And watch o'er the snow, on the highway below,
The two figures slowly wending:
A woman, whose love can all wretchedness span,
And the coarse, shattered wreck of what once was a man. [*N. Y. Sun.*

WEAKER THAN A WOMAN.

CHAPTER XXIX.

(Continued from page 94.)

For Lady Chevenix held up her head with the highest amongst them. She never ignored the past—she spoke of it without hesitation; she talked of her home, the Lines, of her parents, of all her old Lifford friends, with the exception of the Lonsdales, whom she appeared to have quite forgotten. But though she never named them she thought of them; and when she read the brilliant account of all the festivities, she knew that Felix would read the same, that he would hear them talked about. One thing she did wonder at, and that was why he had never contrived to see her. She had imagined that he would make some effort, but he had made none. Christmas came and went; the snowdrops and the crocuses came, the blue violets peeped out, and the desire of her heart was given to Lady Chevenix. She went to London and made her *debut* at Court.

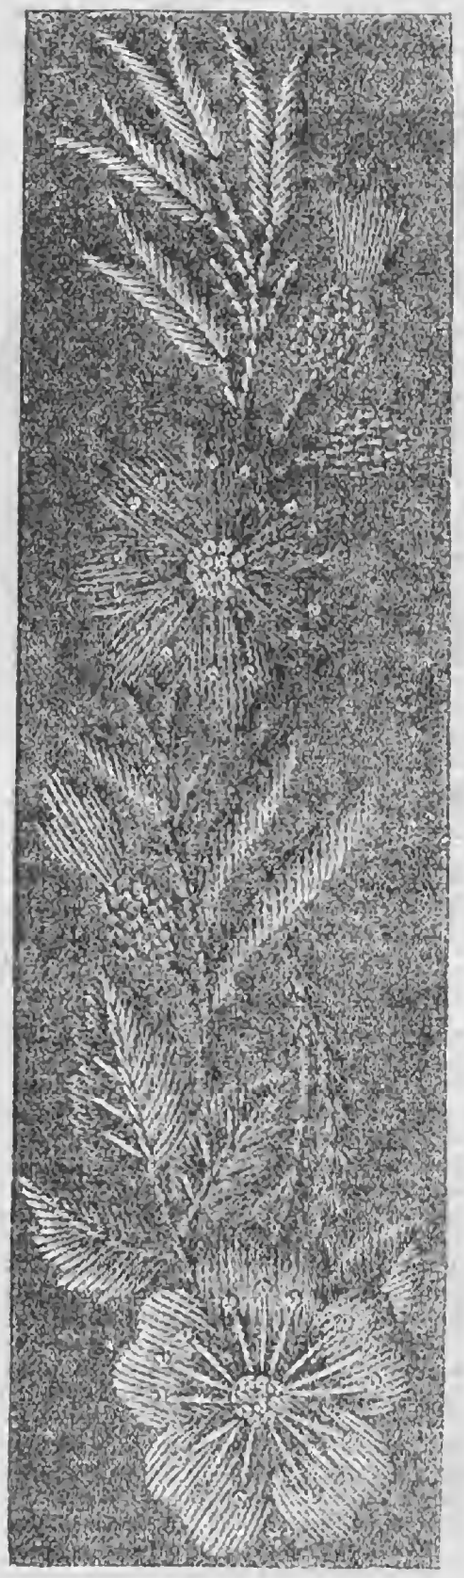
Then it seemed to her that she had reached the climax of all happiness and grandeur. Sir Owen possessed a handsome mansion in Belgravia, and the season they spent in town was one long scene of uninterrupted gaiety and excitement. Young, surpassingly beautiful, graceful, Lady Chevenix soon won a place for herself in the highest and most exclusive circles. She was idolized; her wealth, her diamonds, her superb mansion, her grand parties, were subjects of public comment. But after a time she found that, although she was liked and flattered, her husband was simply detested. No one seemed to care for him; his manners were so coarse that when she contrasted him with other men of his own rank and position she was ashamed of him; she read dislike and aversion to him in the faces of the people whom she liked best and of whom she most approved. Thoughtless, laughing young men said to her—

"Come without your husband, or we shall not enjoy ourselves."

When she particularly pressed any lady to come to see her for some special purpose, the answer always was—

"Well, tell me when you will be quite alone and I will come."

She found that Sir Owen and herself were seldom invited twice to the same place, and it dawned upon her very slowly that she should never be what she aspired to be, a queen of society, because she had a drawback in the shape of her own husband. She was slow in reaching that conclusion, but it was a correct one; and she studied him, to find out, if she could, how it was that he made himself so odious, so disliked.



No. 3.

She could not deny that his face was dark and almost sinister-looking, that his manner and carriage were awkward, that he had an unpleasant voice; the outward appearance of the man was however the best part of him. No one could have called him a gentleman; he was selfish and brutal, and so egotistical that in company no person ever had a chance of speaking but himself. He had two moods—he was either familiar and boasted until every man present felt a great desire to put him out of the room, or he was so sullen that to look at him was like looking at a great black cloud. That was Sir Owen in his sober moments; but, as the novel restraint of his young wife's presence wore off, he fell more frequently into his old and fatal habit of drinking.

At first he carefully concealed it from her, for in his coarse fashion he loved her. A woman of more noble soul perhaps would have made a better man of him—would have helped him to overcome his bad habits and acquire good ones. The woman who had married him, not for love, but simply for his money, had but one thought—it was to keep him in a good temper while it was feasible, and when it was not to keep out of his way.

CHAPTER XXX.

THE season was over, and Sir Owen and Lady Chevenix were expected at Garswood. By that time Sir Owen, to use his own expression, was himself again; the novelty and restraint of his new life had worn off, all his natural characteristics were in full play, and there were times when his young wife wished herself dead. She was not often driven to such despair, but occasionally he was terrible. As a whole she enjoyed her life. She had money and everything that she wished for; she enjoyed her magnificent home, with all its attendant luxuries; she was by universal consent queen of the county.

For some time there was ill-will between herself and Lady Rolfe. She did not wish to ask either that lady or her daughter Lavinia to Garswood, but after a few words from her husband she was compelled to give way. She had the good sense to make the best of it, and Lady Rolfe became a frequent visitor at Garswood.

During all this time Violet had never once seen Felix. She had heard of him continually—he was rising rapidly in the world. She heard old Colonel Riddell speak of him one evening when she, with Sir Owen, went over to a formal and stately dinner-party at Lady Rolfe's.

"Mark my words," said the Colonel—"the leading man in this part of the world is, or very soon will be, young Felix Lonsdale, the lawyer's son. I have watched him with interest. He will be a leader yet. He acts as the Earl's agent now, and Lord Arlington has implicit confidence in him. I prophesy that with the Earl's interest he will be returned as member for the borough, and that once in Parliament we shall hear of him."

One or two others agreed with the Colonel. The face of Lady Chevenix grew crimson when she heard her husband give a little insulting, sneering laugh. She saw with dread that he had drunk too much wine.

"I have beaten him once," said Sir Owen, "and I will beat him again; if he goes in for one interest, I will go in for the other."

For his wife's sake no one answered him; and Lady Rolfe gave the signal for the ladies to withdraw.

"I shall never go out to dine again if I have to meet that man," said the old Colonel, who was an aristocrat *de pur sang*. "Such men ought all to be shot. What could that lovely woman have been thinking of to marry him?"—for the Colonel was far above the scandal and gossip of the neighborhood, none of it was ever brought to him.

So there were times in her brilliant, luxurious life when Lady Chevenix was weary of it all and longed to see the face of a true friend. She had called on Eve Lester, but Eve had declined to see her, and "aunt Jane" had been rampant on the occasion.

Lady Chevenix sat in the best parlor at the Outlands, looking very lovely, dressed in sheeny silk and marvelous lace, when the elder lady came in to her, more erect and uncompromising than ever.

"My niece declines to see you, Lady Chevenix," she said "and I think she is quite right. You jilted our best friend, and, naturally enough, we take his side. Do not call again—Eve does not care to know you."

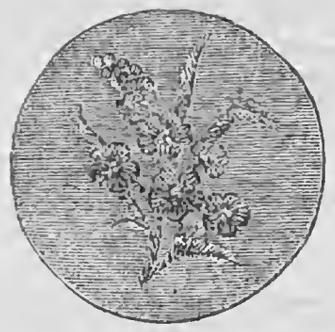
Perhaps in all her life Lady Chevenix had never felt so humiliated. There was no polite disguise about the remark, no conventional veil. "She had jilted their best friend, and they did not care to know her." Even Evelyn cried out in wonder when she heard what her aunt had said.

"No half truths for me!" said that uncompromising lady. "If every one told the truth, this would be a different world."

Never had Lady Chevenix felt so humbled. She had hoped to have heard something of Felix from Evelyn, but, if Eve would not see her, why, there was an end of it.

She had not encountered her old lover once. She wished very much to see him. Why should they not be friends? She had no desire for anything more than the most common form of friendship. She remembered his bright, sunny temper, his sweet smile, his wonderful good humor, his cheerful presence. She felt that it would be a comfort and a pleasure to see him at times after the sullen silence that often lasted for days—to hear a few bright words. She found herself often wondering when and where she should meet him again. At last the time came.

Lady Maude Bramber had been absent from home for some few days, and during that time the Earl had sent out invitations for a dinner-party. If he and his Countess had heard anything of the love-story of Felix and Violet, they had completely forgotten it. The Earl sent out the invitations, and one went to Garswood for Sir Owen and Lady Chevenix, and one to Felix Lonsdale. Lord Arlington very seldom had a large dinner-party now without inviting Felix; his brilliant conversational powers made him a most welcome guest.



No. 4.

"Felix is a host in himself," the Earl would say laughingly.

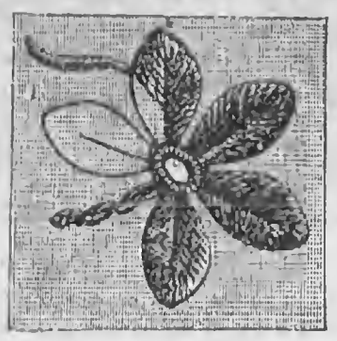
He had not the faintest idea, when he sent out his invitations, of having done wrong. Lady Maude, to whom Felix had revealed his love-story, did not return until the day of the dinner-party, and then it was too late to send a note or message anywhere.

"They must meet some time," she said to herself in dismay; "perhaps it will be better here than elsewhere. I shall be at hand to help him if he requires help."

She said nothing to any one, but awaited the course of events.

The dinner was given in honor of Lord Rayden, a great statesman, who was visiting the Earl, and Lord Arlington was both pleased and proud to introduce his young and gifted *protege* to his friend. Colonel Riddle was invited—he would not have gone had he known that he was to meet Sir Owen, whom he detested—also Lady Rolfe, her daughter Lavinia, and several other friends.

It was a warm day, and the shade of the green foliage all about Bramber Towers was cool and inviting. The dinner-hour was fixed for seven.



L.

"There is no keeping people indoors on these fine summer nights," said the Earl, "so we may as well be prepared to spend the evening out of doors."

Lady Maude was the first in the drawing-room, and to her great delight Felix came in soon afterwards. She was wonderfully proud of him. As Lady Maude looked at him, she thought to herself that there could not be a finer, handsomer, or nobler-looking man in England than he was.

"I was waiting for you, Mr. Lonsdale; I have something to tell you. I know you are a brave man; this evening I shall see your bravery put to severe proof."

He could not imagine what she meant, but he said that he hoped whatever might be the proof she would not find him wanting.

"I have no fear as to that," she said earnestly. "Mr. Lonsdale, I want to tell you that Lady Chevenix will be here this evening. Papa made up his list of invitations during my absence, and I could do nothing."

No. 5.

She was glad that they were alone. His face grew white as death—so white that she was alarmed; he stood quite still, and she saw his hands tremble. She talked on that he might have time to recover himself.

"I would have prevented it, had it been possible, but it was not. You have never seen her since her marriage; and I am told that she has grown doubly beautiful. Still, if you do not feel equal to meeting her, you shall not."

She saw the great effort that he made to recover himself. He succeeded; the color returned to his face; he stilled the trembling of his hands; he smiled as he answered her—

"You are so good to me, Lady Maude, that I am at a loss how to thank you for giving me this warning. I needed it. If I had met Lady Chevenix suddenly, I should have been terribly embarrassed; now I am master of myself."

"And will keep so?" said Lady Maude earnestly.

"And will keep so," he repeated.

Then the Countess joined them, and presently one or two more entered the room.

"Look," said Lady Maude, as she touched Felix's arm gently.

He looked in the direction indicated and beheld Violet so changed from the lovely laughing girl who had kissed him and quarreled with him twenty times in an hour that he hardly recognized her. This was an imperially beautiful woman, on whose white breast and white arms shone jewels worth a king's ransom—a woman whose face was so peerlessly lovely that it dazzled one as did the light of the sun.

Violet wore one of the triumphs of art that she had brought with her from Paris; and nothing could have been devised to enhance her loveliness more. Her dress was composed of some pale green fabric, soft and shining, covered with clouds of white lace looped up with water-lilies, and in her golden hair nestled a lovely drooping water-lily. She wore a *parure* of diamonds and emeralds. Her white shoulders and well-molded arms helped to compose a picture that no man could have seen without feeling his heart beat the quicker for it.

Lord Arlington went forward to meet her. Like a foil to her bright and radiant loveliness, her dark-browed husband stood by her side.

"You are right," said Felix to Lady Maude; "she is a thousand times more beautiful."

Lady Chevenix did not notice Lady Maude Bramber leave his side and go up to her. When she had exchanged a few words with her, she said—

"An old friend of yours, Lady Chevenix, is here this evening." And once more the two who had parted so tragically stood face to face.

CHAPTER XXXI.

Once more Violet and Felix Lonsdale stood face to face. They looked at each other for a moment in silence. To Felix there came back with a keen bitter pain the memory of his passionate farewell;

J.

K.

to Violet there came the sudden keen conviction that she was looking at the face of the only man she had ever cared for. Lady Maude Arlington, much as she disliked the brilliant young beauty, felt so pleased, after bringing the two together, that she had screened Lady Chevenix from observation, for she trembled—her face flushed crimson, and then grew white.

Felix was the first to speak. He did not hold out his hands in greeting; he simply bowed and murmured some few commonplace words.

"I am very pleased to see you," said Lady Chevenix; and the words had a ring of truth that touched both listeners.

With her usual smiling grace Lady Maude said—

"We have a little time to spare—would you like to look at these photographs? They are quite new, and finer than anything I have yet seen."

They all three sat round one of the pretty little tables that were covered with pictures and books. Lady Chevenix turned to Felix again.

"I should like to see your father and Mrs. Lonsdale," she said. "Are they well?"

"They are quite well," he told her, but he made no response to her desire of seeing them.

"He does not care at all about seeing me," she thought; "he does not seem in the least degree agitated or embarrassed—he has forgotten me;" and as the thought came to her, her eyes filled

with tears. "He never could have cared so very much for me," she said to herself; "he could not really have grieved about losing me."

She looked at him—he was talking in a lively strain to Lady Maude. She wondered to herself if this calm, proud, handsome man, so perfectly well-bred, so self-possessed, talking so brilliantly to the Earl's daughter—if this could really be the same ardent, despairing young lover who had bidden her a passionate farewell. He was in no hurry to talk to her. She had rather pictured herself as having to hint something like prudence to him; she could have laughed at herself for the notion.

He did not look at her; she doubted even whether he had noted her rich dress, her shining jewels. When she spoke, he replied with polite indifference, with well-bred calmness, but he never once voluntarily addressed her. It was all so different from what she had pictured that she experienced a sense of depression.

Lady Maude was compelled to leave them for a few minutes, and then Lady Chevenix turned to Felix.

"How strange it seems that we should meet here!" she said.

"Yes, it is strange," he replied. "I am very often here on business—you, I presume, come equally often on pleasure?"

"It is my first visit," she said; but he did not ask the reason of that.

"How cold, how indifferent, he is to me!" she remarked to herself. "No one would ever think even that we had been friends. If he would say something reproachful, it would be better than this."

But there was no thought of reproach in him. He spoke to her with a smile. He neither sought her nor avoided her. His conduct was such that she might have been a stranger whom he had met for the first time. Then came the signal for dinner, and Lady Chevenix was a little surprised to find that Felix took down Lady Maude. She went down with the Earl, and Sir Owen escorted Lavinia Rolfe. Violet was so placed at the table that she could see and hear all that passed.

Never in her life had the beautiful Lady Chevenix felt so surprised. She had always heard Felix spoken of as being clever and gifted; but she had never dreamed that he was really the genius he was. When with her, he had seldom spoken of anything but herself and his great love for her. Now, for the first time, she heard him converse with intellectual men, who all seemed to look up to him as their superior. She was astounded. The great statesman Lord Rayden talked much to him, and the Earl asked his opinion.

"It does me good," said Lord Rayden, "to hear such ideas as yours, they are so thoroughly fresh, clever, and original. We must have you on our side. You must not go over to the enemy."

Felix had a natural wit that made his conversation piquant and amusing. Lord Arlington delighted in it. When any playful attack was made on himself, he would look at him and say——

"I shall leave you to answer that, Mr. Lonsdale."

The dinner was a complete success. It was a new thing to Lady Chevenix, intellectual conversation such as she was listening to. She looked once at her husband, and she saw him gazing with undisguised admiration at Felix.

Sir Owen said little. He had ideas of his own; one was that talking at dinner-time was a bore rather than not; people sat down to eat, not to talk. He certainly did not contribute much to the general entertainment. He dined well; and more than once Violet felt something like dismay, as she saw how the wine-glasses before him were replenished. She could not help contrasting the two men; nor was she the only one present who did so. Felix was so bright, so handsome, so animated, so gifted and intellectual; he was a leader of conversation even amongst older and wiser men than himself, for he had the gift of picturesque language. Sir Owen, coarse and heavy, his brain dulled with constant drinking, speaking little, but, when he did speak, saying something almost disagreeable, was doltish and inert, except when he was offensive. There could have been no greater contrast—and Lady Chevenix saw it. To herself she thought how Felix would be appreciated and understood in London, how eagerly he would be sought—who would care to remember that he was the son of a country lawyer? Such men make their own mark. Where her husband would not be tolerated, Felix would be received with open arms.

All these observations she made to herself, as she sat by Lord Arlington, her beautiful face wreathed with smiles. The last words she heard, as the ladies quitted the dining-room, were from Lord Rayden.

"The next time you run up to London, Mr. Lonsdale," he was saying, "pray come and see me; I shall be delighted if you do, and I will show you the very article in the newspaper of which we are speaking."

And in her own mind Lady Chevenix thought that such a thing as an invitation from the eminent statesman would be an honor Sir Owen would never attain.

The gentlemen did not linger over their wine. Lord Arlington saw that Sir Owen was inclined to drink freely; he made a note in his own mind that it should be some time at least before that gentleman dined with him again.

(To be continued.)

WHAT HAPPENED TO SEVEN GIRLS IN TEN YEARS.

MARY WAGER-FISHER.

From Zethrea Raynor.

CAIRNS POINT, Feb. 24, 1877.

DEAR FRIENDS AND SISTERS;—Of the pleasure the foregoing letters have afforded me there is no need that I should speak. Lee and I talked the matter over last summer, but we thought the date of our parting at R—— was the anniversary. I am right glad that Roswell set the ball rolling, or I fear the matter might have been indefinitely postponed. Of my life the past ten years, there is but little of general interest. It has been less eventful than some of the others. Still to have become a wife and mother, yet never to have been called "mamma" by childish lips, is an experience sweet and sad in its influences upon the life spreading out over many decades. To go back, you know Lee and I returned to Richmond, to our old work and endured the tender mercies of the Hawley's two years longer. Many were the battles I waged against the foul aspersions cast upon pure and self-denying lives. Of the teachers in your places, some were excellent as teachers, and pleasant as friends; but none, save one, could compare with "our clique," whom we often longed for with an earnestness that was surprising to the inmates of the house. Miss Howe, whom we knew slightly the first year, I learned to love dearly as I came to know her well. She was a true, strong woman, and died bravely on the field.

Our schools prospered and we were happy in our work. I look back upon those years of uncongenial toil and petty annoyances as among the most blessed of my life, for the fruits they have borne. In the autumn of '69 (nothing better presenting itself) I accepted a position as teacher in my native town, in which capacity a part of the time for the next two years was spent. The monotony was agreeably broken by a visit to Lee on the occasion of her marriage to Rev. Mr. Vaughan; and in the following summer, she with her husband, and later dear Mary Walter, made my home happy by a visit. The winter of '71 and '72 I spent in the happy home of the Vaughans on the shores of the beautiful Seneca. Many were the lessons I learned of practical Christianity.

At nine o'clock on a beautiful May morning in '72 I was married. It seems strange even now, that my husband chose me, for it was always said that I was "cut out for an old maid," and I had never aspired to the then doubtful joys of marriage. But with all my faults he loved me, and does love me dearly. My life is as happy as is given to mortals of my temperament. There is but one cloud over my sky (and you know I ever see the clouds), and that is the state of my husband's health. Let Lee do the gushing, only I claim to have the best husband in the world. Mr. Carlton was teaching in M—— when we joined fortunes, and we lived there, housekeeping or boarding, as was most practicable, until March, '74, when we returned to C. P., and in two months had to part with our baby. Thank the good father, dear girls, that He has spared you this stroke. We named her Mary Lee, and we fondly saw, even in her babyhood, the promise of all the virtues and beauty that her name implied. Her sweet image is enshrined in my heart of hearts, but I know that God deals more wisely and tenderly than we could, and she blooms in Paradise. Weep not over the grave of the innocent. After a lonely summer I was glad to resume my old employment. We are very pleasantly situated here. My husband is a much better teacher than myself; but they tolerate me and I don't wish to change my position as his assistant. There are already generations of my ex-pupils in C. P., and in all probability, years hence will be found those who bear lively impressions of your fellow-worker on their minds and backs. Personally, I think I have not much changed, except that I have grown stout. You know, ten years ago, I was said to have a "settled look."

This journal would be incomplete without a mention of the delightful visit we had in Berkshire last summer with Jaynesey and her family. And here let me pay my tribute to our hostess, as a housekeeper, wife and mother; and to our host as an accomplished Christian gentleman. Mr. Carlton became as warmly attached to them as myself. Their little May is a lovely child, and endeared herself to us at once. But let me whisper to you that her mother doesn't make her behave so much better than other people's "young ones."

Like everybody else, we "did" the Centennial, but unfortunately missed seeing Mrs. Darrell. From her we expected to get Mercy Biddle's address and give her a call. Had we done so, the good doctor would have found two good subjects for her death-dealing pills—a small dose would have sufficed. I do not despair of seeing them yet, nor Roswell and the "Cookies," as their places of abode are within our projected trips, if we are prospered in the immediate future.

And now I must say farewell, thanking you each and all, for your kindly remembrance. I cast my vote for a continuance of this general letter writing. Come and see us, all of you.

Yours in the bonds of '67. ZETHREA CARLTON.

Jaynesey's letter closes the story.

NORTH EGMONT, March 28, 1877.

Good morning, girls!—This precious budget of letters was received through our friend Zethrea. Glad was I to hear from you all, and learn of your respective localities. After a long talk with you through your interesting letters, I could not help thinking that my bark had glided more smoothly adown the stream of time than yours.

Why, girls, my life has been so uneventful, and God has led me so quietly that my history of the past ten years seems very tame compared with the others. I have no long voyages to speak of, or bright experiences to relate, or great achievements made, or victories to record; only just a quiet, happy, peaceful, restful ten years sailing over the sea of life. Why did you not write me and let me know where you were, so as to invite you to my wedding as I did Raynor? I was married in church, in the city of Schenectady, in October '69, with dear Zethrea for my bridesmaid. And here let me testify that Raynor gave proof of the love she bore me by closing her school and at considerable sacrifice, came and spent the week with me preceding my marriage. In the summer of '71, my husband and myself visited Raynor at her home, and together we there enjoyed Lake George. The following summer we began housekeeping on the banks of Seneca Lake, and here our happiness was intensified by having Raynor an inmate of the parsonage during the winter. In December of '73, we journeyed from the Seneca to Berkshire, Mass., and here we have resided for three and a half years. As I am the only ministers' wife among you, Mollie Cake would say, "I thought Jaynesey would write something sanctimonious." Well, Mollie, there is sometimes as much fun among the wives as the ministers. Never have I been more contented than as the wife of *my* minister; for, though we have celebrated the seventh anniversary of our marriage, I have not yet lost the lover in the husband, and even since the baby came we do not quarrel. Now, I take no credit for this blessed state of affairs, for never have I seen the lovely character of our Saviour assimilated more closely than in my God-given husband.

Our little May flower was given us the first day of May, 1873, and so we call her May Zethrea. Even at her tender age we find much companionship in her. The little mischief told me to-day she was trying to keep Satan out of her heart! I presume Zethrea expected to see her namesake fold her arms from morning until night. But girls, I have'nt been able to accomplish this. I "spect" that love gets the better of judgment. By the way, I must tell you that Professor Carlton is just splendid and very fine looking.

I wish so much to see you all. I drop a ballot for an exchange of photographs. If you want to know how old I have grown, you must come and see me. Silver threads are numerous among the brown, but I do not feel old.

Mary Walter, I have ceased to worry for fear you will open your mouth! I really *care* to see the one you deigned to marry, and am hungry for some of your fresh talk. I don't despair of seeing you all again. I have been thinking while writing who could have marked out our way for the past ten years so wisely and well as the hand of a good God! We have added to our circle of friends since we gave each other the promise of writing these letters; but the attachment for the old ones remains unbroken. The thought is a happy one to me, that we have all been spared to fulfill our promise of writing, and that no dear friend has to write for us, that we are among the dead.

For many another decade of years may our band remain unbroken, and when the angel shall stand with one foot on the sea and one on the land,—crying, that "time shall be no more," may we all meet to spend eternity together, not one of our number missing.

Remember, that the latch-string always hangs out at the Baptist parsonage for the girls of '67.

LEE VAUGHAN.

(THE END.)

THE LINE OF CAPET.

C. H. E. B.

It required time, patience and a large measure of industry to make France a monarchy, and the record of events during the 507 years that the French chicken was chipping its shell is as interesting as it is instructive. Hugh Capet was the real founder of the Kingdom, and when he started in business his actual dominions were a trifle greater in extent than the island of Corsica. The feudal barons who monopolized the greater part of the land were a law unto themselves, and when not employed in tearing each other's eyes out, they were devoted to the mysteries of the wassail bowl. They literally led a cat-and-dog life, which may partly explain that to this day the epithet *chien!* is as gall and wormwood to a Frenchman.

But to return to Capet. His enterprise was not thought much of by the barons, who regarded the assumption of a kingly title as in rather poor taste.

"Who made you Count?" Capet asked one of these feudal lords.

"And pray who made you King?" was the quick rejoinder.

This was a leading question, and Capet, taking counsel of wisdom, concluded he would make haste slowly, and although the Capetian line is the most ancient of any now existing, the founder was so uncertain of his tenure that he wore his crown but once, deriving his surname and the name of his house from his habit of wearing an abbot's cape.

Finding that his only hope of advancement was in conciliating the clergy, he professed a boundless devotion to the Church, thus augumenting his spiritual artillery by being friendly with the cannons! His son Robert who reigned in his stead was surnamed the Pious, and when not fighting, passed the major part of his time in singing chants. Robert was of a meek and gentle spirit, and lived in the fear of his wife. It is related that he met a beggar one day who was temporarily embarrassed, and not having any money assets himself he stripped the silver ornaments off his lance, thrust them into the mendicant's palm, and said, "Now, begone quickly lest the queen should catch me." Subsequently he had occasion to go to battle, and foremost fighting fell.

This was about the year 1000 A. D. at which time the fancy prevailed that the earth was speedily coming to an end. It was very bad for the prospects of the Kingdom, as people lost all interest in life and were inert. Even title deeds were made to read "to the end of the world approaching." But the nobles did not cease fighting on this account. They slashed each other with impartial ardor, while famine stalked through the land preparing the way for its handmaiden pestilence. The supply of customary food having been exhausted, human flesh was offered for sale; while one enterprising inn-keeper supplied his table with the delicacies of the season at the expense of forty-eight unfortunate human beings, whom he decoyed into his house and dispatched.

Finally people somehow concluded that the earth had no idea of stopping its motion, and it came to pass that Henry I. was seated upon the throne. He was a man of quiet tastes, and to end the ceaseless strife going on about him, arranged, with the aid of the clergy, the Peace of God, by which it was decreed that no blood should be shed on holidays, nor from the setting of the sun on Wednesday until the Monday following, under the severest penalties. This arrangement gave him leisure to take his Sunday walk to the brink of his kingdom, and looking over, meditate on how it might be enlarged, then returning home, be in time for tea and prayers.

Henry's reign is to be considered in the light of an anodyne, as it calmed the passions of the nobles somewhat, and gave his son, Philip I., during his tenure of forty-eight years, a chance to make real progress in establishing the monarchy on a solid basis. Philip was a thoroughly bad fellow, and gave the Church no end of trouble in keeping account of his miscellaneous wives and divorces, but the kingdom grew apace. The Norman Conquest of Sicily drew a host of fighting nobles away from France, as also the First Crusade, and Philip entered into the real estate business with a zest that boded his foes no good. When the Crusaders returned they found that this active monarch had married a province here, annexed a province there, and had confiscated castles elsewhere. In a manner that was very alarming.

But his son Louis VI. greatly improved on the methods of his father. While Philip followed events Louis controlled them. Meantime the nobles had turned desperate robbers, and travel was very insecure. At merely eight miles from the Capital there lived a regular Tweed baron who grasped whate'er he could and kept whate'er he grasped—much to the chagrin of travelers. As Louis had to travel that way he thought it expedient to make the place as well the man barren, which he accomplished and by appeal to the clergy, who armed their serfs, smote the stronghold, and generally made the place too tropical for the transgressor. Louis was so well pleased with this experiment that he granted the clergy and peasants communal and commercial privileges, they in turn supplying him with tribute and troops. This was the nucleus of the royal army, and a great stride in advance.

Louis VII. was an inefficient being, and did not advance the business in hand, but his successor Philip II. was a mighty monarch, who lost no time in enlarging his kingly domain. He began by innocently inciting baron against baron, and the plan worked so well that he made arrangements to continue it indefinitely, but the Third Crusade drew off some of his most promising game. While kings and nobles were upholding the Cross against the Crescent in the East, he turned his attention to the affairs of his neighbors, and acted very badly towards England. Richard, the Lion Hearted, when he returned was very wroth, and not feeling called upon to temper his steel with mercy made Philip feel as if he had almost been born in vain. Shortly thereafter was fought the battle of Bovines between the French and Flemings. It was a triumph of royalty over feudalism, and led also to the growth of the thirst for military glory which is now a leading characteristic of the Gaul.

The French will probably never forget this monarch, he was the first to establish permanent taxes. He also gave regular pay to his soldiers, and encouraged the growth of cities. He doubled the area of the kingdom by annexing Normandy, Main, Anjou, Tourraine and Poitou, by which the feudal lords were shorn of some of their fairest possessions. In his hours of ease he also built Notre Dame, founded the University of Paris, and planned the crusade against the Albigenses who were completely exterminated on account of their religious views, and ceased thenceforth to be a factor in political problems.

His son, Louis VIII., was known merely as the "son of an excellent father, the father of an excellent son, and the husband of an excellent wife." Only this. Louis IX. (St. Louis) was crowned soon after the death of his father, and had a fight on his hands at once. The barons could ill brook his Spanish mother. But the King's troops were very powerful now, and the barons had to succumb. Languedoc being added to the crown domains as the price of the insurrection. Louis was extremely religious and could not be restrained from proceeding with an army to Egypt. This expedition was called the Seventh Crusade. The king had quite a little difficulty in securing recruits, so he devised a plan that proved to be a trap. It was usual to give the courtiers new robes on Christmas, so on this occasion the king commanded every one to be at early mass, and as they entered each received his new coat. It was not long in being found out that every coat was decorated with the red cross, and you may depend on it the prayers for the king were not very fervent that morning. The Crusade was a failure, and when he returned to France, he was apprised of his mother's death. Then he set about ruling his kingdom in severe earnest. He caused to be made the first code of justice, and established courts, thus introducing lawyers. Making still another crusade to the Holy Land, he met his death among the ruins of Carthage.

His successor, Philip III., by marriage, added three provinces to the crown, and left the realm in good condition for his successor Philip IV. (The Fair), who began to rule when but seventeen. This young gentleman debased the coinage, and then refused to take it for state dues, and continued to raise revenue by banishing the Jews and seizing their property. Having a difficulty with Edward of England, he took advantage of that monarch's trouble with his own subjects, and added Flanders to the crown; but the Flemings revolted finally, and at the battle of Coulrai twenty thousand weavers vanquished fifty thousand French soldiers. Philip was not satisfied and went to war again, but the weavers shut up shop and came forth in such numbers that Philip cried, "Does it rain Flemings?" Apparently it did, and hence they continued to reign. After quarreling with the Pope whom he made his prisoner, and summoning the states-general and doing other good and bad things, he died, leaving his successor Louis X. a fine property. Philip V. and Charles IV. followed in order, but as Charles died and left no male heir, the son of Charles of Valois, Philip VI., was crowned, and by this act was established the house of Valois, which became the second reigning family in France.

News of the Week.

Monday, Feb. 10, 1879.

MISCELLANEOUS.

According to this mornings telegrams, the English government has not yet taken action prohibiting the importation of American live cattle. The city council of Liverpool, however, has forbidden the landing of them at that port after the 28th of this month, unless in the meanwhile provision be made for their slaughter on the quay. Many meat contractors there say that they are ready to build abattoirs suitable for the purpose, but hitherto no step has been taken in the matter owing to the uncertainty that still prevails with regard to the decision of the Privy Council. Several shipments of cattle have been landed since that containing diseased animals, but although every beast was closely examined, no trace of disease was found on any of them. Shippers here are making preparations to forward their last lots of live cattle so as to arrive in the Mersey before the 28th; 200 head were shipped on Saturday and 60 more will go next Thursday, after which date, exportation will be suspended from this port until some decisive action shall be taken at the other side. Meanwhile the Canadian government has forbidden the importation of cattle from this country for three months from February 6th. Prof. Law, of Cornell University who has been commissioned by the Governor of this State, to investigate the nature of the disease affecting some cattle in one of the suburbs of the neighboring city of Brooklyn, says that several of the cows there are suffering from inflammation of the lungs, a consequence of pleuro-pneumonia.

Across the Atlantic the native stock and agricultural interests, are alarmed at the prospect of a ruinous competition with our cheaper cattle. Last year our exports of all kind of live stock to Great Britain are stated to have been worth upwards of seven million dollars, and it is said that the contracts already made for this year would necessitate much heavier shipments. The landing at Liverpool, nearly three weeks ago, of a single lot of steers suffering from pleuro-pneumonia, afforded the frightened farmers an excellent pretext for insisting on the exclusion from the country of all cattle from the United States, lest their own herds should become infected. The report from our Canadian neighbors came opportunely to support this demand, while at the same time it was calculated to benefit our friends across the border; for these maintain that their own stock are entirely free from all contagious diseases, and therefore that their trade should not be interfered with.

If these representations, however, shall really succeed in securing an order against the importation of live cattle from this country, the prohibition can only be temporary. For the last half century there have been numerous local outbreaks of pleuro-pneumonia in some of the Atlantic States, and to-day the disease is not so unusually widespread as to afford valid grounds for exceptional restrictions on our trade. Cattle for export come almost entirely from the Western States, and there the malady is unknown. In the few localities where it has appeared, it is restricted almost exclusively to cows used for dairy purposes. The ailing animals never come in contact with beasts intended for shipment. Moreover, the attention to the malady, aroused by the present excitement, must result in the speedy abatement of the evil. During the severe outbreak of it at Boston in 1857, the Legislature empowered commissioners to destroy all infected animals and pay for them out of the State Treasury, and the measure extirpated the disorder so effectually that it has never reappeared there since.

After a bitter and protracted struggle between Senator Conkling on one side and the whole power of the Administration on the other, about the appointment of revenue officers at this port, the Administration triumphed, mainly, 'tis said, through the personal efforts of Sec. Sherman. Nearly all the Republicans, including all leaders, voted with Conkling, and so did a few anti-Tammany Democrats, but the Tammany Democrats aided by a handful of Republicans, carried the day, by a vote of 53 to 25, so that Merrit & Co., succeed Arthur & Co., as dispensers of the Federal loaves and fishes in this city. The Potter Committee is taking some curious testimony about those cipher dipatches in this city, but as in recounting political news, it is impossible to please every reader and tell the truth, the gist of it is here omitted. Edmund's resolutions affirming the fifteenth amendments to the Constitution, has passed in the Senate, all the Republicans and a few Democrats voting for it, and the rest of the Democrats voting against it on the ground that it was intended merely to make polical capital.

Tennessee seeming resolved to repudiate her honest debts, creditors representing five million dollars' worth of her bonds, propose to sue her. As they cannot do this individually, they are about to donate $100,000 of these bonds to a charitable institution in some Southern State and get that State to sue Tennessee for their value. Such a method of collecting debts from repudiating States has been strongly advocated in this city of late; but it is a trifle doubtful whether it is practicable. The Eastern or Republican part of the State insists on payment and is in favor of splitting the State in twain and paying its half of the debt. Georgia's credit is so good that she has been able to sell the whole of her 4 per cent bonds 60 days after they were authorized. One of the Richmond papers objects to stocking the Virginia rivers with fish on the ground that it would encourage idleness among the people, who, being thus furnished with free food, would neglect agriculture."

It is said that Senator Edmunds would accept Judge Hunter's seat on the Supreme Bench. Edwards Pierrepont would also like a place on the same seat. The Southern moonshiners are still turbulent here and there. Their latest murder was that of U. S. Deputy Marshal Dotson, at Sinking Creek, Va. These gentry have a rough way of resenting any government interference with their secret pursuits. J. Madison Wells, whilhom of the Returning Board, and later appointed by Hayes to a snug berth as Surveyor of the Port at New Orleans, has been indicted by the grand jury for peculation in office. Another persecuted saint! The Crescent City grand jury also found indictments against twenty-five bulldozers in three of the parishes in which Republicans charged violence during that presidential election which seems to have decided nothing. There are reports that between one and two hundred accused of violating the election laws, have already been arrested, and most of them released on bail. But so little credit seems due to the oaths of folks from that quarter, that rumors are apt to be a trifle untrustworthy.

Ex-Gov. Hartfranft started a couple of years ago for the White House, at one time got 28 votes more than Hayes at the Cincinnati Convention, and is likely to "fetch up" as postmaster at Philadelphia, a position just offered him. Archbishop Powell, of Cincinnati, tried banking, but, like many other estimable clergymen, he failed to keep a close grip on either his own or other folks' money, and the sum of his indebtedness to the poor who trusted to his financial ability is upwards of a million dollars. Sitting Bull is across the border, begging for food and pardon; no, he isn't, and never will be. A dozen reliable papers give the public the option of believing either clause of the sentence. Elizabeth, N. J., is like a well-dressed dandy without a cent in his pocket. The town spent a pile of money on fine streets, buildings and improvements of all kinds, and now is bankrupt. The value of property has gone down with a rush; a multitude of houses have been abandoned for taxes, and to meet interest and taxes, the town has to raise $600,000 a year on a valuation of $12,000,000—but it says it can't.

FOREIGN.

Europe seems in terror at the spread of the plague which is reported to have all the characteristics of the terrible Black Death of the Middle Ages. As stated here last week it kills ninety-five out of every hundred of those it attacks, carrying off its victims in from four to ten hours. In the town of Vetlianka in the government of Astrachan, where it made its first appearance, it slew at once 400 persons out of the 1,700 residents of the place, and the rest fled, leaving the dead unburied. At Prishibe it swept off 520 out of 830 inhabitants in two weeks, and even in sparsly settled localities it spreads with alarming rapidity. It has been known to advance westward 30 miles in two days. It is said to have already reached the Crimea, and now Italy and all Southern Europe are as much terrorized as Germany and Austria-Hungary. Russia is inviting medical aid from all her neighbors, burning infected villages and taking every possible precaution to arrest the invasion of a foe more deadly than Turk or English. A cordon of troops, a thousand miles long, has already been established and Melikoff has been invested with absolute power in the suffering region.

At last the Turko-Russian war is over! A definite treaty between the Sultan and the Czar was signed last Saturday. Yesterday the Russians began to evacuate Turkish territory, and the last of them is to cross the frontier within 35 days. Montenegro having got Podgoritza, has withdrawn her troops from Ottoman soil. Greece is still discontented with her bit of Turkey, and probably the Great Powers will have to decide whether she is to be made happy with another "serving." England has just closed the bargain with the Sultan for Cyprus. He'll retain a private estate he has there and pocket $5,000,000 for the rent of the island. Shere Ali is either dead or buried in the wilds of Asiatic Russia on a bootless tramp to St. Petersburg. Yakook Khan can't control even the city of Cabul; a part of it is said to be in insurrection. The British are resting in winter quarters as quietly as the turbulent and predatory natives will let them. Stanley offers once more to enter the "Dark Continent" at the head of a Belgian exploring expedition. Lord Dufferin has been appointed ambassador to Russia.

It is acknowledge by all that the resignation of McMahon from the Presidency of the French Republic and the election of Grevy to succeed him, have contributed greatly toward the permanence of that form of government. The Marshal's term would have ended in 1880, when there would certainly have been a struggle for the mastery between the Imperialists, Monarchists and Republicans. Now as Gevy stands at the helm for seven years, that critical struggle will be avoided, and if the French people deserve the blessings of a republic, it will be firmly established at the close of his Presidency. Waddington, the English-Frenchman, late Minister of Foreign Affairs, takes Defaare's place at the head of the Cabinet as President of the Council. Several other good changes have also been made in the Cabinet. All is peaceable and hopeful for the future. With few prominent exceptions, all the communists are to be fully pardoned. The Church and State are to be separated, as in this country Grevy declares the Republic wants peace at home and abroad, now and in future. England hails the prospect of a permanent Republic, as cordially as if she were herself a Republic as much in name as she is in reality. HERMAN.

The breakfast on the occasion of the Prince of Wales's visit to the city of London to unveil the statue of the prince consort cost £2,000. The thanksgiving for the recovery of the Prince of Wales, £13,000. That, too, was the amount spent in the reception of the czar of Russia. The Shah of Persia's reception cost £15,000. The sultan's cost £30,000. The flowers alone at the reception of the Prince of Wales, on his return from India, cost £2,000. The banquet in honor of the czar, £2,676. The upholstery bill was nearly £7,000 more. The cost of the menu cards at the dinner was £93; £170 was expended on bands, £25 for wands, £22 for gloves, £282 in gratuities and £7 upon corkscrews. The flowers at the Shah's reception cost £527 and the gloves at the czar's £57. There is now a big bill to pay for the installation of Lords Beaconsfield and Salisbury as freemen of the city.—*Cor. Newark Advertiser.*

Domestic Economy.

CONDUCTED BY EMILY MAPLE.

PEN THOUGHTS FROM EVERY-DAY HOUSE.

ANNIE L. JACK.

Old Wall Paper and Its Suggestions.

"This room must be repapered." It was the critic in household art who gave the mandate in such decisive tones, and only one voice was heard in protest.

"Spare it yet another year."

"And then," asks Household Art, "how long will it have been upon the walls?"

"*Only* twenty years."

They stand appalled—twenty years! What a change in the world's history that paper has outlived.

"Why it was a paper in slavery days," says the young historian, "and on that wall before Abraham Lincoln was ever President."

Could it be possible! Yet it was not faded—some fly specks could be seen on close observation; but the soft, gray, neutral ground, the white-and-scarlet of the large flowers with their satiny appearance were fresh and pretty, and we could not bear the idea of tearing it off to be supplanted by a gay, fresh pattern that would change the aspect of the parlor, that would cause the furniture to look out-of-place, and the pleasant memories that clustered around the dear, cosy room to be pleasures of the past. "For how could we recall them," I said, "if the walls were changed, that had been the same for twenty years?"

And while talking of these things it occurred to me that in the course of that time many people who visited me have passed the remark, "How well you keep this room," with an air as if they knew that it was not used except on state occasions. I seldom take the trouble to disabuse them of that opinion, but may here say that I do not believe in keeping a room for company, into which the family dare not venture; nor do I believe that faded furniture covers, dingy carpets, and rough, dim wood are signs of *use*, but rather of abuse. I know full well things *will* wear out, but often the carelessness of those in charge of the rooms is a cause of the quick fading from its original freshness, that is sometimes seen in newly furnished houses. In the room where this article had its first suggestion, the carpets and furniture were the same as when the owner entered her home a bride, with no experience, and nothing but what country folk are apt to call "book larnin." But she knew enough to keep a separate broom for her parlor carpet; to keep down the shades in strong sunshine, though not to darken the rooms; and to pick up any litter on the floor, instead of sweeping it too often, which wears away the nap of a carpet and raises dust over the furniture. Wood fires in a tight box stove, as used in country places, prevent a great deal of dirt that is inevitable with the soot of coal; but the dirt from the latter is often increased by carelessness in removing the ashes, especially by doing so while the furniture is uncovered, for then the dust settles in every crevice and groove.

Men and boys are a great deal more blamable than they will allow for the necessity of shut-up parlors; for if they would always remember their slippers, and not attempt feats of spitting, mother and sister would be always glad to have them stretched upon the parlor sofa in leisure hours. In this little twenty-year furnished room we think with pleasure now of the happy hours the children have spent there; of the corners where they have been found curled up reading some wonders of book lore; of the Sunday talks we have had there; the treasures that have been brought there for safe-keeping, and the many Christmas mornings when, in the center of the floor—the carpet being protected by sheets—there has been found a *tree*, blazing with candles and glorious with gifts, the wonder and delight of the children at home and of their little neighbors. How they enjoyed sitting under the branches for weeks afterwards before we could find it in our hearts to remove it, sharing its fruits with many. And I know well that all through life, they will go back to that little parlor, whenever the piney fragrance of a fir tree meets their senses.

No, leave the paper on. Household Art must go elsewhere for innovations; times are too hard for refurnishing, and we will not patch the old parlor's appearance.

RAG CARPETS—ONCE MORE.

While reading in the Rural of Nov. 16th, some remarks concerning rag carpets, as I have had a good deal of experience in that line—having been a weaver for about 15 years—I thought perhaps I could say a few words that might be of interest to the lady readers.

In the first place, I would suggest that you cut the old garments up instead of ripping them, which takes too much time, and what you would save out of the seams does not amount to much. Next, have the pieces washed clean, which is much easier than to wash the garments whole. Some people prefer to color rags before cutting, but I am not particular as to that; I rather think that I like the way of coloring them after cutting best, for then one does not color the waste rags. Select your best pieces, and cut or tear them in strips, and if of cotton, let the strips be one-half an inch in width. Do not cut around the corners, but tear them off. Of course, it makes more sewing, but always remember that "it pays to do only what it pays to do well." If rags are cut around the corners, they will soon wear off in those places, leaving the rest of the rags good. So you can see that it is not good economy, though it takes less time. Always have your rags as near half an inch in width as possible. Woolen rags must be cut narrower than cotton.

Wind your rags firmly in balls as nearly a pound in weight as you can guess, allowing a pound and a quarter for each yard, which will be enough to fill a yard with the proper amount of warp. If you wish to prepare your own warp, get cotton yarn No. 10; make it three-threaded, which will give you 30 knots, and of each pound you will have one skein left, which in three pounds will make 30 knots extra. Take good care to double your yarn even, and twist it well. Slack-twisted warp is almost worthless. Allow 6¾ knots of warp for each yard. This is more than usually allowed, but try it, for it takes less rags, and if well beaten up, the carpet will last nearly twice as long as if less warp was used. If you buy your warp ready prepared, always get that which is hard-twisted, fine and even. Never send your warp to the weaver without first reeling it and putting the desired quantity in each skein. Reel your rags you wish to color in skeins of two knots each, as they are lighter to handle and will color better. Be very careful to wash out every particle of the dye, as it will injure the rags if they be not well rinsed. Wind again into balls and they are ready to be sent to the weaver.

All calicoes and delaines that are of a good color, weave in without dyeing. Cutch makes a good color and beech bark or maple set with copperas, is durable and cheap. If you have a few odds and ends of all colors, sew them together in balls and make what we call a "hip-skip" stripe. Never put in a carpet rags that are worn so badly as to be tender, as it is waste; for they soon wear out and then the carpet is worthless. To sew rags properly, lap the two pieces three-quarters of an inch, and double the rag so that it is but half the width, and backstitch through it as far as it is lapped. This mode of doing it is much better than sewing one or two stitches in the middle, and leaving both ends flying.

MRS. J. A. GREGORY.

New York.

A CUP OF TEA.

"The cup that cheers, but not inebriates."

Who has not smiled at the way in which our foremothers made their first tea?

"Pooh!" says a little miss of ten, "it's nothing to make tea. All you've got to do is to put in a teaspoonful of tea for the drawing, and one for every person to drink of it; pour on a little hot water and let it boil till the streugth is out; then fill up with water."

Perhaps eight persons out of every ten who make tea at all, make it after this fashion; but it is a very poor one, for all that, and tea so made is, to say the least, not what it might be.

In the first place, tea should be *steeped*, not boiled; and then if one wishes to know just how *good* a cup of tea can be, she should never allow the addition of even the smallest quantity of water after the tea is steeped, as it will be sure to render it insipid. Let the required quantity be poured on at once, or, still better, put the water in the pot first, and add the tea to it. Tea is often spoiled, both as to color and taste, by oversteeping. Japan and black teas require a longer time than do the green sorts—say five minutes for Japan, eight or ten for black, while for green three minutes will suffice.

A good way to prepare tea for picnics and and the like, is to fill glass fruit jars with cold water, and to every quart put half a cup of dry tea, and just before using, drop a lump of ice into each jar. ADELINE E. STORY.

DOMESTIC RECIPES.

Apple Tarts.

Make the crust with one cup of lard; the white of one egg beaten to a froth; one teaspoonful of white sugar; one-fourth cup of cold water; flour sufficient to roll out. Make a rich sirup of white sugar, boiling in it some fresh lemon peel, then put in tart apples that have been sliced rather thick. When tender take from the fire to cool, and then fill the tart; cover with another crust and bake lightly.

Prison Cake.

One cup of butter; three cups of white sugar; five cups of flour; two cups of sweet milk; one teaspoonful of soda and two of cream-of-tartar; whites of eight eggs, This is for the white part.

Dark part.—One cup of butter; two cups brown sugar; one cup of molasses; one cup of sour milk; one teaspoonful soda; four cups of flour; yelks of eight eggs; fruit to taste. Put into the tins in alternate layers, and when it is sliced off it is in bars of dark and light.

One Egg Cake.

One and one-half cup sugar; three-fourths cup of sour milk; one-half cup of butter; one egg; one-half teaspoonful of soda. Do not mix very stiff.

Rice Pudding.

One teacup of rice, cooked till done; then add six eggs, one pint of milk, one pint of cream, one tablespoonful of corn-starch. Flavor with vanilla or lemon. Beat the eggs and stir into the boiling milk and cream. Cook over a hot-water bath. A cup of raisins should be added the last thing before it is cooked.

LORETTA E. K. TURNER.

Currant Sauce For Venison.

BOIL a teacupful of dried currants in a pint of water; add a small teacupful of bread crumbs, four or five cloves, a glass of port wine and a bit of butter. Stir until smooth.

Mich. MRS. A. L.

Creamed Potatoes.

PUT into a saucepan a teacupful of sweet cream, one tablespoonful of butter and dessert spoonful of flour, rubbed smooth in a little of the cream; cut some boiled potatoes into slices and add; season with pepper and salt, and just before they are served add a teaspoouful of chopped parsley. MRS. E. L. B.

OUR FREE SEED DISTRIBUTION.

SEEDS of the following varieties of plants are offered to our subscribers without any charge whatever (except for postage, a part of which we bear) until further notice:

DEFIANCE WHEAT. A hybrid spring wheat. The most promising variety ever before offered.

"PEARL" OR "EGYPTIAN" MILLET. One of the most promising fodder plants known.

BEAUTY OF HEBRON POTATO. According to many careful tests, this is ten days earlier than Early Rose, as good in quality, and more prolific.

THE VOORHIS WATERMELON. A specialty of the Rural Farm.

GOLDEN RURAL TOMATO. A specialty of the Rural Grounds.

ACME TOMATO. This is offered as the best of the newer varieties of Tomatoes to those who may prefer it to a trial of the Golden Rural.

NEW BRONZE RICINUS. Specialty of the Rural Grounds. The most beautiful Ricinus in cultivation. A cross between Ricinus Gibsonii and R. sanguineus.

HIBISCUS MOSCHEUTOS—the showy and beautiful Rose Mallow, never before offered so far as we know. Hardy.

CALLICARPA AMERICANA (Purpurea). The brilliant French Mulberry. Hardy.

HIBISCUS SYRIACUS. One of the most charming of hardy shrubs. Sometimes called "Rose of Sharon." Our seeds are saved from double-flowering varieties—many of them from seedling plants. They grow readily from seeds, and bloom as soon as plants would if transplanted from nurseries. The seedlings "sport" without end.

WEIGELA. Seeds saved mostly from seedlings. This is probably the finest hardy shrub in cultivation.

DEUTZIA CRENATA fl. pl. Seeds saved from seedlings at the Rural Grounds. Seventy-five per cent. of seedlings will bear double flowers. It is perfectly hardy and there is no finer shrub known for ornamenta grounds.

HIBISCUS MILITARIS. Hardy and beautiful.

ERYNGIUM LEAVENWORTHII. The most striking annual of recent introduction. (See RURAL of November 9th for engraving of this and other plants, seeds of which we offer.)

YUCCA FILAMENTOSA. Every farmer and lover of plants should have specimens of this perfectly hardy evergreen liliaceous plant in his grounds. It is superb.

VITIS HETEROPHYLLA. See RURAL, Nov. 9, for description of this hardy vine.

RURAL HYBRID AQUILEGIAS. Beautiful, hardy perennials of great beauty.

GRINDELIA SQUARROSA. See RURAL of Nov. 9 for remarks.

OBSERVE.

Any ten of the above require a one-cent postage stamp:—that is, ONE *cent* for the ten, not for each except the Beauty of Hebron Potato, Pearl Millet and Defiance Wheat. The Beauty of Hebron requires a two-cent extra stamp and the other two a two-cent extra stamp also.

Other varieties *may be* added. We intend this free seed distribution to be the most valuable of its kind that has ever been gratuitously offered by any journal, and to introduce the above v uable plants to the homes of farmers and horticulturists in every part of our country.

WE offered, some time ago, to sell the cuts used in this Journal for twelve cents the square inch. Many have requested us to send proofs of our cuts. As we have upwards of ten thousand, we couid not undertake to do so. Persons wishing to purchase, must select from files of the RURAL NEW-YORKER.

A Favorable Notoriety.—The good reputation of *"Brown's Bronchial Troches"* for the relief of Coughs, Colds and Throat Diseases, has given them a favorable notoriety. 25c. a box.

THE MARKETS.

PRODUCE AND PROVISIONS.

NEW YORK, Saturday, Feb. 8, 1879.

BEANS AND PEAS.—Beans have sold slightly better for export, but the market, as a rule, is dull all through. Holders thought that prices had touched bottom, but with the liberal offering, especially of low class mediums, further concessions will probably occur before a firm base is reached. Supply of red kidney, heavy, in the absence of southern call. Prime black beans quoted stiffer. Green peas, not rated prime, have sold at 1.37½; choice in store, $1.30@1.32. Canadian peas show sales at 73@75c.; Southern B. E. peas weaker. Medium beans, prime, $1.30@1.32; fair to good, $1.15@1.25; marrows, prime, free on ship, $1.37½@1.40; fair to good, $1.25@1.35; peas, $1.20@1.50; white kidney, $1.60@1.85; red do., choice, $2.60; fair to good, $2.35@2.45; black beans, $2.05@2.25 Lima, $1@5.

Receipts of beans for week, 16,732 bushels; exports, 900 bbls.

BEESWAX—Has been offered lower on account of fair supplies and a slow demand. Western and Southern quoted 25@28c.

Exports, past week, 361 lbs.

BUTTER.—The market is not generally active, and heavy receipts of commission State cause some depression in all but selections and fine table. Shippers continue to encourage holders, taking good sound mixed lots at a range of 10@20c., though the latter is extreme. There remains a fairly long season to handle the crop, and unless the interior reserves are far ahead of estimates, serious breaks in rates are not anticipated. At the moment supplies are somewhat pressing, and consignees should not be limited or restricted in their method of movement by owners' orders. Local merits of quality do not always go up to commercial standards at points where receipts concentrate, and at as late a date as this responsible sellers' judgment should be submitted to. Western butter is also largely included in the receipts, and prices are quoted as high as they will bear. Buyers of sound parcels divide their attention more than usual between Western and State, as in the latter good bargains are offering in dairies. Roll butter has only a nominal position. State full creamery turns out well this season, but, as usual, Western with heavier grain feeding is quoted the highest.

Comparative receipts and exports from June 1st to date:

	Receipts, pkgs.	Exports, firkins.
June 1, '78, to Feb. 1, '79	1,067,150	208,451
June 1, '77, to Feb. 1, '78	942,050	140,417
June 1, '76, to Feb. 1, '77	818,400	103,975

Single extra State half tubs, 26@27c.; State, full dairies, special, 20c.; other, 16@18c.; firkin dairies, fair to prime, 15@18c.; Welsh dairies, fine full, 16@17c.; choice half tubs, 23@25c.; fair to prime do., 16@21c.; choice Welsh, 19@21c.; fair to prime, 12@17c.; Choice creamery 25@26c.; best western creamery, 28@30c.; other, 20@23c.; early packed creamery, 17@20c.; poor State, 9@12c.; Western dairy, fine fresh, 18@20c.; fair to good, 10@15c.; factory, ladle packed, 18@19c.; good, 14@16c.; other, 7@9c.; rolls, 10@16c.; grease, 4@5c.

Receipts for week, 32,677 pkgs.; exports do., 11,500 do.

CHEESE.—The movement has been very steady and fair, chiefly in grades at from 2@6c., and fancy stock at about 9c., with special lots of the latter running up to 9½c., and even above this on especially attractive parcels. Good grades are most difficult to sell. The general market is firm.

Quotations are 9@9½c. for fancy; 8¼@8½c. for fine lots; 7¼@8c. for good; 4@5c. for skimmed; State, farm dairy at 8@8½c. for fine; 7@7½c. for good to prime. Wisconsin factory, fine and fancy, at 8¼@9c.; do. good to prime, at 7½@8¼c. Western factory, fine and fancy, 8@8½c.; good and prime, 6½@7½c.; do. full skimmed, 2@5c.

Comparative receipts and exports from June 1st to date:

	Receipts, pkgs.	Exports, lbs.
June 1, '78, to Feb. 1, '79	2,761,422	111,444,572
June 1, '77, to Feb. 1, '78	2,228,375	95,005 808
June 1, '76, to Feb. 1, '77	1,876,767	77,127,293

Liverpool quotation, 48s.
Steam to Liverpool, 45s.

COTTON has been slow comparatively the past week, and only slight changes in prices, which close at, for February, 9 61c.; March, 9.71c.; April, 9.88c.; May, 10.0.c.; June, 10.19.; July, 10.28@10.30c.; August, 10.38@10.39c; September, 10.17@10.19c.; October, 9.96@10c.; November, 9.84@9.85c.

Quotations for spot cotton are based on American standard of classification, and on cotton in store running in quality not more than half a grade above or below the grade quoted:

	Uplands.	N. Orleans.	Texas.

Strict good ordinary	8 5-16	Middling	9 3-16

DRIED FRUITS.—Apples have a very good inquiry, and some sales of choice sliced run above quotations or up to 4c to the local trade; shippers have paid as high as 3¾ for quarters. Unpeeled peaches are about ¼ better, having been sold freely. Blackberries are also somewhat stronger.

State plums, 14½@15c.; Blackberries are quoted at 4¾@5c. Peaches—Peeled Georgia, at 6@7c. for poor; 8@9c. for fair to good; 10@10½c. for prime; choice North Carolina, 11½@12½c.; good do., 9@10c.; unpeeled halves, 3@3¼c.; quarters, 3½c. Pitted cherries, 21c. Apples—New, 2@2¼c. for southern quarters in bags.; 3¼@3¾c. for good and prime sliced; do., fair at 2¾@3c. State at 3@3½c. for new sliced; and 3¾@3¾c. for quarters; Western at 2¾@3¾c. for new quarters. Raspberries, 23c. Apples, evaported, Alden or Williams, at 10@11c.; other processes at 6@8c.

Exports, past week, 802 bbls. apples.

EGGS.—Receipts for the week, 3,070 bbls.; do., last week, 3,215 do. The market has been very lightly supplied and violent fluctuations have occurred. These, when upward, always damage trade, as buyers hold off and a sudden heavy delivery may take off all that has advanced. Since our last 34@35c. was realized for State and western, but with the withdrawal of buyers and larger regular supplies, together with lots being added from neighboring cities, prices are weak at quotations: near points, 30c. State, Pennsylauia, southern and western, 27@28c.; limed are quite gone, at least no one quotes them regularly; choice at last sales went at 25@26c.

FLOUR.—Business has been somewhat brisker, chiefly on wants of exporters, and prices stronger without an actual advance.

Latest prices are at $3.15@3.60 for very inferior to strictly choice superfine State; $3.60@3.90 for very poor to good extra do., odd lots and lines; $3.90@4.25 for good to very choice do., and fancy lots above this; $3.10@3.60 for inferior to very choice superfine Indiana, Iowa, Michigan, &c.; $3.60@3.90 for inferior to good shipping extra do. and $3.90@4.25 for good to very choice extra do.; common to about choice white wheat extras, $4.00@5.00; choice to fancy do. at $5.00@5.75; red and amber winter wheat, very inferior to very choice trade and family, at $3.90@5.60; round hoop Ohio at $3.85@4.25, and trade and family brands of do. at $4.25@5.60, the latter rate for very choice; St. Louis, $4.00@4.75 for very poor to good extra, and $4.75@5.60 for good to choice; Minnesota clear, very inferior to fancy, at $3.60@5.00; few brands going above $4.50; Minnesota "straight," inferior to fancy at $4.40@5.60; and patent fair to strictly fancy at $5.25@8.25, few brands going above $7.50; unsound stock at from $2.00@4.75; city mill extra at $4 70@5.00 for West Indies (the latter rate for very fancy in new packages); do. for England $3.65@3.80; do. trade and family extras, $5.10@6.00; do. for South America, $5.00@5.50 for fair to very choice; No. 3 at $2.35@3.00 for poor to very fancy.

FEED.—Sale at $14.50@15 for 40 lbs.; $14.50@14.50 for 50 lbs.; $14@15.50 for 100 lbs., and $14@15 for rye feed.

FRESH FRUITS.—Strong prices for apples limit the demand, but prices are as firm as at our last. Quotations are for stored or inspected parcels; late car-loads are regarded with suspicion on account of frost and rarely sell up to the extreme. Spitzenbergs, $4@2.50; Greenings and Baldwins, $1,75@2; poor lots, $1@1.25. Cranberries have only a moderate trade, but the supply is small, and as apples advance berries will hold to late rates; prime to fancy, bbls., $8@9; other, $5@6; N. J. crates, fancy, $3; other, $2@2.75. Florida oranges dull, lots not turning out handsome; bt. bbl. boxes, fair to best, $@3; discolored, $1@1.50; bbls., $4@6. Hot-house strawberries, $5 per quart. Peanuts firmly held, with only a moderate trade. Hand-picked Va., $1.10@1.12½; other, 80@95c.; shelled, 4½@5c. Hickory nuts nominal at $2.

Exports for week, 5,670 bbls.

HONEY.—The market is practically dead. Choice single comb clover still quoted down to 10@12c.; two do., 8@10c.; buckwheat, 7@9c.; strained, 6@9c.

FURS AND SKINS.—The market is active for prime lots for shippers' use, intended for the London March sales. Skunk are largely in excess of last year's catch and are again easier. It must be understood that shippers will not take skins that are torn; these have no other outlet than to local manufacturers. One reason for the prolonged activity of the market this year is the excellent quality of most furs, the season having been so favorable to fur growth. The shipping demand will close by Feb. 15th.

GRAIN.—Wheat has shown only a moderate export movement, but speculation has been very fair and has served chiefly to keep up prices; latest sales are of No. 1 red at $1.08¾@1.09; No. 2 red at $1.08¾@1.08¾; No. 3 red at $1.08¾@1.04; ungraded red at 99c. to $1.08¾; rejected red at $1; No. 2 amber at $1.08¾@1.08¾; ungraded amber at $1.0@@1.08½; No. 3 spring, car lots, at 90c@90¾c.; ungraded Minnesota spring at 90c.; extra white at $1.10; white State at $1.09¾@1.09¾; No. 1 white at $1.08¾@1.09¾; do. steamer quality at $1.07; No. 2 white at $1.07¾; ungraded white at $1.08¾@1,10; No. 2 red, February option, at 1.08¾; do., March option, at $1.10@1.10¼; do., April option, at $1.11; No. 2 amber, February option, at $1.08@$1.8¾; do., March option, at $1.09; do., April, at $1.09¾. Rye has been very active on wants of continental markets and closed strong; State quoted at 57¾@61c.; Western at 57@60c. Corn is in larger receipt and closed lower; latest sales are of steamer mixed, in lots, at 44½@44¾c.; old New York No. 2 afloat at 47¾c.; do. in store at 47c.; New York No. 3 at 42¾@43¾c.; ungraded mixed at 46¾@47¾c.; New York No. 2 new at 45¾@45¾c.; Jersey yellow at 45c.; New York yellow at 46¾c.; yellow western at 46¾c.; white western at 49¾@50c. for old; round yellow at 53c.; York No. 2 white at 46c. for new; New York steamer yellow at 45c.; yellow southern at 45¾@46¾c.; New York No. 2, February option, at 45¾c.; old do. at 47¼c.; New York No. 2, March, at 46¾c.; do., April, at 46¾c.; steamer mixed, February option, at 44¾@44¾c. Oats are unsettled and rather easier at the close; sales of New York No. 1 at 31¾c.; New York No. 2 at 31@31¾c.; New York No 2 white at 33c.; New York No. 3 at 30c.; New York No. 3 white at 32c.; white Western at 32¾@34¾c.; mixed do. at 30¾@31¾c.; white State at 33@34c.; mixed do. at 31¾@32c.; New York extra white at 33@35¾c.; New York No. 1 white at 34¾c.; No. 2 Chicago, afloat, at 31¾@31¾c., and for do. in store 30¾c. asked and 29c. bid; Jersey and Pennsylvania mixed at 30@31c. State 6-rowed barley, 85@90c.; do, 2-rowed, 75@78c.; Canadian, 90c.@1.15; do. malt, $1@1.25; western do., 60@90c.

HAY AND STRAW.—There have been very fair dealings, and as receipts have been moderate prices are somewhat firmer.

Sales at 40@45c. for shipping, and 70@80c. for retail qualities. Straw quoted at 50@60c. for long rye, and 40@45c. for short rye, and oat at 40@45c.

Exports, for week, 975 bales.

HOPS.—Exports for the week, 581 bales. The moderate business from exporters has been at fairly steady prices on prime stock, but the low grades favor buyers. There are few lots here of a quantity to exceed 13, but one fancy lot sold to a brewer as high as 16.

Quotations are for New Yorks, new crop, choice, 13@15; New Yorks, new crop, good to prime, 10@12; New Yorks, new crop, low to fair, 7@9; Eastern, 8@12; Western, 8@12; Yearlings, 4@6; Olds, all growths, 2@3; Pacific coast, 12@15.

LEATHER.—Hemlock sole at 18@20c. for light; 19@21c. for middle; 19@21c. for heavy, and 17@19c. for good damaged.

OIL CAKE.—Western has been in brisk demand at $27 per ton.

POULTRY AND GAME.—Live stock is scarce even for winter. N. J. fowls, 13c. Western, 12c.; young roosters, 8@9c.; old do., 6@8c.; Turkeys, hen, 12@13c.; do., toms, 9@10c.; Ducks, 60c.@$1; N. J. Geese, $1.75@2; other, $1.25@1 50 pair.

Dressed poultry has arrived moderately and good rates have ruled for fresh, bright stock. Nothing very common in market. Large turkeys not wanted, 10c. extreme for them. The supply of prepared frozen poultry will not, it is thought, be heavy this coming spring. Low prices last year checks the enterprise. Phila. and N. J. turkeys, including dry picked, 13@14c.; prime State and Western, small, 12@13c.; other, 9@11c.; Phila. dry picked fowls, 10@12c.; do. chickens, 14@15c.; N. J. chicks, 13@14c.; Western, prime, 11@13c.; other, 8@10c. Capons, 18@19c.; slips, 15@17c.; Ducks, choice, 13@14c.; other, 9@12c.; Geese, 7@11c.; 11c. for dry picked.

The surplus of game has been worked down and prices are better. Quail, choice, 85@90c.; other, 50@60c.; Grouse, trapped, 60@85c.; soft, 50@55c.; Canvas-back Ducks, $1.50@1.75; Red-head, 75c.; Mallard, 50@60c.; Teal, 40c.; common, including Broad-bills, 20@25c.; Hares, 22@25c.; Rabbits, 15@20c. Foreign exports for the week include 100 pkgs. game.

PROVISIONS—Have generally tended higher on a good demand. Mess pork quoted at $8.60 bid and $8.70 asked for old for February; $10.15 bid and $10.30 asked for new for February; $8.69 bid and $8.70 asked for old for March; and $10.15 bid and $10.30 asked for new for March, and $10 25 bid and $10.30 asked for new for April, and May at $10.35 bid and $10.40 asked. Bacon at 5c. for long clear and 5¼c. for short clear. Lard—Western steam at $6.80 for spot lots; $6 75@6.77½ for February, $6.82½ for March, $6.90@6.92½ for April, and $6.95 for May. Tallow at 6¾c. for prime. Stearine at 6¾c. for Western. Beef hams at $17.50 for Western. Beef, extra India mess, $18@20 as to quality; packet, $11@11.50; plain mess, $10@10.50; extra mess at $10.50@11.50.

SEEDS.—Clover is strong at 6½@6¾c. for prime and 6¾@6¾c. for choice western. Timothy is firm at $1.25@$1.35.

TOBACCO.—Export movement has been light and home trade moderate, with prices steady. Quotations are for

Iowa, Vermont and Illinois—X and XX, 28@31c.; No. 1, 32@34c.; No. 2, 27@29c.; combing, 33@36c

Missouri, Kentucky and Tennessee — Washed fleece, 26@31c; unwashed fleece, 21@26c.; unwashed combing, 23@27c.

LIVE STOCK MARKETS

Saturday, Feb. 8, 1879.

BEEVES.—Receipts for the week, 8,305 head; do., last week, 10,137 do. Supplies have been light, and with considerable competition on part of buyers prices show an advance over Wednesday, closing firm. No very extra grade here, and prices deemed high for the medium average quality of the offering. Common to good sold at 3½@9¼c., dress 56 lbs.; prime, 9¾@10c. to dress 56 lbs.; some Colorado stock brought 9c. Cattle are still taken for British use. The cattle disease scare has temporarily reduced consumption locally.

COWS AND CALVES.—A few fresh cows happened to strike a market during the week at $35@65 per head.

VEAL CALVES.—Prime live and dressed have had steady sale; frozen calves slow. N. J. and Buck's Co. live milk, best, 7¾@7½c.; good, 6½@7c.; other, including heavy weights, 5½@6c. for State; 7c. the top. Fed, 4½@5½c.; grassers, 2½@3c. Prime hog dressed, 9½@10c.; other, 6½@8c.

SHEEP AND LAMBS.—Receipts for the week, 25,288 head; do. last week, 17,659 do. Sheep have had a good demand; but with a larger offering prices have ruled a shade off compared with last week's. Western, fair to prime, 5¼@5¾c.; near-by, 5@5½c.; N. J. ewes, 4½@4¾c. Lambs, 5¾@6½c. A number of Canadian sheep are going abroad. Last sales of American sheep in England not favorable for owners.

SWINE.—Receipts for the week, 29 609 head; do., last week, 24,706 do. There has been a firm and better market for live, but at the close prices are not so strong. Nominal rates, 4¾@4¼c. No offering.

Dressed hogs doing well. Country pork, State and N. J., light, 6¼@6¾c.; medium, 5¾@6¼c.; heavy, 5¼@5½c.; city dressed, 5¾@5½c.; western, 5¾@6¾. Pork tenderloins, 6@¾c.

HORSFORD'S Bread Preparation
UNSURPASSED FOR MAKING
LIGHT BREAD
Biscuit, Rolls, Cake and Pastry.

It is Better and Healthier than ordinary Baking Powder, Cream Tartar or Yeast.

The cost of raising Bread, Biscuit, &c., with it is only about half as much as by ordinary Baking Powder, and the result is much better.

It restores the nutritious elements which are taken from the flour in bolting. No ordinary Baking Powder or anything else used for raising bread does this.

Universally used and recommended by prominent Physicians.

If you cannot get it of your Grocer send a three-cent stamp to the manufacturers for a sample.
Manufactured according to the directions of Prof. E. N. Horsford, by the Rumford Chemical Works Providence R. I.

Reading for the Young.

HOW THE TIGERS ARE CAUGHT.

HAVE you ever visited a place where wild animals are kept for exhibition and trained, or as it is commonly called, a menagerie? If so, you have no doubt wondered at the ferocious tigers and lions that are kept in great, strong, iron cages to prevent them from jumping out upon the other animals and upon people that come "to see the show." You must have noticed the fierce expression in their eyes as they gaze out over the crowd of curious visitors and impatiently walk to and fro in their cages, now and then uttering a suppressed growl that made your very boots tremble. You wondered perhaps that anybody would dare to catch and cage such animals, compared with whose strength and ferocity, the strength of a man is but feeble indeed. But your astonishment reached its topmost hight when you saw the keeper enter the cage, open the jaws of one of the beasts, and put his head in between its teeth. It would be certain destruction for anybody but the man who constantly trains them, to do this daring deed; but for him they form in some cases a certain attachment, or otherwise get so afraid of his whip, that they permit him to take liberties with them which it would be folly for anybody else to imitate. And even keepers are sometimes taught that nature is stronger than training, for occasionally we read of some being killed by the animals in their charge.

The lions and tigers we see in shows are either born in some menagerie, and as they in that case have never known what it is to be at liberty to roam over the plains and through the woods, they have become "domesticated" to some degree; or they have been caught in their native wilds while they were still young. The natives of Bengal, and other portions of Asia and Africa, where these animals are numerous and often troublesome, have devised many traps in which to catch them. One, which is much used, is represented in the picture. A stout framework is formed of posts set firmly in the ground, and covered with a heavy lid, which when it falls down is held down, either by a weight or a catch.

This lid is partially raised, as shown in the picture, and so set, by an arrangement somewhat like a mole-trap, that if anything comes under it and touches the lever, it falls and makes a prisoner of the intruder. You will notice that a looking-glass is fastened to a lever of the arrangement. This is to attract the tigers, of which the males, particularly in pairing time, are always ready for a fight; and one seeing his own image in the glass, takes it for an enemy and makes a bound for it, the lid falls and Mr. Tiger is made prisoner. The trapper, when he comes along, either kills him in the trap, or in the case of a young animal, sells him, if he can, to some showman. The traps are sometimes made portable, so the whole can be put on a cart and carried off.

In place of the looking-glass the trapper sometimes ties a kid in the bottom of the trap which by its bleating attracts the beasts. Lions are said to be more shy of traps than tigers, and carefully avoid all that looks like a trap unless they are very hungry.

If you notice, you will see a great resemblance between the Cat, Lion, Tiger, Panther and others. Scientists class them (with many others) in the order *carnivora*, which includes all that live on flesh by preying on other animals. Those named have the same build, only differing in size; they have much the same appearance in their movements, and all walk on the tip of their toes and not on the whole foot as for example does the bear. For these and other reasons, which you would not understand, scientists have put them in one group, which they call *felidæ* meaning the cat family.

Tigers are most numerous in Asia and particularly in Hindostan, where they breed almost undisturbed in the jungles along the great rivers.

The ground-color of the tiger is orange-yellow which is striped with black bands across the body; but the throat, breast and under part is of a dirty white. He sometimes reaches a size of about eight feet long and between three and four feet high, and is strong enough to carry off an ox. He is very subtle and treacherous in his character, and will lay in wait for his prey behind a log or stone near some path or watering place when he suddenly jumps upon and carries off beast or man that happen to pass.

UNCLE MARK.

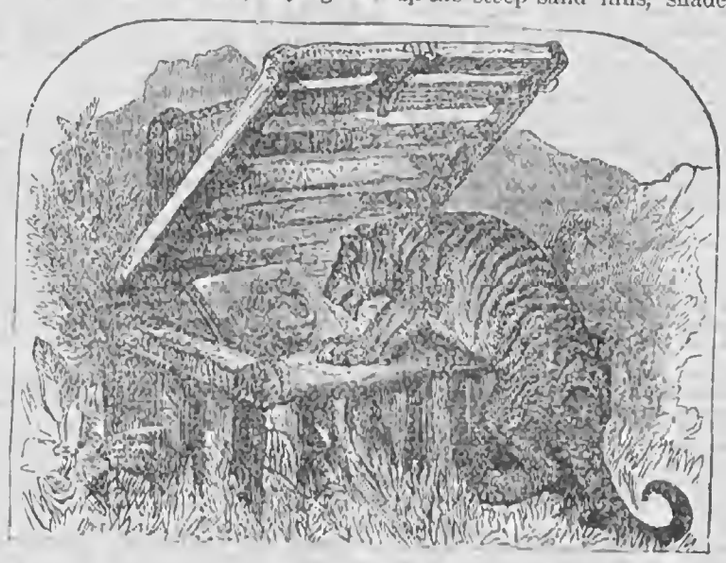
A KNIGHT IN A PIE.

YES, a real, live knight, in a real, crisp, nice pie. Did you ever taste of that pie? No, I think not, for it was cut open about two hundred years ago. Wouldn't you like to have been at that table upon which that lively pie was put? Methinks I hear some one say—they would have liked pies better filled with cherries or peaches.

I am going to let Sir Knight tell his own story. As he told it to—me? Oh, no, for the Knight has been dead about one hundred and seventy-five years, so he never had an opportunity of giving me an account of how it all happened; however, he told somebody who told some one else, who told some other body who told me. Now, I will let the knight speak for himself:—

"Yes, sir, there was not a thing which my royal mistress, Henrietta Maria, could have required of me, that I would not have complied with, sir; I was her sworn servant, and at her majesty's particular request, I once condescended to become—ladies, you know, have strange fancies—to become the tenant, for a time, of the *interior of a pie*. So I found myself imprisoned in a huge platter, of no ordinary dimensions, you may be assured, since I could lie at length in it; then I was entombed, as it were, in walls of standing crust and a huge cover of pastry. Notwithstanding the contrivances made to give me air, it was more like being buried alive than anything else I could think of, but I bore all these inconveniences cheerfully for the Queen, for whom I would have crept into a filbert-nut, if it had been possible.

I must say, I feared lest some awkward attendant might let me fall, or that some hungry guest might stick his knife into my upper crust; however, I had my dagger about me. I had other cause for apprehension, for my lord of Buckingham commanded the pastry to be carried down to the kitchen and put again in the oven, saying—



TIGER TRAP.

'The pastry was better eaten warm than cold. Then I thought of Nebuchadnezzar and his fiery furnace. Fortunately, the cook would not allow me to be put in the oven and I was again taken to the royal table.

The happy and glorious moment at length arrived. The upper crust was removed—I started up to the sound of trumpet and clarion. It was then, that with my buckler on my arm and my bilbo in my hand, I executed a warlike dance. I was almost deafened with the applause of those around me."

Have you any curiosity regarding the name of the "knight of the pie?"

He was called Sir Geoffrey Hudson, and is often mentioned in anecdotes of Charles the First's time. His first appearance at court was his being presented in a pie. Our knight was but a diminutive person, until he was thirty years old he was only eighteen inches high, after that age he grew to the height of three feet, nine inches, and then stopped.

Although Sir Geoffrey was of so insignificant stature, he proved a formidable antagonist; indeed, in a duel, if we can believe the chronicles of the time, he killed one Master Crofts, who had made fun of Geoffrey for appearing on the royal table in a pie. Regarding this duel, it is related that our knight said:

"I would not wish my worst foe the pain which I felt when I saw Crofts reel on his saddle, and so fall down to the earth, and when I saw that the life blood was pouring fast, I could not but wish to Heaven that it had been my own instead of his."

Poor Sir Geoffrey was not doomed to end his days in peace. Upon some suspicion respecting the Popish Plot, he was thrown into prison, where he languished many years, finally dying in his sixty-third year.

The brush of Vandyke has immortalized Sir Geoffrey, and his clothes are said to be preserved as articles of curiosity in Sir Hans Sivan's Museum.

SANS SOUCI.

BERTIE'S AND KATIE'S PICNIC.

DEAR UNCLE MARK.—Do you remember Bertie and Katie; and how the boy of us, that is I, once poked straws through the hives at the bees; and how the bees poked back, and how you carried me away, as you said bees did not like to be poked; and how I was crying too hard to even thank you? Well, I am that same boy, wiser now, and want to tell you of our picnic.

It was at South Haven, right in the middle of the "Lake Shore Peach Belt," not that there is any real belt of peaches there; though all we saw would make a pretty long belt, and all we ate would have made a wide rent in such a belt. It is so called because a narrow belt hugging the eastern side of Lake Michigan grows the largest, juiciest, lusciousest, meltingest peaches ever tasted by boy or girl. I wish all the cousins had been there, with Uncle Mark to keep us straight, we would have treated the whole family. The peach trees were so green that Katie said God must have just been painting them. I said may be they had been Paris-greened for insects.

Well, our picnic was to be up the shore a few miles, at a place called Thunder Mountain. Twenty of us, of whom two half dozen were children, were to go on a cunning little steamer named "Skipper." Just after we walked onto "Skipper," she made us children skip, for she bellowed till she was fairly hoarse. Katie said it made her angry for us to walk on her, but I think she did it just to scare us little folks. Soon she gave two ringing, roaring, shouts as if angry at being tied up, which I guess was true, for some men fairly ran to untie the ropes that held her fast, when "Skipper" just skipped out of the river into the lake puffing and blowing as though she had the asthma or else a bad cold. I guess it was the latter, for she just kept blowing her nose every minute.

In a few minutes we were out on the lake, and the fresh breeze, the dancing waves, and the rocking "Skipper," were just more than jolly, the children all got on "Skipper's" head, and just "hollered" the whole of that ten miles. "Skipper" would throw her head away up into the air, and then as if thirsty drop it quickly down to the water's edge. Some of the folks were sick. This was too bad, for it was just a tip-top time to be well. We saw on the water a great many beetles and other insects, which papa said were blown over the water and getting tired of flying, were trying to swim.

Just as soon as the boat touched the land we children rushed out onto the sand, which had been pounded so long by the waves that it was nearly as hard as stone.

Katie and the other girls stopped to gather pretty stones and shells, and to watch the jumping waves that were ever trying to leap onto the shore, and of which Katie said they must be tired for their faces were white. While we boys rushed up the steep sand hills, shaded with thick evergreens. I may tell you another time what we saw and did.

BERTIE.

HOW BOYS CAN MAKE MONEY.

THINKING perhaps to encourage the boys who do not altogether like father's ways, and who often wonder whether he used to pick stones, or pull weeds, or hoe potatoes all day in the hot sun, while he was a boy, when there was so much fun, and perhaps mischief, waiting for just such boys. Now boys, although you may be looking anxiously towards your cousin who clerks in the city, who has fine clothes and apparently an easy time; but don't be deceived. It is too often a delusion. I will tell you how I managed to go through with such a life and yet managed to drive a trade on my own account. Before I was twelve years old, I had saved seven dollars and a half by cutting and sawing wood, and by making fires in a neighboring church. In the month of February I obtained the consent of my parents to go to a neighbor who had lately brought a flock of sheep on his place, and buy as many sheep as I could with my seven dollars and a half. The man was a kind, honest farmer, and picked out three ewes that suited my fancy. We put them in the sleigh and I drove home the proudest I have ever been in my life. Father told me before I bought them that if I would take care of them he would give me the feed. We had never kept sheep, and I did not know how to care for them; but we had a clever hired man who helped me the best he could, and with our combined efforts they grew finely. In March I was wonderfully pleased one morning to find a nice little lamb running around with its mother. Soon I greeted the advent of another, and finally two more. I was now a proud boy, the happy owner of seven head all told. They grew finely, and in July I sold them all for twenty-one dollars, and the wool for five more, making in all a return of twenty-six dollars for my first business venture.

W. GOODRICH.

RECENT LITERATURE.

Night Sides of City Life. By T. DE WITT TALMAGE, D. D., Chicago: Fairbanks & Co. Price 50c. Received of T. O. Evans & Co., 76 East 9th St., New York.

This is a collection of the sermons recently delivered by the famous Dr. in the Brooklyn Tabernacle. The subjects discussed, taken in connection with the well-known characteristics of the author, as a preacher and writer, must insure for the book a ready sale.

It is popular in some quarters to characterize Talmage's style of preaching as "sensational;" granted that it is, if, however, by striking out into new and "sensational" paths, he can bring men to a saving knowledge of their sins, why should we quarrel with his methods? That he is a power for good, few, if any, will deny. Have we then, so many good influences at work in this world of ours, that we can afford to sneer at and belittle any who work for the salvation of men and the glory of God?

These collated sermons are to be specially commended to the young men in villages and country towns, who think it a grand achievement to come to New York and "see the elephant." Mr. Talmage, a man of taste and culture—and surely such an one ought to be a good judge—shows them that this "elephant," beside being a most unclean beast, is a tawdry, vulgar thing, and that no young man of refined tastes (leaving out the question of morality), could be other than disgusted at the attractions (?) so graphically described. If the reverend gentleman, by giving his sermons this permanent form, will only be able to convince foolish young men that drinking, gambling, and "fast" living generally, so far from being "manly," are most reprehensible and ignoble, he will have accomplished a great work.

How to Read and Hints in Choosing the Best Books, with Classified Lists of Works on Biography, Criticism, Fine Arts, Fiction, Poetry, Religion, Science, Language, etc. By AMELIA V. PETIT. New York: S. R. Wells & Co. Price $1.

THIS book will be of use not only to students, and those who are collecting a library, but to those also who read mostly for amusement. It is very convenient to have a book at hand which contains accurate information as to authors and their works, and which is full of good suggestions about what it is best to read. Many young people, after leaving school, determine on "courses of reading," but, having no one to guide them, they fritter away their time in attempting to accomplish too much. People of this class will find "How to Read" a great saving of fruitless toil. The book is fully indexed, and publisher and editor have done all in their power to produce an excellent work—and they have succeeded.

LINDSAY'S LUCK and Jarl's Daughter are two bright, attractive books by that delightful author, Mrs. F. H. Burnett. Every story that this lady writes (or ever did write) is interesting, and the books under notice are quite as entertaining as any that have preceded them. The publishers, Messrs. Peterson Bros. of Philadelphia, are doing the reading public a good service by reprinting Mrs. Burnett's stories, and the low price at which they are offered (25c. and 50c.) must insure for them an extensive circulation.

MAGAZINES FOR FEBRUARY.

HARPER'S MAGAZINE, while making a marked impression by the beauty of its illustrations, is even more remarkable for the temptations by which it solicits a reading, and for the satisfaction it gives the reader. There are exquisite illustrations of Mr. Beard's article, The Treasures of the Deep, and the letter-press is as entertaining as the pictures. Mr. Benjamin's second paper on Southern France presents some very novel illustrations. Phebe Earle Gibbons writes about French Farmers. The illustrations of the Brazilian article, At the Mouth of the Amazon, and of Mr. F. G. Mather's Winter Sports in Canada, are very fine. Mr. Horace E. Scudder's admirable paper, Education by Hand, is chiefly valuable for its comprehensive treatment of the whole subject of manual education.

A very interesting biographical sketch of the late Rear-Admiral Paulding, is contributed by Commander R. W. Meade, U. S. N.

Probably the most popular thing in the Number is Will Carleton's humorous and pathetic poem, Our Traveled Parson, with three exceedingly happy illustrations by Abbey.

The promised letters written by Mendelssohn to Madame Moscheles (edited by the latter), occupy over sixteen pages of the Magazine, one of which is given to a hitherto unpublished *lied* by the great composer, of which both the words and music are given.

Nothing could be more timely than John Esten Cooke's story, Moonshiners—the scene of which is laid in the mountains of Western Virginia, with two brilliant illustrations by Reinhart. Mrs. Rebecca Harding Davis contributes a strong short tale, A Story of the Plague.

A new serial novel by Miss Mulock, entitled Young Mrs. Jardine, is begun in this Number, and promises to be as interesting as the best of her previous stories.

Elizabeth Stuart Phelps contributes a Song, and Helen W. Ludlow a beautiful poem, entitled A Picture and a Parable.

SCRIBNER'S opens with a portrait of R. W. Emerson, drawn by Wyatt Eaton and engraved by T. Cole. There is also a paper on the Homes and Haunts of Emerson. In The Tile Club at Play, is detailed the excursion of the Club to Easthampton. The paper is made attractive by some exquisite engravings and an account of the life of John Howard Payne. The Fortunes and Misfortunes of Co. "C," contains a description of the actual experiences of a company in the Confederate army. Jno. Leech, the English caricaturist, is the subject of a paper by Russell Sturgis. In fiction, there are installments of Mrs. Burnett's Haworth's and Mr. Boyesen's Falconberg; Pott's Painless Cure, a capital little story by Edw. Bellamy, and a peculiar romance by Maurice Thompson. To the Clergy, by Rev. Edw. Eggleston, is full of bright suggestions and amusing anecdotes. A Symposium on the Chinese Question, by A. A. Hayes, Jr., contains the opinions of "distinguished representative men," including Ah Lee, Hon. Phelim McFinnegan, Mons. Alphonse de la Fontaine, Herr Isaac Rosenthal, and others. The cover of this number is a marvel of beauty.

APPLETON'S JOURNAL contains among its numerous articles a striking paper by Appleton Morgan, entitled The Shakespearean Myth, in which the authorship of the Shakespearean plays is studied from a fresh point of view, going to show that Shakespeare could not have been the author of those plays. In his article on Toleration, W. H. Mallock attempts to show that persecution is the inevitable consequence of profound and general belief. W. R. Greg's Verify your Compass is most suggestive and valuable. Dean Stanley's paper on the Historical Aspect of the United States is extremely interesting, proving as it does, that we are not so deficient in historical aspects as some suppose. The Editor's Table is more of a feature than ever under the new arrangement. The discussion this month is upon Amending the Constitution, The Nude in Art, Novel Reading, each topic being illustrated with fresh ideas and marked by close analysis. Some Modern Artists is an excellent criticism on Fortuny, Mellois, Leslie, Leighton, Alma Tadema and other English artists.

ST. NICHOLAS contains the first installment of Eyebright, Susan Coolidge's new serial story. H. H. contributes a charming poem, The Shining Little House, and Augusta Larned gives the boys and girls a peep into ancient Icelandic literature in a short poem entitled Helmdall. Rumpty-Dudget's Yomed, Julian Hawthorne's bewitching fairy tale, is continued. A Story of Stone, is a lively short article, written by Prof. D. S. Jordan, on a curious scientific subject. Little Nicholas, and How He Became a great Musician and About Violins, are two graphic and finely illustrated articles, giving the make and history of the violin.

There are seven short stories, all finely illustrated, some bright and some pathetic; and their subjects embrace: a hair-breadth escape from a Rhinoceros in South Africa,—the rescue of an old man from a snow-drift by two little boys,—the confusion made in Sunday-school by Polly Hersey's Pet,—a curious nest on wheels,—a poor little factory girl of Manchester, Eng.,—the origin of the Jumping-Jack,—and a little girl's experience in keeping a journal.

PERSONAL ITEMS.

Two of the newly elected Southern senators are first cousins—Wilkinson Call of Florida and J. D. Walker of Arkansas.

Mrs. Nellie Grant Sartoris is said to be greatly attached to the family she has entered and the country of her adoption.

President Palmer, of the Broadway National Bank, this city, and one of the metropolitan millionaires, used to drive a Broadway stage.

The late Dr. Linderman, Director of the Mints, was a descendant of Margaretha Linderman, the mother of Martin Luther, on his mother's side.

Though Senator Howe of Wisconsin has held his present position eighteen years, he will leave it on the 4th of March, sixty-three years of age; without a dollar in the world, it is said.

General George B. McClellan, now New Jersey's Governor, is far more youthful-looking than his 53 years would make him. His thick hair is only slightly gray, and his face is full and ruddy with health.

Wade Hampton has not only had to give up his intended trip to Florida, but has taken to his bed again. He will probably have to undergo another amputation of his leg, and is despondent about pulling through.

William Libby, the present leader, under Judge Hilton, in the firm of A. T. Stewart & Co., in this city, was an ambitious jobber who failed and was glad to get a situation with Stewart. He was a bankrupt at thirty, but now he is a merchant prince, estimated at from two to four millions. Herein is comfort for those who have met with early adversity.

Senator Jonas of Louisiana is a native of Illinois, and about forty-six years of age. He went to Louisiana while a boy, and has ever since lived there; is a lawyer, and was a confederate soldier. He has been State attorney a number of years, a member of the legislature, and received the nomination for lieutenant governor in 1872, with John McEnery. He afterward gave way and let in Penn as a compromise. He is a Jew, and is the third of that race ever in the U. S. Senate, Judah P. Benjamin and David Yulee having been the others.

Some recent developments go to show that Dr. Talmage, the eloquent Brooklyn pulpit, or rather platform gymnast and Presbyterian preacher, does not always stick closely to the candid truth. Hence our country friends may dissent from his opinion of rural morals. He insists that the city is worse than the country in morals, only because there are more people to be bad if they wish to be. In the rural districts the grocery store, or the blacksmith shop, by day and night, is the grand depot for masculine tittle-tattle, and there are always in the village a half dozen women who have their sun-bonnets hanging near so that at the first item of news derogatory, they can fly out and cackle it all over the town.

Michael L. Sullivant, formerly of Columbus, Ohio, and well known as having been the possessor of immense tracts of farm land in different parts of the country and particularly at Burr Oaks, Illinois, died suddenly on the steamer James Guthrie, at Owensboro, Ky., Tuesday night. He had been visiting his daughter, Mrs. W. A. Hopkins, at Henderson, Ky., and was on his way to Springfield, Ky. to visit another daughter, Mrs. E. L. Davidson, when he was taken suddenly ill. Five minutes before he fell from his chair dead he was in good spirits and apparently in good health. The remains will be taken to Illinois for interment. A wife and seven children survive. It is stated that he was at the time of his death owner of forty thousand acres of land in Illinois.

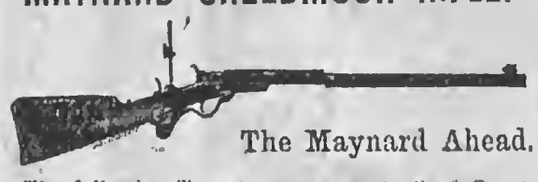
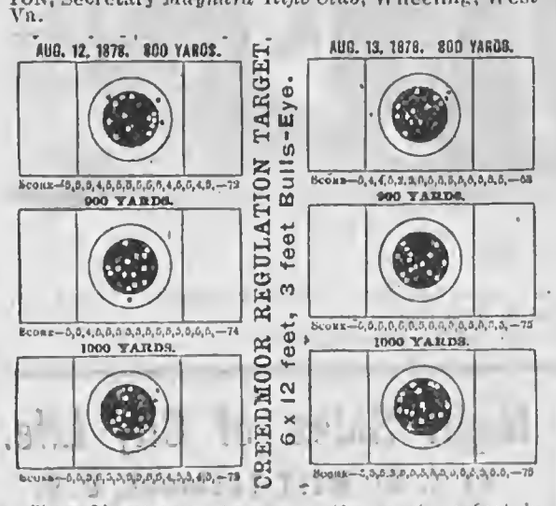
MAYNARD CREEDMOOR RIFLE.



The Maynard Ahead.

The following Targets were made by Prof. CHAS E DWIGHT of Wheeling, West Va., on Woodland Range, August 12th and 13th, 1878, with a *Maynard Long Range Rifle*, and are the MOST REMARKABLE ON RECORD. The grand total of 447 in a possible 450,—90 shots at the long ranges,—has never before been accomplished by any Rifleman, or Rifle, in the world.

These scores were made in the competition for position on the American team for 1878; open to all native-born citizens of the United States, and were shot under the rules of the N. R. A., Fulton position, no sighting shots at either distance. These scores were all witnessed and sworn to by JAMES D. STANTON, Secretary *Maynard Rifle Club*, Wheeling, West Va.



THE MAYNARD ARMS are the most perfect in workmanship as well as accuracy, of any make in the world, *particular attention being paid to the fine shooting as well as the mechanical qualities of the Arms.* For full particulars and price list, address

Wit and Humor.

WHAT is wanted just now in Europe is some great composer who can produce a few overtures for peace that all the crowned heads will listen to.

"Do you ever have malaria here?" said a lady to an illiterate hotel-keeper. "Yes," said he, "we'll have it to-day, for I've got the best French cook in the city.

"JULIA, my love, what do you think of my moustache?" Julia (looking earnestly at him for a moment).—"Why Alfred, where is it? Why didn't you bring it with you, darling?"

NEW READING.—A young man of twenty recently took to wife a Pennsylvania widow of fifty, the sole proprietress of a couple of paying petroleum wells. Of him it may be truly said that "he loved not wisely, but two wells."

TEACHER (to class in geography)—What does geography describe? The earth, on which some live, some exist, and others starve. How is the earth divided? By earthquakes. Of what does the earth consist? Land and water, and brickbats. Class may sit down.

THE Norristown Herald prints a poem headed "Lover's Leap." Of course they do. Nor are they to be blamed, either, when the old man suddenly opens the door at 11,30 P. M. and glares in on them like a modern allegory of wrath, with a lighted candle in one hand and a heavy cane in the other.

"'Pears to me you've got a putty slim fire, Miranda," said a spindling youth, the other night, as he sat in front of the fire-place by the side of a buxom young lady, who had no earthly use for him. "Yes," she said, as she wickedly looked at the floor behind him, "it's about all you and the fire can do between you to get up a respectable shadow."

A Source of Much Bodily Evil.

If the habit of body becomes irregular, much evil is inflicted on the system. The stomach becomes dyspeptic, bilious symptoms develop themselves, the circulation is contaminated, and the nerves share in the general disorder. It is of the utmost importance that the bowels should be thoroughly and speedily regulated when they grow derelict. The corrective agent best adapted to this purpose is Hostetter's Stomach Bitters, a wholesome, non-griping vegetable laxative, worth all the rasping cathartics invented since the time of Paracelsus. People who have been in the habit of using blue pill, calomel and other drugs and cheap nostrums for constipation, should abandon such hurtful and useless medicines, and substitute for them this pleasant and gentle aperient, which not only produces the purgative effect naturally, but also strengthens while it regulates the bowels, stomach and liver. It moreover cures and prevents intermittent and remittent fevers, gout, rheumatism, debility and urinary troubles.

Floricultural.

TILLANDSIA USNEOIDES.

This plant, a representation of which is given in the accompanying figure, plays a much more important part in commerce than one would suppose, judging from its apparently frail structure and humble appearance. It was named after the Swedish botanist, Tillands, and is also known as Florida Moss, Spanish Moss and Black Moss. It loves a warm, damp atmosphere and grows in abundance along streams, in marshes, valleys and low lands in all the Southern States, especially in Southern Georgia and in many parts of Texas, Louisiana, Alabama and Florida. Here it hangs suspended from the branches of the trees in long, twining, tangled bunches, having somewhat the appearance of an old man's beard, to which it has, not inaptly, been compared.

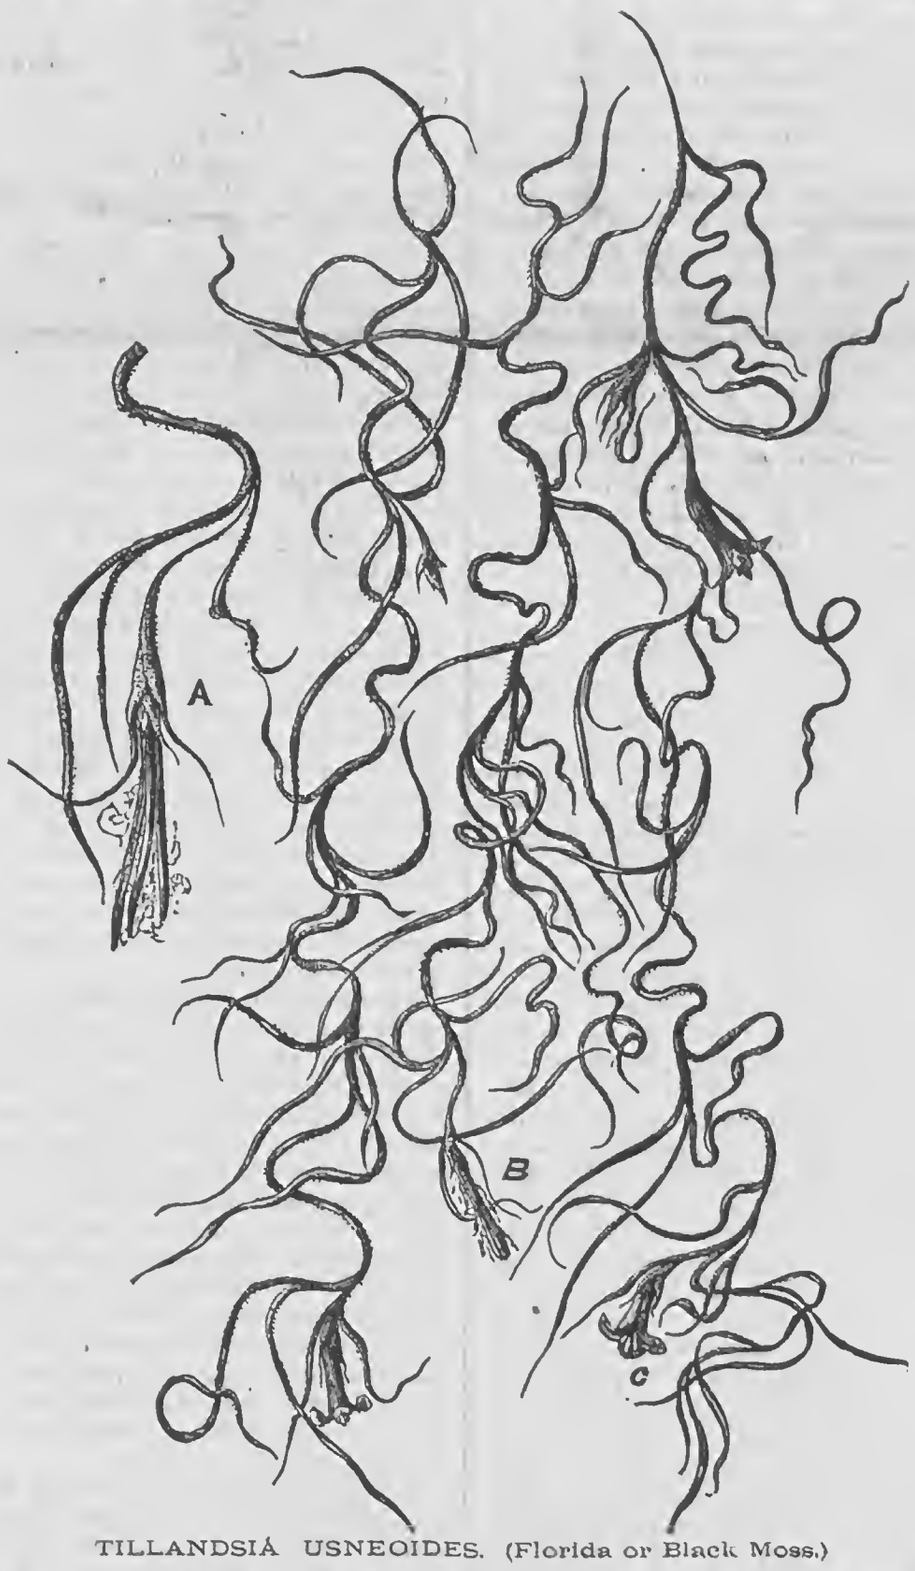
It is an epiphyte, or air plant, taking its nourishment from the moist air, and, as some suppose, also from the trees upon which it hangs, though, most likely, the feeble roots it spreads on the bark of these are more for support than for the absorption of food. Where but little is found, it has an airy, decorative effect, but where it grows in dense masses, filling the woods far and wide with heavy festoons that move lazily in the breeze and form barriers impenetrable to the rays of the sun, it has a somber and melancholy effect, that perhaps has given rise to the name of Indian Death Cloud, by which the Southern people sometimes denote it.

The plant is of a grayish color, and, as seen in the engraving, consists of a yarn-like stem with many branches, and tiny scattered leaves from one to two inches long. The epidermis is covered with a fuzz not unlike hoarfrost. Each internote, or piece of stem from leaf to leaf, is twisted. The flowers which appear at the end of the branches, are small, of a yellowish-green color and perfect, arranged on the plan of three, having three sepals, three petals and six stamens. From its mode of growth and general appearance, one would hardly take it to be so closely related to the Pine-apple as is the case, both being members of the family Bromeliaceæ.

At A is seen a ripened fruit split open, ready for the discharge of the seeds. B is another pod that has not attained its full size, and at C is seen an expanded flower, all of natural size. The fruit consists of three carpels, sometimes two, and sometimes several seeds provided with a coma or prolongation of the outer seed-covering into a hair-like mass by which they can be floated in the air. Though it is not particularly attractive, yet, for the oddity, it is often grown in greenhouses, and nothing is simpler than its cultivation. All that is required is to hang it up on a piece of wood or any growing plant, and to keep it warm and moist. It will not grow if planted in a pot, or even if it lies on the soil; it must be suspended so that it can grow downwards.

In the cities, and other places where evergreens are scarce, it is much used to decorate churches, private and public buildings for Christmas and New Year's, though it seems to us a very gloomy sort of decoration. Large quantities are gathered in the fall for this purpose, packed in barrels and shipped to the Northern seedsmen and florists, who bind it into festoons and other forms. A barrel sells in New York at about Christmas for not less than $2.50. But the use to which it is most extensively put, and which gives it by far the greatest value as an article of commerce, is as a substitute for horse-hair, to fill mattresses, chair-seats, saddles and cushions of all kinds. The inner part of the stem is peculiarly fit for this purpose. It is tough, flexible, durable, black and curly, and the best of it, when well prepared, can only be distinguished from horse-hair on close examination.

The process of preparation has been considered somewhat of a secret, and in the North, at least, has not been well understood. Though several methods are used, they all have in view the removal of the outer covering, or bark, of the stem. To accomplish this, it is sunk in shallow water, or narrow trenches are dug in the ground, into which it is packed in thin layers, where it remains for several months till the coating has decayed, when it is taken up, shaken, boiled, dried and beaten with sticks or machinery till all dirt is removed from the black inner stems. Or it is packed in large steam-tight vats, and for some time exposed to the action of steam, when it is washed, dried and beaten as before. Thus prepared, it is an article of export, and as the production involves simply the expense of gathering and preparing it, some profits may be realized. Here, in New York, upholsterers pay from three to eight cents a pound for it, according to its cleanness and quality.



TILLANDSIA USNEOIDES. (Florida or Black Moss.)

Our illustration is drawn from a quantity of this singular plant, which has been hanging in our office for a long time.

WINTER FLOWERS.

WILLIAM FALCONER.

Out-of-door plants being now locked in frost and mantled with snow, our windowgardens, frames and greenhouses only, yield us our posies. And with the multitude of kinds of winter-blooming plants suitable for this purpose, there is no more need of a dearth of blossoms in the little tenements, than, proportionately, in the conservatories of the millionaire. If under the poorest circumstances we cannot have many flowers, we can have green leaves and rambling vines, for isn't the wandering English Ivy as highly appreciated by fastidious and common folks, as are Geraniums, Pansies, and other floral paraphernalia? And there is the Wandering Jew that will flourish on the mantel-piece, the brackets in the corners, or the window, and is perfectly at home in earth or in water.

In order to obtain the best results from the means at our command, we ought to notice several appropriate conditions: The flower-pots, be they those pots proper, old teapots, damaged mugs, fruit punnets, lard tins, pickle-cans, blacking bottles, nail kegs, or whatever else you please, should have holes or cracks enough at the bottom to permit a ready egress of water; the drainage in the bottom of the pots, as potsherds, oyster-shells, small stones, or pounded brickbats, should be set in field-drain fashion—the larger ones in the bottom, then a sprinkling of small ones, and this nicely covered over by half-decayed leaves, moss, or other rough material, so as to prevent the soil from clogging the drain. The earth used in potting should be full of fiber or gritty; in fact, such a compost as will not become plastic but instead, always be free and open, and through which water will percolate readily. When potting your plants, put big plants into as small pots as you can get them, and smaller plants into proportionately smaller pots. Over-potting is a ruinous evil. So is over-watering. If your plants look sickly, stint rather than increase the supply of water, and never prescribe manure or manure-water for a ghost, else the phantom will probably die, or become more indisposed, at any rate. Feed robust plants liberally, but delicate or declining subjects treat sparingly. As a rule, plants treated as annuals, as Cinerarias and Primroses, require the sunniest window corner, and though Geraniums, Carnations, and the like, love as good a place, they will submit pretty well to less favorable treatment. But in all cases, the flowering plants should have window preference over German Ivies, English Ivies, Climbing Fern, Wandering Jew, Ferns, Myrtles, and other evergreens. Though Cactuses and other succulent or thick-leaved plants love the sunlight, they will winter very well in comparative shade, providing they be kept dry.

Daphne odorata is nearly past; it blooms copiously as a pot plant, but more so when planted out in a cool greenhouse. If Callas are strong and not over-potted, they will be in bloom now; if they be in small pots and have made many roots, feed them extra. I much prefer the old strong-growing kind to the dwarfer sort. Despise the notion of applying hot water to make them bloom, also of chopping off their leaves. Chinese Primroses are in all their glory. We grew ours in a cold-frame from the seed-pan to the flowering period, and now have splendid plants full of large, bright blossoms. I like the single better than the double ones. Cyclamens are approaching their best. Some growers dry them off in the summer and pot them afresh in August; others plant them out in the open garden, but the best Cyclamens I know of just now, were planted out in a cold-frame in the summer time—keeping the corms a half inch or so under ground—and lifted, shaken a little, and potted off about the last of August, this time having the corm rising a little above ground. Cinerarias are coming in. They are splendid greenhouse plants, but not so good for the window. They are big, bulky things, extremely subject to green-fly, very thirsty and hungry, and a dry or hot atmosphere curls their leaves. Sown about the end of June and grown on in cold-frames till the end of November, then removed to a cool greenhouse, they will yield flowers from January till April.

Stevias and Eupatoriums are in season, but I don't favor them much. Planted out in early, and lifted and potted in late summer, a rich soil, lots of water, and pinching seem to suit them well. Poinsettias, with their large and glowing rosetted bracts, are going slowly by, and should be kept drier, then placed under the stages on their sides till spring. They are better greenhouse than window plants, as is likewise Euphorbia fulgens, with its fiery wreaths. Bouvardias blossom freely through the winter; so do Heliotropes. Of the last, I prefer old pot-grown plants that were closely cut in last September or October, and allowed to break gradually; afterwards, cutting off the flowers will keep them within bounds.

TILLANDSIA USNEOIDES, OR FLORIDA MOSS.

JAMES TAPLIN.

This is a curious, though not very showy plant which drapes the trees in Florida, and more or less in other swampy places in southern States. It is an admirable packing material, and is also used for filling mattresses and pillows for sofas and beds, for which purpose it is probably second to nothing but horse hair, than which it is much cheaper. As a decorative plant for rooms it is very satisfactory; if obtained alive it will grow without trouble in positions unfavorable to vegetation generally, and although not very showy, it i very ornamental. In a living state I believe it is not in the trade, except when obtained from

Southern florists, who make a specialty of rare and curious plants from that district, so that it would generally be difficult to obtain plants from the North, except where specially ordered. I am well aware that this class of plants, like the Californin Gymnogramma triangularis, can be dried out to apparent death, and still grow under favorable circumstances, and also that the above Tillandsia, when dried, is very ornamental for the decoration of rooms; in fact, it is scarcely possible for a novice to distinguish between the dried plant of commerce and the living plant for ornament, but the difference can be readily seen when it is placed under circumstances favorable for growth.

The plant, naturally growing on trees, like Orchids in the tropics and Moss in the North, does not require soil of any kind for its support, but as it grows most luxuriantly in dense swamps, it requires a moist atmosphere to secure the best success with it. As it is difficult to give this in rooms, the next best substitute is to peg it over baskets or pots of plants which require frequent watering, and it will then grow freely and add a fresh feature to the room. It will also grow freely on branches of trees or blocks of wood, suspended from the roof and occasionally dipped in water, and being a plant of much vitality, if it is neglected for a time, it soon recovers and recommences to grow.

Middlesex Co., N. J.

Dairy Husbandry.

THE PENNSYLVANIA DAIRYMEN.

Necessity of organized discussion of dairy matters; cash versus credit system of selling; disadvantage of lack of uniformity in dairy products; Pennsylvania at the International Dairy Fair; best forms of dairy buildings.

The sixth annual meeting of the dairymen of this State was held on the 5th and 6th of this month at Meadville. This Association, although younger than those of several other States, has made rapid progress in organizing the dairy industry. Some of its leading men have seen clearly the necessity of beginning reform at the foundation—among the dairymen themselves. And to this end they initiated a course of lectures to be given in dairy districts, so that dairymen might get such instruction as would enable them to reform their faulty practices in the keeping and management of cows and the handling of milk. They determined to make a strong effort to bring Pennsylvania up to the New York standard of dairy goods; and, at this meeting, they pointed with gratification to the honorable position secured by the State in the International Dairy Fair. It was stated here that the course of lectures given by Prof. L. B. Arnold was heard by some 5,000 dairymen, and that it had awakened a high degree of interest, and was likely to result in much improvement in their practices. Yet the members of the Meadville Board of Trade reported that the quality of the dairy goods was so wanting in uniformity that they could not be purchased without a strict examination of each lot—that one lot might be of a very fine quality and the other very inferior. The President of the Association, Mr. A. M. Fuller, who has been most energetic in promoting its interests, gave a very clear opening address, in which his recommendations were generally very sound—and especially in urging primary organizations of the factories, where the patrons may be brought together every month, and hold discussions upon the proper management of their dairies. The patrons of a factory are all naturally interested in everything relating to the conduct and management of the business, and, as a body, they should control the action of its individual members, as the delivery of bad milk at the factory from a single cow may fatally injure the make of a vat of milk. This is a most important and needed improvement in factory management—each factory should become a dairy school for the mutual education of the patrons.

In reference to the proper system of disposing of dairy goods, Mr. Fuller was inclined to adhere to the present method of selling on commission, stating that the selling for cash of all the dairy goods offered was "simply impossible." He held that there was not money enough, at command, to buy them. This question raised a lively discussion. Many of the factory-men present thought all cheese should be paid for in cash. Mr. Carpenter expressed himself strongly against the credit system. He charged it had brought disaster to large dairy districts, and thought that all sales ought to be brought to the test of cash, and if there is such over-production that it could not be sold except on credit, dairymen ought to know it.

Prof. Stewart, on being called out, said he thought the credit system in selling dairy products had resulted in much loss; that the patrons of a factory in the interior could know nothing of the responsibility of a merchant in New York, and that dairy goods should be sold the same as cattle, hogs and sheep ar sold by the farmer—for cash. The hog products bought for exportation amounted to four times all the dairy products exported; the purchase of cattle required more money than the purchase of dairy products, and yet there was money enough to pay the farmer for both hog products and cattle on delivery. He maintained that there was really no valid reason why dairy products should not be paid for in the same way. He urged that the present system was simply a scheme by which the dairymen of the country furnished capital for the New York butter and cheese merchants to do business on.

Mr. Harris Lewis thought the New York commission merchants, as a class, were high-minded, honorable men, and thought that much less money had been lost by them than by those who purchased the goods, nominally for cash or 30 days, and failed with large obligations.

Prof. Arnold was opposed to the credit system and thought there was money enough to buy all the dairy goods the market required.

S. A. Farrington, a local buyer, said the real difficulty was the want of uniformity in the goods. He admitted that all known first-class goods would be taken for cash readily; but when the character of the goods was doubtful, they could not run the risk of buying except at very low figures. He referred to Harry Burrill, of Little Falls, who had dealt in dairy goods for 40 years, and had always paid a hundred cents, but was sometimes forced to ask indulgence for a few months. After a free expression of opinion, it was evident that the balance leaned towards cash sales and the breaking-up of the credit system.

At the evening session Hon. Harris Lewis gave a very instructive address upon dairy stock and its management. Had there been a large attendance of the rank and file of Pennsylvania dairymen, they might have listened to his suggestions with great profit. But, unfortunately, the audience was made up principally of factory managers, who could only receive his suggestions and carry them to their patrons.

At the morning session of the second day Mr. S. A. Farrington read a critical paper upon the International Dairy Fair, to which he awarded due credit for its bringing together a most instructive illustration of the dairy resources of the country, and he showed under what difficulties this Pennsylvania Association had contributed its share to the show. They had found the factories so unwilling to undertake the display of their goods at the Fair, that it became necessary to select a few cheeses from each of the best factories and purchase them for exhibition, and under such difficulties did the State come to its honors in the Fair.

After this paper, Prof. E. W. Stewart delivered an address upon "Dairy Buildings and their Management." He said in the future only skill could win; that dairy products had now reached such a low point in price that only the best article could pay a profit on cost of production. That it was now imperatively necessary that the dairyman should manage his business in the most economical way—that he must suffer no wastes by exposing his cows in cold stables or, worse, to the open air, which would require the consumption of so much extra food and necessarily reduce the milk production. He showed how easily and cheaply the dairyman could raise up his barn and place under it a tight concrete wall, making a warm basement for stabling his dairy stock, where the consumption of food to keep the animal warm would be reduced to a minimum. He showed how important it is to avoid nervous excitement in milch cows; that they should be watered in the stable where they could not be molested. He gave an illustrative plan of the manner of watering in the stable, and then showed the economy of giving water at 60 degrees temperature, instead of from a trough in the open air at a temperature of 32 to 34 degrees. He said that it required food to warm this water in the stomach of the cow, which is all saved by watering cows in a warm stable. He dwelt at some length upon the cheapest and best form of barn, which he thought to be either square or octagonal. In such a structure the amount of lumber and labor would be much less than in a building of the ordinary form, and the octagonal form would be much more compact and convenient, requiring no interior posts or beams, which obstruct labor. He also described his mode of tying, which is simple and cheap, giving the cow great freedom, and at the same time holding her in the center of her place, so that she cannot annoy her neighbors. His self-cleansing stable or platform, on which cows keep perfectly clean, saving all the labor of cleaning the stable, excited much interest.

Prof. L. B. Arnold read a report on butter exhibited at this Convention, and the points he made called out many questions, which he answered in a very clear and familiar way. He urged more attention to the proper washing of butter with brine and proper packing. He thought suspension in brine the best method of packing butter when it is to be kept for any length of time. He said when properly made and packed in hermetically sealed cans, it will keep as long as canned fruits.

The officers of this Association for the ensuing year are: J. H. Lenheart, of Meadville, President; J. M. Bigger, Cambridgeboro, Cor. Secretary; A. M. Fuller, S. A. Farrington, S. H. Findley, Executive Committee.

This is truly a lively Association and destined to revolutionize the dairy productions of Pennsylvania. S. E. W.

POISONOUS CHEESE.

T. H. HOSKINS, M. D.

It is a well-known fact, not unfrequently brought to public notice in the newspapers, that occasionally a cheese is found which possesses poisonous properties. Record is made of very severe and occasionally fatal cases, where the symptoms could be attributed to no other cause than the eating of cheese,—where, indeed, every individual partaking thereof was more or less affected. Some five years ago almost the entire Legislature of the State of Vermont, on the occasion of an entertainment offered to its members at adjournment, were thus made sick, and, albeit some sport was made of it at the time, it was by no means a laughing matter, though all who were affected by the poisonous cheese, recovered.

The symptoms of this cheese-poisoning are: nausea, followed by violent and protracted vomiting; pain in the bowels; strong purgative action and great prostration, with fever. When the patient recovers there remains for some time a tenderness and soreness of the bowels, indicating continued inflammation. The attack, to the inexperienced eye, very closely resembles one of cholera morbus; while to the physician it bears some of the marks of arsenical poisoning. These facts have very much misled the public, so that in the one case the idea has prevailed that no real poisoning occurred, but that the symptoms simply indicated the over-eating of indigestible food, or the indulgence in unaccustomed beverages; while, on the other, the attending physician has been led to suspect carelessness in the use of Paris-green, or in the application of arsenical fly-poison to the outside of the cheese.

My attention, both as a farmer and as a physician, has been repeatedly called to cases of this kind, and I am fortunate now in being able to lay before the readers of the RURAL the account of a case in which the circumstances give a very satisfactory clue to the real nature of the poison of cheese.

Mr. Edson Tracy of Brownington, Orleans Co., Vt., is one of the best dairymen of his locality. This is attested by the fact not only that he has had a large experience as a cheese-maker, extending over a period of twenty years, but that cheese of his make is in great demand by private families for home use, and has repeatedly received the highest award when exhibited at the County Fair, where the committee is composed of skilled lovers of dairy products. On the third day of July, 1877, Mr. Tracy began to make cheese, and continued the manufacture for forty days, making twenty single and ten double cheeses. When these cheeses were suitably cured for market—about the 25th of Sept.—they were sold, and out of the number five of the twenty single cheeses were found to be poisonous. The symptoms produced were those usually noted, and the severity of the attacks varied, in some instances being so severe that fatal results seemed imminent; but, fortunately, all those affected finally recovered.

By reference to Mr. Tracy's day-book it was shown that all these five cheeses were made in one week. The same record shows that the next week one of the cows of Mr. Tracy's herd began to give bloody milk, and that this milk was not afterwards used. This was on the 15th of July. The cow became very sick, and was near losing her bag, which, after swelling to the size of a six-quart pail, broke, with a profuse discharge, after which the animal slowly recovered. This abscess Mr. Tracy attributes to an external injury to the cow's bag. *Every cheese made from milk of which that from this cow constituted a fifteenth part*—there being that number of cows in the herd—*for five days before the milk itself gave evidence of anything wrong, was a poisonous cheese.*

Now, a pathologist knows that, in all probability, before *blood* appeared in that milk, warning Mr. Tracy of its unfitness for use, and that something ailed the cow, *pus* had existed, and had passed from the diseased gland into the milk ducts, and thence to the pail and the cheese vat. In this pus the microscope would undoubtedly have revealed organic germs capable of multiplication to an indefinite extent. The milk in cheese-making, is not subjected to a heat exceeding 130 degrees, and consequently these germs are not destroyed. On the contrary, they are placed in conditions eminently favorable to their growth and multiplication, so that we cannot doubt that each cheese made from this milk, became intensely charged with them, producing a mass of substance similar in nature to that putrescent animal matter upon the action of which in the blood, is dependent that class of so-called zymotic diseases of which typhoid fever and diphtheria are examples. I say "similar," because as yet we have no certainty that these poisonous germs are the same, no matter what form the disease produced by them may assume; neither are we sure that they are different. We only know that when they are taken into the body in sufficient quantity, and under ordinary circumstances, serious disease follows. We have had a striking illustration of this in the severe epidemic occurring, the past summer, in the town of Richford, Franklin County, Vermont, among those using water from a public well in the village street, into which sewer water obtained access, occasioning the death of many individuals.

It is something to know *whence* comes the poison of poisonous cheese. The history of the case I have given, shows that it comes from disease-germs in the milk itself, originating from suppurative inflammation in the milk-producing organ—the cow's udder. The lesson to cheese-makers is plain:—never use milk from a cow which shows tenderness, redness, or swelling of her bag, even though the milk may exhibit no ill signs to the eye. *The germs of disease are there before blood appears in the milk.* Run no risks; for serious consequences to health, life, and your own pocket and reputation may ensue. Customers are very shy of buying again from a dairy that has once produced and sold "Poisonous Cheese."

Orleans Co., Vt.

Sheep Husbandry.

HINTS FROM AN EXPERT ABOUT THE MANAGEMENT OF COTSWOLDS.

In the Register of Cotswold sheep, just published, the Hon. C. P. Mattocks of Maine, has a valuable essay on the above subject, full of information and practical suggestions, the principal of which are here briefly condensed; as nearly everything that is said applies to other breeds of sheep also:

Sheep need freedom of action and variety of feed more than any of our domestic animals. In winter they require shelter only against heavy rains and melting snows, as even a cold storm is better than a heated barn, at least for Cotswolds. A rough shed, facing the south and capable of being closed during rain and snow storms, is quite sufficient. They should then be kept in small flocks, have spacious yards to roam in at all times except during storms, and be fed in racks out-of-doors in ordinary weather. Where cold storms are rare, and the ground is free from heavy snow, artificial shelter is hardly necessary, for Cotswolds at any rate. Lambs as well as bucks should be kept by themselves. In lambing time warm quarters should be provided, and so should a warm hospital for old, feeble or wounded animals to which special feed and care should be given. Sheep should never run or feed with other stock in winter, and if it is desirable to feed to them the waste of cattle and horses, it should be gathered and fed to them apart. Flocks of a dozen or so of Cotswolds are best in winter, and of under a hundred in summer, although larger flocks have been sometimes kept successfully.

When confined during inclement weather, the best substitute for pasturage is a liberal supply of roots—turnips or mangolds—for these add to the feed of dry hay what sheep lose by their change from grass to hay. In the absence of roots, a ration of a pint of oats daily, per head, is recommended, and also the substitution, at one meal a day, of corn-stalks, oat- or pea-straw instead of hay. Corn should be fed to them very sparingly, while oats and peas can be safely and profitably fed in considerable quantities. Shorts and cotton-seed meal may be fed to advantage, if not too high-priced. Although sheep may be successfully wintered without water when they have access to clean snow, it is a cruel practice. If a liberal supply of salt is not always at hand, it should be given them at least once a week.

Tar, for the sheep to lick at will, is excellent. Smearing the nose with it in summer, prevents the deposit of eggs in the nostrils, which may afterwards develop into "grub-in-the-head." The practice is also good in winter, for the medicinal qualities of tar act as an antidote against cold and catarrh, besides benefiting the sheep in other respects. A solution of one ounce of carbolic acid, to a gallon of water, used once a week by turning a teaspoonful down each nostril, will soon cure a discharge at the nose, care being taken not to allow the sheep to swallow the mixture.

Breeding ewes should be taken from the flock two or three weeks before lambing and fed upon roots, mixed with oatmeal and shorts. The lambs when a month old, may be fed upon bran, oatmeal, or even a little corn-meal, in addition to the milk from the mother, and this can be most easily done by placing the extra feed in a small pen with an opening large

enough to admit the lambs, but small enough to exclude the ewes. With warm lambing pens and good care, the lambs may come even in the cold North, as early as February; in the absence of suitable conveniences, however, it is far better that they should be dropped when the sheep are turned out to pasture in May. In spring, it is advisable to turn the sheep into the pasture for only a few hours each day, at first, lest a too sudden change should induce the scours. The ewes should be thoroughly "tagged," that is, the wool should be cut away under the tail down to, and around the udder, so that the lambs may suck more easily, and to prevent the accumulation of filth, which would otherwise seriously impede the movements of the animals.

Within two weeks after the ewes are sheared, the lambs should be dipped in a decoction of tobacco and water, strong enough to kill the ticks, seven pounds of plug tobacco being sufficient for a hundred lambs. Or a solution of arsenic and water may be used, made by dissolving three pounds of white arsenic (powder) in boiling water, and adding forty gallons of cold water. In this case, the waste wash must be put where no animal can drink it, as it is deadly poisonous, and the hands of the persons who dip the sheep must be free from eruptions and bruises. Lambs' tails should be cut within a fortnight from their birth. Buck lambs should be castrated only when they have become strong enough to endure the operation, and sufficiently developed so that the owner can determine which should be reserved for breeding. In summer the sheep should be changed from one pasture to another, as often as possible. If the farmer has only one pasture, let him fence off a part of it, thus making two, so that his flock may have the necessary change.

The Herdsman.

A HOT-BED OF PLEURO-PNEUMONIA.

BLISSVILLE, a small village of Queens County, Long Island, has lately gained a wide notoriety in this neighborhood on account of its possession of a large distillery and several packed cow stables connected with it. The latter are wooden buildings containing between 700 and 800 cows, which are fed exclusively on the swill from the former. Some of the animals belong to Graff, Fleischmann & Co., owners of the stables and distillery, but most of them are boarded there by milk-dealers who get from them the supply of "Pure, Orange-County Milk" they sell to their customers in the neighboring cities of Brooklyn and New York. The cows are tied in opposite rows of stalls varying in width from 37 to 42 inches, the ropes being barely long enough to allow them to lie down. Between the rows of heads facing each other, there is just sufficient room to allow one to pass, but behind the animals are broader spaces from which the fast accumulating excrement and urine are swept away once a day. Evacuations are almost constant, as the nature of the food stimulates the kidneys so as largely to increase their secretions, besides rendering the fæces very abundant and almost liquid. In front of each row is a trough for distillery swill which is supplied, at a temperature of 109 deg. Fah., from a large tank, by turning a cock in a connecting pipe. The only provisions for light and ventilation, are the doors. When these are closed, the interior is dark and the air noisome. The cows never stir from the place. From the moment they first enter it until they cease to give milk in satisfactory quantity, and are fattened for the butcher, they take no exercise beyond those three-by-ten-foot stalls, get no change of food from that unwholesome swill, and breathe over and over again that filth-reeking atmosphere, until the lungs become diseased, the body feverish and the udder dry or nearly so. Small wonder that the wretched victims of cruelty and greed have become a source of sickness in the community, of possible infection among other herds, and of danger to our live-stock export trade. For right here is the most notorious hot-bed of pleuro-pneumonia in the country.

About four weeks ago the attention of the Brooklyn Board of Health was directed to the condition of the cows in these stables by local reports of the presence of pleuro-pneumonia among them, and by an unusually high rate of mortality among the children of the city, which was reasonably attributed to their use of milk from the diseased animals. The newspapers of New York and Brooklyn, always on the outlook for something sensational, daily filled columns with highly-colored accounts of the severity of the disease here prevalent, utterly regardless of the injury their exaggeration was pretty sure to inflict on the vast cattle interests of the country in the present critical state of our live-stock trade with Europe. A thorough investigation by the veterinarians attached to the Boards of Health of this city and Brooklyn, and by the Governor's Commissioner, Prof. Law, of Cornell University, leaves no doubt of the existence of a mild type of pleuro-pneumonia among the animals; but, owing to their strict confinement at all times to the stables, even if the disease had reached a contagious stage, it could hardly be communicated to stock designed for exportation. By orders of Governor Robinson the stables are now rigidly quarantined and effective measures have been adopted for stamping out the pest here and elsewhere throughout this State. A few days ago we visited the stables ourselves, and, although permission to examine the animals was refused, we saw and learned from the villagers enough of the condition and surroundings of the inmates of the buildings to enable us to guarantee the correctness of the above account of the matter.

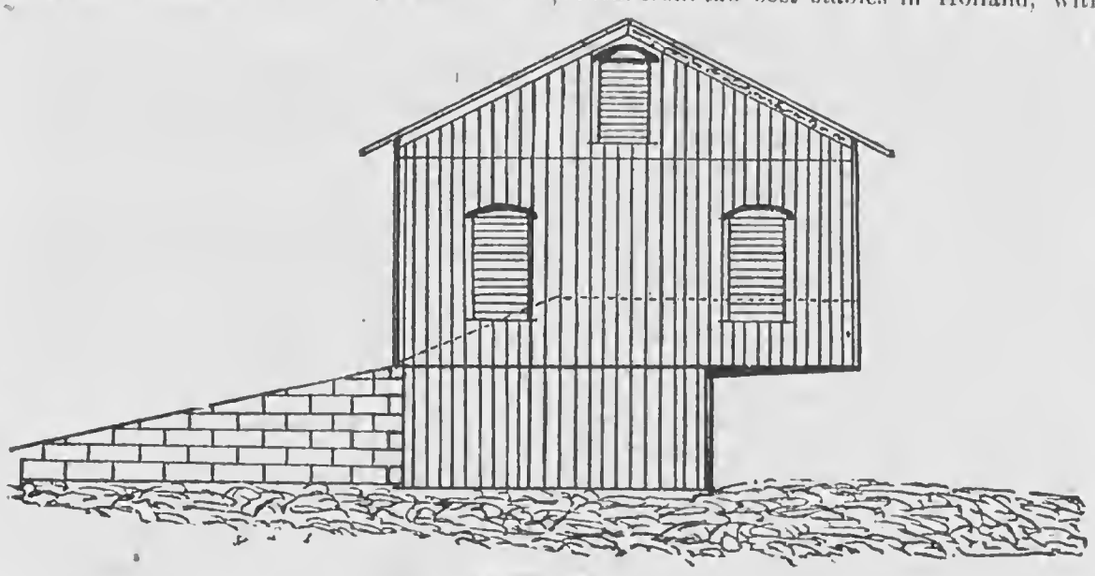


FIGURE 6.

STOCK NOTES.

JOTTINGS.—Of the Polled Angus cattle the North British Agriculturist says that, although it has no intention of pitting animals of that breed against Short-horns for prepotency in improving any kind of cattle with which they are crossed, or of putting them alongside either the Ayrshire or Jersey for milking properties, yet no pure breed will mature so early, carry the same quality and quantity of beef, and realize so much for hundredweight as the improved Polled Angus or Aberdeen. . . . Very few, if any, Norman-Percheron horses were imported into this country before 1856, yet the Stud-Book of that breed, issued a couple of months ago, contains a list of 701 imported horses and mares, while the number of native full-bloods bred in this country is 153, making a total of 854 registered in the volume. As, for various causes, a considerable number of imported animals have not been entered, it is held a safe estimate that the total number of Norman-Percherons that have crossed the Atlantic, mainly within the last ten years, is not less than 750. . . . Mr. McCombie's celebrated herd of Polled Angus cattle were lately sold, except the group illustrated in our last issue, which gained a wide reputation by carrying off a number of prizes at the Paris Exposition. Forty-four animals in all brought $9,354, or an average of $210 each. The highest price of a single beast was $512. One family of twelve brought an average of $312 a piece. The price of polled cattle of late years has been steadily advancing across the Atlantic. . . . The English Agricultural Gazette, in refuting the assertion of an American writer to the effect that if Short-horns were good milkers dairymen would long since have found it out, says that they have found it out in England. In the North, the Midlands and the West of that country it says the majority of dairy cows are cross-bred Short-horns, and many pure-bred Short-horn dairies are kept. Moreover, town dairymen pay higher prices for Short-horns than for any other kind of cows on account of their known power of giving abundant milk and of quickly fattening when they cannot be kept profitably in the dairy, either through becoming barren, loss of teats or advanced years. It also gives instances of the recent sale of two Short-horn dairy herds, one of which contained 31 heavy milkers which sold for an average of $120 each, while the other, described as chiefly good dairy cows, brought an average of $92.50 apiece. . . . An Illinois Short-horn breeder reports to the National Live-Stock Journal that his sales during the past year amounted to 1,088 head, at an average of $125.91 each, or a grand total of $136,995. He says that although prices are comparatively low, yet the outlook is not discouraging, as there is a greater demand than usual for young bulls and cheap high-grade heifers for the Western country. . . . The town authorities of New Castle-on-Tyne, England, urged on by the jealousy of local and Irish cattle dealers, have been guilty of a petty display of opposition to the importation of American meat into that town. Some time back they let a cattle-shed to the local agent of the Liverpool consignees of Mr. T. C. Eastman, one of our largest meat exporters whose annual importations to the north of England, amounting to 1,500,000 pounds, have kept down the prices of meat in that section. This shed was fitted up as a market for American meat. The other day the authorities, without any previous notice, tore off the sides of the building just as a consignment of meat was about to arrive. The American consul has protested against the unjust action and is seeking redress. . . . Smith and Powell, of Syracuse, N. Y., have lately imported 20 Holstein heifer calves, which were selected for them from the best stables in Holland, with special reference to the superior milking qualities of their ancestors. As a lot, they are said to show great uniformity, being finely formed and having all the marks and indications of deep milkers. With this addition, the Holstein herd of this firm now numbers nearly 60 full-blood animals of various ages. . . . The American Stockman says that, judging from the many old, flabby sows and light, unthrifty hogs just now coming into the Chicago market, it seems not unlikely that farmers, discouraged by recent low prices, are parting with their breeding stock, and that if the supply continues at the present rate, it would not be surprising if the crop should be short next fall and winter. Week before last we said that on this account among others, farmers might reasonably look forward to higher prices for hog products next season, and both the Stockman and National Live-Stock Journal are of the same opinion. Very inferior hogs which, a few weeks ago, would only bring $1.50 per hundred in the Chicago market, are already selling for $3.50, and the extra drain now from the tributary country on this account, is likely to contribute to the same end.

Rural Architecture.

A FEW AXIOMS IN BARN-BUILDING.—2

W. I. CHAMBERLAIN.

I WISH to call attention to a few more self-evident truths involved in the structure of barns.

4. It is economy to utilize all the space covered by the roof. This seems so evident that everyone says "Why, of course!" And yet the owners of the greater part of the grain-barns of Ohio and of many in Pennsylvania, seem to me to disregard it. Fig. 6 gives an end view of the ordinary Dutch grain-barn of central Ohio and of some parts of Pennsylvania. Nearly one-third of the entire basement story—usually the south third; and always towards the barnyard and straw stack,—is left uninclosed, in the form of an over-shoot or "overshot," as represented in the figure. The rest of the basement, even in barns as large as 45x100 feet, is all devoted to stabling for the stock, and on a grain farm the stock stabled there are seldom more than six or eight horses, as many cows, and sometimes a few sheep. The part of the barn left uninclosed, would be abundant to stable these, and the other two-thirds of the basement would store fifty tons of hay, in a barn 45x100 feet. I have sometimes asked Dutch farmers:

"What's the use of the 'over-shot,' anyway?"

"Vy, mynherr, elery pody has te ofer-shot!"

"Yes, but what for? What do you use it for?"

"Oh! nottings, nottings mooch. But he keep te toorvays nice and dhry alvays!"

And that is all! I have seen hundreds of such barns and never yet saw the "over-shot" utilized for storing machines, implements, feed, cattle, or even manure. The Dutch farmers, as a class, are among the best in our State, and their barns are splendid, usually costing three or four times as much as their houses. But in this respect they do not seem to me to be economical. Indeed the over-shot has always seemed to me a sheer waste, in more ways than one. It "leaves out in the cold" nearly one-third of the basement, the most valuable, because the most convenient place for storage, and as we have seen, it really costs the storage of fifty tons of hay. It leaves the barn to project so far that a very solid and expensive basement is required, usually quarried stone masonry throughout and immense timbers for the floor and projection above the basement. By actual measurement, some large barns of this kind require 10,000 feet of timber for the cross-sleepers and sills above the basement, and about as many feet of heavy plank for the floor. But more than half both of the timber and lumber would be saved by the other plan. And as already hinted, the part wasted in the projection would stable the stock, and the rest of the basement would store their feed and leave the whole main barn for grain. If that gave too much room, the barn could at first be made just so much smaller, thus saving a good deal of expense.

5. We should make the force of gravitation work for, and not against us. It is just as willing to help as to hinder, if we only plan aright. In hundreds of details is this true. I can specify but a few. We have already hinted at one. The bank-barn itself is a step in the right direction. A nine-foot basement with all the hay and grain driven in above it, means *nine feet more down-hill pitching* of hay and grain than there would otherwise be. If the whole basement is needed for stock, then the whole main floor above would be needed, if there were no basement. We have no more right to waste any of its precious room than we should have to waste the room of the first floor if it was not a bank-barn. If properly built, drained and ventilated, a basement will not injure the hay by musting any more than the first floor of an ordinary barn will. If I were to build a hundred grain or dairy barns, or barns for mixed husbandry, they should all be bank barns. Not only that, the space in the basement should be as carefully economized as that in any other part of the barn; yes, more carefully, for it is more valuable. The higher up you go, the less the pressure when the hay is in, and the harder the pitching to get the hay in. A thousand cubic feet in the basement will hold twice as much as a thousand above the "big beam," and a ton of hay is landed there in less than half the time. It is a weariness to the flesh to put hay or grain up near the roof, even if the horse-fork is used for the hay. It cannot well be used for grain to good advantage.

Under this head we might give this as an axiom: The higher up we drive, the lighter the pitching. An excellent plan is to have a *movable, elevated* barn floor. Suppose a barn like that in Fig. 5 page 103 of last week's issue, 75 feet long, with a permanent floor crosswise in the middle, and a temporary or movable floor on each side of it, for filling the outside bays. One floor will answer in turn for both these spaces, and can be so arranged as to slant upward the first 15 feet after entering the barn, gaining a rise of five feet, and then running level. The position of this elevated floor as indicated by the slanting and horizontal dotted lines in Fig. 6. Where pine planks run crosswise of the floor, a team will draw a ton of hay up such a slope perfectly well, and the top of the load will then be above the big beam in a barn with 16-foot posts (besides the basement), so that nearly all the hay is to be pitched down-hill; and I undertake to say that a smart man can pitch off every load till the hay in the bay reaches above the big beam, *quicker than two men* can unhitch the team, and throw it off with the horse-fork. In hilly Vermont I have even seen barns with the barn floor running *above the big beams* lengthwise of the ridge of the roof. Here every forkful is pitched downward. The plan of such a barn will be given in my next.

Industrial Topics.

NEED OF PERMANENT TEACHERS. ENTHUSIASM IN COUNTRY SCHOOLS! No. 3.

PROFESSOR W. J. BEAL.

IN my last I spoke of employing good teachers at any price. Low wages will not stimulate and encourage candidates to make a thorough preparation for the work. As a general thing, our teachers are poorly paid and often not properly prepared. Low wages make changes frequent. Young persons engage in teaching as a temporary employment to make a little something to help them to something better, not to help to prepare for better teaching.

It is to the advantage of any school to retain a good teacher for several terms in succession. The teachers of our district schools usually teach but one term in a place, and but few of them teach anywhere for more than three or four terms. How would a college fare with a change of president every term? How would a professorship succeed if filled with a new man every term? How would our graded schools thrive with a total change of teachers and directors every term? Yet this is the kind of management given to many of our district schools.

Competent salaries, fair and rigid examinations and good supervision will compel candidates to attend institutes, normal schools and colleges. As managed at present, is it not wonder that the country schools get along as

well as they now do? The results are as good in every way as could be reasonably expected.

I am best acquainted with the country schools of Michigan, which are acknowledged by those who are competent to judge, to be generally poorly supervised. Our villages and cities, however, have graded schools which are a credit to the country. The majority of the students who enter the Agricultural College come directly from the country schools. Some of them come from the graded schools.

I am informed by those who conduct the examinations that the students from the country are generally better prepared than those who come from the cities and villages. Undoubtedly we get the best from the country schools, and perhaps we do not get the best from the graded schools. Why should there be this difference? In the city children are often kept in school from six to nine months in the year. They are graded, so that those of similar advancement are placed in classes together. There is a good deal of an evening-up of the dull and bright. The brightest are often kept too long with those who are dullest. In the country the largest pupils go to school only three or four months in the winter and the smallest for three or four months in the summer, while a few attend for six months in the year. The most ambitious of the country people feel that their chance for an education is not as good as that of their city cousins. They work hard, however, improve what time they can get, and often procure a good education. The school is not graded to keep any from advancing. There is nothing to hold them back.

In the country school pupils of all ages and degrees of advancement occupy one and the same room. The youngest and most backward often learn as much by hearing the older pupils recite as they do in any other way. There is often great enthusiasm shown by some of the scholars in a district school. In graded schools steady attendants for many terms "peg out," get sick of school, and lose all ambition for study or much of anything else.

Ambition and good health, with perseverance in one direction, will overcome almost any obstacles. Every person is self-made if he amounts to anything, no matter whether he goes to school or not.

Farmers should generally pay more attention to the schools. The time thus spent will be the best investment possible to make. How shall they give this attention? Not *necessarily* by themselves going to the schools, if they know they are incompetent, but by employing and paying others to go who are competent judges of good schools; or, if they perceive the schools are not good, they will be able to point out the reason and a remedy.

In the words of my co-worker, Professor Fairchild, "Our country children need to be in school more days in the year and fewer hours in each day." I take also a few extracts from a former lecture of my own on this subject. "It would be better to have the children in school three hours a day for six months than six hours a day for three months. When our children go to school we are apt to put them on the high-pressure system. From my own experience as a teacher and a student of physiology, I am certain that many little children are permanently injured by sitting too many hours a day in school, and not unfrequently they study too hard and get pale and thin over their books. Many want their children at home to help at work on the farm or about the house. They should not work as many hours as older people. Why not have school half a day or three hours a day in one session? Teaching for six hours a day is too much for any person who puts much energy into his work."

One of the difficulties in teaching a country school is the multitude of text-books. By this means classes are unduly multiplied. No doubt we shall some day get rid of this evil, and then the teachers' work will be much simplified.

Agricultural College, Lansing, Mich.

Horticultural.

EXPERIENCE IN PURCHASING PLANTS, NOVELTIES, &c.

A mine that did'nt pay for working; a tricky dealer; a hunt after novelties, that ends in a sideless hole; good returns for cash and fine extras; ditto, ditto; dollar collections worth fully 100 cents each; a reasonable proviso.

As the time draws near to make up our orders for trees, plants etc., we naturally look back to see who received our orders last year, and what we received in return for our money. Accepting the advice of the RURAL, I sent for a number of catalogues to see who advertised what I wanted and sold it for the least money. I then sent at least one dollar for seeds or plants to all who sent me expensive and instructive catalogues free of charge. Those who required stamps sent to pay for their advertisements I felt under no obligation to patronize. Now I propose to tell my success; first, with three whom I will not here name, and whom I shall not trouble in the future.

One of these was a seedsman who offered all the novelties at ten cents per packet, which others were selling at 75cts or $1.00 per packet. In this case I thought I had struck a mine, and immediately ordered sixteen packets, six of which were novelties. I found on receiving them that each packet purported to contain five or six seeds, three or four of which on examination proved to be mashed or shriveled. I planted them in hotbeds by the side of other seeds which germinated and grew well, and got one plant from the six packets. I watered it every night and lifted the sash every morning, that it might not scorch, and in due time, I transplanted it to the most sheltered and conspicuous place in the border, intending to show my neighbors something nice, but when it bloomed, it looked no more like the colored plate representing "Dwarf-Crested Japanese Coxcomb" than a *mouse looks like a monkey*; and from the sixteen packets I did not get one-quarter the value of plants I did from a twenty-five cent collection of seeds from my old seedsman.

From another catalogue I ordered "eight fine and distinct, one-year-old, pot-grown Roses for $1.00" and a new double white Oleander, "Madonna grandiflora." I had already set 50 Roses besides the hardy ones I wintered, but these were to be one-year-old and I thought I would like to have them for immediate effect. After waiting two weeks and writing one letter of inquiry, I received eleven puny little Roses not one half as large as those I had ordered from two and three-inch pots, and a letter saying he was "out of" Madonna grandiflora and would not have any more until fall. When fall came, instead of sending the Oleander I had paid for, he sent a fall catalogue quoting Madonna grandiflora at 30cts, and extra-strong ones at $1.00 each. Now I should like to know where these plants that had got to be extra-strong and worth $1.00, were the previous May! The reader can draw his own conclusions. I shall draw mine and buy elsewhere.

To the third man I sent a large order for trees and plants for myself and neighbors, some of which gave satisfaction and some did not; but the novelties among these, like most others, proved of little value. One a Hypericum patulum, was to "bloom from June until frost: be evergreen, and create a sensation in the horticultural world"! It bloomed through the month of July a single yellow bloom, not superior to a single wild buttercup, and as for being evergreen, every leaf on it has been dry enough for fire kindling for more than two months. Another novelty was a tuberous-rooted Begonia; it came in an inch-and-a-half pot, and was about as large as one's finger nail. I put it under a propagating-glass and watched it day by day as it gradually grew smaller until it entirely disappeared in about six weeks. I then thought I would look for the tuberous root, and behold! the tube had all become cavity, for it could not be found. Yet for these two plants, I paid the price of a dozen common plants, one of which would have been worth a dozen of them. I will now mention three other firms, of whom I can speak with pleasure.

First come Storrs & Harrison, who sent plants twice as large as I expected, with liberal extras. As I sit writing, I see an Abutilon and a Veronica that were extras from them. The former, four feet high, has been in full bloom since November, and the admiration of all who have seen it; while the latter was a great curiosity last fall when in bloom, some blooms being pure white, while those that had been longer blown, had changed to purple.

From B. F. Elliott & Co., I also received nice plants and liberal extras. Among the latter were a Chrysanthemum, a dwarf double white shaded with pink, the handsomest I ever saw; and a Lantana which grew five feet high and spread three feet each way, blooming until cut down by frost, after having been clipped for bouquets all summer.

Among the other liberal dealers who send out nice plants at a low figure, I must mention Mr. Peter Henderson, who extensively advertised dollar collections, and twelve of them for $6, by express. In one of my collections purchased from him were twelve greenhouse plants costing me less than six cents each, and one of them, a Rivina humilis, I would recommend to anyone who wants an evergreen shrub that will flourish in the dry atmosphere of a sitting-room. Mine has over twenty racemes of white flowers and buds, five clusters of intensely scarlet berries, which are the main beauty of the plant, and a foliage of the brightest green, without a dry or faded leaf during the whole winter.

In conclusion, one word about the new Climbing Hydrangea: Mr. Parsons says "he owns some small plants," and intimates that he and Messrs. Clarke, Sargent and Henderson, own all there are in the country. He says "his differs from Mr. Henderson's," and that they are not large enough to enable one to judge of their merits. Now, Messrs. Saul, Henderson and Vick are offering them to their customers, and the two former have been doing so for more than one year. Now, if these dealers will speak definitely of the merits of this novelty—and they must know something on this point, if a year ago they had enough plants, and those sufficiently large, to justify them in offering them for sale—or if they will send some to the RURAL Experimental Ground, so that the RURAL may be able to report on them next fall, then if they turn out to be all that Mr. T. Hogg claims for them, I certainly want one; but if they are like most novelties, I want my money more than I do Schizophragma.

JOHN J. WATSON.

Newport, Co., R. I.

[We are happy to publish such communications, which evidently bear the marks of sincerity, though, as we believe, the marks of unintentional error as well. We are indeed glad to publish *anything* that is calculated to guide or benefit our readers in any way.—EDS.]

CAULIFLOWER.

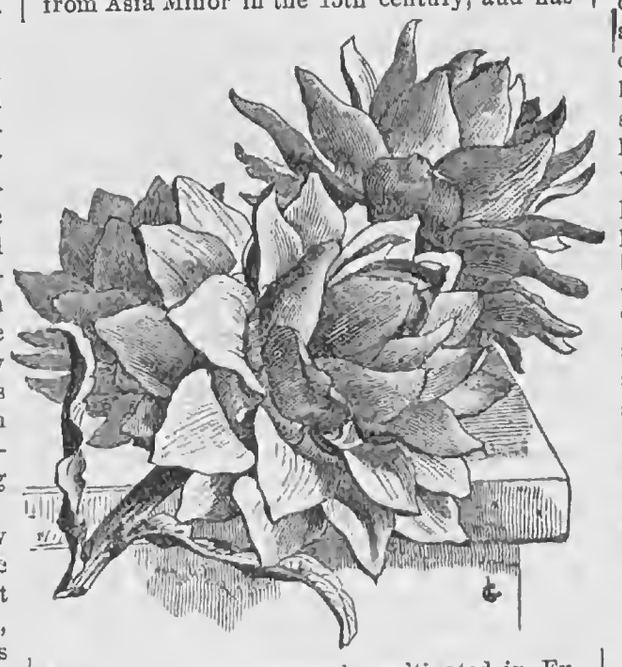
THIS very common vegetable is one of the market gardener's most profitable crops. It is closely related to the cabbage plant, and, like

that, the eatable part forms a head: but while the head of the cabbage is formed of the leaves, the head of the cauliflower is formed of the flower-stalks, which grow up in one compact, conical mass that, in well-grown specimens, measures nine inches to a foot across. There are many varieties in cultivation. Of these the engraving shows Lenormand's Short-Stemmed. It requires a good garden soil, richly manured; it is useless to attempt to grow it on a poor gravelly or binding clay soil.

Cauliflower is mostly grown as a crop for spring or early summer; as a late crop it is more apt to fail. For an early crop the seed should be sown in the first half of September, and later the plants should be set about three inches apart each way, in a cold-frame. During the winter they should be covered with sashes, and in cold weather have an additional covering of straw mats. On every mild or sunny day, air should be given, by raising the sashes a few inches, and as early in the spring as the weather will permit, the sashes should be removed entirely during the day. In the latter part of March, or as soon as safe from hard frost—a little will do no harm—the plants should be set out on well prepared and richly manured land, in rows two by three feet. The seed may also be sown on the hot-bed in February, and by proper care the plants may be ready to set out in the beginning of April; but in this case they must be thoroughly hardened before they are planted in the garden, or a little frost will kill them. By giving proper attention to this point, spring plants are but little inferior to those wintered over in the cold-frame, and may produce as good a crop. Lenormand's Early Paris, Erfurt Early Dwarf, Large Algiers, and Autumn Giant are some of the best varieties.

ARTICHOKE (Cynara scolymus).

THIS vegetable was introduced into Italy from Asia Minor in the 15th century, and has



ever since been commonly cultivated in Europe; but in this country it is found, as yet, only on the larger private places and on the tables of first-class hotels. The engraving shows the flower-bud, which is the eatable part of the plant. though sometimes the stems of the young plants are also eaten, being first bleached, like celery, by heaping soil up around them. Its cultivation is very simple. The plants may be raised from seed, which should be sown on a hot-bed in the latter part of February, and by proper care the plants will be ready to transfer to the open ground in the first days of May; or it may be propagated by suckers from the old plants in the spring. In either case the plants should be set in rows, three by three feet apart, in rich and deeply-prepared soil.

It is a perennial plant, and once planted, it requires no farther care during the summer season than to be kept clean, and to gather the crop. The heads will be ready for use in July, and continue to appear till fall. In the fall the old flower-stocks and leaves are removed and the plants, not being perfectly hardy, are covered with leaves or coarse manure, to protect them during the winter.

French Green Globe, the one represented by the engraving, is considered the best variety.

The Poultry Yard.

PARASITIC LUNG WORMS.

HENRY STEWART.

FOR every thing there is a reason, although your correspondent, Gen. Noble, (see RURAL of Jan. 25, page 58) cannot see any good in "doctoring the stomach for a worm in the windpipe." When the true character of anything is understood, a course of treatment may be considered rational that would otherwise appear absurd. In the case mentioned by Gen. Noble, the treatment he gave his hen-house might seem to some others than himself quite unreasonable—doctoring the hen-house for worms in the throat—but there is a far closer connection between the stomach of an animal and the mucous membrane lining the lungs and throat than between the latter and the walls and floor of a poultry-house, although even here there is a rational connection. The truth of this matter is, that "gapes" is really caused by a parasitic worm which belongs to a family of animals well known to naturalists. One of these infests poultry, another partridges, or rather grouse—as they really are—another lambs and sheep, another calves, and another young pigs.

All these are well known, and their natural history is so far clearly ascertained as to their generation by means of eggs. How the eggs or the young worms gain access to the lungs and air tubes is not *known* with such certainty as to satisfy a scientific man who will deal only with facts—that are facts, and not suppositions. Abundant circumstantial evidence exists to make it highly probable that the eggs of the worms are taken into the stomachs of the young animals with the food—with the grass in the case of lambs, calves and pigs, and by being picked up from the ground, in the case of young chicks. The ground becomes infested, most probably, by means of eggs voided by mature animals; for all these worms may be found in the bodies of mature animals, in some cases so numerously as to cause disease and death. This is notably the case in sheep, in whose lungs and air passages myriads of these may be often found, as is well known to every practical shepherd. The eggs being then introduced to the stomach, are hatched into worms, and these are sometimes so plentiful in the stomachs of animals as to cause trouble there. These worms find their way from the gullet to the air tubes and lungs, and live upon the secretions of the mucous membrane, which are increased in quantity by the irritation caused by their presence—"and thereby hangs a tale" of how "doctoring the stomach for a worm in the windpipe" may be very effective.

If the General or any man will take a dose of the old-fashioned sulphur and molasses for a week, he will find all his new legal-tender or other silver dollars which he may carry in his pocket, blackened by the fumes of the sulphur which went into his stomach. If he had breathed upon the silver, the blackening, which is caused by a sulphide of silver deposited upon the metal, would have been apparent much earlier and more conspicuously, because the vapor of the sulphur escapes by the lungs sooner than it does through the skin. The same happens when turpentine is taken as a medicine, as is well known. Indeed the action of turpentine is so effective that persons exposed to its vapor and breathing it only, are quickly affected by its diuretic qualities acting upon the kidneys; or the simple rubbing of turpentine upon the skin will show the same effects. Sulphur and turpentine are active poisons to these worms, and in the case referred to by Gen. Noble. the sulphurous fumes escaping from his fortunate application, may doubtless have done the business "and he builded better than he knew."

If any medicine can be called a specific, turpentine is such in the treatment of these lung worms, and I believe sulphur will be

found equally effective, but of slower operation. I have treated many lambs, sheep and calves for this disease with success, by the use of turpentine, administered through the stomach; and from its great volatility it rapidly enters the blood and is carried off through the lungs and air tubes, and, moreover, it strongly affects all the secretions, especially those of the mucous membrane and the skin, and is thus placed where it will do the most good, or rather the most *evil*, to the parasites which are destroyed—poisoned, in fact, by it.

Now, I think I have given "some trial or reason for the use" of the remedies I propose; fortunately I have never had any reason to try them with my fowls, because I have never had gapes among them, having used those precautions which would necessarily occur to those who knew the truth of this matter.

Bergen Co., N. J.

AN EXPERIENCE WITH SEVERAL BREEDS OF POULTRY.

C. S. COOPER.

In a former communication I stated that a free current of air in a house constructed for chickens, is actually necessary to keep them in a healthy condition. I shall now give my experience with the several breeds, as far as I have tested their qualities.

Barn-door Fowls were the first with which I had any experience; for when I first settled upon the farm, there was no other breed in the neighborhood. I bought my stock from several farmers and am willing to acknowledge that the birds were excellent layers and affectionate mothers. I wanted no better for several years. They began to fail, however, and I resolved to try another variety.

White Leghorns were my next choice. These I found excellent layers of large, white eggs. Indeed they were all I desired as layers, but they had other traits that did not altogether please my fancy. I found it almost impossible to keep them in any inclosure, be it ever so high, and owing to their naturally wild nature they were unsuited to my fancy. As brooders, too, they were very poor—many a setting of eggs was spoiled by the hens leaving their nests after sitting for a week or two. Then again, the chicks that were hatched and reared, were about two-thirds cockerels, so that it was difficult to rear enough pullets to supply all the eggs I wanted, and for table the birds are of very poor quality and of small body. Moreover they are not extra-hardy, so that, on the whole, they are not an A No. 1 breed, and I have altogether discontinued raising and keeping them.

Black Spanish were my next venture. I found them to excel the White Leghorns in laying qualities, their eggs being equal in size and color, but more numerous. The hens, however, were almost non-sitters, and of the same wild, restless disposition as the White Leghorns, all whose other objectionable traits they also had.

The Plymouth Rock and Light Brahmas, are the breeds to which I now confine myself exclusively, having discarded the Houdans for various objections. I find either of these varieties best suited to my fancy. Both kinds are of large size, docile, good layers, good mothers, and of excellent quality for table use. They can be kept in an inclosure of ordinary hight. I was dilatory in getting the Brahmas on account of rumors of their being inveterate sitters, but such a report is not well founded. I have had no trouble in breaking their disposition to brood, by two or three days' confinement. For winter layers they cannot be excelled, and the chickens are very hardy.

The Plymouth Rock excels all other breeds for general use. Fowls of this variety have all the good qualities of the Brahmas, are most excellent layers, very pretty, and among the best fowls for table use, pullets weighing, when full-grown, from seven to eight pounds, and cockerels from nine to ten pounds. Moreover, they are very hardy and great foragers when running at large. I am of opinion that this is the breed above all others to answer the general requirements of farmer and fancier. They are not slow to feather, mature early, and should I keep only one variety, the Plymouth Rock would be my only choice. [One changes his estimate of the value of breeds from year to year. At the present time we agree with Mr. Cooper.—Eds.]

There is a disposition, especially among fanciers breeding for feather, to in-breeding too closely. This practice is detrimental to the health and destructive to the constitution of the flock. I would say to all: get new blood in your flock every year, and select the best quality of birds.

Bergen Co., N. J.

A Fine Poultry Show was lately held at Burlington, Vt., by the Champlain Valley Poultry Association. There were a long list of premiums, and some very fine birds. The number of visitors was unusually large, and we are glad to learn that financially and in all other respects, the managers and exhibitors of the Show are to be congratulated on their eminent success.

Miscellaneous.

CO-OPERATION.

In the Rural for January 18, J. A. H. Ellis gives a very glowing description of the beauties and advantages of co-operative farming. If it were possible to organize a company, each one of whom was utterly unselfish, and whose only desire was to advance the public weal; in short, if the men were all saints and the women all angels, then his vision might become a reality. But as poor, weak humanity exists at present, it is almost certain that his enterprise will collapse within five years. Co-operation is a bright "idea" that may be successfully realized about the dawning of the "Millennium."

The Perpetual Hay Press.

Two co-operative companies have been formed in this city with the avowed object of settling upon the cheap lands of the West. Both appeared to be well organized, and wisely officered, and yet one disbanded before reaching its place of destination, the members of the other had sufficient cohesive powers to locate their lands and run for a year or two, when that collapsed also.

Some eighteen months since, about one hundred of us organized a co-operative grocery store in this place. Large dividends were promised and great benefits expected. It soon became apparent that nearly every man wished to become the controlling spirit in the organization. In fact we found plenty of material for officers, but very few were willing to rank as privates. The result can easily be imagined. That store that started off with a grand flourish of trumpets, has "run under" and is now being closed out. At least one of its stockholders proposes to "paddle his own canoe" in future, leaving co-operation to those men who "have a soaring after the infinite and a diving after the unfathomable, but who never pay cash."

In organizations of this kind, the "sweetest talkers," and those promising the most by the way of success, are usually given the lead, and in this case, we chose nine of the most inexperienced and impracticable men in the organization for directors. Men who had never succeeded at any kind of business for themselves, were decided to be the most competent to manage a store! Who could doubt their ability when they talked so eloquently, wrote so forcibly, and promised so much? Well, the result has proved a deserved failure. Co-operation may be all right in theory, but practically it will not work until people know more (or less) than they do at present.

I can recall a score or two of attempts to found communities, co-operative societies and the like, but all have failed in this country, except the Shakers and the Oneida Community. These are held together more by ignorance than by wisdom. I have about come to the conclusion that "competition" is the life of trade, the laboring man's incentive to energy, and the law of God. Nelson Ritter.

Syracuse, N. Y.

WHAT OTHERS SAY.

Seeds.—J. J. H. Gregory, of Marblehead, says that in no country in the world are vegetables raised in such abundance and variety as in this. The man with a garden can here "live like a king." Seed growers have many things to fight against. Seed peas are not grown with good success, owing to bugs, except in Canada. The best varieties of potatoes are grown just north of the apple zone, as in Vermont and Northern New York. The bulk of the choice seed imported comes from France and Germany. Some choice seeds are worth a great deal. As high as $200 per ounce have been paid for choice cucumber seed. Some kinds of seed require a special study to produce them. The foreign seeds are mostly sold by agents who reside in this country, and travel from place to place.

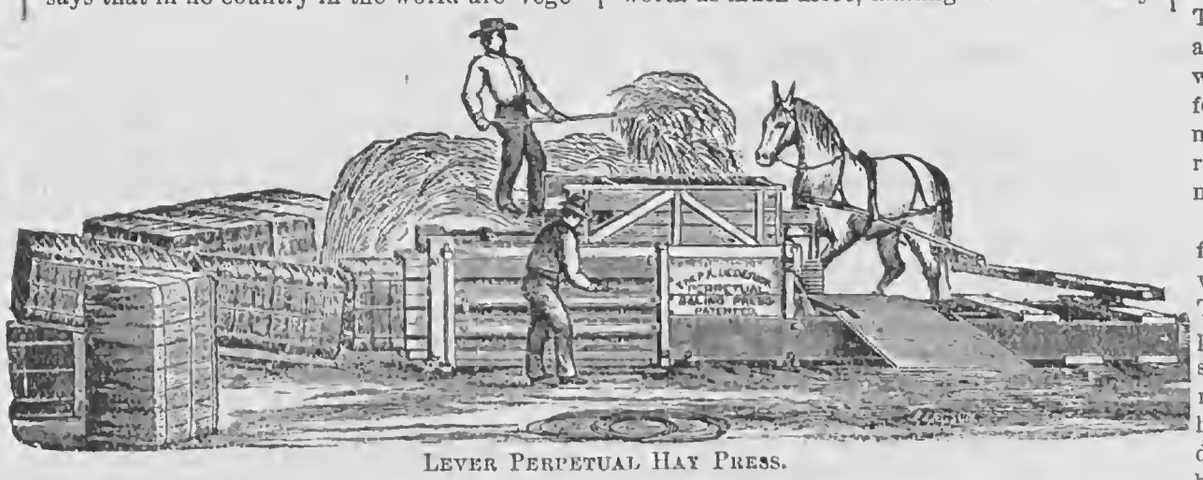
Fancy Milk.—The New York Times has the following in regard to the experience of a correspondent: Having a few high-bred costly cows, a finely-appointed dairy-house, the newest and best facilities for keeping milk, and keeping and feeding cows regardless of expense so long as it would bring profit, he tried hard to find customers who would pay a few cents per quart more for the best and purest milk, put up in sealed bottles and handled with the greatest care and cleanliness. The effort was a miserable failure. Not one milk-dealer in the whole city of New York could be found who would undertake the sale of milk so put up, at the reasonable price of 10 cents per quart, delivered. Not that there were no persons who could afford to give five times that price for it, but that there was no desire to pay a few cents a quart extra for purity and excellence in the milk. So that much-talked-of myth of "Parisian bottled milk" in New York was driven to earth and found baseless.

Frost and Fruit.—But little definite information, says the Indiana Farmer, has yet been received regarding the effects of our late excessively cold weather upon the next fruit crop. The general impression is that the peach buds in all this section of country are killed. Those who have examined them are positive that this is the case. Many claim that the trees are also killed. The mild dry weather of last fall, it would seem, should have made the wood of the trees unusually tough and hardy, and the dry weather thus far in the winter has been favorable to the preservation of the wood and bark, so we have hopes that a large proportion of the trees will survive. Mr. S. Johnson, president of the State Horticultural Society, gives it as his opinion that most of the Blackberries, Raspberries and Grapes are killed.

Beet Sugar in Maine.—At his factory in Maine, Mr. Gennert has already turned out one hundred thousand pounds of beet sugar during the recent season, and he has between five and six hundred tons of beets yet to manufacture. He says that there is no question about the profitableness of the business and the only trouble is to get beets in sufficient quantities. He gives the farmers $5.00 per ton for the roots, and states that a good average yield is twenty tons per acre. It is well known that it took a long time to establish this industry in France and Germany, and that it has accomplished wonders for the farmers of those countries. The pulp of the beets, after the sugar is extracted, is an excellent food for stock.—The Husbandman.

Poultry Figures.—G. O. Brown says that farmers will feed a bushel of corn to produce six pounds of pork, while the same amount of corn will keep a good laying hen one year, and she will produce at least twelve dozen eggs, averaging eighteen cents per dozen, which would equal two dollars and sixteen cents. In addition she would rear a brood of chicks worth as much more, making a total of nearly *five dollars* against six pounds of pork at ten cents, which would equal only sixty cents; or, in other words, the hen would yield *seven* times as much as the pig fed on the same quantity of corn.

Don't Pay.—From twenty years' experience as a fruit grower, Waldo says, in the Practical Farmer, that he has come to the conclusion that the size, health, and value of a fruit tree depend largely on the treatment it receives during the first four years after it is planted in the orchard, and that this is particularly true of the Peach. He does not think a peach tree which once becomes stunted, can ever be made profitable.



Lever Perpetual Hay Press.

ELASTIC WATERPROOF CEMENT FOR TREES.

Take one quart of fine North Carolina tar and boil it slowly three or four hours. Add to the boiling tar four ounces of tallow and one pound of beeswax, and stir till well mixed. Then remove the vessel from the fire and stir till the contents begin to thicken. Have ready one pound dry and sifted clay, and stir it in thoroughly until you can stir no longer. In warm weather this cement is soft enough to be easily spread with the point of a knife. When applied to wounds on trees, it completely excludes moisture, does not harden or crack or scale off, yields to the new growth, and can at any time in moderately warm weather be pressed by the finger into the corners and crevices of the wound which may be uncovered. T. H. Hoskins.

CATALOGUES, &c., RECEIVED.

We are gratified to learn that Mr. J. T. Lovett and Mr. E. P. Roe have become associated together in business life. For years the former has been the manager of the nursery of A. Hance & Son, of Red Bank, N. J. He is well known to our readers through his communications upon small fruits, which have been alike notable for their frankness and accuracy. Experienced, intelligent and trustworthy, we do not know of two gentlemen who are better fitted to inspire the confidence of those whose patronage they solicit.

A reference to Mr. Joseph Harris's announcement in this issue discloses the fact that Moreton Farm has been partially devoted to raising home-grown seeds. Mr. Harris says of his catalogue, which is now ready for mailing, that it contains ample directions for cultivation. His experience should make his suggestions of great value, and an opportunity of securing such advice free, does not often occur.

The Drainage and Farm Journal.—This is the first number of a new 28-page monthly periodical published by Billingsley & Diamond, Indianapolis, Ind.; price, $1 a year. It is devoted to drainage, tillage, tile and brick manufacture, and promises to be a convenience to the large class of farmers whose land needs drainage.

Annual Report of the Public Printer, showing the condition of the public printing, binding, etc., for the fiscal year ending June, 1878. Printed at the Government Printing Press, Washington, D. C.

Proceedings of the Fifth Annual Meeting of the Woman's Christian Temperance Union of Illinois, held at Monmouth last October, 9th and 10th, Mrs. M. H. Williams, Pana, Cor. Secretary.

Catalogue of thoroughbred horses belonging to J. W. Hunt Reynolds, for sale at Fleetwood Stock Farm, near Frankfort, Ky.

Industrial Implements.

THE LEVER PERPETUAL PRESS.

The improved methods of baling hay led to an increase in the market price of the staple, and greatly lessened the labor of handling it. We believe Mr. Dederick, of Albany, was the pioneer in this movement. At any rate his presses are to-day in very general use, and we have selected two suitable for farmers' use for illustration. The hay in the second cut is thrown into the top of the press into a condensed hopper, the lever-power is supplied by the horse, or horses, and the bale is made. The process is continuous, and about one ton an hour may be baled if the press is steadily worked. One of the great merits of this press for farm use is, that it may be operated by one man only, and handsome bales turned out ready for shipping, in the most methodical manner.

The first illustration shows a variation from the Lever Perpetual, and has some advantages and disadvantages as compared to it. The horse may be driven entirely around the press, or only half, turn and reverse. The side-feed is convenient, as it permits the operator to always remain on the ground, where he can attend to the horse. The press is self-discharging and perpetual, or each bale may be stopped if desired.

The presses are made for different sized bales, the 17x22 and 14x18 being the most popular. Their strength and solidity make them very durable, and to be relied on to stand an extra pressure if it is thought necessary. At the Paris Exposition, P. K. Dederick & Co. were awarded a gold medal, and in this country they have secured enough medals to start a coin-cabinet.

Various.

TALKS ON TIMELY TOPICS.

ALL THE EGGS IN ONE BASKET.—Farmers who keep strict accounts of their income and expenditure will be surprised at the difference in profits on their various products during the past season and in ordinary years. The prices of butter and cheese cannot compare with those of former years, while a crop of potatoes brings in more cash than the same quantity of choice apples. Unthinking farmers who could not be persuaded into orchard planting, are now exultant. "I told-you-so" is ever ready to give his opinion that all this talk of planting apple trees for profit is "bosh—there's nothing like a crop of good sound potatoes," forgetting the not far distant time when the tubers were fed to the cattle in preference to selling them at 20 cents per bushel, while apples were worth a dollar for the same quantity. It is true that in the case of the fruit, we have to wait some years for a crop, but it is always a remunerative one, if the fruit is properly handled, and the quality first-class. At the same time the experience of the past season proves the wisdom of having more than one department of agriculture or horticulture on which to depend. The culture of some kinds of vegetables, or small fruits, the perfecting of such seeds as can be grown in the climate where we live, the careful curing of good hay for winter sales, and the profits of a well kept poultry house, all contribute to fill the different "baskets." Yet let no one be tempted, by the low price of fruit, to neglect the orchard, or to leave it to the ravages of the tent-caterpillar or codling-moth. Careful picking of the "rings" of the former, which contain the eggs; and hay bandages to lure the latter where it can easily be destroyed, will amply repay the time expended. The children of a household if properly interested, can become students of nature in many branches of natural science if once they begin entomological researches; and the trees well cared for during years of over-bearing and low prices, will repay a hundredfold when the change comes, and apples once more bring profitable returns. A. L. JACK.

ADVANCE OFFICE, Wenonah, N. J., Jan. 31st, 1878.

PUB. RURAL NEW YORKER:—Some party is trying to trade one of my neighbors a large quantity of fertilizer, I think, in exchange for a residence here. My neighbor desires me to ascertain, if possible, whether the article is reliable or not. He has handed me a circular which has been furnished him. It purports to be issued by the "Bird Guano and Shell Fertilizer Co.," and the title page bears the name of Tunis Johnson and what appears to be the name of C. C. Lewis, *erased*. Their stores purport to be located at the foot of South Sixth street, Williamsburgh, L. I., and office at 58 Liberty street, New York City. Will you please inform me if the concern and this fertilizer are reliable, and what the real value of the fertilizer is? Yours truly,

MILTON P. PEIRCE, Pub. Advance.

We have received the above letter, and, as requested, made inquiry at the "Bird Guano and Shell Fertilizer Co.," where the following analysis was handed us, from which the reader can judge for himself:

Carbonate of lime	44,525
Organic and volatile matter	5,830
Insoluble sand and clay	6,383
Oxide of iron and aluminum	1,161
Chloride of sodium	279
Ammonia	48
Moisture	43,763
Carbonate of magnesia	a trace
Sulphate of lime	a trace
Potash and phosphoric acid, pure	a trace

NOTES FROM NEBRASKA.

EX-GOV. ROBT. W. FURNAS.

A lively and instructive week's work; products of Nebraska in 1878; Eastern exaggeration of Nebraska lawlessness; a fine showing for the educational system of the State; its weather peculiarities; its hardiest Apples.

OUR State Horticultural Society, State Board of Agriculture, State Stock-Breeders' Association, State Agricultural Institute and State Wool Growers have just concluded a week's session at Lincoln, the capital. All the sessions were held the same week, having been sandwiched and interspersed to mutual accommodation. The Horticultural meeting was particularly interesting, consuming three days and evenings of the time. The usual discussions,—as to varieties of fruits best adapted, all things considered, to our soil and climate, locations for orchards, modes of culture and treatment of trees,—were indulged in, whereby much valuable information was both imparted and obtained. In addition, valuable papers and essays were read and delivered from and by: Dr. Jno. A. Warder, Ohio, President American Forestry Association—Forests and the Future Water Supply; William Saunders, Agricultural Department, Washington City—Rotation of Crops; Suel Foster, Iowa—Evergreens and Hedges: by our own residents; Prof. Samuel Aughey of State University—Soils of Nebraska, outside the Loess; Ex-Gov. J. Sterling Morton,—Trees and Homes; Prof. Harvey Culbertson, Agricultural College—What can our Society do for the People? James Y. Craig—Grape Culture; D. W. Kauffman—Plum Culture, and James T. Allan, Sec'y American Forestry Association—Forests. For want of means, the proceedings of these annual meetings have not been published for some years past. The present Legislature, however, now in session, will make needed appropriation.

Statistics show that Nebraska products for 1878 were, in round numbers, wheat, 15,000,000 bushels; corn, 48,000,000 bushels; oats, 8,000,000 bushels; barley, 3,000,000, and rye, 1,000,000 bushels. Nebraska has 48,000,000 acres of land, of which 30,000,000 acres are suited to all kinds of agricultural purposes. We have now about 2,500,000 acres under cultivation.

I note that some Eastern newspapers are prone to advertise Nebraska as the "home of desperadoes!" Here, like all other sections of the world, we are not free from such characters. They are not native products, however, but refugees from older States. The extreme western and unorganized portions of the State afford fields for unlawful operations and hiding places for their perpetrators. Yet a greater number of such outrages as those heralded from our borders as "Nebraska crimes," are perpetrated in all the great cities of the East, in proportion to the population of both sections. As an evidence of the status of society generally in Nebraska, let me state that we have to-day more churches, more schoolhouses, more money invested in educational matters, two to one, than had ever any other State in the Union at our age. To say nothing of our State University, State Normal School, sectarian and private schools, we have 2,690 common-school districts, employing 3,730 school teachers. The educational expenditures for 1878 were $936,931.98. We have on hand a permanent cash school fund of $535,167.35, drawing eight and ten per cen. interest; and in addition, an educational endowment fund of 2,443,148 acres of land. The constitution fixes the minimum price of these lands at $7 per acre—some have sold as high as $40 per acre. This would make for us a permanent common-school fund of nearly $20,000,000. The State university has a land endowment fund of nearly $1,000,000 besides. With these prominent and leading characteristics, we are not likely to turn our attention to propagating or shielding outlaws to any very great extent!

We have had a remarkable winter. Up to the 13th day of December last farmers were plowing. Commencing on that day, and continuing for the following week, there was an unusual snowfall. We had the finest of sleighing for six consecutive weeks, the weather during that time having been the coldest known for years. The thermometer indicated 27 degrees below zero. At the date of this writing farmers are again plowing and planting spring wheat. Fruit-men do not think fruit buds injured as yet. Such is our altitude—one thousand feet above tide-water—and such our consequent favorable atmospheric conditions, that fruit buds and trees withstand a greater degree of cold here than in many other localities differently situated. In the winter of 1873-4 we had cold 32 degrees below zero, yet the season of 1874 gave us the finest peach crop we have ever had before or since.

What does Dr. Hoskins, your fruit correspondent, mean by "the climatic belt just below us," "the cold belt," and his intimation that Red Astrachan, Maiden's Blush, Tahman's Sweet, Ben Davis, Bailey's Sweet and other varieties he names, are "almost hardy!" To what locality does he refer? The varieties I name are among the very hardiest in Nebraska—we class them "iron-clads"—and most profitable.

Brownsville, Feb. 1.

NOTES FROM KENTUCKY.

MANY seem to think that we have, in this State, blue-grass, fine horses and beautiful women, and nothing more worth mentioning. 'Tis true we have these almost in perfection, but we have something more. We have inexhaustible mines of coal and iron; immeasurable beds of marl and carbonate of lime; almost boundless forests of the most valuable timber; farming lands of unsurpassed fertility; peach and other fruit lands of unequaled quality; a healthful climate; the most beautiful rivers in the world; taxes only 60 cents on the $100, and no State debts; schools, churches, railroads, etc., etc. I do not wish to be understood to say that we are exempt from all "the ills that human flesh is heir to," but that we have a full share of the blessings and a small proportion of the curses common to this "land of the free and home of the brave," and that the worthy who comes to "Old Kaintuck" will find a welcome so hearty and a greeting so cordial, that he will never regret the coming.

Excellent tobacco land can be had for $15 to $20 per acre; fruit land, $10 to $15 per acre; Ohio River bottom-land, $40 to $60 per acre, according to location and improvements. Here in Hunter's Bottom, 50 miles above Louisville and 100 miles below Cincinnati, land rates from 25 to 50 per cent. higher than its equivalent on the Kentucky and other interior parts of the State. The four farms sold here recently averaged $51 per acre. Horses, 15 to 16 hands, sound, good steppers and stylish, can be bought for $60 to $80; good work horses for $40 to $50; mules, 14 to 15½ hands, for $60 to $75. Six thousand barrels of potatoes were shipped from this Bottom the past season at $1 per barrel, and they averaged 40 barrels per acre. Our market is the Ohio River. Each farm has a landing for the packets that pass each way every day, and buy our farm products of all kinds at Cincinnati and Louisville prices, with freight and commission off. Tobacco is selling at 7 to 14c. per pound, and about 1,000 pounds is the crop per acre; corn is worth 31c.; oats, 24c.; wheat, 85c.; potatoes, 50c.

S. E. HAMPTON, M.D.

Trimble Co., Ky. Feb. 4th. 1879.

RURAL SPECIAL REPORTS.

NEBRASKA, Orleans, Harlan Co., Feb. 6.—In the issue of Jan. 11, the RURAL refers to the fondness of potato beetles for the Matrimony Vine, and suggests its use as a beetle trap. There is a plant growing hereabouts which the beetles seem to like better than that Vine. I refer to Solanum rostratum. The plant is the original pasturage of the beetles in Colorado, and has come down to us Nebraskans along our mountain streams. For several years past I have been in the habit of allowing a few plants to grow among my potatoes. I find the plants alive with beetles while the potatoes are uninjured. If the plants are getting worsted too soon, I come to the rescue with Paris-green. The beetles appear each year, but in such limited numbers as to cause no serious apprehensions. I do not use Paris-green on S. rostratum rather than on S. tuberosum through fear of injuring the latter, but because I like to fire where the enemy is thickest. I have raised the Doura—illustrated in RURAL, Jan. 18—for two years past and propose to continue raising it. I think it far inferior, however, to Pearl Millet as a forage plant. On new "breaking" it does well—the stalk rots and is out of the way much sooner than corn-stalks. It is as nearly grasshopper-proof as is common Sorghum. I never knew it to be injured by insects of any kind. It grows slowly at first—corn planted at the same time comes up a week earlier—but the Doura is always "ahead on the home stretch." It may do for John Chinaman to eat, but we find no place for it in the house. Wife wants a supply for her poultry; and hogs, sheep, cattle and horses eat it with seeming relish. I plant it about three and a half feet apart with a hand corn planter, by putting in a proper slide. R. H. C.

NEBRASKA, York, York Co., Feb., 5.—We haven't had more than five or six inches of snow this winter, and but very little cold weather. For the last week, farmers have been busy plowing and in some instances the hum of the thrashing machine has been heard in the land. According to present indications there will be a larger acreage of wheat put out this coming spring than ever before. This will furnish employment for the 1001 idle men of the East, if they will come this way about next July. [Put the idle men hereabouts at 1,000,002, and the estimate will be nearer the truth. EDS.] A great many fruit trees were sold the past season, which shows that the people have faith in raising fruit in this section. Wheat is now worth 60c; corn, 16c; oats, 15c; hogs, $2.00 per 100 pounds, live-weight. ANON.

CALIFORNIA, Carpentria, Santa Rosa Co., Feb. 3.—Much apprehension has been expressed in some parts of this State of late with regard to the crops for the coming season, owing to the small amount of rainfall, but it is raining here and the soil is in fine condition for "working," and the promise for next harvest never was more favorable at this time of the year. We are now planting potatoes, sowing grain, etc. The grass is growing finely, so that stock can get some feed. Flowers are blooming and all Nature looks gay. O. N. C.

NEW YORK, East Bethany, Genesee Co., Jan. 31.—The RURAL'S article on that patent fence out West, and the accompanying illustrations, well exposes one form of patent swindling, but it is only one out of thousands. As an inventor of a patent fence and several other devices, myself, I am quite familiar with the whole subject, and with the multitude of abuses connected with it. D. R. P.

NEW YORK, Whitney's Point, Broome Co., Feb. 11.—Snowing again! the second snowstorm in a week. Roads are nearly blockaded, drifted from fence to fence. Farmers are busy cutting wood and filling their ice-houses. Potatoes are scarce—65@75c. per bushel. Buckwheat, floured and sacked, sells for $1.25 per hundred; oats, 25c. per bushel; eggs, 22c. per dozen; butter, 12½ cents per pound. M. B. D.

MICHIGAN, Three Rivers, St. Joseph Co., Feb. 3—Last year's wheat crop hereabouts was only middling. Good corn, too, was short, as drought had hurt it. Hay was a big crop. Potatoes are rather scarce, but apples are plentiful. Wheat looked well when snow fell. It was sowed rather late on account o the ravages of the fly last year and the warm and dry fall. S. M. S.

WISCONSIN, Delafield, Waukesha, Co., Feb. 6.—My 30 head of cattle and horses well cared for and protected from the storms of winter in warm stables, bear testimony to the good effects of their owner's attention to the lessons taught by the RURAL. Since Christmas the winter hereabouts has been severe, but good sleighing makes the weather more bearable.

VIRGINIA, Dunnville, Essex Co., Va.—The wharves and depôts along our navigable rivers have suffered very much from floods. It is supposed that a great many oysters have been killed by the influx of fresh, muddy water. Grain is low, and labor unsettled and highly unsatisfactory among our farmers. R. S.

NORTH CAROLINA, Reidsville, Rockingham Co., Feb. 7.—I have had experience with Pearl Millet, and as a fodder plant it is far more productive than is claimed for it by any seedsman in your latitude. It is a great exhauster of the land, and therefore needs generous manuring. W. S. F.

KANSAS, Matfield, Green Co,, Feb. 5.—We have had more snow this winter than for 21 years, and still the ground is snow-clad, so that no plowing has been done up to date. Fall grain is doing finely, and the prospect for good crops is excellent. D. W. M.

MASSACHUSETTS, Swansea, Bristol Co., Feb. 10.—Stock of all kinds is doing well. Produce is low; pork, 5c. to 5½c. per pound; beef 7c. to 8c; poultry, 15c. to 16c; eggs, 30c. per doz; hay, $13 to $14 per ton at the barns; rye straw, $12 per ton in Fall River. R. R. M.

The Querist.

ANSWERS TO CORRESPONDENTS.

Improving a Poor Farm.—Scab in Sheep.

D. M. S., Martinsville, W. Va., is a merchant who knows nothing about farming. Sometime ago he became a subscriber to the RURAL, and reading it made him interested in agriculture. This interest led him to invest in a farm. It is a mixture of limestone, soapstone and slate. It has been badly handled; the fences are dilapidated; no manure has been put on the land for years; there is no grass on any part of the 193 acres included in it. He asks what is the best way to get it under grass: some tell him to sow it to buckwheat and when that is in bloom, to plow it under; others advise him to sow corn on it, and plow it under green; while others insist that to treat Carolina peas in the same way is the quickest method of enriching the soil. He asks, also, whether coal ashes have fertilizing properties enough to make it worth his while to haul them three miles; whether it will pay to put gas-house lime on the land, after having hauled it three miles at a cost of five cents a bushel; will blue-grass grow in the woods, and what is the best time and way to sow it; is there another species of grass that would do better under the circumstances. Which is the better plan—to rent the land for a few years to a skillful farmer and get him to put it gradually into good condition, or to put a man on it himself with a view to produce the same effect. He has a lot of fine sheep that are troubled with the scab, and he inquires whether the ailment is curable, and if so, what is the best remedy.

ANS.—No skillful farmer would be likely to rent such a farm as this, because, if sufficiently skillful, he would most likely be working a farm of his own. To hire a good man would be a good plan; and then furnish him with means to do the best he can with the land. But for one competent man in such a case, there are a thousand others, and the money cost would be disheartening. We would suggest, to try 40 acres or less at first. There must be limestone on the land and probably wood; if so, burn a few thousand bushels of lime in the most convenient of the methods recently described—see page 55—and spread 50 bushels per acre, when finely slaked, on the plowed ground as early in the spring as may be, and let it remain so. When danger of frosts is over, sow one bushel of buckwheat per acre and harrow the seed in with the lime. When the crop is in blossom, plow it under and repeat the sowing. Early in September, plow the second crop under and sow *two* bushels of rye per acre. In the spring, sow eight quarts of clover, six quarts of timothy and a bushel of Kentucky blue-glass per acre. When the rye is cut, sow 100 pounds of gypsum per acre on the grass. The blue-grass

will require three years to mature, and in the meantime the clover and timothy and the rye will supply some feed for stock. If this plan succeeds, enlarge the operation. It will be advisable to try a few acres with some artificial fertilizer, to test this against the green manuring.

Coal ashes are worthless. Gas lime is dear at five cents a bushel when fresh lime can be burned for that price. Fresh gas lime is hurtful, and should lie some months to become oxydized and get rid of its sulphuretted hydrogen. Orchard-grass is the best for woods, and succeeds well in shaded ground. Scab may be known by the appearance of a yellow discharge from numerous pustules and the formation of brown crusts,—scabs, in fact. Mere redness and irritation of the skin may not be scab. These may be treated by giving the sheep half an ounce of sulphur and one dram of cream-of-tartar daily for two weeks. The scab may be treated by soaking the scabs in hot water, breaking them up and removing them; then dressing the parts with a mixture of one quart of pine tar, one quart of raw linseed oil, and one ounce of creosote, well rubbed in to the raw spots. If the scab is really in the flock, the better plan would be to get rid of the whole; wash with hot lime-wash every place where they have rubbed themselves, and wait a whole year before the flock is replaced. It is a very contagious parasitic disease, and costs more to cure than the sheep are worth.

Overloaded Paunch.

H. D., F., Palmer, Mass., asks what is the best thing to do for a cow that has been to the meal chest and eaten too much cob meal, and it is not known for twelve hours or more?

ANS.—While the writer was attending veterinary lectures it was a standing joke with the boys, when asked at examination time what they would do if called to see a sick animal with certain mysterious symptoms about which they knew nothing, to answer that they would send for Dr. ——, Prof. of Pathology. And so in a case like this, where a spontaneous cure or death usually results in the course of a few days, we should advise, by all means, that a competent veterinarian be employed, if possible, to treat the animal. It is often necessary to change the treatment to a very considerable degree in treating such a case, and no one can judge so well when these changes are necessary as an experienced practitioner. When first discovered, a good purgative should be given, together with a stimulant to hasten its action; this may consist of two pounds of Epsom or Glauber salts, or a pound of each, as some prefer, to which may be added two ounces of either ginger or oil of turpentine and thirty grains of nux vomica. This should be followed every two hours with such stimulants as water of ammonia (½ ounce), sulphuric ether or sweet spirits of niter (2 ounces), or ginger (2 ounces). In case of bloating, the ammonia or ammonia and ether combined, are to be preferred. If there has been no improvement in seven or eight hours, another purgative dose of the same should be given. If bloating becomes excessive, the gas may be drawn off by puncturing through the most distended point on the left side, with a cannula and trocar, or even with a knife. Finally, if the patient does not improve, but is evidently sinking, the only hope is in making an opening through the left side and removing the greater part of the accumulated food. Few people will undertake this operation without having first seen it performed.

Angora Goats and Mohair.

D. S. & W. H. G., Morristown, N. J. ask the price of mohair; where they can buy Angora goats; where they can find some works on the subject, and what would be the price of goats; also the price of a good sheep dog.

ANS.—There is no market price or any regular market for mohair in this country. The price ranges all the way from 40c. to $1 per pound, the factories paying, on an average, about 60c. to 65c. There are two or three mills (one at Jamestown, N. Y., and others in Philadelphia), working up this material into fringes and other small wares, but they are supplied mostly from foreign sources. The reason of this is that the business of growing mohair in this country is not yet a settled one; the fleeces are very uneven and of poor quality, and the wool is not sorted, so that the mills do not care to buy the domestic product. Richard Peters, Atlanta, Ga., is the oldest breeder of Angora goats. They are also for sale by J. S. Goe, Brownsville, Pa. They are worth about $30 per head. Experiments in keeping Angoras have been carried on more extensively in California than in any other part of this country, and according to late articles in San Francisco papers, they have not proved satisfactory there. Similar experiments, on a smaller scale, have been made in so many parts of the country that if there really was money in the undertaking, the industry would by this time have assumed wide dimensions in those sections which experience had proved adapted to it. There is no book about goats published. A good shepherd dog is worth $25 and upwards, according to the amount of training.

Reports of the Department of Agriculture.

Many subscribers, with many addresses, ask how they can obtain the above works.

ANS.—To be able to answer the question authoritatively, we wrote to the Department at Washington, and Gen. Le Duc replies that each Senator and Representative in the lower House has about 720 copies of the last Report for free distribution among his constituents. It is urged that application should be made to them at once for copies, as already the demand for them is very great. It seems to us that some discrimination should be made in the distribution of these works among members of Congress. Members representing large cities, like New York, Phila., Chicago and St. Louis, have seldom any demand for books that treat of subjects in which their constituents have little or no direct interest, and about which they know little or nothing. Nearly all the volumes consigned to them, soon find their way to the paper mills, and the country is thus put to a wasteful expense. It is just such indiscriminate largesses that excuse, if they do not justify, the diatribes of political papers on the uselessness and wastefulness of such publications. If placed in the hands of those for whom they are nominally issued, the large fund of interesting and useful information compiled in them, would be of advantage to the agricultural community in the first place, and through them to the country at large. At present, however, it is not unlikely that more of them go directly to the dealers in old paper than to the farmers.

Carbonate of Lime—Pear and Apple Quinces.

N. C. D., Mt. Airy, Hamilton Co., Ohio, asks, 1, what is carbonate of lime; 2, what, if any, is the difference between the pear and apple quince.

ANS. 1, Carbonate of lime is a salt composed of one equivalent of carbonic acid and one of lime. Artificially prepared, it is a white amorphous powder, quite insoluble in water. In its purest natural form it is the mineral calcareous spar. The pearl is almost entirely composed of it. It is also the principal ingredient in limestones and marbles. Carbonic acid is one of the most feeble acids in the formation of the compound substances called bases, and is easily expelled with effervescence by nearly all the other acids. This fact can be readily illustrated by placing a piece of chalk or limestone in a vessel and pouring any acid, such even as a good strong vinegar, upon it. It is also expelled when the limestone containing it is heated to redness, hence when limestone is burned the carbonic acid gas escapes and the lime remains. 2, The Apple is the more popular of the two. For certain places, Rea's Seedling is better than either. The Pear Quince ripens about two weeks later than the apple; is not so large or of so good a quality.

The Market for Gilt-Edged Butter.

C. A. G., Cornwall, Orange Co., N. Y., asks how he can best secure city purchasers who will be willing to pay top prices for his Golden-leaf butter, which has received several certificates.

ANS.—There is a good deal of humbug about the reports of extravagant prices given for so-called "gilt-edged" butter. The fancy grocers are overwhelmed with applications from makers to sell such butter. If any mutual friend can persuade any of these to accept a consignment, one *might* get a trial, but the demand for fancy butter at extravagant prices is so limited that there is hardly any possibility of finding purchasers at more than the ordinary market prices. The best way to find a special market for a choice product is first to make it; then send it, packed in half tubs of 30 pound weight, to a respectable and honest commission agent who will look out for a permanent market for it, and who will suggest the proper sort of packages to meet the ideas of his customers in future. Our correspondent, may, perhaps, gain his point by communicating with a good commission agent, such as C. W. Idell, 333 Washington St.

Miscellaneous.

Mrs. G. B. B., Somerville, Tenn., asks what variety of cabbage is best for winter, and what will destroy the cabbage worm. 2. She also states that her early cabbages head well, then decay in the center of the stalks, whereupon the heads fall off, and she wants to learn the cause, and how to prevent it.

ANS.—1. Large Flat Dutch and Drumhead Savoy are good late varieties. 2. Hot water thrown upon the worms will kill them. Of course, it must not be so hot as to scald the cabbages. A market gardener who grows cabbage on a large scale, recommends a mixture of twenty parts of superphosphate of lime, one part of carbolic powder and three parts of fresh air-slaked lime, a small handful of which should be scattered over each head. 3. Club-root. Lime and bone-dust have been recommended.

A Rural Reader, Richford, Tioga Co., N. Y., sends a beetle for name. After a flood, caused by the bursting of a dam, it was found in low water swimming like a fish, near the bottom. 2. He asks whether the Smithsonian Institute pays anything for such specimens.

ANS.—1. It is Belostoma grande—the Gigantic Water-Bug. It lives in the water and feeds on other aquatic insects and small animals. It is figured in the American Entomologist, 1869, vol. I., p. 249, and mentioned in the RURAL for Sept. 20, 1873, p. 187.

2. The Smithsonian Institute does not pay, generally, for any specimens.

L. P. M., Danville, Montour Co., Pa., referring to the article, How Ninety-seven Bushels of Corn per acre were raised, in the RURAL for Dec. 7, '78, asks where he can get some of the Rennie's New White Field Corn therein spoken of.

ANS.—We forwarded the letter containing this inquiry, to Mr. Rennie, Toronto, Canada, and he replies that he cannot give the desired information, as he has sent out several varieties of corn, from time to time, to his Canadian customers, and cannot decide to which of them the above name has been given.

W. S. H., Harbourton, N. J., asks where can he obtain information as to the method of caponizing cockerels.

ANS.—Full information with regard to different modes of performing the operation, was given in lengthy articles in the RURALS for April 20th; November 23d and December 28th last year. Instructions are also given on the matter in Lewis's Practical Poultry Book, Dixon & Sear's Ornamental and Domestic poultry, American Poulterer's Companion, and in most standard works on poultry.

S. G. B., Jamestown, Chautauqua Co., N. Y., asks where can he get the seeds of Chinese yams.

ANS.—He cannot get seeds in this country, that we know of. The male and female flowers are borne on different plants, and we have only the male. Upon this bulblets grow in the axils, as large as peas, and these are sold by most seedsmen for seed, from which plants readily spring.

M. J. C., Ashley, Ill., asks, 1, where can he get the Beauty of Hebron potato for seed and at what price; 2, where can he get Pearl Millet seed; 3, where can he get alfalfa seed and at what price.

ANS.—1. It will be advertised in our columns later. 2. Of half-a-dozen now advertising it in our columns. 3. Of most seedsmen. Price 30 cents per lb.

A. L. M., Darbyville, Baker Co., Fla., intending to ship 400 crates of vegetables to this city, besides a good deal of fruit, asks the name of a reliable house here, to which he can with safety consign the goods.

ANS.—C. W. Idell, 333 Washington street, is quite trustworthy and has won a reputation for giving satisfaction to those who ship goods to him.

J. D. T., Brookside, N. J., asks whether dipping chestnut shingles in coal tar and then allowing them to dry before laying them, will be beneficial.

ANS.—1. Yes. The coal tar can be applied the same as if it were paint, and sand sifted upon it before it dries.

R. J. S., Chillicothe, Ross Co., O., asks where the varieties of Apples mentioned by Dr. Hoskins in the RURAL of Jan. 18th can be found, and at what prices.

ANS.—If he means trees, or cions, of the Dr. himself. His address is Newport, Vermont. He will send a price-list free to our subscribers.

"Medicine," Stratford, Conn.: asks whether Grindelia robusta, spoken of as a remedy for bronchial and asthmatic affections in RURAL Brevities, in issue of Jan. 28, is the name by which it is known in *materia medica*.

ANS.—Apothecaries know it by that name.

J. W. K., Pitman Grove, N. J., asks where can he get Banana seeds or plants.

ANS.—Do not know as to seeds. Plants of several different kinds are sold by such florists as Geo. Such, South Amboy, N. J.—John Saul, D. C.

C. M., asks whether the account of Wet Mountain Valley, Colorado, given in the RURAL of Jan 1st, 1878, is trustworthy.

ANS.—We are not acquainted with the writer of the article, nor do we personally know as to the correctness of the description.

Several Inquirers wish to know where Plymouth Rocks and their eggs can be procured.

ANS.—C. S. Cooper, Schraalenburg, N. J.; George S. Josselyn, Fredonia, N. Y.; A. M. Halsted, Rye, N. Y.

THE
RURAL NEW-YORKER.
PUBLISHED EVERY SATURDAY.

Address RURAL PUBLISHING CO.,
78 Duane Street, New York City.

SATURDAY, FEB. 22, 1879.

The several statements in our columns to the effect that we intend to send trial lots of corn to our subscribers, have brought us a great number of premature applications. Now we beg to state that, being in the very midst of our other free seed distribution, we CAN NOT *regard these applications. The announcement in relation to the corn will be made in a few weeks. As we believe, the variety to be offered is the most prolific of any hitherto cultivated. It was for this reason that we have hastened to secure a quantity sufficient to supply every one of our subscribers who may apply with enough to give it a fair trial.*

We will be pleased to send one or more copies of the RURAL NEW-YORKER *free to any of our subscribers sufficiently interested in its welfare to be willing to hand them to their neighbors for inspection. An intimation by postal card will suffice.*

We earnestly request that all letters containing money, or any communication intended for the BUSINESS DEPARTMENT *of the paper, be addressed to* THE RURAL PUBLISHING CO., *and not to any individual. We cannot otherwise guarantee the prompt entry of names upon our books, or the acknowledgment of money.*

SPECIAL NOTICE.

OF ALL OUR SPECIAL NUMBERS, NO OTHER HAS CREATED AMONG OUR SUBSCRIBERS SO LIVELY AN INTEREST AS THE COMING CORN NUMBER. WE SHALL HAVE AN EXTRA EDITION PRINTED AND WILL SUPPLY, FREE OF CHARGE, SPECIMENS TO ANY OF OUR SUBSCRIBERS WHO APPLY FOR THEM. WE ARE CONFIDENT THAT THIS CORN NUMBER WILL DO GREAT GOOD, AND WOULD BE GLAD IF A COPY COULD BE PLACED IN THE HANDS OF EVERY FARMER IN THE COUNTRY. IN IT WE SHALL NOT ONLY OFFER TO SEND A TRIAL QUANTITY OF SEED (OF THE NEW VARIETY TO WHICH WE HAVE ALREADY CALLED ATTENTION) TO ALL OF OUR SUBSCRIBERS WHO APPLY, BUT WE HAVE DETERMINED UPON OFFERING PREMIUMS TO THOSE WHO, FROM THIS SEED SO SENT, SHALL PRODUCE THE LARGEST YIELDS OF CORN.

SUSPENSION OF OUR FOREIGN CATTLE TRADE.

THE Privy Council of Great Britain has issued an order that after the third of March all cattle imported from this country must be slaughtered at the port of landing within three days after their arrival. When questioned in Parliament last Friday as to the grounds for this order, the Government attributed it to the arrival in Liverpool of three cases of pleuro-pneumonia among American cattle. Apprehensions were therefore entertained that this disease might be communicated to native stock by infected animals in future shipments. The British Ambassador at Washington, the British consuls at various ports on the Atlantic, the commissioners whom the Canadian Government sent a few weeks ago among us to investigate the matter, had all furnished information of the existence of the disease in several parts of the Eastern States. Professor McEachran, the Canadian Commissioner, and his associates, Drs. Gadson and Lockhart, are reported to have ascertained its existence in Virginia near Lynchburgh and Martinsburg; in Maryland, near Baltimore; at Washington, near the Capitol; in Pennsylvania at several places; in this State in a number of localities on Long Island, also in Staten Island, Kings and Jefferson Counties; in Connecticut, near New Haven, and in several other parts of the Eastern States.

he recent action of the Governor of ew York and the reasons he assigns therefor afford ample proofs that with regard to some parts of this State at least the Professor's report was not without foundation. We learn, however, that Commissioners appointed by the Governor of Virginia, after investigating the alleged cases in that State, declare that the disease among cattle in both the places mentioned, is not pleuro-pneumonia. In many of the other places also, there is little doubt but that some other diseases have been ignorantly called by that name, for there is a natural tendency to ascribe all unknown causes of sickness among men or stock to any disease about which there may be a public excitement at the moment, and it is not pretended that the Canadians personally investigated the cases in all these places.

The check put to our foreign trade in live cattle by the action of the English Privy Council, Americans are apt at first blush to attribute solely to the pressure brought to bear upon the Government by the farmers and aristocratic land-owners with a view to getting rid of the ruinous competition with our cheaper beeves, from which they have lately been suffering and which threatened to be still more disastrous during the current year. This pressure, no doubt, existed and had a good deal to do with the decision arrived at, but it must be borne in mind that there was a counter pressure both by the vast body of consumers who have been benefited by the competition, by the English steamship lines and railroads, whose present meager profits will be rendered still more slender by the interdiction, and by the sticklers for free trade, who are always jealous of any measure that may seem to infringe upon their principles. Moreover, the privilege of importing live cattle from this country was an exceptional one. On the sixth of last September Her Majesty's Council issued an order prohibiting under all circumstances the importation of cattle from all countries in which any contagious disease was anywhere prevalent among them. The countries held to be infected were Austro-Hungary, Russia, Turkey, Greece, Roumania and Montenegro—in fact the whole of Eastern Europe. Cattle from the western seaboard of the Continent were admitted, but under the strictest surveillance, while cattle from Canada, the United States, Denmark, Sweden, Norway, Spain and Portugal have hitherto been allowed freer entrance. Great Britain has had ample cause for the most rigorous precautions to prevent the spread of pluero-pneumonia on her soil. It is moderately estimated that, some time back, the loss in the British Isles in six years from this disease amounted to $60,000,000, and even now, despite the severest measures for its prevention and repression, the annual loss from it is at least from five to eight million dollars.

In view of this experience of the Mother Country, Canada also is hardly blamable for taking every precaution against the introduction of the plague within her borders. It amounts almost to a certainty that she will be a loser rather than a gainer by her own and England's embargo on cattle from this country. Her trade in cattle with England has been temporarily ruined thereby, as she has made no preparations to ship by the St. Lawrence before spring. The earnings of her railroads and canals will be vastly reduced by the consequent diminution of their traffic. Her dealers have already made contracts for enormous deliveries of live cattle across the Atlantic during the present year.—a Glasgow authority states that they have contracted to deliver 250,000 head—while of many estimates we have seen none that places the number of cattle fattening for shipment at a higher figure than 15,000, and there are good reasons for believing that that estimate is twice too high. These dealers have been in the habit of making large purchases of our Western cattle, and while at present losing the profits of such transactions, they are running a serious risk of being mulcted for breach of contract through their inability to deliver the stipulated number of cattle to their foreign customers. On the whole, therefore, it is pretty certain that the Dominion will raise her own embargo on our cattle and urge the Mother Country to do likewise, so soon as she is assured that pleuro-pneumonia has been thoroughly stamped out in this country.

It depends upon our own Government, National and State, how soon this desirable object is to be accomplished. The interests involved are too important to the welfare not only of the agricultural community, but of the entire population of the country to brook a day's unnecessary delay. The disease is of the most contagious and insidious nature, readily communicable even by contact with the clothing of an attendant upon infected animals, days after he had left them. Favorable circumstances may, therefore, at any time cause an extensive outbreak which might inflict enormous losses upon the country. A month ago an export trade of 100,000 cattle during the current year, was deemed by good judges to be among the probabilities, and a trade of double that number among the possibilities, and although in the event of the continuance of the present restrictions, our exports of dressed meat will certainly be far heavier than would be the case should the embargo on live cattle be speedily removed, yet the difference in profits to our citizens during the summer months, combined with the loss from a decrease in the aggregate exports of our live-stock products, renders prompt action imperative.

For years the National Government has been culpably dilatory in providing means for the extirpation of this very disease. As long ago as 1871 the distinguished English veterinarian, Professor Gamgee, prepared for it an excellent report on the insidious pest. Twice during his term in office Gen. Le Duc has urged the necessity of liberal appropriations for stamping out this and similar contagious maladies among stock—and to his reiterated representations only the paltry pittance of $10,000 was accorded. Is it only when a long-threatened evil has come upon the country that our Washington Solons can be expected to take tardy action when the agricultural interest, the greatest in the nation, is concerned? True, the representatives of farmers in Congress, who have neglected to eradicate this plague, may point to the representatives of farmers in the agricultural press which, with a few honorable exceptions, has been equally remiss in calling attention to the necessity for stamping out the malady, or, worse still, have persistently denied its existence.

Indeed, whenever the danger from inattention to it has been referred to by any agricultural paper more far-sighted or better informed than the bulk of its contemporaries, it has been the habit of many of the latter to protest against any reference even to the existence of the malady here lest, forsooth, English agricultural papers might copy what might be said, and our cattle trade with that country be thereby possibly endangered. But to such reticence might be well applied the *mot* of Talleyrand to Napoleon, apropos of the execution of the Due d'Enghein, "It was worse than a crime—it was a blunder," for not only did it partake of the nature of a crime on the same principle as does the conduct of the owners of diseased cows who conceal the condition of the latter in order that they may sell their milk and finally their carcases, so endangering the health and life of their customers; but it also partook of the nature of a blunder, inasmuch as not only have the risks of contagion been thereby multiplied, but our trans-Atlantic customers must have discovered its existence; and now that they have done so, it is only natural that the very efforts made here to conceal it have given them exaggerated notions of its extent and severity. Upwards of three weeks ago Commissioner Le Duc, speaking from the records of his office before the Senate Committee of Agriculture, among other reasons why our export trade in live cattle should not be interfered with, urged that sporadic cases of pleuro-pneumonia had existed for nearly half a century here and there among our cattle, and that neither the number nor severity of such cases at present were so exceptional as to afford special cause for apprehension.

Candidly, we are strongly inclined to the same opinion, and we have never been among those who, from selfishness or ignorance, have foolishly attempted to conceal the existence here of a few widely-scattered cases of the disease. But, in view of the recent action of the British Government and of the magnitude of our interests affected thereby, even these few cases must be extirpated in the speediest possible manner; precautions must be taken against the spread of the malady, and some means devised by which our trade in live cattle with Great Britain may be speedily resumed, without exposing her herds to the slightest risk of contagion. On these points we shall have some suggestions to offer in our next issue.

FARMERS AS POLITICIANS.

THE government of the United States is supposed to be a government of the people, for the people and by the people. A large majority of the voters are farmers, and it consequently devolves upon this class to determine what laws shall be made and who shall make them. This being the case it becomes the duty of every one to so inform himself of the needs of the body politic that he may use this right of suffrage intelligently and for the best interests of the whole, of which he is so small a part. To do this, he must needs know at least the fundamental principles that underlie the science of government, and in so far as he does this he becomes a politician.

It is sad, but none the less true, that this term, in common conversation, has come to denote one who gives his time and attention to the furtherance of the interests of this, that, or the other party with which it has seemed best for him to connect himself. A politician, as the word is used, is one who has in some way gained an influence over voters, who can command the support of a certain set, clique, or ring, and consequently demands from his party a prominent position for himself or others whom he sees fit to name—one who believes that "to the victors belong the spoils," and to whom the control of the distribution of government offices with their attendant salaries and perquisites, whether national, State, county, or township, seems to be the chief object of party success. The name has become an unhonored one, and it is time it were cleansed from the ignominy that unscrupulous men have brought upon it. This will be done when every farmer becomes, as he should, a politician.

Universal education is the boast of this country. The good, sound sense of the common people is admitted; the honesty and economy of the governments of the towns and counties in the rural districts as compared with the knavish extravagance of cities, States, and the general government, are conceded. Take any district school-meeting, for example. The people understand there how and why they vote, and realize that every dollar expended is to be paid by themselves.

There is one thing every farmer can do—he can decline to give his vote to any man in whose honesty and capability he has no confidence. If a candidate is one to whom you would not trust the management of your own affairs, do not give into his charge the affairs of your town and county. First make personal worth, character and integrity indispensable qualifications of every man for whom you vote. Next satisfy yourself that he will speak, act and vote in such a way as will serve the interest of yourself and your fellow-farmers. If the interests of others, whether manufacturers, traders or professional men are antagonistic, they must yield precedence. Your motto should be "the greatest good to the whole number." Beware of smooth speeches and false logic. Try all things—prove or determine for yourself—that which is good.

We will close by just one bit of definite advice. Vote for no Representative in Congress who will not promise to use his best endeavors to raise the agricultural interests of the country to the position their importance deserves, and the first step towards this is to promote the officer in charge of the department to the position of Secretary with a seat in the Cabinet.

N. Y. STATE BOARD OF AGRICULTURE.

WE see that there is to be an effort to institute a Board of Agriculture for New York; and it would seem reasonable that 5,000,000 of people should have a bureau to keep a watchful eye over their greatest interest. The State Agricultural Society has been quite successful in holding annual fairs without the aid of a horse trot. Its greatest good has resulted from its display of stock and new farm machinery, thus allowing farmers to judge of improvements presented to the eye. But in dairy products—the largest specialty of agriculture in the State—it has uniformly presented a row of tubs of butter and boxes of cheese, which may have been instructive to coopers, but would have been equally useful to visitors had they been empty, since their contents are never exhibited. This Society has been and will continue useful in its way, but this great State requires a Board with broader views of its agricultural needs—that will exert an influence in organizing and developing its neglected resources—that will take an intelligent supervision of the great interests of agriculture. Pennsylvania, Ohio and other States are some years in advance of New York in this respect.

The fence question is rapidly solving itself under the pressure of circumstances. A few years ago it was thought one of the inalienable rights of slip-shod farmers to let their stock run in the road to annoy their neighbors, but the summary road law, of New York and some other States, has put an end to this nuisance; and now, moral philosophers among the farmers are beginning to ask the question whether any one has a right to require his neighbors to build fences to protect themselves against his stock. The Pennsylvania Board of Agriculture has solved this nice moral question in the draft of a bill to repeal existing fence laws, recognizing the principle that every farmer must be responsible for keeping his own stock at home. This will enable the farmer who soils his animals to build only such fences as he requires—and leave his neighbors as independent as himself.

BREVITIES.

MR. GEO. C. WOOLSON writes us: "I see in a recent RURAL an account of Hibiscus coccineus. This species from the Southern States is, as you say, not hardy; but we have a plant from Japan, apparently the same thing, which I have strong hopes of being hardy." If so, it will certainly prove a great acquisition.

IF you have rheumatism, eat celery—it is said to be a right-down, sure cure—if you eat enough of it. But even if you haven't rheumatism, we advise you to eat it all the same. It is a most delicious vegetable when properly grown and blanched, and farmers ought to raise one hundred bunches where now they raise one.

For Women.

CONDUCTED BY MISS FAITH RIPLEY.

WRITE THEM A LETTER TO-NIGHT.

Don't go to the theater, concert or ball,
But stay in your room to-night;
Deny yourself to the friends that call
And a good long letter write—
Write to the sad old folks at home
Who sit when the day is done,
With folded hands and downcast eyes
And think of the absent one.

Don't selfishly scribble "excuse my haste,
I've scarcely the time to write,"
Lest their brooding thoughts go wandering back
To many a by-gone night
When they lost their needed sleep and rest,
And every breath was a prayer—
That God would leave their delicate babe
To their tender love and care.

Don't let them feel that you've no more need
Of their love or counsel wise;
For the heart grows strongly sensitive
When age has dimmed the eyes—
It might be well to let them believe
You never forget them, quite;
That you deem it a pleasure, when far away,
Long letters home to write.

Don't think that the young and giddy friends,
Who make your pastime gay,
Have half the anxious thought for you
That the old folks have to-day.
The duty of writing do not put off;
Let sleep or pleasure wait,
Lest the letter for which they looked and longed
Be a day or an hour *too late*.

For the sad old folks at home,
With locks fast turning white,
Are longing to hear from the absent one—
Write them a letter to-night.

[*National Baptist.*

FRECKLES AND COMEDONES.

In answer to many inquiries relative to these skin blemishes, I give below Dr. Erasmus Wilson's recommendations for their treatment. (Dr. Wilson is *the* authority on diseases and disfigurements of the skin):

Freckles are sometimes a congenital affection, appearing soon after birth and continuing through life; more commonly, however, they prevail during the ten years from ten to twenty, and are more frequent in persons of light complexion and light hair than in those possessing a darker skin. The exciting cause of freckles is the operation of light and heat upon the skin, and in particular the sun's rays; but there doubtless exists a predisposing cause, in a weakness of structure of the skin and a sensitiveness to irritant impressions. The treatment should aim to promote a healthy tone and healthy nutrition of the skin; to this end the parts should be washed once or twice a day with some stimulating soap, such as that of juniper tar or carbolic acid, and cold water, and a moderately stimulating lotion subsequently applied, such as that of the bichloride of mercury in emulsion of bitter almonds (gr. j. Lj. ad. z.j.); a similar solution in spirit, with elder or rose-water. Some authorities claim that freckles are cured by galbanum and carbonate of soda, rubbed down with vinegar to the consistence of honey. This is to be rubbed upon the skin, left for some hours, and then washed off.

Comedones.—These are commonly met with on the face of persons in whom the cutaneous circulation is less active than natural, and particularly among the inhabitants of cities and large towns, in whom the brain and nervous system claim an undue proportion of the vital energies. The treatment of Comedones or black worms, requires the employment of such means as are calculated to stimulate the skin gently and excite it to the due performance of its proper functions. The parts affected should be saturated with soap and thoroughly washed; they should then be rubbed briskly with a rough towel until the skin be felt to glow. This should be repeated twice in the day. The immediate effect of this treatment may possibly be a red and patchy state of the skin, which will speedily pass away. It would be well, also, to extend the ablutions and frictions to the entire body, for the appearance of the disease in one part is indicative of a generally torpid action of the skin. Cold bathing and sea bathing are also calculated to be beneficial. In some instances it may be necessary to employ some medicinal stimulant, in which the bichloride of mercury lotion with spirits of wine, or with the emulsion of bitter almonds, will be found to be the best application.

ITEMS FOR CORRESPONDENTS.

Mrs. Bird, Madison Co., Wis.—You can purchase good quality of American silk at $1.00. Silks advertised at 50 and 60 cents, are usually worth no more.

Constant Reader.—The address of Alice Fletcher & Co. is East 14th St., New York.

Mrs. Linda Acker, Fulton Co., N. Y.—In Poonah painting on wood it is necessary first to cover every part which is to be painted with Chinese white, mixed with gum-water and laid on rather thickly, and upon this prepared white surface the colors will preserve their own proper hue, but unless this is done the tint of the wood, although it may be as near white as wood can naturally be, will spoil the effect of the colors.

Miss H. L. T., Ripon, Wis.—Crewels can be purchased at Decorative Art Society, East 19th St., New York, at $9 per pound or 10 cents a skein. I would prefer to have you order direct, rather than through me.

Lily Beal, Fond du Lac, Ill.—It is rather early to give positive information as to coming styles. I will publish in a week or two illustrations of two polonaises, suitable for the materials you name.

Literary Miscellany.

WEAKER THAN A WOMAN.

CHAPTER XXXI.

(Continued from page 111.)

As his Lordship had foreseen, the outdoor attractions proved too much for the younger guests. The Earl himself and Lord Rayden sat down to chess; Lady Arlington, Lady Rolfe, Colonel Riddle, and Sir Owen made up a whist-table; Lavinia went to the piano; Lady Maud distributed her attentions equally, and most of the younger people went out through the long open windows on the wide terrace.

The evening was fragrant, calm, and sweet; far away under the trees the glow-worms were beginning to shine, a nightingale was singing in the gardens, the faint ripple of fountains filled the air, the rich odor of roses and lilies ascended like a cloud of perfume.

One by one the guests went out. Some descended the terrace-steps into the rose gardens below, some admired the tints in the west left by the sunset, leaning over the stone balustrades; others wandered into the beautiful grounds. Lady Maude walked for a short time with Felix, and then she looked up at him with a smile.

"You can amuse yourself," she said; "you are a man of resources. I must go to that unhappy young lordling who is feebly trying to talk to Miss Lloyd."

She left him, and Felix turned down a broad path where acacia-trees were in full bloom. Lady Chevenix saw him, and followed him. She had been longing for the chance of speaking a few words to him, and it had come at last. He was startled when a shadow fell over his path and a sweet voice said—

"Felix—Mr. Lonsdale—will you be friends with me?"

He turned round in amazement. Violet stood before him, looking as lovely as a vision, her silk dress and rich lace trailing round her, her beauty deepened because over her white neck and shoulders she had thrown a silvery veil; it fell from her golden head, shadowing the fair face.

"I have alarmed you," she said; you were not thinking of me."

"I am afraid, to use a lawyer's phrase, that is a true indictment," he replied. "Lady Chevenix, I must plead guilty. I was thinking of Lord Rayden."

"And I was thinking of you," she said, gently.

"You are very kind," he returned, indifferently. "Lord Rayden is quite a new type of man to me; I have seen no one like him."

They were walking down the path together now—he had been compelled to follow, as she led. The white acacia-blossoms fell on them; the evening breeze was full of sweetness. Lady Chevenix turned to him with her old graceful impetuosity.

"I do not want to talk about Lord Rayden—I do not care to hear about him; I want to hear of you."

"You are very kind," he said again, with a polite bow.

She stamped her little foot on the ground impatiently.

"Do not be so polite to me," she cried; and then she seemed suddenly to remember herself. "I beg your pardon, Felix," she said. "but I want to know if you will be friends with me?"

"I do not understand you, Lady Chevenix," he replied; and she knew there was nothing but indifferent wonder in his voice.

"You do not understand? You must understand! A child would know what I meant. Will you be friends with me?"

She stood still as she asked him the question, and looked up at him with wistful eyes. In the half-golden light her face shone out clear and pure as a star. She held out her hand to him.

"Will you be friends?" she repeated: and this time her lip quivered.

He did not touch the hand she held out to him. He had bidden farewell to those hands—their least touch was no longer for him.

"Do you mean, Lady Chevenix, to ask me if I will be your friend? I do not see that that is possible—you forget the difference in our positions."

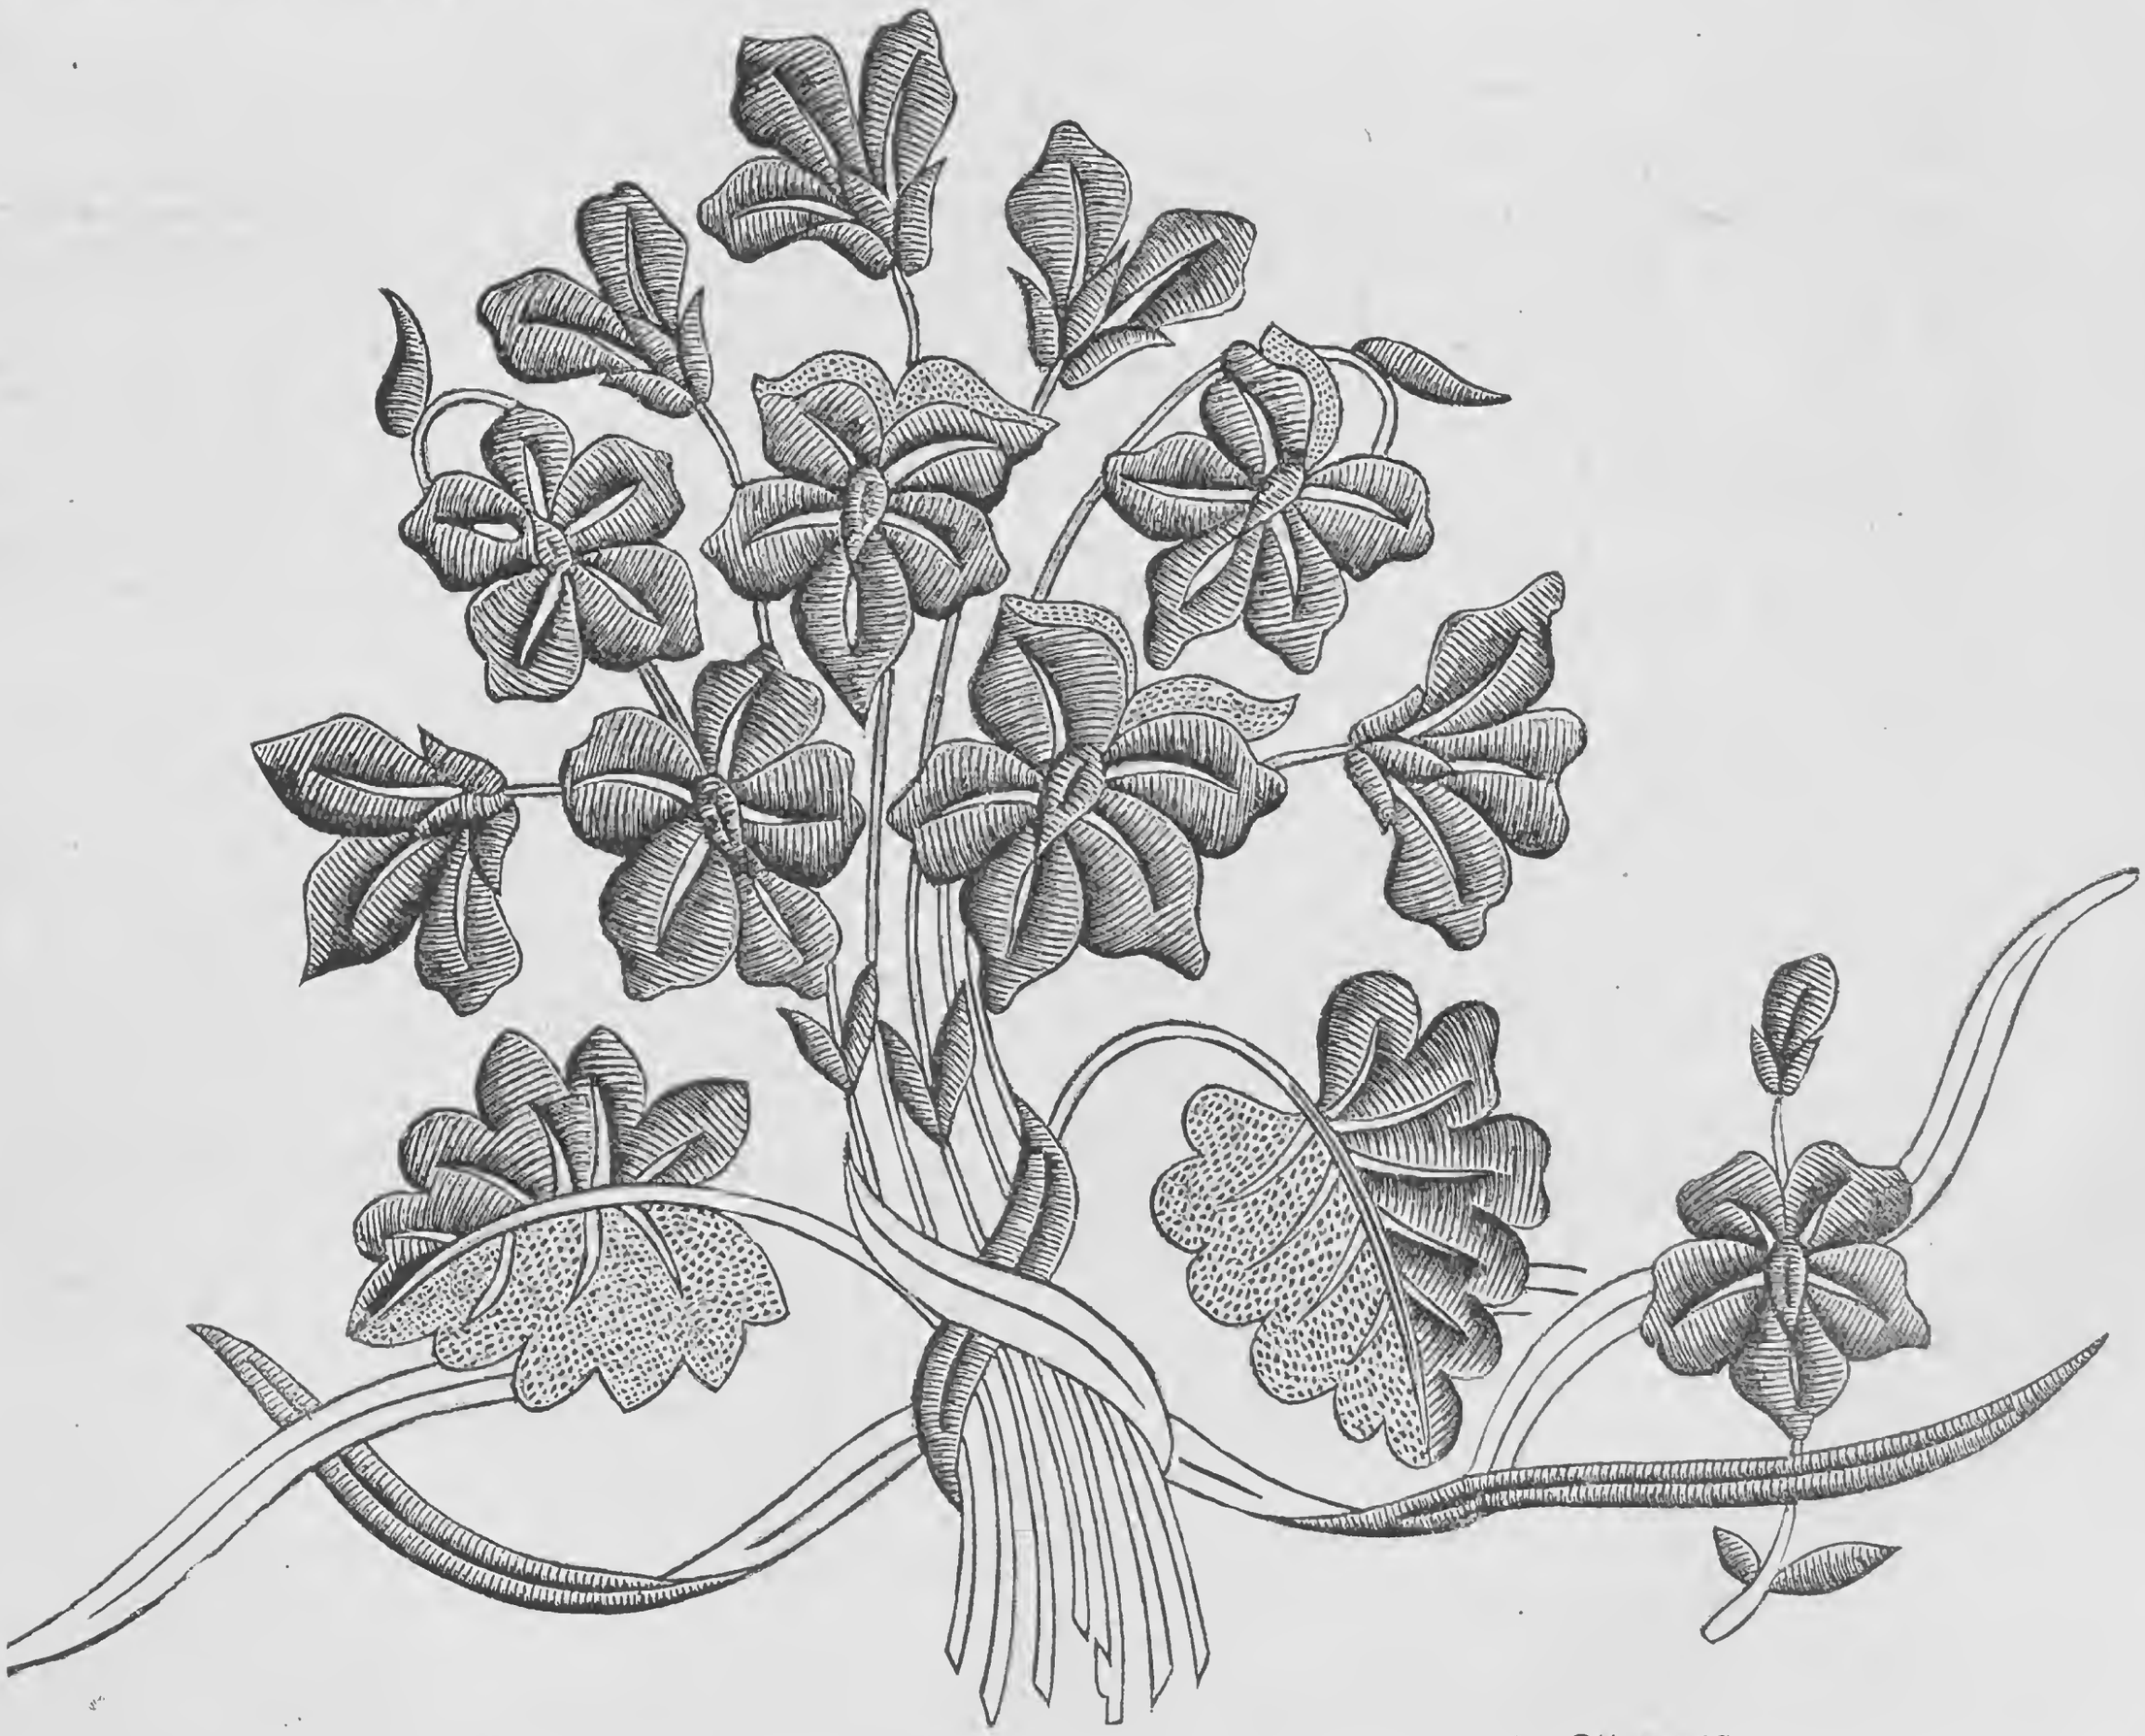
"You are Lady Maude's friend," she interrupted.

"Yes, that is natural. I have business relations with Lady Maude's father. It is quite a different matter. There never can be much friendship, I think, between people of different positions."

The tears stood in her eyes.

"I did not think you could have spoken so to me," she said.

"I am unfortunate if I have spoken unpolitely or abruptly," he returned. "Friendship is to me a



Design in Crewel Work, suitable for Chair Backs or Seats, or for Ottomans.

very sacred thing—I never lightly use the word—and I cannot but say that for Lady Chevenix of Garswood and a very hard-working lawyer there can be no common ground."

"I have known you all my life," she said.

He looked at her—he did not speak; it seemed to him that further speech would be imprudent. Her eyes fell before the clear, honest gaze; there was no reproach in it, no upbraiding, but it reached the depths of her soul.

They came to the end of the path; he did not turn back. There was a garden-chair; she sat down upon it, and he passed on with a low bow.

CHAPTER XXXII.

Lady Chevenix and Felix Lonsdale did not meet again for some time. Sir Owen had not made a very favorable impression at Bramber Towers. The Earl had invited him, with his beautiful young wife, to a grand ball, but Felix was not present, and Sir Owen forgot himself so far as to drink too much, and then, when intoxicated, to use coarse language.

In September Sir Owen was invited to be present at a grand political banquet given at Ordstone, and Felix made one of the most telling speeches of the night. It was so eloquent, so magnificent in its true, noble ideas, its picturesque language, that he became popular; a man who could speak so well ought to be in Parliament, the leaders said—and it seemed very probable that at the next election Felix would stand an excellent chance.

Sir Owen was startled; he thought a great deal about "young Lonsdale." With all his own dense stupidity, he was capable of admiring great talent in others. Another thing struck him. During the banquet he sat next to Captain Hill, who told him that he heard Lord Arlington say that the wisest action of his life was the placing of his affairs in the hands of Darcy and Felix Lonsdale. Sir Owen thought a great deal of that; a good, clever, trustworthy land-agent was a person he had long desired above all others, and, if the Lonsdales served Lord Arlington so faithfully, they would perhaps serve him in a like manner. He thought over it some days before he mentioned the subject to his wife.

He knew that he was deficient in business capacity. In his sober and most sensible moments he owned that. Study—learning of any kind—had always been irksome to him. He never had read anything but the daily newspapers and some of the sporting prints; he could not write a letter properly, and he had just sense sufficient to know his own shortcomings.

One morning he received a number of letters that puzzled him—some documents that he could not understand were sent for him to sign.

"A man may sign his whole fortune away without knowing it," he said. "I wish I had some clever man to see to it all for me. Arlington has none of this trouble, I know."

Lady Chevenix, in her graceful morning-costume, sat opposite to him. They had just finished breakfast, and that was, as a rule, his most amiable hour. He looked up at his wife suddenly; he had never consulted her on any business before, and would not have done so now but that she knew the Lonsdales.

"Violet," he said, "what a clever man that young Lonsdale is! He is making quite a good position for himself. I should not be surprised to hear of his getting into Parliament."

He did not notice the flush on her face or her agitation. She did not know what answer to make—she dared not say she was glad. Sir Owen did not want an answer. He went on——

"I have been thinking of asking him to be my land-agent; they say he does so well for Arlington. I really cannot grapple with all these matters myself; and he seems to be the only man about here who has a head worth carrying on his shoulders. I wonder if he would undertake the post if I asked him, Violet?"

"I cannot tell—I do not know," she replied.

"But you must; surely you must have some idea—you have known them a long time. What do you think?"

"I should say the Lonsdales would be very pleased; they ought to be. You would pay them well, of course?"

"I should be quite willing to give five hundred a year; but then I should expect all my work done for that. I pay almost as much as that now in one way and another. I think I shall go and see them about it, Violet."

"It would be the wisest plan," she said.

"Young Lonsdale has not shown any great anxiety to visit us," he continued, with a sneering laugh. "Perhaps he has not quite forgiven me about you—eh, Violet?—though he did not seem to care about it."

"He has forgotten all that nonsense," said Violet. "I do not believe he remembers even that we were friends."

"So much the better. I shall call to-day and see them. If young Lonsdale consents, I will make him come and dine with us. He dines often enough at Bramber Towers. I hope he will consent. I thought of traveling next year, and I should enjoy my trip much better if I left him in command."

"I hope you will succeed," she replied—and she did hope so; she would have been glad of anything that would have forced Felix into her society. She was lonely in spite of all her grandeur, and there were times when she was dreadfully tried.

It was hard work to live with Sir Owen; she had to watch him incessantly to study his humors, to obey him readily; she had less real liberty than the wife of many a poor peasant. She would be so pleased if she could see Felix sometimes—not that she wanted any allusion even to their former acquaintance, but she never knew what that sweet sunny presence of his had been to her life until he had passed out of it.

If they could meet sometimes, and laugh as they used to laugh over all the little comic scenes and sensations Lilford afforded, if she could talk to him of some of the thoughts and ideas that began to crowd upon her mind and brain, she would be well pleased; there was always a sense of something wanting, something missing, in her life. So she hoped that he would consent to act as Sir Owen's agent. Surely she should see him occasionally.

Her husband was not a pleasant companion, and at times, when her nerves and patience were overtaxed, she would go to her mother with a long list of complaints. But Mrs. Haye was always diplomatic. She would listen with every appearance of sympathy; she would condole with her daughter, and then she would say, "Every wife, my dear, has a good deal to undergo; the foolish ones talk about their trouble, the wise ones keep it to themselves. After all, you must expect some little drawback. You have wealth, title, grandeur, diamonds, carriages, servants; the only drawback is your husband, and you must study to bear with him as well as you can."

This was all that Lady Chevenix ever had from her mother.

Francis Haye would say to her at times—

"I do not like to interfere, Violet; but is all that I hear about your husband's intemperate habits true?"

"I am afraid so, father," she would reply; and then he would add—

"Can you do nothing to check him? A wife should have some influence over her husband."

"I can do nothing," she would answer; and then her father would doubt whether, after all, things had happened for the best.

* * * * * * *

Sir Owen rode over to Lilford and called at the office in Castle Street. If he had found Felix there, his request would have been refused; but Darcy Lonsdale was in the office, and listened calmly to what the Baronet had to say.

"I cannot give you an immediate answer," he replied; "but I will think over your proposition and let you know our decision."

Sir Owen stopped while he said something about his earnest desires, and he made some impression on Darcy Lonsdale by his evident trust in him. Once the elder man was inclined to turn round and say, "You robbed my son of the greatest joy of his life—his love—and I will have nothing to do with you or anything belonging to you." But that would have been undignified, and he had learned his lesson of mercy. To him there was something almost pitiful in the fact of this strong, coarse, rich man, unable to take care of his own, unable to hold his position with dignity, appealing to him for the sensible management that he could not give himself.

He would not decide hastily; he did not think his son would like the business. But five hundred per annum was a consideration; besides which, Darcy Lonsdale shrank from the remarks that people would make if he refused such an offer. He said nothing about it until he returned home at night, and then he found Eve Lester there, and the matter was reviewed in solemn council.

"I say take it," urged Kate. "It seems to me really, Darcy, that there is an especial Providence for us. Take it, by all means. It is a sin to throw five hundred a year away.

"My dear Kate, this is more a matter of sentiment than of money," said Mr. Lonsdale.

"I am of Kate's opinion," put in Evelyn. "I quite think you should accept it. If you do not, people will say disagreeable things."

"I have thought of that, too. The general impression would be that Felix held some kind of resentment against Lady Chevenix, or that he had still some lingering liking left for her. What do you say yourself, Felix?"

"My dear father, I will say nothing," he smiled. "It is a matter of utter indifference to me. I do not see that there is the least connection between Lady Chevenix and her husband's agency. Accept or decline it, just as you will."

"If I accept it, I will undertake to do all the work," said Darcy Lonsdale.

"Then I will do more for you, so that you may not feel it," said Felix.

"There will be one thing," remarked Mr. Lonsdale. "If we take the agency, we shall be compelled to visit Garswood at times; and I do not know whether you would like that, Felix."

"I shall neither like nor dislike it," he replied. "It is a matter of utter indifference to me. I do not like Sir Owen, I confess; as to Lady Chevenix I say nothing. If we are compelled to visit them, we must suffer the penalty of mixing in society."

He spoke in a tone of such perfect freedom and indifference that Darcy Lonsdale said to himself, "He has forgotten her;" but Kate and Eve both looked anxiously at him. He looked indifferent, and Kate thought he achieved the victory; but Eve knew him better, and understood that he would fight to the death but would never yield. So, after a long and animated discussion, it was decided that Darcy Lonsdale should write to Sir Owen and tell him that his offer was accepted.

"I am glad," said Eve, "for I hear many people say that unless matters improve the time will come when Lady Chevenix will badly want some one to look after her interests. Sir Owen drinks dreadfully, and has no thought of the hundreds he lavishes when he is not sober. Poor Lady Chevenix, with all her beauty may yet want a friend."

"I hope not," said Darcy Lonsdale kindly. "If I have anything to do with Sir Owen's affairs, I shall do my best always for her."

So the matter was settled, and Sir Owen, when he read the note in which Mr. Lonsdale gave his consent, was grateful. He took it at once to his wife.

"They have consented," he said. "Now from this day henceforth I shall lead a happy life; all that reading and writing and worry was too much for me. I was tired of it."

She read the note, and laid it down without comment.

"Are you pleased, Violet?" he asked.

"I am pleased if you are," she replied.

She was thinking whether this would bring her and Felix more together.

"I tell you what we'll do, Violet. We will give a grand dinner-party, and you must ask all the people from Bramber Towers, with Mr. and Mrs. Lonsdale and Felix. See about it at once; send the notes out to-day."

She obeyed him without a word.

CHAPTER XXXIII.

"We can not refuse," said Darcy Lonsdale, as he held Sir Owen's invitation open in his hand. "We must go this once, and then we can please ourselves afterwards. What do you say, Felix?"

Felix thought for a few minutes, and then he said frankly—

"To tell you the truth, father, I think I would rather not go—I do not like the idea. To transact Sir Owen's business is all very well, but to dine with him is quite another thing."

"You shall please yourself," returned Mr. Lonsdale. In his heart, although he felt great compassion and great indignation concerning his son, he was pleased that he had not married Violet. He had seen no chance of happiness for him—he had resented her conduct to him.

Darcy Lonsdale knew that his son was bitterly wounded, but he said to himself, "Pain is discipline," and every one has some kind of trouble to undergo. So, when he declined to go to Garswood, Darcy sighed to himself, and was sorry that his son still felt the rankling of an old wound.

But Kate would not have it so; for the first time, almost, in her life she differed from her step-son.

"You must go, Felix," she said. "Only think what people will say if you stay away! Even Lady Chevenix herself will be flattered and think you dare not meet her. Go, Felix; I should not like to give her that triumph. You will have to meet her some time or other—do it now."

He was not quite willing at first, but after a time Kate persuaded him, and it was arranged they should go.

Yet Felix hardly liked it. To have refused Sir Owen's agency would have been to stand in his father's light, to prevent the children from receiving the benefits of an ample income. He would not do that; but when he was in sight of Garswood he hated himself for having come near the place. He could not help wondering how Lady Chevenix would receive him, what she would say to him, whether she would be pleased, or the reverse.

"It can never be pleasant for her to meet me," he thought. "The sight of me must remind her of her unfaithfulness."

As they came in view of the towers and turrets of Garswood he expressed this idea to his father. He wished even then that he could return. He looked anxiously into his father's face.

"It seems to me," he said, "that we have compromised our independence by accepting the agency."

"My dear Felix," Darcy Lonsdale laughed, "if every man were to carry his private feelings into business, business would soon stop. Bear one thing in mind, and you will never be vexed about coming here. You are invited here, not as the lover whom Miss Violet Haye in her innocent pride forsook, but as the agent without whose services and restraining hand Sir Owen, rich as he is, will soon be ruined."

"There is common-sense in that view," said Felix.

"Then, again, for your own sake, Felix, forget the past. The world is very unjust. A woman forsaken is always pitied; a man forsaken is often laughed at. Let people say how little it must have affected you since you can visit her husband—not how bitterly you must grieve for her since you are compelled to decline all invitations."

And with those words the carriage stopped before the great entrance. Father and son entered the superb hall with its ancient oak and armor, its stained glass windows, and an ancient crest emblazoned everywhere.

They passed through the magnificent rooms, until they reached the great drawing-room where Sir Owen and Lady Chevenix received their guests. Several were already assembled, but standing apart from all others Felix saw Lady Chevenix.

It was the first time he had met her in her own home, in the midst of the splendor that was now hers, and his eyes were dazzled by her wondrous beauty. Her dress of white silk with trailing roses was richly trimmed with fringes of gold. She wore a tiara of diamons set in gold. Her exquisite beauty and her exquisite dress dazed him for a few moments, but he made no sign; and Darcy Lonsdale was proud of his son, as he advanced with princely grace and carriage into the room and bowed to the lovely woman who, despite all her efforts, grew deathly pale as she saw him.

Lord Arlington, who never neglected any opportunity of publicly showing his great affection and regard for Darcy Lonsdale, went up to him and began a long and interesting conversation with him. Lady Maude called Felix to her side. And so the Lonsdales' arrival passed off as the arrival of any other guests would have done.

"I am glad you came," said Lady Maude to Felix. "I was afraid you would refuse—and I should have been sorry for that."

Then dinner was announced, and the long and stately procession moved forward to the dining-room. Felix, from where he sat, could not only see Lady Chevenix, but he could hear all that was passing. He wondered at her perfect grace and elegance. She took her place at that superbly-appointed table as though she had been accustomed to it all her life. He watched her keenly, and with wonder. Where had she acquired her perfect grace and ease of manner?

Sir Owen, awed by the presence of his distinguished guests, behaved with great propriety, and altogether the dinner was a great success. Lady Chevenix gave the signal to the Countess of Arlington, and the ladies rose. Felix sprang up to open the door for them. His eyes met Violet's, and he saw a red flush cover her face, and rise even to the roots of her hair.

Was she ashamed of the price of her faithlessness? he wondered. Was she ashamed to parade before him her wealth, her grandeur, her jewels? The more shame she felt the better for her—it was a good sign. The gentlemen had a pleasant half hour, and then they rejoined the ladies.

"Surely," thought Lady Chevenix, "I shall be able to see him, to say a few words to him. I must know if he always intends to be as he is now, so cold, so proud, so unforgiving."

But it was a far more difficult matter than she had thought. She could not speak to him without attracting observation, unless he either purposely or accidentally found himself near her. Perhaps he would make the opportunity, she thought—but he did not. He talked a great deal to Lord and Lady Arlington, and at times to Lady Maude; but at last came an opportunity. Some one asked for the old-fashioned glee, "When shall we three meet again?" and Lady Chevenix remembered that she had the music. Felix was to take the tenor part—he had a glorious tenor voice, rich, clear, and ringing. She turned to him with a charming smile——

"The music is with some old books of mine in the canterbury—will you help me to find it?" So, while the room was filled with laughter and song, Lady Chevenix and Felix bent over the old music-books to look for the glee. She turned her head and said in a low voice——

"I want to speak to you, Felix—will you listen to me for a few minutes?"

"If you wish it," he replied coldly.

"I do wish it. I want to know if all our lives we are to be like this."

"Like what, Lady Chevenix?" he asked.

"You know what I mean—if our lives are to be so entirely apart, if you will always be cold and distant and proud to me—if you will always avoid me and ignore my presence."

He looked at her in mute wonder.

"Must I remind you of one thing, Lady Chevenix?" he asked.

"What's that?" she said.

"That it was your hand that separated us—that broke all ties."

"Yes, I know that; but could we not be friends? Could you not come to see us sometimes—talk to me, share our amusements, and be really a friend—could you not do this, Felix?"

"No," he said, "I could not."

"Why?" asked the sweet soft voice.

"Because I happen to be a man, and not a statue—because I have a human heart, and am not made of marble. Our lives lie apart, Lady Chevenix."

"You might be kinder," she said; and the beautiful woman shrank from him as though he had struck her a blow.

"No," he rejoined, "it would not be possible. As the wife of another man, you are nothing to me; to enter into a compact of friendship with you would be to endanger what I hope to keep stainless until I die—my honor before men and heaven. Our lives lie quite apart, and nothing can bring them into contact.

"Can I help you, Violet?" said a voice near them; and, looking up, Lady Chevenix saw the anxious face of her mother.

Mrs. Haye bent over the music-books.

"I will assist my daughter, Mr. Lonsdale," she said coldly.

Felix bowed and left them.

"My dear Violet," said Mrs. Haye, "how can you be so imprudent? Why do you talk to him? You will cause remarks that will not please you."

"Mamma," replied Violet, raising her white face, "he says that he will not even be friends with me."

"So much the better, my dear. Lady Chevenix of Garswood will choose her friends from amongst the highest in the land, not from her old playfellows. Try to look like yourself, Violet."

"I will; but I wish I were dead, mamma."

"Nonsense, child. See, Lady Maude is waiting for you. Come now, my darling Violet—courage; this is but childish nonsense."

So with inspiriting words she brought the smiles back to the sweet face; but in her heart she resolved that Lady Chevenix should see but little of Felix Lonsdale while she was there, and she kept her resolve.

CHAPTER XXXIV.

Five years had passed since the peal of Violet Haye's wedding-bells had driven her lover Felix almost mad, since the wonderful turn of good fortune had come to the Lonsdales and made them famous—five years, and they had brought with them many changes.

Darcy Lonsdale seemed to have recovered more than his usual health and strength; he had never been so happy, so prosperous and contented. Over and over again he said to himself that his misfortune had been a blessing. He attended almost entirely to Sir Owen's business—Felix very seldom interfered with it; but he in his turn attended entirely to Lord Arlington's. The firm was eminently prosperous, and it was fast taking the place of one of the most eminent in the county.

A great change had come to Felix. These five years had wonderfully improved him. He was looked upon as the rising man of the day; his society was courted; his opinion was sought upon every leading question. He retained all the simple habits of his boyhood; he reverenced and loved his father, he loved Kate and the little ones. He might have set up a separate establishment for himself, but he was quite content with the old home at Vale House. The only luxury in which he had indulged was the purchase of a spirited thoroughbred. When he had worked until eye and brain and nerve were exhausted, he would ride through the green lanes, gallop over the breezy commons, and return with renewed vigor.

They asked themselves, those who loved him best, if he had forgotten his unhappy love-affair. It was impossible to say.

He never mentioned Lady Chevenix; he never made any of those half-bitter, half-cynical remarks in which disappointed men so often indulge. If any one spoke of her in his presence, he listened, and replied if necessary; but there was nothing revealed in his manner. Kate said to herself proudly that he had forgotten her, that his heart was too noble to keep alive the memory of a woman so false. Eve knew him better. There were times when even a gallop over the breezy uplands did not set him straight, and then he would go over to the Outlands.

(To be continued.)

BREAKING THE BONDS.

L. Q.

"Do, Annie, fasten these flowers in my hair. See, I tremble so that I cannot. Oh! what an ordeal! I shall certainly make a goose of myself, and disgust Charley."

The lady addressed turned from the glass, and very deftly placed the drooping moss rosebuds in her companion's dark hair, artistically arranged a tiny bunch of the same exquisite flowers in the belt of the slender waist, and at the white throat, and then stepped back to admire the effect.

"Exquisite! Gertie. You are looking lovely to-night. Such color—such eyes! Take my word for it, Charley Denton cannot be disappointed."

Gertie Melton turned and flashed a glance at herself in the great pier-glass, which disclosed a slight girlish form, exquisitely rounded, robed in snowy muslin, ruffled, and tulled, and festooned in the fashion of now-a-days. But tears were in her lovely eyes as she turned away from the glass, saying:

"Cousin Annie, I am a miserable coward, and shall utterly fail in making the desired impression. Oh! Annie, dear, take my name and place just for to-night. We shall be able to deceive him, I know, for every one talks of how very much we resemble each other. We both bear the name of Miss Melton, and it will be easy to exchange positions. Besides, it will be such fun;" and she laughed in an almost hysterical manner.

"And the ring, Gertie?"

"You must of course wear it for to-night," and she tremblingly took from her hand a magnificent diamond ring, and placed it upon her cousin's finger. "Now remember. You are to be Miss Gertie Melton, the affianced wife of Charles Denton, and I your cousin, Annie Melton. Act your part, and I will mine."

The two girls, as they stood with clasped hands, looked strangely alike, both in form and feature, but they were as unlike in temperament, and manner, and voice as possible. Gertie was all enthusiasm, graceful, sparkling and impulsive to a marked degree, while her cousin was calm and impassive as a summer sea, matter-of-fact, and devoid of the least romance in her composition—one of the class of women who make excellent methodical housekeepers, and whose entire life is an accumulation of hard facts without a single dream.

Charles Denton, the subject of so much discussion, had that day arrived from a foreign shore, and had taken rooms at one of the fashionable hotels. He had intended to call immediately upon his affianced, but had met with an old friend—the only one who would be likely to recognize him after an absence of five years, from the fact that they had been fellow-students in a German university.

"I saw Miss Melton," he told him, "at the opera, last evening, and she informed me that she would attend the ball at Mrs. Vandevere's to-night. I can easily procure you an invitation, and you will have plenty of time to dine and dress. You will certainly meet the lady there looking her loveliest. What say you, Charley, I will call for you with the carriage."

"A pleasant arrangement, old chum. Especially as I feel slightly nervous about our meeting. Ah, me! how time changes one's feelings. I am not half as eager, I presume, as I ought to be, or as I would once have been."

"How in the name of divinity did you come to bind yourself, Charley? Hasty courtships, and a speedy execution for me. Gracious! I could not live five mortal years bound, and yet not tied, as you have been—would not for a kingdom."

"Did you never hear the romantic story? Well, Gertie may have changed, but five years ago she was as lovely and sparkling a fairy as ever danced among the moonbeams and flowers. I was not twenty, she but fifteen, when we fell madly in love with each other. Of course, old Squire Melton and my governor objected to the engagement, upon the first ground of our lack of years and experience. So, one day the dear child consented to my proposition of an elopement. Of that it is enough to say that we were followed and found, by our frantic and enraged parents before the tying of the knot was completed. Just as we were about to be pronounced man and wife, the proceedings came to an abrupt termination. I was packed off to Germany to complete my education and cool my boyish ardor, and she, poor child, in a deluge of tears, was sent away to a female prison, called a boarding-school. The only concession we could gain from our respective parents was this: Gertie was to be permitted to wear my engagement ring, and if when we had fully matured in mind and body we still clung to each other, they would place no further difficulties in the way of our union. My dear, sensible old father is, as you know, with the saints and sages in the better land, leaving me no master but my own will."

"And that is, Charley?"

"To abide by any decision the lady may make in the matter."

"She is a trump, old fellow; and I am thinking that after you have seen her, you will use your best efforts to influence her decision. But *au revoir*. I shall come as per appointment."

Left alone, Denton sat down and penned and despatched a note to Miss Gertie Melton, informing her of his arrival, and that he would meet her at the house of Mrs. Vandevere. It was received as the young lady was putting the last touches to her toilet, and threw her into a flutter of confusion.

The elegant mansion of the Vandeveres was brilliant. Light, flowers, and music, combined with the rich dresses and jewels, and fair forms and faces of the *elite* of the city, made a scene for a painter. Through the gorgeous array the Misses Melton trailed their spotless robes, paid their respects to the hostess, and dropped quietly into a retired corner, where they were soon joined by many an admirer.

"See, Annie," whispered Gertie to her cousin, "that is he. Oh! I should know him amid a thousand. That tall, dark, grand-looking man with Mr. Judson, who is paying his respects to Mrs. Vandevere. Be firm, Annie, dear, and wait my coming here;" and the lovely girl glided away.

A moment after, as Judson and his friend were making their way from group to group in search of Miss Melton, a servant accosted him thus:

"A lady wishes to see you in the conservatory, Mr. Judson."

"Take care of yourself, Charley. I will be back in a few moments," he said, as he followed the messenger.

To his intense surprise, he found among the flowers the radiant Gertie, who at once proceeded to unfold to him her stratagem, and gained his secrecy and assistance. Then they separated, and Judson returned to his friend, and after glancing about for a few moments, pointed out the cousins.

"There they are, Charley, as alike as two peas. Which will you choose, roses or geraniums? You see that is the only difference in their toilet."

"They are both extremely beautiful, but the one who is now speaking is mine. By Jove! what expression!"

"Miss Annie!" laughed Judson, while a slight shade of disappointment flitted across the speaking face of Charley Denton.

A few moments later he was bowing low over the white hand that was adorned with his engagement ring, but it lay cold and unresponding within his own as to chill him to the core. Then he was presented to the glowing, palpitating counterfeit. A dance was called, but his betrothed informed him that she did not dance, and there was nothing left him but an awkward *tete-a-tete*, while her lovely companion was whirled away upon the arm of Judson. They appeared to enjoy themselves hugely, and Charley Denton turned away with a sigh, and began talking of his journey, answering the lady's questions in the most matter-of-fact manner. And once or twice he found himself speculating upon the probability of her releasing him from his engagement.

"I find you very much changed," he said, after one of the awkward pauses.

"Ah! indeed," smiled the lady. "I hope the change is a pleasant one. You know in the days of our former acquaintance, I was but a hoydenish school-girl."

"I never thought so. To me you were enthusiastic and charming."

At this moment Gertie and Judson returned; the former in a glow of excitement that enhanced her beauty tenfold. She began at once to question Charley concerning his stay abroad, and his journey home.

"You quite surprised my cousin," she said, with sparkling eyes. "She did not expect you until the next steamer, I believe."

"I hope it was a pleasant surprise, Miss Melton," he replied.

"Oh! certainly. You see I know all about your romantic engagement;" and she laughed, blushed, and cast down her eyes in the most coquettish manner, for Judson and Annie had strolled away, leaving the real lovers together, and Charley Denton was completely charmed.

"Of course you, like every one else, think us very foolish?"

"Not I. I think it must have been splendid," looking up, archly. "It is out of the way of ordinary courtships—a real romance."

"Rather a childish one, our parents thought—one with which the lady is disgusted by this time."

"Ah! no. That is impossible. I know my cousin too well. She has a real affection for you. The love of a true woman is ever steadfast and unchangeable. It is the other sex who weary of bonds."

And the color deepened in her fair cheek.

They had been walking slowly along away from the glare of the lights and heated rooms, and reached the cool perfumed conservatory, when he answered:

"You, Miss Melton, are much more like what I expected your cousin would be. When we parted five years ago, she was all impulse and enthusiasm. Now she is so cold and passionless that I hardly dare approach her. Will you be my messenger, and say that if she —"

"No, no!" and she shook her head, laughingly. "You must not expect me to meddle with your love affairs. You must see her yourself. Trust me that you will find Cousin Gertie honorable and frank."

Charley Denton was in love, and that at first sight. But then, he argued, this loveliest of all beings was more like the one he had worshipped so ardently in his boyhood.

That night he sat in his room at the hotel, with his brain filled with a thousand plans. Sometimes he resolved to at once write to Miss Gertie, and dissolve the engagement. He would then be free to wed the one he really loved.

Morning found him as far from a decision as ever, and he wrote a simple note, requesting an interview, and begged her to decide whether the engagement should be considered binding. There was not a word of his own feelings; but the cousins laughed merrily over it.

"Rather a poor compliment to me," pouted Annie. "Had I been the real Gertie, I should have been furiously jealous. Why, he had the frankness to hint at my not being quite as charming as when we parted years ago! And for the rest of the evening was your most devoted cavalier. To me, he was frigidly polite—nothing more."

"Oh! but it was jolly! You ought to have heard our confidential talk, concerning his engagement. He asked me if I did not consider it childish!"

And her laugh was like rippling music.

When the appointed hour drew near, Charley Denton, with many a shrug of his aristocratic shoulders, prepared for the disagreeable visit, and as he walked up the stone steps of the Melton mansion, he felt very much like a criminal.

A lady arose, and came forward to meet him as he entered the semi-lighted drawing-room. He presumed it to be his affianced; but the first words of her welcome undeceived him. It was the beautiful cousin who had so stormed his heart; and, after they were seated, and the usual commonplaces passed, the supposed Miss Annie began business.

"My cousin, Mr. Denton, is not well—in fact, not quite rested from last night's fatigue, and wishing to avoid the unpleasantness of a conference with you, has deputed me to return you this;" and she drew from her finger their engagement ring.

He took it mechanically, and his mind flashed back to the time when he had placed it upon the hand of his almost bride, and for an instant sorrow appeared on his expressive face, and his voice slightly trembled, as he replied:

"I argue from this, Miss Melton, that the bond has become irksome to your cousin?"

"Not exactly that; but with yourself she considered it a childish attachment, which is better broken. You know in reality so little of each other, that your acquaintance, she says, must begin upon a new basis."

There was a ring at the door at this instant. Two lady callers were admitted, and at once began their chatter.

"Oh, Gertie! how is your cousin Annie? When does she go home? Do you know that we could scarcely tell you apart last night?" and a dozen more such questions, which effectually let the cat out of the bag, while Denton sat stupidly endeavoring to entertain one of the coquettes, who had instantly fastened upon him.

But the moment they had departed, Gertie stepped towards him, and said, shyly, but with a winning smile:

"It is useless to attempt to carry the deception any further. Of course, you have learned from those chatterers that Annie personated me last night. It was a suddenly-conceived freak of mine, as I was too much of a coward to endure your criticisms as your affianced wife. Besides, I wished to know your *real* mind. I feared a high sense of honor would induce you to wear the bonds, however galling, and I knew that if you could love Annie, you could not, Gertie."

She had said all this very demurely, and with down-cast eyes; but as soon as she had finished, he caught her hands with a look of transport, and answered:

"How could I be so stupid, when my heart turned to you at once, as all I had ever hoped or dreamed you would be? But," and he glanced at the ring, "you have given this back to me, and, of course, our engagement is broken."

"I have scarcely had time to consult my own feelings in the matter. I simply took my cue from you—from what you said last night about its being a childish engagement, and all that sort of thing."

"You must have known that I was alluding to your cousin, Gertie. Your deception caused me to feel a disappointment which would express itself. You must have seen my preference for yourself. You had me at your feet all the evening, as you may through life."

"You are crushing my hands, Charlie, dear. Give me back my ring, and forgive my little deception. It would have broken my heart, had our bonds been severed in earnest."

Tears came into her blue eyes, only to be kissed away with more than one endearing word. A plain gold ring guards the diamond now, and the bond which Gertie wears is for life. She is a lovely, sparkling wife, and very proud is her husband of her. Annie, too, wears her diamond—the plain hoop of gold is to come—when she changes her maiden name for that of Judson.

RECENT LITERATURE.

The Ideal Life. By ELLA F. MOSBY. New York: E. H. Swinney, No. 20 Cooper Union; Boston: Geo. H. Ellis, 101 Milk St. Price $1.25.

This book is written with the desire of placing before its readers some suggestion of the life which they desire to lead; of the character they wish to form; of the homes they seek to build for themselves. The author believes that there is a higher nature in every one, which can be awakened, however hard and unattractive may be the outside. She says of our intercourse with each other:

"You must see the angel within the man or woman, must believe in it, and appeal to it above the lower natures. This alone gives completeness. If you have not this tender insight into the hidden humanity, you will stumble and be hurt, you will continually be disappointed, vexed and chilled by the stripping away of illusions, which is too often the result of daily contact and intercourse with ideal and enthusiastic temperaments. Do not doubt your first vision—the lovely image is there—only keep patience and love. By such exercise you yourself will grow also, and may give new graces of life—the highest gift of all—to the beloved. The highest pleasure that ever comes to one, is to do something for those we love, and in this way we may give every act and word of our loneliest hours to them. When they next see us, they will feel the added warmth and light, and our most solitary struggles will not have been in vain. Far more powerful than persuasion and reason, far stronger than physical beauty, is this spiritual sphere from a beautiful life. You cannot wander to such a distance that it will not recall you, and touch you with a thrilling sense of its tenderness.

"The commonest things on earth teach us a parable of faith in the hidden nature which desires to grow in others and ourselves. You see a knot of gnarled and bare trees, twisted and uncomely—for what is so bare as a fruit tree in winter? Cedars keep their greenness, oaks their branching symmetry, but these look denuded and dead. Wandering back that way in spring you are suddenly surprised, enveloped in a cloud of fragrance and bloom. All around you snowy and rosy petals drift to the grass; in the air the bees are humming, and clusters of buds and blossoms touch softly your cheek and brow. Your scorn at its former meagerness is confuted and tossed away in sight of this exceeding fairness, for you were foolishly blind—all this blossoming tree even then existed potentially in the naked and gnarled trunk. Such a revelation, and higher, will Heaven give us of the personality which we misjudge here. 'For we shall all be changed.'" * * *

In no human life is growth without the knowledge of loss and pain. There are few mothers who have not been called upon to surrender one of the little flock—to miss from their firesides one of the darlings of their hearts; and often the household knows not one only, but many vacant places. The writer of this book says:

"Within the center of each household life, lies the remembrance of some little child which has been taken away in the innocence of its early morning. About that affection cling the innermost conceptions of human peace and tenderness and undefiled truth. If we have done wrong, if we have judged any harshly, if we have disquieted our day with restless ambitions, we have only to return into the presence of that stainless memory:—there we believe and love, there we are sorry—thinking of the fair dead child tears wash all our stains out of sight, and we humbly pray that we may be kept back from the sins which would bar us from the sight of its face in Paradise." * * *

In another chapter she says:

"When a child dies, the only shadow of his death falls behind him. He is 'gathered to his own.' Be you sure that the angels who receive him wear his mother's look and likeness. They never seem strange or far-off to a little child even here. * * * Heaven is for them, more than for older souls who have been weaned from its life, a native country whose landscapes, white with bloom and dew, wear a home sweetness, and whose presence is beloved and familiar."

The book is divided into three parts, the first on the daily or individual life; the second and third on history and the different arts. It is bound in one volume; with the title and one full-blown calla lily and leaf in gold. The cream-tinted paper of the pages makes the type clear and pleasant to the eye.

TEMPERANCE INTELLIGENCE.

THE minutes of the annual meeting of the Woman's Christian Temperance Union of Illinois has been issued in pamphlet form, and those who have not followed the progress of the Temperance Cause, must be surprised at the story of organization and executive ability which they disclose. We regret that space will not admit of our giving the plan of the Union's work in full. It treats of District Conventions, Gospel Meetings, Sabbath-school Work, Instruction in Public Schools, "Our Union," Young Ladies' Unions, Influential assemblies, Auxiliaryship.

The Home Protection Petition is to be presented at Springfield, during the session of the Legislature. The necessary blanks and all information concerning it can be obtained of Miss F. E. Willard, Pres't Ill. W. C. T. U., Evanston, Ill. The following is a copy of the Petition:

To the Senate and House of Representatives of the State of Illinois:

Whereas, In these years of temperance work the argument of defeat in our contest with the saloons has taught us that our efforts are merely palliative of a disease in the body politic, which can never be cured until Law and moral suasion go hand in hand in our beloved State; and

Whereas, The instincts of self-protection and of apprehension for the safety of her children, her tempted loved ones, and her home, render woman the natural enemy of the saloons: Therefore, your petitioners, men and women of the State of Illinois, having at heart the protecting of our homes from their worst enemy, the legalized traffic in strong drink, do hereby most earnestly pray your honorable body that by suitable legislation it may be provided that in the State of Illinois the question of licensing at any time, in any locality, the sale of any and all intoxicating drinks (including wine and beer), shall be submitted to and determined by ballot, in which women of lawful age shall be privileged to take part in the same manner as men when voting on the question of license.

THE AMERICAN ANTIQUARIAN, a Quarterly Journal devoted especially to Early History, Ethnology and Archæology. Illustrated. Edited by Stephen D. Peet, Unionville, Ohio.

The scope of the Antiquarian will be understood by the following list of topics:

The Early History, Exploration, Discoveries and Settlement of the different portions of the continent. The Native Races, their physical and mental traits, social organization and tribal distinctions; their religious customs, beliefs and traditions, as well as their earlier and later migrations and changes. The Antiquities of America, especially the pre-historic relics and remains, or any evidences as to ancient earthworks and structures, inscriptions, hieroglyphics, signs and symbols. Pre-historic Man, his origin, antiquity, geological position and physical structure. The Antiquarian will also treat of subjects of a more general character, such as The Descent of Man, The Rise of Society, The Origin of Writing, The Growth of Language, The History of Architecture, The Evolution of Ornament and Ceremonial observances, Comparative Religions, Serpent Worship and Religious Symbols, Man and the Mastadon, Man and Animals, Earth and Man, and many other topics which are connected with the Science of Anthropology, especially as they are viewed by the Antiquarian.

Besides these topics especial arrangements have been made by which articles will be contributed upon Archæological Relics, upon Aboriginal Languages and Dialects, and upon the traditions of this Continent compared with those of other lands.

The investigations made by the different historical and scientific societies, as well as the results of all explorations and discoveries will also be reported as far as possible.

In the editorial management the assistance of several prominent gentlemen has been secured. Prof. E. A. Barber will assume the care of Anthropological News; Prof. R. B. Anderson will take the department of Pre-Columbian Discovery, and A. S. Gatschet will take the department of Indian Linguistics. The design is to make the Antiquarian partake of the advanced studies of the best scholars on the continent, and every effort will be made to make it thoroughly reliable and valuable. It is the only work of the kind on the continent.

News of the Week

Monday, Feb. 15, 1879.

MISCELLANEOUS.

The remnant of the rebellious Cheyennes has reached Kansas, where the chiefs are to be tried for crimes committed in that State. Wild Hog and Old Crow deny that they have been guilty of murder and raiding, and, as stoutly as if white men, attribute all the outrages to the wicked Indians who are now in their graves or still free on the prairies. The subsidy lobbyists at Washington have induced the Senate to add to the Post-Office appropriation $300,000 to be paid annually to two steamship lines between this country and Brazil, at the rate of $150,000 apiece. One runs from this city *via* Norfolk, Va., and the other from New Orleans, *via* Galveston, Texas. The best men in New Orleans, of all parties, are about to hold a convention in April with a view to wrest that State from the machinations of mere politicians, and put an end to bulldozing and ballot-box stuffing by either whites or negroes. U. S. Judge Blodget's trial at Chicago, has developed the fact that the charges against him were made by Hessing, one of the whiskey ring, who was sent to prison by him for a couple of years. Hessing's testimony has been squarely contradicted, and it is to be hoped for the sake of public morality, that the Judge may be proved entirely innocent. New Hampshire's law against tramps works admirably and meets the women's hearty approval. To check the negro emigration to Texas from Georgia and Alabama, the Legislatures of both States have imposed a tax of $100 on every agent soliciting them to emigrate. Sambo seems to still remember his old friend's injunction, "Go West, old boy, go West."

The New York Senate has passed a bill punishing the grave crime of pilfering "stiffs," with five years' imprisonment. Indiana and Ohio are likely to follow suit. The U. S. Senate has passed a bill permitting women—beg pardon, lady—lawyers to practice before the Supreme Court at Washington. Now for beauty and purity, flowers of rhetoric and the hothouse in the grim precincts of our courts! President Hayes has written to Collector Merritt congratulating him on his confirmation by the Senate, and directing that no officers must be removed because they are Arthur's friends or any new ones appointed because they are the friends of anybody else. It's possible there's no joke about civil service this time, and that Merritt, after all, may prove worthy of his name.

The following is the full text of the instructions sent by the Governor of this State to Gen. Patrick, who has been commissioned to stamp out all traces of pleuro-pneumonia in New York:

STATE OF NEW YORK, EXECUTIVE CHAMBER,
ALBANY, Feb. 12, 1879.

General MARSENA R. PATRICK:—

SIR—In pursuance of the provisions of the act chapter 134 of the Laws of 1878, entitled "An act in relation to infectious and contagious diseases of animals," I hereby designate and appoint you as my assistant in executing my duty under the said act and in carrying out its provisions.

It has been made known to me that the infectious and contagious disease among neat cattle called pleuro-pneumonia has been brought into and exists in various places in the counties of Kings and Queens in this State. You are therefore directed, as such assistant, to prohibit the movement of cattle within said counties except on license from yourself, after skilled examination under your direction. You are also directed to compel all owners of cattle, their agents, employes or servants, and all veterinary surgeons, to report forthwith to you all cases of disease by them suspected to be contagious. When such notification is received, you are directed to have the cases examined and to cause all such animals as are found to be infected with the said disease destroyed and buried with slashed hides. You are directed, further, to quarantine all cattle which have been exposed to the infection of said disease or are located in an infected place, but you may in your discretion permit such animals to be slaughtered on the premises and the carcases to be disposed of as meat if, upon examination, they shall be found fit for such use. You will forbid and prevent all persons not employed in the care of the cattle there kept from entering any afflicted premises. You will likewise prevent all animals and fowls from entering such premises. You will prevent all persons so employed in the care of animals from going into stables, or yards, or premises where cattle are kept, other than those in which they are employed.

STRINGENT PRECAUTIONS.

You will cause the clothing of all persons engaged in the care, slaughter or rendering of diseased or exposed cattle, or in any employment which brings them in contact with such diseased animals, to be disinfected before they leave the premises where such animals are. You will prevent the manure, forage and litter upon infected premises from being removed therefrom, and you will cause such disposition to be made thereof as will in your judgment best prevent the spread of infection. You will cause all buildings, yards and premises in which said disease exists or has existed to be thoroughly disinfected. You are further directed, whenever the slaughter of diseased or infected animals is found necessary, to certify the value of the animal or animals so slaughtered at the time of slaughter, taking account of their condition and circumstances, and to deliver to their owner or owners, when requested, a duplicate of such certificate.

Whenever any owner of such cattle or his agent or servant has wilfully or knowingly withheld, or allowed to be withheld, notice of the existence of disease upon his premises or among his cattle, you will not make such certificate. You are further directed to take such measures as you may deem necessary to disinfect all cars or vehicles or moveable articles by which contagion is liable to be transmitted. You are also to take such measures as will secure a registry of cattle introduced into any premises in which disease has existed, and to keep such cattle under supervision for the period of three months after the removal of the last diseased animal and the subsequent disinfection of such premises. You are further authorized and empowered to incur such expenses in carrying out the provisions of the foregoing order as may in your judgment be necessary, and to see to it that the bills for such expenses be transmitted to this department only through yourself, after you have examined and approved them in writing.

L. ROBINSON.

By the Governor—D. C. ROBINSON, Private Sec'y.

It seems not improbable that Kearney's mandate, "The Chinese must go," will have to be obeyed; or rather that they must not come in such disagreeably overwhelming numbers. The Senate has just passed the House bill prohibiting the importation of more than 16 of them on one vessel at one time. There is a rumor, however, that the President may veto it, on the grounds that it violates a treaty without giving proper notice; because the State Department is now conferring with the Chinese ambassador with a view to restricting the immigration, and because our trade with China and the interests of our citizens resident there, might be injured by such hasty action. In Columbia, Vancouver's Island, Australia, New Zealand, and in fact wherever Mongolian and Caucassian emigrants are competing, the laboring classes of the latter are bitterly opposed to the former. And as the Caucassian is the dominant race everywhere, its members are taking measures to exclude the swarms of cheap laborers from the Flowery Kingdom.

Out in Dakota Territory it's a jolly good thing to be a member of the Legislature. D. D. W. Flich, who represents the Black Hills district in the lower House, now sitting at Yankton, evinced a decided preference for billiards to law-making, and became a great annoyance to the Sergeant-at-Arms. The latter always got his man, however, until last Wednesday week. On the afternoon of that day the Sergeant sent three clerks and a messenger after Flich soon after roll-call. He was found by the posse in a saloon. Taking to his heels the legislator escaped at a back window and ran across into Nebraska, the clerks giving chase. Flich wheeled and ran back into Dakota, and before the pursuers could catch him, gained his room in the Yankton Hotel, barred the door and covered the window with a shot-gun. At last accounts he was still in a state of siege.

FOREIGN.

The long-threatened strikes in England have at last broken out. Although there are large ones in nearly all the manufacturing towns, that in Liverpool is so great that it overshadows the others. Sixty thousand 'longshoremen, sailors, coal-heavers, and other laborers have there struck, the first two classes against a reduction in their wages, and the other merely from sympathy for the strikers, and possibly through fear that the sucessful example of reduction might soon induce their employers to cut down their own wages also. The streets are daily paraded by vast processions of strikers prevaracating to the public in doleful doggerel that they have no work to do. Ships are retained for want of sailors to man them, of 'longshoremen to load and unload them, and of cartmen to take away or bring their cargoes. The gates in the long lines of walls surrounding the docks, are closed to the public, red-coated cavalry guard the approaches and the low prices of provisions alone have hitherto prevented disastrous riots there and elsewhere. Hundreds willing to work for the wages offered are being imported chiefly from Glasgow, and as the leaders of the strike now counsel arbitration, there is a good chance for a speedy resumption of work.

The British forces in South Africa have experienced a Custer-like defeat at the hands of the Zulus, a warlike tribe against which war was lately declared. About 500 English soldiers and 600 native auxiliaries, forming a detached column, were assailed by what fear, pride, or possibly truth, estimates at 20,000 Zulus. All the Europeans, including 49 commissioned officers from colonels downward, were slain, as were most of their native allies. The fight, or rather massacre, occurred near the Tugela River, the dividing line between Natal and Kaffirland. The spoils were a valuable convoy of 102 wagons, 1,000 oxen, two cannon, 400 shot and shell, 1,000 rifles, 250,000 rounds of ammunition, 60,000 pounds of provision, the colors of the Twenty-fourth regiment and the clothing and effects of the slain. At first there was a panic for the safety of Natal, but a part of the Zulus have since been repulsed in an attack upon an entrenched position; the British forces have been concentrated, and reinforcements are hurrying forward from England, Aden, India, the Cape of Good Hope and the Mauritius. The Zulu loss is put down at 5,000, and if much less than that now it will be much more before long. The full fighting force of the tribe is estimated at 40,000 men.

It is reported that Shere Ali has never quitted Afghanistan, that he is daily in receipt of all important news from Yakoob Khan, and that he is massing forces near Herat. The English are said to be apprehensive of advancing hastily, as the surrounding semi-savage tribes, though quite ready to take their liberally-distributed money in the friendliest way, are nevertheless always ready to pilfer, cut off stragglers, pounce upon convoys, and act as guerillas on every opportunity. The Viceroy of India advises the annexation of the whole of Afghanistan, and the advice causes much indignation among the Liberals at home, who stigmatize such a measure as a violation of the professions of that wily, everlastingly smart, unprincipled, mountebank, trickster, Jew, Beaconsfield. All Europe is still in terror of the Russian plague and adopting measures for preventing its extension, while Russia is busy trying to suppress it within her borders. It is said to have disappeared from the province of Astrachan where the first outbreak occurred, but it has broken out elsewhere in the more westerly parts of that country, and is said to have made its appearance in Turkey, but this is denied. Russia complains of Roumania for having quarantined her without giving her notice of intended measure, and the feeling between the two countries is far more hostile than should exist between people lately so closely allied. Roumania has seized upon Arab-Tabia as a part of her fresh acquisition, the Dobrudscha, despite the protest of Russia; Todleben has ordered four regiments to seize the place, and unless Europe interposes, there is some risk of collision between the forces of the Czar and those of Prince—King—Nicholas. Already there has been a skirmish between the Muscovite troops and the Roumanian police.

HERMAN.

Domestic Economy.

CONDUCTED BY EMILY MAPLE.

PEN THOUGHTS FROM EVERY-DAY HOUSE.

ANNIE L. JACK.

Labor-saving Devices in the Household.

IT is very refreshing to see the gentlemen of a house taking interest in the domestic conveniences that are strenth-savers to those members of their households who have the household work to do. There is nothing more useful in a kitchen than a man who can use a hammer and nails to advantage, put up shelves, or take them down, mend a broken chair or the leg of a table as need be, and do it with a pleasant manner, and not as if he were conferring a favor. Some men have an exasperating way of assisting in any household matter, making it appear that they stooped from their high dignity to work that was beneath them. If you trace back you will generally find that as boys, they had not been made helpful in domestic affairs, and consequently their manner was the result of wrong training. But just as surely as labor-saving machinery accumulates in the barn, ought it to be in use in the kitchen. First, of all water in the house is a grave necessity, then the washer and wringer, a clothes dryer, and small mangle. There should be a mincing machine, the latest improvement in irons and ironing-board, an apple parer, raisin stoner, potato washer, and anything else that comes under the notice of the housekeeper as a need. Of course, they cost money; so does tobacco, yet I do not think I ever knew any one compare the two in point of usefulness, while we all know houses where there is money enough for the "weed" which does no good; but not enough for household conveniences.

It is a hopeful sign when there are men who consider the RURAL a good medium through which to give their opinion on this domestic problem; who sympathize with, and help wife, sister, or mother in the ceaseless round of duties that fall to their lot. The one idea of a Chinaman will not answer in the varied work of a woman's life; her tasks are heavy, and many. All honor to the man who will try to make the kitchen as it should be—the brightest room of the house, with cheerful, sunny windows, and among other things a baking table that can be shut down when not in use and serve other purposes. By supplying things like this, an ordinary mechanic can lessen materially the labor of the household.

LOG-CABIN SKETCHES; OR, JESSIE SEABRIGHT'S DIARY.

MAY MAPLE.

A Poor Beginning.

Nov. 10th, 18—. How little I thought, when, years ago, I wound my way among the lofty hills and quiet valleys of western New York, from the comfortable school-room to the small, low and really comfortless dingy log cabin whose inhabitants were to extend their hospitality to the teacher for a week or two, as the case might be, that some time in my life I should be obliged to step into a log cabin, not one whit better, and call it home. Yet, here I am in a far-off wilderness, with my husband, John Seabright, and our two-year-old Berlie. I have been a wife four years, and John and I ought now to be in good circumstances; for he is a steady, hard worker, and I have learned to use the best economy. But fate was against us; our house, with nearly all its belongings, except our clothes, was destroyed by fire. The little village lot was sold for but little more than enough to pay off the mortgage. So we were left with only sufficient means to bring us to these Northern woods—where unimproved farms can be had for almost nothing—and to purchase a stove, a few dishes and such provisions as we should need for the coming year.

John has bought a tract of land containing one hundred and sixty acres, which boasts of a tiny cabin for the family and a small "patch"—perhaps two or three acres—"cleared." A *gun* paid for the whole farm. And this is our home. The present outlook is not very captivating. The cabin contains one room below and a low bit of chamber above. Two half-sashed, small-paned windows light the lower room, and these are so high up that I can only look out when standing. We have one chair. John has improvised a stool, a bench, a couple of bedsteads and a table; and these, with stove and dishes, make up all our house furniture—exactly the same as those old York State patrons "got along with" for years, and really believed they could do no better. Time will develop my resources, and necessity may enlarge my sympathies; at present my neighbors are but little better off, as far as appearances go. I will keep my eyes open for any opportunities to improve our condition. And whatever the improvements may be, I will jot them down in my journal, for it is possible my experience may save another from discontent and many unhappy hours.

DOMESTIC RECIPES.

Extra Good Cookies.

ONE-half cup of butter, one cup of white sugar, one-half cup of sour milk, one egg, one-half teaspoonful of saleratus. Melt the butter, mix all soft together with a spoon, and set away for one-half hour in the winter and one whole hour in summer where it is cold. Then the dough can be easily rolled without adding very much flour (the less the better), sprinkle the dough after rolling with sugar, cut and bake in a quick oven, watching carefully. The ingredients mentioned in this receipe make two dozen cookies. Add carraway seed if liked.

Raw Pumpkin Pie.

One pint of new milk, three well-beaten eggs; sweeten and spice to taste; then stir in gradually four heaping tablespoons of grated pumpkin. Place the crust in a deep tin, then pour in the mixture and bake brown.

Popovers.

Two cups of milk, yelks of two eggs, a little salt, two cups of prepared flour. Add the whites of the eggs last, well-beaten. Bake in small tins—for breakfast or tea.

Orange Cake.

One cup of sugar, two eggs, half a cup of butter, half a cup of sweet milk, two cups of prepared flour. Bake in four layers, as for jelly cake.

Mixture to be put in between layers.—The grated rind and juice of one orange, whites of two eggs, two cups of sugar; spread between the layers and frost the top of the cake.

Jelly Cake.

Three eggs, whites and yelks beaten separately, one cup of sugar, one heaping cup of prepared flour, a piece of butter the size of an egg, three tablespoons of sweet milk. Bake in four layers.

Prepared Flour, with Horsford's Bread Preparation.

The cake recipes I have given require prepared flour, which the ladies of the RURAL will find superior to any baking powder, cream-of-tartars, etc., that could possibly be used. For making biscuit, muffins, dumplings and cake, its equal cannot be found. Everything is sure to be light and good that is made with it. (See the advertising columns of the RURAL.—EDS.)

The most economical method of using it is to prepare twenty-five pounds of flour, by taking one package and thoroughly sifting it twice through the flour. There are measures given, but this I find the quickest and most saving way to use it. The cake can be made and baked in half the time required by the old method. It seems to me that Horsford's Bread Preparation will work a revolution in domestic economy when its virtues become known to everybody. MRS. F. BREWSTER WINN.

La Salle Co., Ill.

Barley Soup.

Wash and soak one-fourth pound of barley in a quart of water over night; in the morning turn off the water not absorbed and add three quarts of boiling water; a teacupful of bread crumbs and salt to taste; boil *slowly* four or five hours; add a tablespoonful of butter and a little chopped parsley half an hour before serving.

Cheese Toast.

TAKE half a teacup of grated cheese—use crumbs and dry pieces—mix with it a teacup of grated bread, the yelk of one egg, a spoonful of butter, three spoonfuls of rich cream, pepper and salt and a little mustard if liked; toast some slices of bread, spread the mixture on, place in a quick oven for three or four minutes and serve hot. MARY B.

Oatmeal Bread.

NOTICING a request in RURAL of Feb. 8 for a method of making Oatmeal Bread, I send mine.

No. 1.—Take fine oatmeal, put enough cold water in it that it will be covered after being thoroughly stirred; put in a flat pan, and bake in a moderate oven till the edges come away from the sides of the pan. The bread should not be more than a quarter of an inch thick, and not be allowed to brown.

No. 2.—Fine oatmeal, with hot water poured over it; stir well, leave it to stand ten or fifteen minutes, and dip into a flat pan by the spoonful, which should be flattened into cakes in the pan. There should be enough water on the oatmeal that it will work easily.

No. 3.—The same as No. 2, with the addition of a little more water, and enough Graham flour to make the oatmeal a soft dough. Bake as No. 2.

No. 4.—Cold oatmeal mush with Graham flour molded in until the dough can be rolled and cut with knife or cake cutter, or made into rolls or biscuits. Bake in a moderate oven until a light crust is formed.

No. 5.—Add a little cold water to cold oat-

meal mush, mix in Graham flour till a dough is made that when dipped with a spoon will just settle flat. Bake in gem pans like Graham gems. Salt may be added to any of the above, if desired, but the bread is sweeter without it. Grated cocoanut, in any proportion, makes a pleasant addition. RITA BELL.

Coughs.—"Brown's Bronchial Troches" will allay irritation which induces coughing, giving oftentimes immediate relief in Bronchitis, Influenza, Hoarseness, and Consumptive and Asthmatic Complaints. **25c. a box.**

THE advertisement of the Diamond Dictionary on another page contains a statement that is misleading. The purchaser will not get for sixty-three cents what would ordinarily cost seven dollars to purchase. The advertiser means to state that anyone who receives the book will get seven dollars' worth of information for the lesser price. The book is worth in the shops about 75 cents.

THE MARKETS.

PRODUCE AND PROVISIONS

NEW YORK, Saturday, Feb. 15, 1879.

BEANS AND PEAS.—Beans are quiet; there has been some better export movement, but general supplies are still large and sellers humor buyers; red kidneys have materially declined; some of this variety is expected from California. Green Peas steadier; $1.30 at station; $1.32½ at store. Medium beans, prime, $1.30; fair to good, $1.15@1.20; marrows, prime, free on ship, $1.82@1.35; fair to good, $1.25@1.35; pea, $1.20@1.50; white kidney, $1.55@1.80; red do., choice, $2.40@2.45; fair to good, $2.20@2.30; black beans, $2.05@2.25; Col. Limas, $4@4.25.

Receipts of beans for week, 8,150 bushels; exports, 1,050 bbls.

BROOM CORN.—Short corn is scarce and wanted; other sorts are plenty. Brush and short broom corn, choice, per lb., 5@5½c.; do., common to good, 3½@4½c.; hurl, good to choice, 3½@4½c.; do., common to fair, 3@3½c.; red and crooked, 2@3c.

BUTTER.—Local trade is generally inactive and the export call is earnestly courted; in fact, a prolongation of extreme dullness at this advanced part of the season would allow foreign purchasers to dictate. When the first-class qualities of butter may be quoted easier than under styles, sellers properly feel a little alarm. Receipts, however, have been free, rather weighing upon the market. Now it is thought that as the bulk of country-held State has come forward, the situation is more hopeful. Western creamery has arrived heavily enough to break the market, 27c. quoted against 29c. last week for top grades; other good lines have sold at 22c. for export. Western dairy and other packings dull, and mostly selling at inside figures.

Single extra State half tubs, 26@27c.; choice lines, 22@25c.; State, full dairies, special, 19c.; other, 16@18c.; firkin dairies, fair to prime, 15@18c.; Welsh dairies, fine full, 16@17c.; choice half tubs, 23@25c.; fair to prime do., 16@21c.; choice Welsh, 19@21c.; fair to prime, 12@17c.; choice creamery 24@26c.; best western creamery, 27c.; other, 19@25c.; early packed creamery, 17@20c.; poor State, 9@12c.; Western dairy, fine fresh, 18@20c.; fair to good, 10@15c.; factory, ladle packed, 18@19c.; good, 14@16c.; other, 7@9c.; rolls, 10@16c.; grease, 4@5c.

Receipts for week, 29,734 pkgs.; exports do., 6,150.

CHEESE.—The demand has been very regular and fair, and the whole situation of the market unchanged from last week; holders generally firm.

Quotations are 9@9¼c. for fancy; 8¼@8½c. for fine lots; 7½@8c. for good; 4@5c. for skimmed; State, farm dairy at 8@8¼c. for fine; 7@7½c. for good to prime, Wisconsin factory, fine and fancy, at 8¼@9c.; do. good to prime, at 7½@8¼c. Western factory, fine and fancy, 8@8¼c.; good and prime, 6½@7½c.; do. full skimmed, 2@5c.

Exports, for the week, 61,840 boxes.

Liverpool quotation, 49s.

Steam to Liverpool, 42s. 6d.@45s.

COTTON.—There has been less activity, but price closed firm. February, 9 71@9.72c.; March, 9.76c.; April, 9.92c.; May, 10.08@10.09c.; June, 10.22@10.23.; July, 10.32@10.33c.; August, 10.41@10.43c.

Quotations for spot cotton are based on American standard of classification, and on cotton in store counting in quality not more than half a grade above or below the grade quoted:

	Uplands.	N. Orleans.	Texas.
Ordinary	7¾	7¾	7¾
Strict ordinary	8 8-16	8 5-16	8 5-16
Good ordinary	8 11-16	8 13-16	8 13-16
Strict good do.	9	9⅜	9⅜
Low middling	9¾	9⅞	9⅞
Strict low middling	9 7-16	9 9-16	9 9-16
Middling	9¾	9⅞	9⅞
Good middling	10	10⅛	10⅛
Strict good middling	10⅜	10⅝	10⅝
Middling Fair	11 1-16	11 3-16	11 3-16
Fair	11⅝	12	12

STAINED.

Good ordinary	7⅛	Low Middling	8⅛
Strict good ordinary	8⅛	Middling	9⅛

DRIED FRUITS.—Apples continue in very fair demand and rule firm in price. Peaches, unpeeled, are wanted and are at strong prices. Small fruits are quiet. State plums, 14½@15c.; Blackberries are quoted at 8c. Peaches—Peeled Georgia, 6@7c. for poor; 8@9c. for fair to good; 10@10½c. for prime; choice North Carolina, 11¾@12½c.; good do., 9@10c.; unpeeled halves, 3½c.; quarters, 3@3½c. Pitted cherries, 21c. Apples—New, 2@2½c. for southern quarters in bags.; 3½@4c. for prime sliced; do., fair at 2½@3½c.; State at 3@3½c. for new sliced; and 3@3½c. for quarters; Western at 2½@3½c. for new quarters. Raspberries, 23c. Apples, evaporated, fancy at 10@12c.; other processes at 5½@8c.

Exports, 1,183 pkgs. dried apples.

EGGS.—Receipt for week, 5,910 pkgs.; do. last week, 3,070 do. The demand is better at the late decline, but prices are weak with prospective free receipts. Near points, 24c.; State, 23c.; Western and Southern, 22@23½c. Limed exhausted.

FLOUR.—There is a much better export and home trade demand, and prices have improved a little.

Latest prices are at $3.25@3.65 for very inferior to strictly choice superfine State; $3.65@4.00 for very poor to good extra do., odd lots and lines; $4.00@4.25 for good to very choice do., and fancy lots above this; $3.20@3.65 for inferior to very choice superfine Indiana, Iowa, Michigan, &c.; $3.65@4.00 for inferior to good shipping extra do. and $4.00@4.25 for good to very choice extra do.; common to about choice white wheat extras, $4.10@5.10; choice to fancy do. at $5.10@5.50; red and amber winter wheat, very inferior to very choice trade and family, at $4.00@5.75; round hoop Ohio at $3.90@4.30, and trade and family brands of do. at $4.30@5.75, the latter rate for very choice; St. Louis, $4.10@4.85 for very inferior to good extra, and $4.85@5.75 for good to strictly choice (with a few very fancy brands in high favor with the jobbing trade), quoted up to $6.25@6.50; Minnesota clear, very inferior to strictly fancy, at $3.65@5.00; few brands going above $4.50@4.60; Minnesota "straight," inferior to fancy at $4.40@5.75; and patent poor to strictly fancy at $5.25@8.25, few brands going above $7.50; unsound stock at from $2.00@5.00; city mill extra at $4.70@5.15 for West Indies (the latter rate for fancy in new packages); do. for England $3.85@3.85; do. trade and family extras, $5.10@6.00; do. for South America, $5.00@5.50 for fair to very choice; No. 2 at $2.85@3.00 for poor to very choice.

ESSENTIAL OILS.—Nominal in a wholesale way. Peppermint, glass (Hotchkiss), $2.30; in tin, $1.60; wintergreen, $2; sassafras, 40c.; pennyroyal, $1.25; spearmint, $2.25; wormwood, $3.

FRESH FRUITS.—Apples in moderate demand, but steady. Prime Eastern stock rated $1.50@1.75; late receipts of State, $1.62@1.87, sound lots. Spitzenbergs, $2@2.50; Greenings and Baldwins, $1.75@2; poor lots, $1@1.25. Cranberries continue quiet, but the supply is small, and as apples advance berries will hold to late rates; prime to fancy, bbls., $8@9; other, $5@6; N. J. crates, fancy, $3; other, $2@2.75. Florida oranges very dull; hf. bbl. boxes, fair to best, $3; discolored, $1@1.50; bbls., $4@6. Hothouse strawberries, $5 per quart. Peanuts firmly held, with only a moderate trade. Hand-picked Va., $1.10@1.15; other, 80@95c.; shelled, 4½@5c. Hickory nuts nominal at $2.

Exports for week, 6,514 bbls. apples.

FURS AND SKINS.—Exports for early sales abroad have ceased. Buying here, however, continues brisk, as trade in Europe promises to assume more of its old-time busy character than has prevailed in recent years. The fine quality of skins this season also makes dealers anxious to secure them. Several items which fell off after the late foreign sales have revived again.

Quotations: Badger, 50.@$1; bear, black, N., $8@12; do. S., $5@5; cub. N., $5@8; brown, $3@7; beaver, Cal. W., $1@1.40; S. and W., 80c.@$1.10; N. W., $1.52@1.75; N. and Ca., $1.75@2.30; cat, wild, N., 25@50c.; S. and W., 10@20c.; house, 10@15c.; deer, W., summer, 20@25c.; winter, 10@15c.; elk and moose, 12@15c.; fisher, S. and W., $3@6; N. and Ca., $7@10; fox, silver, $25@75; cross, $2@5; blue, $3@5; white, $1.50@2; red, N. and E., $1.50@1.75; N. and N. W., 50c.@$1; gray, N. and N. W., $1@1.25; S. and W., 40@70c.; kitt, 25@35c.; lynx, Minn., $1.50@2; Can., $2@2.50; marten, large dark, $5@8; small and pale, 75c.@$1.25; mink, S. and S. W., 3@5c.; W., 50@60c.; Middle States, $1@1.25; N. W., $1@1.20; Eastern, $1.50@1.75; Can. and N. S., $1.75@2; muskrat, S. and W., fall, 8@10c.; S. and W., winter, 10@14c.; S. and W., spring, 14@16c.; N. and E., fall, 10@12c.; N. and E., winter, 14@16c.; N. and E., spring, 12@20c.; kitts, 3@5c; opossum, N. and W., 20@30c.; S., 5@10c.; otter, S., 3@4c.; N., 5@7c.; rabbit, 3@3½c.; coon, S. and S. W., 3@40c.; W. and N., 50@65c.; Mich. and N. W., 75c.@$1; seal, Atlantic, 40@60c.; Pacific, $10@15; skunk, black-cased, $1.50@1.70; half-striped, 30@40c.; full, 40@50c.; white, 10@20c.; wolf, large, forest, $1.75@2.50; prairie, 75c.@$1; wolverine, 20@30c.

GRAIN.—Wheat is active and higher; sales are of No. 1 red at $1.10½@1.11; No. 2 red at $1.10½@1.10¾; No. 2 red, steamer grade, at $1.08@1.08½; No. 3 red at $1.06½@1.08; ungraded red at $1.03@1.10; No. 1 amber at $1.10@1.11; No. 2 amber at $1.08½@1.10¼; ungraded amber at $1.07¾@1.10½; extra white at $1.11@1.11¼; white State, in lots, at $1.10@1.10¾; white at $1.10@1.10¾; No. 2 white at $1.08@1.08¾; ungraded white at $1.08@1.09½; No. 3 spring at 92@95c.; ungraded spring at 92@96c.; No. 2 red, February option, at $1.10¾@1.10¾; do., March option, at $1.11¾; do., April option, at $1.12¾; No. 2 amber, February option, at $1.10; do., March option, at $1.10¾; No. 1 white, February option, at $1.10@1.10¾; do., March option at $1.10¾. Rye at 60c. for Western and 61c. State. Corn is in larger supply and easier; sales of steamer mixed, in lots, at 44½@44¾c.; New York old No. 2 at 46¾@47c.; New York No. 3 at 42½c.; ungraded mixed at 46½@47c.; New York No. 3 at 45¾@46c.; Jersey yellow at 45¾c.; yellow western at 45@45½c.; graded steamer yellow at 44¾c.; old western ungraded white at 48c.; New York No. 2 white at 50¾c. for old.; yellow southern at 44½@45½c.; New York No. 2, February option, at 45¾c.; old do. at 45¾@47¾c.; New York No. 2, March, at 46¾c.; old do. at 47c.; New York No. 2 April, at 47@47½c.; do., May at 47½c.; steamer mixed, February option, at 44½@44¾c.; do., March, at 44¾c.; do. April at 44¾c. Oats are more freely offered and are a trifle easier; sales of New York No. 1 at 32c.; New York No. 2 at 31½c.; New York No. 2 white at 33¾@33¾c.; New York No. 3 at 30c.; New York No. 3 white at 31¾@31¾c.; white Western at 31@33¾c.; mixed do. at 30½@32c.; white State at 32½@34c.; New York extra white quoted at 33@33¾c.; New York No. 1 white at 35c.; No. 2 Chicago, afloat, at 32c. asked. Barley lower. State 6-rowed barley, 80@95c.; do. 2-rowed, 65@75c.; Canadian, 85c.@$1.10; do. malt, $1@1.25; western do., 60@$1 15.

HAY AND STRAW.—There are full receipts, but demand is fair and prices sustained; sales at 40@45c. for shipping, and 70@80c. for retail qualities. Straw quoted at 50@60c. for long rye, and 40@45c. for short rye, and oat at 10@45c.

Exports, 350 bales.

HOPS.—There is little or no change to report. Brewers who are not freely stocked with old hops are taking all the "bargains" offered in new, but prices have not yet reached a point that will warrant speculation. Good, fair brewing hops have changed hands at from 8@10c., while 12c. and 13c. can still be realized for grades suitable for export. There is a marked falling off in the export traffic; the cause assigned for it is the general depression of business in England.

Quotations are for New Yorks, new crop, choice, 13@15; New Yorks, new crop, good to prime, 8@11; New Yorks, new crop, low to fair, 6@8; Eastern, 8@12; Western, 8@12; Yearlings, 4@6; Olds, all growths, 2@3; Pacific coast, 12@15.

OIL CAKE—Is higher, quoted at $27.50 per ton.

SEEDS.—Clover is wanted at 6¾@6¾c. for prime and 6¾@6¾c. for choice western. Timothy is at $1.40@1.50.

PROVISIONS—Have been variable in price, but left off firm. Mess pork quoted at $8.00 bid and $8.80 asked for old for February; $10.25 bid and $10.35 asked for new for February; $8.85 bid and $8.85 asked for old for March; and $10.30 bid and $10.40 asked for new for March, and $10.30 bid and $10.40 asked for new for April, and May at $10.35 $10.40@10.50. Bacon at 5@5¾c. for long clear and 5¾@5¾c. for short clear. Lard at $6.80 for spot lots; $6.85 for March; $6.97½ for April, and $7.05 for May. Stearine at 6¾@7c. Tallow at 6¾c. for prime. Beef Hams at $13.50. Beef, extra India mess, $18@20, as to quality; packet, $11; plain mess, $9.50@10.25; extra mess at $10.50@11.

POULTRY AND GAME.—Good prices rule for live poultry. Western, 12@12½c.; young roosters, 8@10c.; old do., 6@7c.; Turkeys, hen, 14@14½c.; do., toms, 11@12c.; Ducks, 60c.@$1; N. J. Geese, $1.75@2; other, $1.25@1.50 pair.

Dressed poultry is doing better than for a long period, but light receipts and good quality are the chief supports of our advanced figures. Phila. and N. J. turkeys, including dry picked, 15@16c.; prime State and Western, small, 14@15c.; other, 12@13c.; Phila. dry picked fowls, 12@14c.; do. chickens, 15@16c.; N. J. chicks, 14@15c.; Western, prime, 12@14c.; other, 10@11c. Capons, 19@20c.; slips, 15@17c.; Ducks, choice, 15@16c.; other, 12@13c.; Geese, 8@13c.; 13c. for dry picked.

Quail are scarce and high; grouse easy; choice wild ducks doing better; few hares remain. Quail, choice, $1.00@1.12; other, 55@70c.; Grouse, trapped, 55@70c.; soft, 60c.; Canvas-back Ducks, $1.75@2; Redhead, $1.00; Mallard, 50@60c.; Teal, 40c.; common, including Brond-bills, 20@25c.; Hares, 22@25c.; Rabbits, 16@20c. Foreign exports for the week include 41 pkgs. game.

TOBACCO.—Export demand is better, but the home trade slack.

LIVE STOCK MARKETS

Saturday, Feb. 15, 1879.

BEEVES.—Receipts for the week, 9,664 head; do., 8,305 last week. There has been a fair trade at about Wednesday's prices; the range is 8¼@10¼c., 56@58 ℔ dress, only a few choice Illinois fat steers bringing the extreme quality averaged good, a large portion of the sales running from 8¾ to 10c.

COWS AND CALVES.—The market is without new features. The proposed interference with the swill milk trade will be apt to further reduce the use of cows from shipping points; nominal range, $35@65 per head.

VEAL CALVES.—Live calves scarce; on very scant days 8c. was obtained for extra. Market firm, for N. J. and Buck's Co. milk, 6¾@7¾c.; heavy, 6@6½c.; State, 6@7½c.; fed, 4@5½c.; grass, 3¾@3½c. Hog dressed calves, choice, 10½@11c., good to prime, 9@10c; very common, 6½c.

SHEEP AND LAMBS.—Receipts for the week, 19,080 head; do. last week, 25,288 do. Light supplies have made strong prices. Western, 5½@5¾c., with a few at 6c.; N. J., 5@5¼c.; ewes, 4½@4½c. Lambs, 6¼@6c.

SWINE.—Receipts for the week, 41,503 head; do., last week, 29,807 do. Common qualities, $4.20@4.30 per 100. Market quiet.

Dressed hogs—N. J., light, 6@6¼c.; medium, 5¾@5¾c.; heavy, 5¼@5¼c.; city, 5@5¼c.; western, 4¾@5¾c.

HORSFORD'S Bread Preparation

UNSURPASSED FOR MAKING
LIGHT BREAD
Biscuit, Rolls, Cake and Pastry.

It is Better and Healthier than ordinary Baking Powder, Cream Tartar or Yeast.

The cost of raising Bread, Biscuit, &c., with it is only about half as much as by ordinary Baking Powder, and the result is much better.

It restores the nutritious elements which are taken from the flour in bolting. No ordinary Baking Powder or anything else used for raising bread does this.

Universally used and recommended by prominent Physicians.

If you cannot get it of your Grocer send a three-cent stamp to the manufacturers for a sample.

Manufactured according to the directions of Prof. E. N. Horsford, by the Rumford Chemical Works Providence R. I.

Reading for the Young.

TO THE SONS OF THE FARMER.—No. 1.

REV. A. W. MANGUM.

WHICH is better for the farmer's sons, to go to the city, or to remain on the farm?

In discussing this question my sincere desire is to give the best counsel that I can.

First, while you are *young*, it is best, for many reasons, to remain on the old home-plantation. There your character will be formed more safely, and is almost sure to be purer when it is formed; for the country is comparatively free from many of the most seductive and dangerous vices of the town. Even those who never yield to the temptations to grosser vices in the city, are, at least, so familiarized with multiform wickedness that the heart is tainted and sadly liable to lose its decided abhorence of that which the pure should vehemently despise. It requires sound, established character to pass uninjured through the peculiar traps and pitfalls for the young in the cities. And let it be remembered that character is indispensable to true happiness, true honor, true success of any good kind, in life.

Stay in the country till your tastes are developed. Rural simplicity is eminently favorable to a just appreciation of the innocent, substantial, yet unostentatious privileges and enjoyments in life. The city substitutes the specious, the artificial, the exaggerated, the delusive, the dazzling, the sensational, the intoxicating, for the plain realities of the country. With pure and simple tastes, you may find rich entertainments almost anywhere; but, with tastes corrupted and inflamed you cannot be contented unless you are engaged in extravagant indulgences, running hastily onward and downward to ruinous dissipation.

Stay on the farm till the habits are thoroughly formed. Virtue has not such fierce opposition in the country, as in the town. It is easier to form good habits, and harder to form many of the worst habits, in country, than in town. Early habits are almost destiny to the young. A single vice will, if pursued, surely destroy the character, the peace, and the usefulness of any one. You may conclude that you are very different from the unfortunate young men who have become the victims of the many fascinations of prevailing evils in cities; but that conclusion was, doubtless, in the minds of many whose early history has closed in darkness, shame, and tears. Your fearless presumption is proof of your danger.

But stay on the farm while young, for there you have an independence which is highly favorable to the development of true manliness of character. Many, at least, of the boys and young men who rush to the towns and beg themselves into some kind of a clerkship are subjected to a daily experience that smacks most unpleasantly of the very essence of servitude. The will of the employer is the master of the employed. The duties required of one by an employer who has an inflexible system in the work of those whom he employs, and who studies to control all so that he may accumulate profits, are generally such as virtually to enslave those who are bound to perform such tasks. The highest type of American character demands the generous influences of mutual respect, sympathy and love between the employer and the employed. Besides, the pay in respectable work in the city is generally small for a long time, while the expenses unavoidable in city life rapidly and continuously consume the meagre wages. How few young men in cities are able to lay by anything as gain—as capital for any business!

Stay on the farm till you have learned the regulations and principles involved in trade-life. There will be abundant opportunities to learn these at home if you studiously avail yourself of them. Wait till you have acquired a knowledge of human nature. There are many "sharpers" and deceivers in large cities. They are apt to victimize those who are inexperienced in the ways of the world, and who are unable to detect at once the wiles of the cunning and unprincipled.

Stay on the farm, for you are needed there, while the places that you would occupy in the city are either filled already or are eagerly sought for by other applicants. There are so many young men rushing to the town that employers can find plenty to fill all the places they have at unprofitably low wages.

All that I teach in this article is that you should stay on the farm at least until you have reached your maturity. In this series of articles I may advise as to the course you should pursue when youth is past.

[The Rev. A. W. Mangum of the University of North Carolina will contribute a series of articles, entitled To The Sons of the Farmer for the Youth's Department of the RURAL. We recommend every farmer's boy in the land to read these articles.—EDS.

A HORNED FROG.

MADISON, Jan. 19th, 1879.

DEAR COUSINS: How many of you have ever seen a horned frog? When I was about eleven years old my brother went to Texas and for a long time I did not hear from him. Finally there came through the mail a little box addressed to me and marked "horned frog." I was totally ignorant as to what a "horned frog" might be, so I decided not to investigate the matter until I got home. I was made to wait, however, until I had eaten my supper and then the box was opened. The reptile leaped out on the floor and seemed quite lively, (and who wouldn't need a little exercise after riding from Texas to Wisconsin in a hook-and-eye box?) Thinking that many of you perhaps have never seen a horned frog, I will try and describe one to you. Mine was about five inches long to the tail and had a pale yellow color. He had the shape of a lizard and acted very much like one, only he never climbed. Right over his eyes were two horns and back of these was a semi-circle of nine more, which were much larger and very sharp. From the middle horn on his head to the end of his tail a distinct white stripe extended straight through the middle of his back.

On each side of this stripe were four black spots which were round and underlined with bright yellow. Each side of his body was edged with two rows of sharp white spines, and the mouth, which seemed to be a slit from one side of the head to the other, was surrounded by sharp little thorns that reached to the back of his head. I wish you could have seen him drink. Sometimes I put him into a basin of warm water, when he would drink till he bloated out like a rubber ball. When I first had him I was at a loss to know where to put him, but one day papa brought home a wooden box with a sliding pane of glass in the top. This I partly filled with soft white sand. Froggy liked his dominion very much and showed his approval by burying himself in the sand, as was probably his custom in his native country. After I had kept him about two months I began to think it was time he should eat something, but all my efforts to make him eat were fruitless. One day I had been to church, and coming home I found him in the grass by the door. He started to run, and, being afraid he might get away, I ran after him as fast as I could and finally caught him, though with great difficulty. On another occasion there seemed to be something the matter with my little pet, and I thought he was going to die. But how great was my surprise one morning to find him in a new skin and as chirp as ever. The old one which he had crawled out of lay on the sand beside him. The skins that came off from his little hands were so soft and white that they looked like little gloves, and I kept them for a long time. My frog lived only about six months; in all that time he scarcely tasted a morsel of food. Occasionally he would lick some fat pork or lard, or he would scramble around after flies among mamma's house plants, but the flies seemed more likely to eat him up than he to eat them. If any of my young cousins have a brother in Texas, I advise them to send at once for one of these curious animals. It is worth the trouble to own such a curiosity. Perhaps Uncle True can add something to this letter about horned frogs. We all enjoy the young folks' column of the RURAL very much, and I want to see some letters in it from all of my cousins.

FRANKIE M. BROOKS.

This letter is very interesting, indeed; I only wish that all the cousins would tell us about their pets as Frankie has done. To give you a better idea of a "horned frog" I have taken pains to procure a picture of one, though it may not be exactly like the pet Frankie had, as there are several species, and they vary somewhat in size and appearance. The fact is, it is no frog at all, but a lizard, which is quite common in the southern States. Travelers camping out where these animals are numerous are sometimes annoyed by their seeking shelter in the folds of the blankets, and by reason of their prickly skins, they are not very comfortable bedfellows. There is a real frog, sometimes called the horned frog from its having a small horn over each eye, but it is only found in South America.

There are many points of difference between a frog and a lizard, of which the most prominent are that the frog while young lives in the water and breathes by means of gills like a fish; the lizard breathes by lungs from its birth. The frog has no tail in the adult, or full-grown state; the lizard retains its tail through its whole life, even if it is broken off by accident, a new one soon grows out. The hind legs of the frog are well developed, and being used for leaping, are much longer and stronger than the fore limbs; the lizard's legs are simply used for creeping and running.

Those learned men known as naturalists, find many other points of difference, but those mentioned are enough to tell them apart. It will be very interesting for any of my young relatives, who are not already familiar with the subject, to procure a few frog-eggs, put them in an aquarium or some small pond, and closely watch their development. The transformations that take place through the babyhood and youth of the frogs will be a wonder to you.

When the little ones first come into the world, they are shaped much like fishes and breathe by gills like these. The head rapidly grows larger and gets out of all proportion to the body; the limbs are developed, the hind pair first, the gills disappear, and finally the tail is absorbed and the frog takes to the land as its dwelling place, only returning to the water to bathe and to hide from danger.

In the absence of Uncle True these few remarks are made by

UNCLE MARK.

JUMPING JACK REAPPEARS.

RURAL RELATIVES:—From the depths of that supposed "dead silence" I rise; or, with more *nom de plume-tal* precision, jump once again into your friendly midst. To-day one year ago I wrote you, and then of a beautiful walk that is yet precious to memory. Now the earth is white with "ermine too dear for earl," and the wind keeps time with the falling flakes in a tune most lively and gay. And as we cannot go walking this Christmas-time, my two companions—the golden-haired maiden, and she of the nut-brown tresses—and I, quietly spend the day in-doors. When the cheer of the day is over, and the delicious dinner is only a remembrance, I hunt out my good gold pen, which has lain idle so long, and write another letter. But what shall it be about this time? I have spent many weeks of the past autumn-time in visiting and sight-seeing, and shall I tell "a little something" of that? Niagara Falls, in all their rushing beauty, were most delightful. The city of Buffalo, with its broad, clean streets, was a pleasant place to spend a few weeks. The "Land o' Grease," or, in explanatory words, that part of western Pennsylvania where petroleum is obtained, was a constant wonder and enjoyment. And of these and other places visited, much might be written, as the weeks I was absent from home were very crowded ones, and it seems I have much to tell; but that inevitable "time and space," so well known in editor's sanctums, frowningly warn me to move on. But I must not forget mentioning the lovely carriage drives over the almost mountainous roads of the wild territory; and, again, the lovely sails on the moon-lit waters of the beautiful Niagara River. While in Canada, I one day fell to thinking about that pleasant writer, Mrs. Jack. Of course, *Jack* is to my name, but, "the question is," *can* we be considered as in any way related? Be that as it may, as the result of my thinking I was wondering just where in the Dominion lives the author of those cheery "Whiffs from Canada." But how I do tarry by the way! Co and I were out in the dairy-room the other day to see the beautiful frosted cob-webs that hung in fairy-like festoons above the great stone trough. The spiders had been at work just before the "cold snap" came, and *Jack* Frost (any relation?) found splendid subjects upon which to try his skill. The rafters, shelves, and even the crane in the old-time fire-place, were wreathed in delicate whiteness by the frost. A feather wing that hung against the wall was daintily touched by a fringe more beautiful and soft than eider-down, and my companion playfully—not suggestively—remarked on its appropriate fitness for a bride. It was indeed beautiful. The days have been bitter cold ones with us lately, yet they bring us beauty in the shape of frost works, pleasant evenings round the fireside, and rides over the ever "beautiful snow."

One thing more and I am done. Our poor plants! How they have suffered! But *we*, among the more fortunate, saved in part our treasures from the grim Frost-king, and now lovely white primroses cheer us with star-like blossoms and sweet perfumes. Wishing to you all, my dear relatives, much profit and pleasure for the new year, I bid you all an affectionate good night.

JUMPING JACK.

The Puzzler.

GEOGRAPHICAL ACROSTIC.

1. A town of New York. 2. A lake of Minnesota. 3. A river of Arkansas. 4. A river of Pennsylvania. 5. A city of Peru. 6. A city of France. 7. Mountains of Labrador. 8. A mountain of Bolivia. 9. A city of France. 10. One of the Shetland Isles. 11. A river of New Brunswick. 12. A lake of Florida. Initials form a noted place in the Old Dominion.

☞ Answer in two weeks. LITTLE ONE.

CROSS-WORD ENIGMA.

My first is in Arctic but not in London,
My second is in Cape May but not in Hunterdon;
My third is in Blair but not in Yates,
My fourth is in Charlevoix but not in Gates;
My fifth is in Somerset but not in Lucas,
My sixth is in Franklin but not in Cass,
My seventh is in Clinton but not in Upas.
My whole form two counties of Maryland.

☞ Answer in two weeks. BALTO.

DIAMOND PUZZLE.

1. In cities. 2. An article. 3. Public pleasure-grounds. 4. Shunned. 5. A holiday. 6. Chronicles. 7. Christened. 8. Sorrowful. 9. In countries.

☞ Answer in two weeks. NELL.

TRIPLE ACROSTIC.

1. An animal. 2. Belonging to an empire. 3. A rug. 4. Sooner than. Primals, centrals and finals form fruits.

☞ Answer in two weeks. MD.

PUZZLER ANSWERS.—Feb. 8.

Sabbath Reading.

PREACHING HONESTY.

WE do not think that there has been any hesitation on the part of Orthodox ministers about teaching, in a general way, that men ought to be honest. The fact that religion must include morality is asserted by them strongly and frequently. The great lack has been a careful and minute application of this truth to the affairs of every day. Men must not only be told that they ought to be honest; they must also be told what honesty is. A close and faithful application of the moral law to the business of life needs often to be made. It is in this, if in anything, that modern pulpit has failed.

If the average minister, for example, should undertake to preach on the Eighth Commandment, he would be likely, first, to give a careful exegesis of the text, referring to other scriptures which support its teachings, and showing how in all the legislation of Moses the rights of property were protected; in the first place he would enter into some philosophical investigation of the origin of property rights; then he would show how Christ's law of love secures obedience to the eighth commandment, and a genuine respect for the rights of property; and finally he would impressively exhort his hearers to remember the injunction of the decalogue, and never to interfere with the property rights of others. All this is curious and entertaining, of course, to minds trained in abstract speculation; and, graced by an occasional illustration drawn from nature or from history, and by a few neat literary references, it may be made very pleasing to the auditors. The trouble is that it does not come quite close enough to the "business and bosoms" of those who listen.

The thing that is needed is that the command, "Thou shalt not steal," should be translated into the terms of modern commercial life. It ought to be shown, to begin with, that cheating is stealing; that every transaction in which by deceit or concealment or misrepresentation a man obtains money or other values that he could not have obtained if he had told the truth, is a direct infraction of the eighth commandment; that he who gains an advantage by telling a lie or by hiding the truth in a commercial transaction, is just as really a thief in the sight of God's law, as he who picks his neighbor's pocket.

Then, it ought to be shown with equal distinctness that the commandment forbids all violations of the law of trust. He who appropriates to his own uses property entrusted to him for safe keeping is a thief. He who risks in private speculation the property which has been placed in his hands for specific purposes is a thief. The boy who spends the money of his Sunday-school class, or of his ball-club, for his own purposes, breaks the eighth commandment. He may intend to replace the money thus taken; he may think he knows just where he will obtain it; but this gives him no right to take it. Every penny of it ought to be sacredly kept, that he may give at any moment an exact account of his stewardship.

Such distinct application of the Bible law of honesty to the affairs of every day are always needed, and if the pulpit has failed at all, it has probably failed just here. It is not only true as a venerable pastor says, that we have not made enough of honesty, it is also true that we have not made it so plain as we ought to have done what honesty requires and forbids. Specific and elementary teaching from the pulpit on this point would be timely and serviceable.—*Sunday Afternoon.*

THE "ONE-CLASS" PLAN.

EVERY how and then somebody starts up with the revival of a long-ago exploded notion, and calls it a new invention. One of the latest fancies in this line is "the one-class plan," or the proposal to have but a single teacher for an entire Sunday-school. This is the old plan which the modern Sunday-school displaced. The catechetical exercises of former days were conducted in that way. Children's services down to the present time have had the same form. But the small-class system, whereby each scholar can receive the personal instruction of a teacher, is an essential feature of the modern Sunday-school. Without this feature a Sunday-school is not a Sunday-school; it cannot do its distinctive work for the scholars individually. As Dr. Duryea once effectually put it, "The sick soul needs not a lecture on medicine, but a prescription." Unless the physician can feel his patient's pulse, and question him as to his feelings and needs, he cannot prescribe for him to advantage.—*S. S. Times*

THE GOLDEN VIRTUE OF SILENCE.

To know when to speak and what to say are silvery virtues, certainly; but nothing, after all, compares with the golden virtue of silence. It is always among the possibilities of talk that you may do some mischief, that you may inflict a wound, that you may be misunderstood. It is safe to keep the lips closed, especially when you are tired, or hurt, or indignant. "By thy words thou shalt be justified, and by thy words thou shalt be condemned." How often do we repent of the hasty speech almost as soon as it is uttered; but it is then too late to recall it, when it has gone, like a barbed arrow, into the heart of a friend. Self-control is one of the rarest of graces; yet it is an impossibility to do anything in life which shall be high, or heroic, or noble, without it. "Better is he that ruleth his spirit than he that taketh a city."—*Christian at Work.*

GOD loves to see a poor Christian shut his closet door, and then open his bosom and pour out his soul before him.

PERSONAL ITEMS.

General R. L. T. Beall, who was sworn in on Saturday as a member of Congress to succeed the late Beverly Douglas, is a strapping big Virginian, aged fifty-nine years. In the war he fought with his back toward Richmond.

He saw Washington, rode on Robert Fulton's pioneer steamboat, fought the British at North Point, moved to Newbury, Ohio, and the other day died at the ripe age of 86 years—which his name was Samuel Harrison, the auronaut.

General Badeau, the United States Consul General at London, lives at a country seat eight miles out of town. He drives into his office daily, there being upon his brougham a coachman and footman in dark-blue liveries, cockaded hats and fur tippets.

Mr. Sam Ward, the great Washington lobbyist, is down on what he calls "centurions." The centurion is a political wire-puller who is in Washington in company with some rural Congressman whose election he has aided in securing, and who offers to control a few votes on any question.

Professor George S. Morris will leave the Michigan University at Ann Arbor to take the chair of philosphy and ethics in the Johns Hopkins University at Baltimore. It is said that there will be other desertions from the Ann Arbor School, the regents of which have wrangled a great deal lately.

General Sherman, who has lately been once more "marching through Georgia" and several of the other Southern States, says that Georgia and Florida are now receiving "the best possible type of immigration," and that the whole Southern country is stepping abreast of the North. When he arrived in Jacksonville, Fla., General E. Kirby Smith happened to be there too, so Sherman invited the ex-Confederate to run over to St. Augustine with him. General Smith accepted.

PULVERMACHER'S ELECTRIC BELTS AND BANDS

Are self-applicable to any part of the body, for the speedy and effectual cure of

Rheumatism,
Neuralgia,
Dyspepsia,
Nervous Debility,
Liver Complaint,
Kidney Disease,
Female Complaints,
Nervousness,
Urinary Diseases,
General Ill-Health,
Wasting Decay,
Spermatorrhœa,
Epilepsy,
Paralysis,
Sexual Exhaustion,
Spinal Diseases,
Indigestion,

And other chronic ailments.

VOLUNTARY TESTIMONY.

[*Extract from the Baltimore "American,"* *December* 21, 1878.]

"The Pulvermacher Electric Belt is recommended to general use for the following reasons: First, for its wonderful properties for the cure of diseases of the kidneys, stomach, liver and blood; secondly, for its extreme simplicity, and the fact of its being applied outside, precludes all possibility of any injury being done to the patient, as an external remedy is universally acknowledged to be safe. Another advantage is the facility with which the progress of the disease and cure can be watched, and if the Belt be not quite in the right place, it can be very easily readjusted so as to cover the parts affected. The Pulvermacher Electric Belt, and its perfection, has been hailed with delight, not only by the sufferers who have regained health, enjoyment, and a new lease of life through its beneficent qualities, but by the medical profession, who very frequently prescribe its use to their patients."

PULVERMACHER'S ELECTRIC BELTS AND BANDS

are indorsed and approved by the most eminent medical and scientific authorities in the world, by the Faculties of France, England, Austria, Prussia, Belgium, and America, and by well known writers, who refer to the extraordinary cures effected by Pulvermacher's Electric Belts and Bands, in upwards of one hundred medical and philosophical works.

DESCRIPTIVE PAMPHLET and THE ELECTRIC QUATERLY, a large Illustrated Journal, containing full particulars mailed free. Address

PULVERMACHER GALVANIC CO.,

212 Broadway, NEW YORK.

☞ *Avoid bogus appliances claiming electric qualities. Our Pamphlet explains how to distinguish the genuine from the spurious.*

Wit and Humor.

WHEN a Virginia gentleman asks another to drink, he blandly says, "Shall we give the public debt a lift?" And they lift.

A WOMAN, deranged in her intellects, stopped a divine in the streets of the metropolis with this salutation: "There is no truth in the land, sir! there is no truth in the land." "You do not speak truth, good woman," replied the clergyman. "Oh, yes, I do," returned she hastily. "Then there is truth in the land," rejoined he as quickly.

Nerve Inquietude and Its Remedy.

Restless nerves, at least those that are constantly so, are weak ones as well. The true way to tranquilize them thoroughly is to strengthen them. It may be, nay, it very often is necessary to have recourse to a sedative or even an opiate, in dangerous cases of nervous inquietude, but the continued use of such unnatural palliatives, is greatly to be deprecated. Though not, in a restricted sense, a specific for nervousness, Hostetter's Stomach Bitters is eminently calculated to allay and eventually overcome it, a fact which the recorded experience of many goes to substantiate. This inestimable tonic, by promoting digestion, assimilation and secretion, touches the three key notes upon which the harmony of all the bodily organs depends, and the result is that fresh stores of vitality are diffused through the system, of which the nerves receive their due apportionment, and grow tranquil as they gather strength.

E. P. ROE Has the Largest and Best Stock of the Two GREAT RASPBERRIES, **The Cuthbert,** the Best for Market and light soils. **Pride of the Hudson,** the Largest and Best-flavored Red Raspberry in existence. Also, a superb stock of STRAWBERRY Plants, and all other small fruits. Send for Catalogue. Address E. P. ROE, Cornwall-on-Hudson, N. Y.

MORETON FARM SEEDS.

Catalogue of Farm, Garden and Flower Seeds, Potatoes, &c., for 1879, with full Directions for Cultivation, sent free to any reader of the RURAL NEW-YORKER who will send me his address on a Postal Card.
JOSEPH HARRIS,
Moreton Farm, Rochester, N. Y.

Night Sides of City Life.
BY T. DE WITT TALMAGE, D. D.

Containing the sermons as delivered at the Brooklyn Tabernacle, giving his personal experience, as recently seen, in company with three high police officials and two elders of his church, during their midnight explorations in the haunts of vice in New York City.

BIOGRAPHICAL SKETCH OF DR. TALMAGE.
PERSONAL EXPLORATIONS IN THE HAUNTS OF VICE.
WHOM I SAW AND WHOM I MISSED.
TRAPS FOR MEN.
STRANGERS WARNED.
THE WORSHIP OF THE GOLDEN CALF.
THE BATTLE FOR BREAD.
THE HORNET'S MISSION.

Large 12mo. vol., paper covers, 160 pages, 50 cts. By mail, postpaid. EVANS & CO., 76 E. 9th St., New York.
To be followed, Feb. 1, '79, by FOES OF SOCIETY, Vol. 2 of Tabernacle Sermons.

Established 1845.

136 pages, beautifully illustrated, indispensable to all interested in gardening, mailed to all applicants inclosing 6 cts. Regular customers supplied free.

New Fodder Plants.

PEARL or EGYPTIAN MILLET.

Clean seed, 15 cts. per oz.; 40 cts. per ¼ lb.; $1 per lb. Seed in chaff, 50 cts. per pint; 80 cts. per quart. By mail, post-paid.

PRICKLY COMFREY ROOTS.

15 cts. per oz.; 40 cts. per ¼ lb.; $1 per lb. By mail, post-paid.
Directions for cultivation accompany each lot.

WHOLE No. 1518.

NEW YORK CITY, MARCH 1, 1879.

PRICE FIVE CENTS.
$2.00 PER YEAR.

[Entered according to Act of Congress, in the year 1879, by the Rural Publishing Company, in the office of the Librarian of Congress at Washington.]

Farm Economy.

A GOOD START IN FARMING.

To the farmer there is always an interest in learning how young men starting in business, with plenty of pluck and energy, but not very much experience, manage to get along at the outset. We frequently receive letters containing accounts of the early struggles, mishaps and successes of young men in their first attempts at farming, but as few of them are meant for publication and the lessons to be learnt from the experiences of the writers, are taught more pithily by older hands in our columns, we seldom give these communications to our readers. We here make an exception to this rule, in favor of a letter from a young friend of the RURAL in Chautauqua County, New York. He says:

"I follow the life of a farmer for the love of it. I came here two years ago, and found this farm of 26 acres badly run down and yielding only an abundant crop of quack-grass. I plowed it all up and put in corn 4x4 feet both ways, and kept the cultivator busy among it. By this means the quack-grass was kept well under and soon disappeared entirely from most of the place. On one piece where the weeds and quack-grass were specially rampant, I summer-fallowed all last season and shall set it to corn this year. I plowed under a piece of pasture that had not been touched with the plow for fifteen years, and planted it with corn, but the grass and weeds fought it for the mastery the first year, and won. Not discouraged, I planted it with the same crop last spring. The seed was White Dent. In gathering it, I chopped off both ends of the best and fullest ears, and shelled the remainder by hand. I planted the selected seed in rows three feet apart, cultivated the rows once and hoed them once, and the yield from an acre and an eighth, was 135 bushels of ears—good-sized ones too. I used no manure in any shape, plowed the ground only once and dragged it twice before planting. I shall give it a good dressing of manure and plant it with oats this year, and seed it down to wheat next fall.

The piece I summer-fallowed I have sown with rye, to be plowed under for green manure. Before sowing the rye, I put some barnyard manure on a part of the ground, so as to be able to judge of its effect by the difference in the growth of the crops on both pieces. I have also plowed under a rich clover patch and sown it with rye, to be plowed under likewise. This piece I shall plant with potatoes and a small strip of corn, this spring. I have about an acre and a half of muck which I shall soon haul out on a yellow, sandy piece of ground, which I shall afterwards plant chiefly with potatoes.

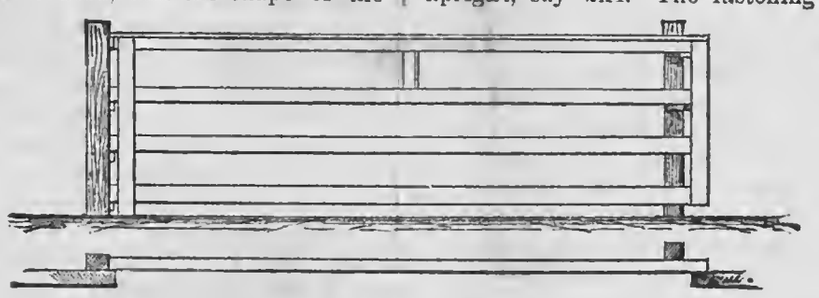
I have two cows and a heifer which I shall soil in the yard this year. They have been kept on corn-stalks all winter without a morsel of hay. The stalks were cut up, steamed and mixed with meal and bran and, occasionally, with ground oats, and I have more and richer milk than my neighbors who fed theirs with hay. I also keep three horses. My barns are boarded with pine, matched and battened throughout. In my carriage-house are a working bench and a coal stove. Behind the stove is a door opening into the roosting room of my poultry-house. The door is kept open at nights and during the day-time whenever it is not necessary to keep the work-shop very warm. By this means my fowls are always kept comfortable.

MY GATE, OR MY BARS.

CALL it which you will; it is free for everybody, and free from all claims for "patent royalty." It is the "Lee Patent" with all the points claimed in the Lee patent left out. And it is the "Teel Gate" with all the points claimed in the Teel patent left out. For posts, it relies entirely on the posts that support the ends of the fence where the opening for gateway is left.

HOW THE FRAME IS BUILT.

The size or width, the length, as well as the number of rails used, and the shape of the



GATE OR BARS.

rails, also, for that matter, can be varied at pleasure, or to suit the size, length and hight demanded or desired. I use hemlock inch fence boards, twelve feet long and four inches wide, for the three lower rails; for the top rail, two pieces three inches wide, one of them as cap nailed to the center of the other with eight-penny nails. "For the right hand end, I use a bit, of 2x4 scantling just long enough to cover the gate's width before receiving the cap board, nailing the rails thereto with ends even with the outer edge. Use eight and eleven-penny nails.

For the left end, I use two bits of board four inches wide, with upper ends even with cap, and lower ends as much below the bottom rail as I wish the gate to stand above the ground. Let the rails at this end run past the uprights, two inches. I make nine inches' space between the upper pair of rails; eight inches between the others; and three inches below the bottom, giving 44 inches in hight. Another rail in the middle, with eight inches' space, would make it 54 inches; that is 4½ feet, or a "lawful fence" for this State.

The second rail from top, and the space below it, must be left free, to be used the entire length as a slide.

Before telling how my bars are put up and held in place, you must know that my gateway opens on a village sidewalk, and the Teel pivot and swing would prove a nuisance at every opening. My gate must not swing into the street. It must open on my own grounds. By my arrangement it can be swung in for persons to pass, but for teams it must slide nearly the entire length. Besides, as the fence-posts stand inside the fence, the gate must have room to slide past the posts which project on that side, and it is set inside accordingly. To the fence-post on the right, at the end of the fence, at the proper hight to support the sliding rail, I nail a cleat of one-inch-and-a-half or two-inch stuff, to project inward, so as to leave room for the pannel to slide free and admit of its being nailed to an upright, say 2x4. The fastening of this to the right side of the cleat must be done after the pannel is in place. A similar cleat below this, and where it will not interfere with any lower rail, will keep the upright firmly in place; or the lower end may be divided or set in the ground as a post. On the left-hand fence post, bits of inch-and-a-half stuff are nailed to the post at the right hight to let the bottom of each rail rest thereon, and then covered by a strip to hold these ends in place—using no mortices—the top of this strip and the top of the post allowing the cap of the top bar to rest thereon. If a fastening is desired, a notch in the bottom of the top rail can shut over a rise in the rest that receives its projecting end.

Snow cannot interfere with "My Gate," which can be easily raised when you wish to slide it. "My Gate" has no hinges; it cannot sag; it cannot be blown open; it cannot get out of order; it is cheap; it is just as efficient as you choose to make it; it is free for everybody. Prof. Carpenter and the Michigan Agricultural College, as well as the rest of mankind are welcome to

Attica, N. Y., 1879. MY GATE, OR MY BARS.

Biographical.

PROF. S. W. JOHNSON.

IN continuation of the series of portraits of gentlemen who have become identified with agricultural interests, the RURAL this week

PROFESSOR S. W. JOHNSON.

presents an engraving of Prof. S. W. Johnson taken from a recent photograph. The gentleman is best known among farmers by his works on farm topics, and recently by his skillful management of the Connecticut State Experimental Station, and the careful analyses of commercial fertilizers made under his immediate direction. The work done at New Haven has been rewarded with a success beyond what might have been expected considering the meagerness of the appropriation. Few Connecticut farmers know, perhaps, that the experiment station which has served them so well, is comprised within the limits of two small rooms; that it has no land at its disposal and no place for even pot experiments; that many of the appliances used are loaned from Yale College, or are drawn from the private laboratory of the Professor, and that it actually has no library except what is contributed by the Director. Under such circumstances it is somewhat remarkable that the station is able to make a record at all.

S. W. Johnson is of Connecticut parentage, but was born at Kingsboro', Fulton Co., N. Y., July 3d, 1830. At the early age of four he "emigrated" into Lewis County, same State, to what is known as the "Black River Country," where his boyhood was passed on a farm that bordered the forests that then covered a large part of the region. His education begun in the common school, was continued at the Lowville Academy, the Yale Scientific School (then under the guidance of Prof. J. P. Norton), and during 1853, '54 and '55 at the University of Leipsic, under Erdmann and Lehmann. Thence he passed under the tuition of Liebig, von Kobell and Pettenkofer, at Munich, before passing over to Owen's College, England, where he enjoyed the advantages of Frankland's knowledge. Such a course of study was a thorough foundation on which might be reared a superstructure only limited by the ambition of the student.

He early disclosed an aptitude for teaching, filling positions for a short time in a common school, and in the N. Y. State Normal School, and, on returning to America in the autumn of 1855, took charge, as chief assistant, of the laboratory of analytical chemistry at Yale. In 1856 he was made Professor of Analytical Chemistry, and the following year agriculture was included in the name, which continued until 1874, when he had conferred on him the title of Professor of Theoretical and Agricultural Chemistry.

Brought up on an extensive, fertile and well-managed farm, he early became familiar with, and interested in agriculture, and the application of science to it. On assuming the chair of agricultural chemistry he began annual courses of instruction on that subject, which have been continued to the present time. His address before the Connecticut State Agricultural Society in 1856, on Frauds in Commercial Fertilizers, was the starting of the methods now employed to protect buyers of these articles. The next year Prof. Johnson was appointed chemist to the society, and during 1857, '58 and '59 made his reports on commercial fertilizers. When the State Board of Agriculture became a fact in 1866, the Professor was appointed a member by the Governor and Senate, serving for two years. He retired from the Board, but was at once named as its chemist, so that he continued to co-operate with it in effect, and for three years (1869–73) made reports on fertilizers. Mr. Johnson broached the subject of an Experiment Station in '73, and pioneered the movement, which ended in its establishment in 1877 by an act of the Legislature. Of this station he became director.

Prof. Johnson has not confined his usefulness to lectures. Besides the reports mentioned, he, while a student under Liebig, translated the German Chemist's criticism upon Mr. Lawes's experiments. Later, his "Lectures on Agricultural Chemistry" (1857), "Peat and its Uses as Fertilizer and Fuel" (1866), "How Crops Grow" (1868), "How Crops Feed" (1870), as well as numerous papers on various topics of Agricultural and Chemical Science,

testify to his literary activity. At the instigation of Liebig, "How Crops Grow" and "How Crops Feed," were translated into German, and the Royal Academy of Sciences of Stockholm had them rendered into the Swedish tongue. In addition to reproduction in England "How Crops Grow," can now be read in the Italian and Russian languages.

Prof. Johnson has aided his students by editing editions of "Fresenius's Qualitative Chemical Analysis," and "Quantitative Analysis," by the same writer. In original investigation he has, with his colleague Prof. Allen, done noteworthy service, having been the first to obtain the salts of the alkali metal, cæsium, (discovered by Bunsen in 1860,) in a state of purity, and to determine the exact atomic weight of the new element.

Prof. Johnson is enthusiastic in his devotion to the interests of science as applied to agriculture, and if his work shall be properly appreciated and abetted, the State will possess an Experiment Station whose reputation and usefulness will not be confined within local bounds, especially if it be continued under the direction of the gentleman who is conceded to be the foremost chemist in the country in his specialties.

Farm Topics.

THE HISTORY OF A POOR FARM.—No. 5.

Feeding for Manure.

"You say that the manure from a ton of bran is worth more than the bran itself!" said Martin, in a tone of astonishment.

"I don't say it is," I replied, "I say it is said to be, and I can readily believe it. Don't let us mistake this matter: what is said by good authorities is this: a ton of bran may cost $12; if the ton of bran is fed to a cow, she takes out of it a part of its substance, digests it, assimilates it and turns it into milk, flesh, or fat. The remainder is rejected in the shape of dung. Now the dung or manure, made by a cow while she is consuming a ton of bran, is known to contain certain quantities of nitrogen, phosphoric acid, and potash, which have a market value. The market value of these substances contained in that quantity of dung or manure, is more than $12. Is that plain to you?"

"The statement is plain enough, but the fact, as you may call it, is not plain," said he. "How is it possible that a ton of bran can be consumed and the refuse of it be worth more than the original value?"

"That seems to be nonsense," quietly remarked my old neighbor.

"Facts are stubborn things," I replied, "and I think I can see the fact here plain enough. Let us look into it a little.

"One ton of bran contains the following:

	Nitrogen.	Potash.	Phos. acid.
From wheat.....	44.8 lbs.	28.6 lbs.	54.6 lbs.
From rye.....	46.4 "	38.6 "	68.6 "

"Then rye bran is worth more than wheat bran," remarked Martin.

"I always knew that," rejoined the old man.

"Now, a cow returns in the manure, liquid and solid, 63.8 per cent. of the nitrogen of her food, and 97 per cent. of the mineral matter. So that there would be in a ton of manure—

	Nitrogen.	Potash.	Phos. acid.
From wheat bran...	28.58 lbs.	27.7 lbs.	53.0 lbs.
From rye bran	29.60 "	37.5 "	66.6 "

Each of these substances has as fixed a market value as bran has; and this market value is fixed in accordance with the prices of staple articles which contain these substances in great part; as nitrate of soda, for example, which is salable at a certain price, and this price gives 25 cents a pound for the nitrogen contained in it. Potash is a regular commercial article, and is worth seven cents a pound. Phosphoric acid is rated in the same way, at ten cents a pound. In whatever shape we buy these materials, they cost so much. Now the manure from a ton of wheat bran, which contains a certain quantity of these materials, is worth at those prices $14.37 and that from a ton of rye bran is worth $16.68, while the bran is worth $12 a ton. Is that plain to you?" Both Martin and the old gentleman shook their heads in unison, but said nothing.

"I cannot doubt it upon such evidence as this," I remarked, "and experience confirms it. Which would you rather do—spread your hay and corn upon the fields and plow them in, or feed them and use the manure?"

"I would rather feed them and use the manure; it would do more good," replied my old neighbor.

"Just so," said William, who had been listening. "Grandfather is right there, but he cannot see that if bran is put in place of the corn and hay, he would do the same, because the manure would do the most good."

"I see it, if you put it in that way," said Martin, "but I have heard the same said of clover hay."

"It is the same with all sorts of fodder and grain," I replied. "Corn meal and wheat bran have been used directly as fertilizers by the Connecticut tobacco growers and by the New Jersey truck farmers; but these people do not keep a sufficient number of cows to make half the manure they require, and in that way they miss making a good profit for their money and trouble in feeding cattle and making manure for themselves.

"There is another consideration. Manure contains plant food in a much more available shape than raw grain or clover hay, or green clover in fact, so that a gain is made by feeding these instead of using them directly as manure, and when the manure is well rotted, if it has not been injured in the process, it is more available than when it was fresh."

"I don't understand exactly what you mean by plant food," said the old gentleman, "but I know that manure made from cows fed on corn meal and bran, with their hay, will keep hot and won't freeze up in cold weather, while that from cows fed on hay will freeze up solid."

"Let us go and see," said I; "David is drawing manure from the cow yard to the big field. There he goes now with a load which is steaming in the cold air and is even now fit to be put in the hill for corn." The pile from which the load was taken was hot and black and rich, with no signs of what meal and bran were left in the manure, except the great heat. The heap was moist enough, having received all the liquids from above which came down into the cellar through the gutter.

"That is good manure," said the old gentleman.

"One load of that is worth three of our manure, grandfather," said William.

"I think there is something in that statement about the value of the manure from a ton of bran," said Martin, "and I do believe you are getting your money back again."

"I am sure of it," said I; "only give time enough and I think it will show for itself."

"How much is it safe to feed?" asked the old gentleman.

"That depends upon the appetite; when an animal eats heartily it is eating healthfully, and whatever quantity it consumes is no matter."

"I feed two quarts of meal a day," said William, "and the dry cows get none. I tell grandfather that that is not enough."

"I am feeding nine quarts of corn meal and bran, mixed, daily," said I; "three quarts at a meal, three times a day; and it pays to do it. I am now giving two bushel baskets of cut corn fodder, with three quarts of meal and bran, in the morning, directly after milking; three quarts of the mixed meal at noon with a peck of cut roots, and then a few pounds of dry hay; and two bushels of cut fodder, with three quarts of the meal, at night, after milking. Nine quarts of this mixed meal and bran, which is in great part middlings, weigh 12 pounds, and cost 12 cents; the roots, hay and fodder cost about 10 cents more, making 22 cents per day for each cow's feed. My cows are averaging seven quarts of milk a day, only three being fresh, and two being dry, out of 13. The milk nets me five cents a quart, which is 35 cents, against 22 cents for the feed. This leaves 13 cents per day *and the manure*. The manure is the great item in this case. Nothing is going off the farm but the milk, and whatever is sent out in the shape of milk, is easily brought back in a few tons of bran and oil-cake."

"Nothing can beat cows for improving land," said the old gentleman.

"Except sheep," remarked Martin.

"Did you ever keep a flock of sheep?" asked the old gentleman. "You didn't! I thought not; you are only saying, then, what nearly everybody says, who never kept any sheep. They are all very well in their way. I have kept a flock for years and years. It is only a few years since we had the last of our good old homespun, made from our own fleeces. Old Jacob, who lived by the church, used to weave the cloth for the folks, and we had a carding mill on the creek in the hollow. My girls and their mother spun the yarn and I fed and cared for the sheep, and so we divided the work. Those were good old times, and we shall never see them again. Here is William's girl; she plays on her piano which cost more than my whole flock of a hundred sheep in their best days, and she can't knit a pair of socks. I like the music well enough; the old songs are pleasant; but I tell William they cost too much; and I am afraid when I am gone the farm won't stand it. No; I know all about sheep; they are pretty good and make rich manure when well fed; but they are not equal to cows for profit, if you have only a good kind. There is no better way of getting light land up than by keeping cows on it. Dairy farms are always in good order, and it is just what this farm needs. That manure is the best I have seen, and can't be beat for raising corn. I shall begin to think it is really true about the bran; although I have been farming 60 years and never knew it. We live and learn, and as old as I am, I keep finding that out every day. But I always knew that you will find the feed in the manure every time."

CO-OPERATION IN THE PURCHASE OF FARM IMPLEMENTS.

PROFESSOR W. J. BEAL.

I was glad to see a recent editorial in the Rural on this subject. It is one not sufficiently thought of by our farmers. Good reapers, mowers, hay-tedders, grain drills, etc. are valuable implements. We could not get along without them. But they are quite expensive. They cost more than they ought to, when purchased at retail prices. In many places farmers are saving money by co-operating in the purchase of farm implements. This is worth attention. Every enterprising manufacturer of farm machines sends out his agents into various parts of the country. They are good talkers, and often prevail on men to buy machines. Men with small farms cannot afford to buy costly machines for their own use alone. It would be much cheaper to hire the work done in the old way; that is, to cut wheat with a cradle and thrash it with a flail. A combined reaper and mower costs about $150 and, on the average, lasts about eight years. The interest on the capital at eight per cent., is $12, and the wear and tear at least amount to $20 a year; making in all $32 a year for the use of a machine. Suppose the owner of a small farm can hire his wheat or hay cut at seventy-five cents per acre. The outlay for a machine as above estimated, will cut 42 acres per year. This is not all. Besides the cost of a machine, if purchased at $32 per year, the farmer employs a team and hand to do the work. This often makes the reaping and mowing very expensive.

Similar figuring may be made with grain drills and some other machines. These are often used to sow not over 50 acres per year, and are idle for the rest of the time. It may be said that if used but little they will last a long time. Sometimes this is the case, but not very often. Farmers leave their tools out in the sun and rain. They get rusty and out of repair. Something new or apparently better comes along, and they buy it, throwing the old implement away. So far as I can learn, the reapers, drills, cultivators, hay-tedders, etc., which are over ten years old and still in use, are hard to find and few in number. Co-operation in the use of expensive farm tools has been tried to some extent. There are some serious difficulties in the way. Men are selfish, and many of them cannot get along together. Some of them are ignorant of the use of complicated machines, and damage them more in one day than others will in a whole season. But this article is not written to find fault with the method proposed in the editorial; but rather, to suggest additional thoughts in the same direction.

But few farmers are competent to manage reapers and mowers and other complicated tools. For this purpose it needs mechanical tact. In every neighborhood there are men who have no farms or only small farms, and who are apt at driving teams and keeping implements in order. If they are pre-engaged, they can be employed to drill wheat, cut grass or grain at reasonable prices. This will need some foresight—some planning. The man can begin on the earliest grass and quit on the latest, perhaps on bottom land. He can do the same with wheat and other grain. At a good price he will try hard to accommodate. The writer knows of several neighborhoods where this plan is already in successful operation. The figures are given to set farmers to thinking, before the season arrives for mowing, reaping and drilling.

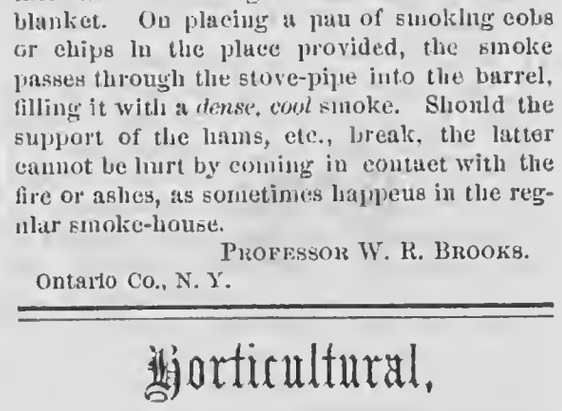
A HOG TROUGH.

A correspondent in sending us the above plan of a hog trough, says: "I like it better than the V-shaped one now in general use, because the hogs cannot get their noses under the sides and tip it over, as they sometimes tip the ordinary trough. Moreover, the food in it is spread out, so that they cannot eat it as greedily as they can out of the V-shaped trough; and even for a hog, it is well perhaps to take a reasonable time in eating his dinner. Last but not least, the animals cannot eat out of this trough while their feet are in it.

In making mine, I use common pine, and find the articles durable. The bottom, a, is of two-inch plank sixteen feet long and twelve inches wide. The sides, b and c, are six inches wide, and a quarter of an inch thick. Take three pieces of two-by-four, 14½ inches long; place them edgewise across the trough—one in the center and one half-way between the center and each end; bevel the ends and nail the sides to the trough. Lay one piece of two-by-four, sixteen feet long, edgewise along the middle of the trough; nail it to the cross-pieces and cut it off flush with the ends of the trough. Of two pieces of stuff, like the sides, fourteen inches long, set one at each end, nail them to the trough and to the two-by-four piece along the center, and the trough is complete.

A HOME-MADE SMOKE HOUSE.

The sketch below represents a simple but very effective smoking arraugement for all kinds of meats, especially hams, shoulders and bacon. The smoking is effected in a very thorough manner and in a short time. The writer had for this morning's breakfast some ham which was smoked in a contrivance precisely similar to this in six hours.



The arrangement can be made by any one without the least trouble, and it is sure to "work" every time. The sketch almost explains itself. The device consists of the barrel, A, of any suitable size. An ordinary flour or apple barrel will smoke four or five moderate-sized hams or shoulders. Both heads are removed and a movable cover provided for the top. This may be of boards, or an old oil-cloth or tight blanket will answer. A short trench is dug in which is laid a length of old stove-pipe, B. A larger excavation, C, is then made in which a pan of burning cobs or chips can be placed. This is covered by a tightly-fitting plank, D. One end of the stove-pipe communicates with this excavation; over the other end the barrel is placed, the earth banked up around the bottom of the barrel and over the stove-pipe, to keep all tight, as plainly shown in the cut. The meat may be suspended from a stick laid across the top of the barrel and then all covered tight with an oil-cloth or blanket. On placing a pan of smoking cobs or chips in the place provided, the smoke passes through the stove-pipe into the barrel, filling it with a *dense, cool* smoke. Should the support of the hams, etc., break, the latter cannot be hurt by coming in contact with the fire or ashes, as sometimes happens in the regular smoke-house.

Horticultural.

A QUESTION AS TO THE RELATIONS BETWEEN PLANT AND SOIL.

I have been for several years past, very much interested in the necessities that call for a rotation of crops. The usual reason given, that plants exhaust certain elements &c., &c., is a tale repeated by chemists, but it does not seem to me to be a sufficient reason, and I think that it is an important question in fruit culture, particularly in orchard fruits, and vineyards. For instance, I find that in new soil (I mean new to this particular crop), if I plant out young Grapes just started from cuttings, the first season will give a growth of three to five feet of vine. These are removed in the fall, the ground manured and turned over to be acted upon by frost, and planted again in due season with another lot of young Grapes. This year they will grow from one and a half to three feet. If I plant a third year under the same general conditions, the plants will not grow more than 18 inches at the best. Now, if this takes place with plants lifted yearly and the ground in the meantime be well manured and turned over, what are we to expect in a closely-planted vineyard after a few years!

Nurserymen find it necessary, in order to secure a good stock, to procure new land, if possible, for each crop of young trees. Although the land is only occupied about three years with a crop of young Pears, yet it is not considered profitable to plant again on the same land, even if manured without stint. What then are we to expect of a pear orchard that is never removed? These things require looking into. The exact specific relations that exist between the plant and the soil in which it grows, are not known.

Wm. Saunders.

A WESTERN LIVE FENCE.

In the Rural for January 25th, there was an article by "Frontier," on the great want of forest culture on the Plains. There is a greater want, however, and that is for fences. Both these wants may be very easily supplied by putting out a kind of Maple known here by the name of Box Elder. On cultivated land it is a fast grower, while it is as hardy as the Oak. A belt of it forms a good wind-break, and, moreover, it is a fine shade and ornamental tree as well as a live fence. The seed can be

found in large quantities along nearly all our Western rivers. It should be gathered in the fall after the first frosts, and planted immediately only a small depth below the surface; and the young plants will make their appearance in the following spring. If sown in a row for a hedge, the plants should be thinned out to the proper distance when of one season's growth, transplanted elsewhere, and cultivated, like corn, until three or four years old, when a superior fence may be made of them, as shown by the accompanying diagram. The young trees should be bent over and held down by fastening them to the uprights, by driving small nails into the latter near the top.

To all new beginners on the Western prairies I would recommend that they should do their first "breaking" in their "outlines," with a view to make fire- and wind-breaks there and also to prepare for forming live fences in this manner. The next "breaking" should be around the place designed for buildings and orchards. Trees should be planted freely both around the farm and homestead, well cultivated, and the labor and expense will never be regretted. S. D. WARNER.

Dairy Husbandry.

RULES FOR MAKING GILT-EDGED BUTTER.

AN OLD DAIRYMAN.

Feeding.

SELECT your cows with reference to the quantity and richness of the milk produced. The best cows are the cheapest for butter, so get the best you can of whatever breed you select. Give them good pasturage in summer, and plenty of pure water, with frequent access to salt. In winter, feed sweet, early-cut hay, well-cured corn fodder, roots, cabbages, etc., and a ration of bran, corn-meal, ground oats, or middlings.

Implements.

Have the best implements, and keep them scrupulously clean, well scalded, and often exposed to the sweetening influence of the sun. The milk pails and pans should be of the best quality of tin. A reliable thermometer is a necessity to every good dairyman.

Milking.

The milking should be done quietly and at regular times, and the utmost cleanliness observed. Nothing is tainted quicker than milk by foul odors, and surely at times with nearly all cows there is enough animal odor to it, without adding any more.

Setting.

Strain the milk slowly into pans four to six inches deep. It is an excellent plan to strain the milk into a large can set in cold water, and cool down to 60 degrees before putting into the small pans. The milk must be set in a pure atmosphere, at such a temperature as will permit the cream to rise in it from thirty to thirty-six hours after setting. In order to do that, the room should be kept at about 60 to 65 degrees, and not allowed to vary much either above or below.

In hot weather keep a large piece of ice in a tub in the room. Cover it over with a thick blanket, and, if arranged so that the water will run off, it will keep a long time, and keep the room very uniform.

In cold weather some arrangement for warming the milk room should be adopted.

Skimming.

Skim as soon as the milk begins to turn sour. Do not neglect this rule, as it is impossible to make good butter from cream that has become old and sour. When you pour your cream into the cream jar, splash as little as possible. Stir the cream every time you add more to it, and wipe the sides of the pot. Keep the temperature at about 60 degrees, and the cream-pot in the coolest part of the house, covered with a fine gauze netting strained on a hoop, not with a light cover. If covered too tight, fermentation is often too rapid.

Churning.

Churn often, as there is nothing gained by long-keeping. Bring the temperature of the cream in the churn to 58 degrees, and do not allow it to rise above 64 degrees. Churn early in the morning, while it is cool. First scald the churn, turn the paddles a few times; then pour off, and pour in cold water, and turn the paddles; pour off, and pour in your cream. In churning revolve the paddles with an easy regular motion, not too fast or too slow.

Coloring.

When it is likely to be deficient in color I have added a sufficient quantity of Wells, Richardson & Co.'s Perfected Butter Color, advertised in your columns, to keep it up to the June standard.

Working and Salting.

The butter should come in about forty minutes, a little more or a little less if the temperature of the cream when put in, was about 58°, ascertained by the thermometer. When it has "broken" and there is a difficulty in making the butter gather, throw in some cold water and give a few more turns. Some, and I think a majority, of the best butter-makers of to-day wash their butter with cold water before removing from the churn. Gather your butter with the paddle and lift it out into the tray, press it gently and incline it, and let the butter-milk run off. Work it gently with the paddle, with a cutting, gentle pressure, but not to mash it; or, better, put it into the butter-worker.

WESTERN LIVE FENCE.

Salt it about an ounce to the pound, or to the taste of good customers; only with the best salt, and free from lumps and impurities. Work the butter only so much as to expel the butter-milk, but not to work it too dry. This can be done by the use of a weak brine prepared for the purpose. Put the bowl away in a cool place. After standing twelve or twenty-four hours, gently press out, with a ladle or machine, the remaining butter-milk and any brine that will flow out with it, care being used not to work it too much. If this is done, the butter has lost its grain and becomes salvey, and its keeping qualities are injured.

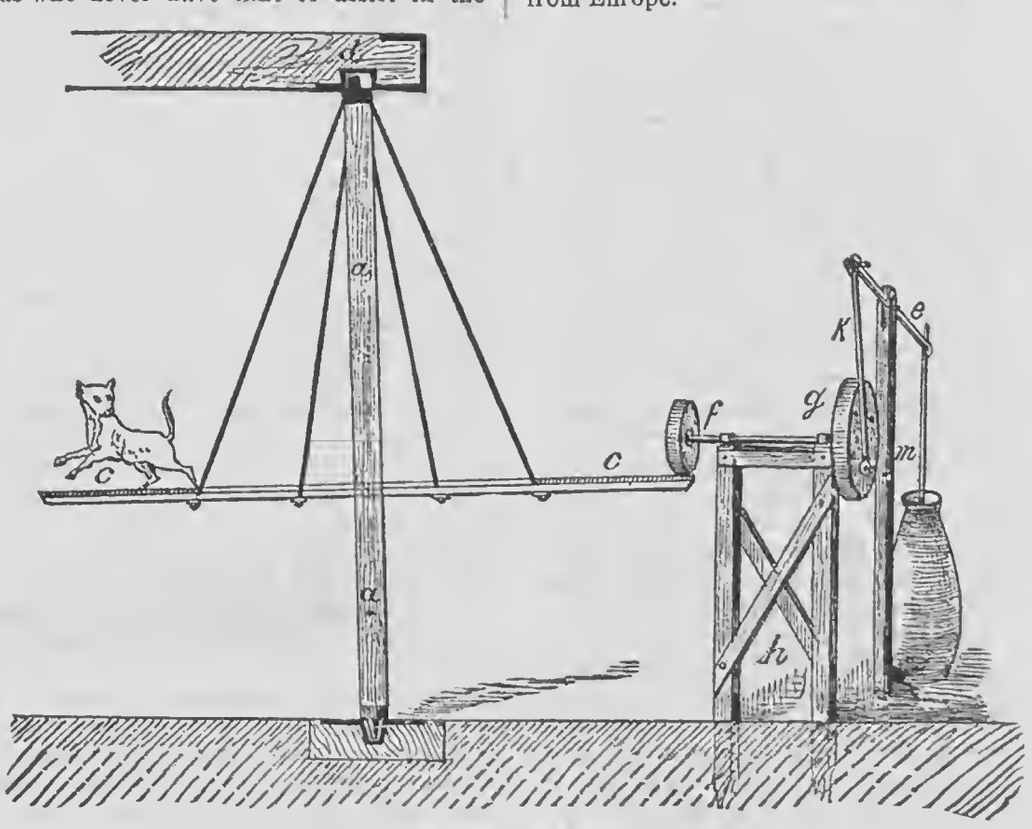
Packing.

Pack in vessels which will impart no impurities to the butter. Fill within half an inch of the top. Place a thin cloth wholly over the butter. Over that pour cold brine as strong as can be made of hot water and the purest salt, or cover with a layer of fine salt The whole process of making the butter, from drawing the milk to the placing of the butter in packages, should be hurried, as milk, cream and butter are going to decay every moment when exposed to the air, however pure it may be. Such butter is ready to keep or sell. If to be kept long before selling, surround every package with coarse salt, by placing them in boxes prepared for the purpose. This process keeps the butter cool and hard, and free from sudden changes of air. When all these things are attended to promptly, and with as much uniformity as is under the power of man to control, there will be a near approach to uniformity in color, richness and purity. If the new beginner follow these rules, and keep doing so, he will soon command the highest figures.

Cleanliness and common sense applied from the beginning to the end, are absolutely necessary to insure good butter that will bring the highest price in the market.

A HANDY CHURNING POWER.

WE wonder why farmers do not more generally make use of power for churning! It is hard work for a strong man to do a large churning with the dash churn—what a task must it be for a frail, delicate woman to be obliged to churn every day, and sometimes twice a day, during warm weather. For the benefit of the lady readers of the RURAL and for the sake of the conscience of those husbands who never have time to assist in the heavier duties about the house, we present a plan of a power suitable for dog, sheep, or calf, which will meet all the requirements of a dairy of medium size—price, ease of operation, and effectiveness, being all considered.



CHURNING POWER.

The standard, a, is simply a scantling, eight feet long and four inches square, with a small iron projection at top and bottom, to be inserted in the slot at d; firmly at the bottom with a play of two or three inches at the top. The arms are four feet long, three inches wide and an inch thick, mortised into the standard three feet from the bottom. The rim or track of the wheel, c, is laid two feet wide from the outside of the arms towards the standard, with braces, an inch square, reaching from the arms at the inside of the track to the standard near the top. The wheel when completed will be eight feet in diameter. The small wheel, f, is one foot in diameter and three inches thick, the larger one, g, eighteen or twenty inches in diameter and of the same thickness. They are connected by a shaft of inch-iron, eighteen inches in length, to which they are fastened securely at each end. The remainder of the cut illustrates the design so plainly that no one will be at a loss how to proceed.

The animal that is to furnish the motive-power, as will be seen, is placed on the opposite side from the small wheel which runs on top instead of under the large one, as it does in all other powers of this description that I ever saw. Built in this manner, it can be propelled by an animal much smaller than is required for powers such as are usually employed. We have seen many kinds of power churns, but never one which required as little force to furnish the motive power. It can be built in a single day by anybody at all handy with tools, with a very small outlay for lumber. This should be of well seasoned pine or other light wood. To have it light but yet strong is the desideratum. It should be placed under shelter; for, however valuable or strongly built a tool or machine may be, the sun and rain will soon reduce its value. Now, let the ladies who are obliged to churn by hand, insist that one be built for them, and we guarantee that they will be perfectly satisfied with its work. HECTOR BERTRAM.

Veterinary

INFECTIOUS PLEURO-PNEUMONIA.

PLEURO-PNEUMONIA is a specific highly contagious disease of the respiratory organs, peculiar to cattle. In Western Europe and America it is undoubtedly propagated by contagion alone. It was brought to Brooklyn, N. Y., in 1843 and again in 1850, and to Jersey in 1847, by English cattle, and finally it was imported into Massachusetts in 1859 by Dutch cattle. From the date of its first appearance in the neighborhood of this city to the present time, it has been nearly constant in some of the stables near New York, where it has been known as the swill-milk disease; and it is probable that it has been propagated from this point to the few other localities in which it is found; although it may have been imported directly to some of these places with cattle from Europe.

It is a very insidious malady, in that it has a period of incubation varying from two to about six weeks, and in some cases even longer; but its average duration is about 40 days. During this interval between the contraction of the disease and the manifestation of its symptoms, an improvement in the condition of the infected animals and an increased flow of milk in cows are often noticeable, due probably to the influence of the subtle poison on the nerves and blood. During this time, a beast may be, and often is, transferred, apparently in fine health, from one part of the country to another, or exported across the Atlantic, spreading disease all around it, certainly when the symptoms become manifest and probably, according to good authorities, while the animal is exhibiting unmistakable signs of good health.

In the first stages of the disease the symptoms are often hard to be detected by an unpracticed person and are chiefly the following: There is a slight rise in the temperature, discernible by the use of the thermometer. Should the temperature of a healthy animal be about 100°, that of an infected one would, at this stage, range from 102° to 104°. Accompanying this elevation are a slight loss of appetite, a decrease in the flow of milk, a disturbed respiration, faintly unusual sounds in the bronchial tubes, a slightly accelerated pulse, often an occasional shivering fit, rarely a slight, hard, dry cough, especially after drinking, and a disposition to keep apart from the rest of the herd. The second stage may not be entered upon for some days after the first has begun. Its symptoms are decidedly febrile. The temperature rises to 108° or more. The flow of milk rapidly dwindles; the mouth is hot; the breath noisesome; the breathing rapid and labored, while a low grunt evinces pain at each expiration, as, with outstretched neck, the suffering beast tries to breathe more freely. The bowels are constipated; the urine scanty and high-colored; the cough frequent, hard, and painful. The coat is staring, and the skin, yellow and scurfy, adheres to the ribs. Pressure between the ribs, just behind the elbow, or along the spine and loins, gives pain, expressed by a low groan. Pain is also caused by handling the windpipe along which the air courses with a rushing sound, plainly audible by placing the ear at the bottom of the neck. Still louder sounds can be heard at the base of the lungs by listening at the top and sides of the chest, a little behind the shoulder-blade. If only one lung is affected, this sound is louder in the other, owing to the greater amount of work it has to do. The animal either stands motionless with the fore-legs wide apart, crouches on its sternum or lies on the side most affected, to allow freer action to the opposite lung.

The hot stage of the fever is never long owing to a lack of sufficient vitality to withstand the injuries to the lungs, that then occur. As the disease progresses, the nostrils become dilated, a limpid discharge, often of a purulent nature, flows from the eyes and nose; the extremities, as well as the horns and ears, grow cold; the body wastes rapidly; water collects in the chest; the pulse becomes weak and irregular; the animal gapes and grunts, drops and dies, often from internal drowning, or a distention of the rumen from gasses resulting from the arrest of digestion.

In one form of the disease the animal appears for quite a long time to get neither better nor worse. A muco-purulent secretion is discharged from the eyes; the appetite is capricious; there is a constant, troublesome cough, and portions of the lungs are regularly expectorated along with a putrid, highly offensive pus. The animal rapidly grows emaciated, and an offensive diarrhea precedes a speedy death from consumption in from four to six weeks from the appearance of the first symptoms.

A post-mortem examination discloses a large collection of water in the cavity of the chest, in which are floating large, yellow flakes of coagulable lymph. The surface of the lungs is found united to the ribs by a "false membrane," and the lungs themselves are greatly increased in size—lungs which would ordinarily weigh five and eight pounds, after disease have been found to weigh 30 and 75 pounds respectively. Instead of being of a bright salmon color, diseased lungs are grayish or mottled, and their surfaces are rough, thick and hard, instead of being smooth, elastic and yielding. The proportion of deaths to recoveries varies all the way from 10 to 75 per cent., according to the condition of the herd among which the disease makes its appearance; the preventive or curative measures adopted, and the sanitary condition of the surroundings. It is generally estimated, however, at from 50 to 60 per cent. Most of the recoveries take place during the first stage of the disease, but as the portion of the lung once injured or destroyed can never be really restored, it is always advisable for the owner of the beast to fatten it for the butcher as quickly as possible after its recovery.

Medical treatment is chiefly preventive, for as a curative agent it appears to have done no good whatever. Hence animals with manifest symptoms of the disease, are at once slaughtered in England, and should be here, because the number of infected animals is so small that stamping it out, to prevent contagion, should be insisted upon. The judicious use of tonics, such as sulphates of iron or copper, have been found very serviceable in the way

fortifying the system against contagion, but they should be administered by a skillful veterinary practitioner, and, in this disease the bungling of the ordinary cow-leech should never be tolerated.

As the disease seldom or never affects the same animal twice in a lifetime, inoculation has been largely employed as a preventive of the regular form of the malady. As the result of a long series of experiments in Germany, Belgium, France and England, it has been calculated that the total loss from inoculation amounts to about four per cent. as compared with that from the natural disease, and that at least 30 per cent. of the animals exposed to infection become manifestly diseased, of which number 60 per cent., as above stated, die of it. Hence the benefit of inoculation. Of 22,348 cases of inoculation, mentioned in a late number of the American Veterinary Review, it failed to "catch" in 5,476 cases; and of the remaining 16,872, 1,582 inoculated animals lost their tails; 53 suffered from extensive gangrene, chiefly on the hind-quarters; and only 490 died.

The efficacy of this preventive largely depends on the virus or "ens" employed. This should be obtained by squeezing out into a clean vessel some of the serum from the lung of an animal killed in the first stage of the malady. Care should be taken that the deceased animal suffered from no disease except pleuro-pneumonia, and the lymph should be used at once. The operation is performed by making a couple of shallow incisions at the tip of the tail, placing a few drops of the serum therein and applying a bandage for a few days. If the inoculation is successful, a constitutional disturbance will be apparent in about ten days' time. The animals operated upon should be shut up in a secluded and disinfected stable, and treated in every respect like diseased stock; and all animals that have been in contact with infected beasts should be so treated. It is useless to inoculate animals already infected.

The matter of the contagion is exhaled in the breath as well as from the pores of the skin, and thrown off by evaporation from the solid and liquid voidings which retain it until thoroughly disinfected. Hence it impregnates the air, and even the walls of the buildings; mixes with the surrounding air to a considerable extent, defiles the stamping ground and pasturage of infected animals, and adheres to every person and thing that come within its influence. Wherever it appears, therefore, the utmost precaution should be observed to prevent its spreading, and no stable in which infected animals have been confined, should be used for four or five months after their removal, and then only when it has been thoroughly disinfected.

The Herdsman.

JOTTINGS AT KIRBY HOMESTEAD.

COL. F. D. CURTIS.

Sheep Eating Turnips.

THREE sheep of medium size eat a half bushel of cut turnips at a feeding. This is about as much as they can hold. They get no water, as the turnips supply all the moisture they require. They are thriving fast. Last winter our breeding ewes had no grain until near lambing time, but they had turnips and they did well. Since this crop is so easily raised and the roots are so natural and healthy a food for sheep, it is a wonder more farmers do not have a patch of turnips and grow them for their sheep. They keep the sheep from getting constipated, and help to keep up their appetites. Sheep are very apt to have these troubles—constipation and loss of appetite—in our long winters. When turnips are fed to them regularly there is no danger of their producing any colic or diarrhea, or of their deranging the fœtus—as the books tell us they are apt to do—by causing a chill and spasms. They are not any more likely to do this than ice-water, of which they are allowed to drink as much as they want. We have never had a sheep sick through eating turnips, but we have had them sick on account, no doubt, of drinking too much cold water. This is one cause of ewes aborting, as it produces a chill and spasms of the womb, which, in most cases, would result in the loss of the young. It stands to reason that five or six months of dry feeding must try the system and produce a feverish condition, and carry a flock of such delicate animals as sheep to the very verge of disease if not to disease itself. Where is the wisdom of pursuing such a course when a daily feeding of turnips will correct it all and make the sheep much better and at the same time save other food? Not one farmer in a hundred understands, or if he does, he does not practice a correct system of feeding in winter. More green or succulent food is necessary. It is the cheapest food we can raise: all that is wanted is the disposition or determination to do it. American farmers are babies in the art of feeding. An Englishman can make mutton and beef faster, and he must make it cheaper to enable him to pay such big rentals and have any profits.

Why Hens Eat Eggs.

Mr. Joseph Alexander says the reason why hens eat eggs in winter is because they are dry and they eat the eggs to quench their thirst. A neighbor was troubled by his hens eating their eggs; after he heard the explanation of Mr. Alexander he supplied them with water, and the first day they drank several basinfuls. This seemed to corroborate the theory of thirst.

To keep a Horse from Rubbing its Tail.

This habit, which spoils the appearance of some horses, is caused by scurf on the skin of the tail, or by worms in the rectum. [A foul sheath is often the cause.—EDS.] The first can be remedied by a thorough washing with borax. Carbolic soap is also excellent. A horse which has formed the habit of rubbing will probably keep it up for awhile after the cause is removed. Greasing the anus, and syringing the rectum with a mild decoction of tobacco, will relieve these parts and kill the worms, but the rubbing will doubtless be kept up for a time. To prevent disfignrement of the tail, nail a plank at the back side of the stall, with the edge projecting toward the horse, and at a hight just opposite the thighs. With this obstruction the tail cannot touch the sides of the stable. Another preventive is to fasten a rope at the back end of the partition of the stall and attach it to a rope hanging down from the ceiling directly in the rear of the tail, and then tie the other end to the partition on the other side of the horse. When he comes out of the stall the rope may be slack enough to allow the horse to back up a step or two, and being suspended from the floor overhead, it cannot fall down and will not allow the animal to get entangled. It may be kept taut by having the perpendicular rope fastened considerably in the rear—enough to draw it.

Why Sows do not Conceive.

A neighbor had a great deal of trouble to get his breeding sow to conceive. He took her to the male five times before she did. He was an old farmer, but he did not know the reason why his pig made him so much trouble. It was on account of her low condition—she was too poor and lacked vitality. Such instances are common. If breeding sows are expected to have young, as soon as possible after a litter are raised, or taken away, they must be fed liberally, so as to be in a thrifty or vigorous condition. The young pigs will be stronger on this account and more likely to live and do well. Breeding animals should not be poor and weak, nor should they be over fat. Thrifty and vigorous is the proper condition. They should also be fed a variety of food, or at all events not be confined to any one kind which is heating or constipating in its character. They should be separated at least two months before the young come, and not allowed to run together at all if they are quarrelsome, or if a master one is inclined to be vicious. They will not winter so easily and are liable to injury constantly. Suckling, unless there is a bountiful supply of food, will rapidly emaciate an animal, and even then reduces the strength.

MANAGEMENT OF YOUNG COWS.

ON some accounts it is probably better that cows should be fed and grown on the farms where they are to be kept. If brought to a strange place it takes some time for them to become wonted to the locality and to the other stock. A calf saved for a cow will be petted and humored in such a way as to be made gentle and kind to handle. It will also probably be a better feeder, and this usually means a better milker also. These hearty feeders should be allowed to breed early, so as to determine the flow of vigor to the milk glands as early as possible, and thus increase their size. After having one calf, the heifer may be fed liberally to keep up the flow of milk as long as possible, and also to increase the size of the cow. If the heifer is of a good milking strain, she will, with such treatment, make a superior cow, and, in any event, this management will bring out the best results of which she is capable.

Variety of food is especially important for milch cows. It insures hearty eaters and a good digestion. Cows that have been trained to eat any and everything edible are much surer to be profitable; because they thus eat much more than they could of a single article, no matter how rich or palatable it may be. One of the best cows I ever knew, was grown on the farm where she always lived, and never lost the liking for sour milk which she acquired while a calf, fed from the pail. This liking for sour milk is often a valuable point in a cow at times when there is no other way to dispose of the surplus. It used to be thought hard usage to keep cows in the early settlement of the country on "browse"—the buds and tender twigs of fallen trees. But cows so fed had always a little hay, some corn-stubble, a few nubbins of corn and the waste from the kitchen. In this way the great variety of food they received was much more favorable to health and a large production of milk, than forced feeding on one or two articles of food. High feeding is profitable for fattening animals; for with these, impairment of the constitution is thought to be of less importance, as they are to be killed so soon. But in feeding cows, and especially young cows, to induce a large milk secretion, the high feeding should include a great variety of articles, and thus induce a habit of hearty appetite which will continue through life. W. J. F.

Monroe Co., N. Y.

STOCK NOTES.

IN 1876 the importation of oxen and bulls into the United Kingdom was 168,598 and their average price per head, $102.64. Of sheep, 1,041,494 were imported, worth $10.39 each. In 1877 the importations of the former fell to 148,619; average price per head, $108.80; while the number of sheep imported dropped down to 874,062 at $10.93 apiece. In 1878, the number of oxen and bulls imported rose to 197,101; worth on an average $109.24 each; and the importations of sheep also went up to 892,126; price, $11.06 each. Thus it is seen that the increased supply has stimulated the demand, so that prices have been steadily rising. This, however, is attributable, to some extent, to the better quality of animals imported, especially from this country and Spain. The aggregate sum paid by John Bull to foreigners for live stock and dead meat during 1878 amounted to $100,615,776. Of the cattle imported the Continent furnished 133,000, or two-thirds of the whole, while 55,000 were supplied from this country and 10,000 from Canada; but about half the Canadian shipments were bred in the United States. . . . . The British Privy Council has decided that typhoid fever in swine, which has lately been very prevalent in that country, comes under the provisions of the Contagious Diseases Act, and accordingly that all infected hogs must be slaughtered and their owners compensated; but not at a higher rate than $8 per animal. . . . . Ireland is the great source of imported cattle supply to England. The small farmers of Ulster alone sent 193,596 head across the Channel during the year before last. . . . . Formerly the presumption in Great Britain was that all cattle from abroad were healthy; but since the passage of the Cattle Diseases Act last year, the presumption is that all foreign cattle are diseased, and the burthen of proving to the satisfaction of the Privy Council that they are healthy rests upon the importers. . . . . What is held to have been the heaviest beast ever slaughtered in Ireland was the Short-horn steer Jove, winner of several prizes, whose live weight was 3,696 pounds. He was butchered the other day at Coleraine.

Floricultural.

WINTER FLOWERS.—No. 2.

WILLIAM FALCONER.

SOFT-WOODED Cape Heaths, as Erica hyemalis, caffra and graecilis, are really pretty at this time of the year, but they are best grown in a cool greenhouse; so are Epacrises. Some growers plant them out in summer, while others prefer growing them on in pots. Plants under three years old are considered better than older ones. Acacias are "real pretty" from December till March or April, but most of them grow too big for window use. A. armata blooms when very small and so does A. Drummondii. Coronilla glauca and Cytisus Canariensis and its varieties are profuse yellow blossomers, compact, and if grown out-of-doors in summer and in a moderately cool room in winter make good window plants. Red spider is their greatest enemy. Chorozemas, orange, and Hardenbergias, purple and white, are neat and copious Australians, requiring treatment like the last. Violets in a cold-frame yield blossoms from November till early May, and, as a preventive against severe weather, a few potfuls in the house will furnish many blossoms in winter. Of Begonias we can have a feast or a famine, just as we choose; the tuberous-rooted and Rex varieties had better rest till spring, but the shrubby ones, Manicata and others, only need warmth and water to gladden our hopes. A few late summer-sown Browallias, or old plants lifted in the fall, cut back a little and potted, bloom continuously. Abutilons will come in a little later, unless you have a greenhouse, when you can have them all the year round. Libonias bear great crops of orange and scarlet; they like to be planted out and pinched in summer and get a little warmth in winter. Red, white and yellow—single and double—Oxalises are now in their heyday; they are splendid house plants. Oxalis versicolor—the little red and white variegated one—has been and still is very fine with me. I keep it pretty dry, cool, and near the glass. The little yellow-blooming Othonna in suspended pots is like a heavy fringe studded with golden stars. Crassulas, white and pink, Cotyledons, red; Sedums, yellow, and some other succulent plants, are in full bloom. They like a dry atmosphere and to be kept a little dry. Aloes are pushing up flower spikes. And I may say here that Aloes, Crassulas, and other South African succulents, unlike the Cacti and succulents of the Northern Hemisphere, grow freely in winter, hence are benefited by light waterings and warmth. Linum trigynum is a pretty plant of the flax family, with large deep-yellow blossoms that on tiny and massive plants alike are borne in great profusion. It likes a little warmth, as do also Peristrophe speciosa, Goldfussias, Jacobinias and the like—all serviceable at this season, particularly for the greenhouse. Cestrum elegans is at its best now, but though its flowers are showy and many, its leaves and stems are so hatefully odorous that I very much dislike it. Catalonian Jessamines are great favorites and good house plants, and they bloom more or less all the year round. In greenhouses Roses can always be had; in windows, if the Roses were well established in pots, ripened thoroughly and early, and pruned in accordance, we may soon expect a goodly reward. If timely cared for, we can now have any quantity of Snowdrops, Crocuses, Christmas Roses, Winter Aconites, and other early-blooming bulbous plants. The Jerusalem cherry plants, with their multitude of bright fruits, are very pretty and last several months in perfection. They are good house plants, but much better greenhouse ones.

Of course, the non-seasonable blooming plants will add a deal of green, but when "green" is wanted for cutting, besides smilax, Rose-geraniums, Maiden Hair, Pteris and climbing Ferns, I would highly recommend some of the evergreen kinds of South African asparagus. We have a species here that grows about ten inches high, is lovely as green in bouquets, and keeps in good condition as long and as well as the best of our Ferns; and we have one that grows some two or three feet high that is far heavier and richer; also, a climbing species whose long, sprayey strings are as handsome as those of Smilax. And I would also commend to notice for winter work the Lemon Verbenas. If grown in pots, well ripened and cut backin fall, like a Heliotrope, a little moisture and warmth will give lots of fragrant shoots in winter.

Entomological.

THE PEACH APHIS ON THE EASTERN SHORE OF MARYLAND.

THE severe freezing weather we have had during much of the winter, brightens the prospects for our escape from the devastations of the dreaded "Peach Aphis" the coming spring, as there is nothing that approaches as nearly to a remedy for this aphis as a severe winter. A few winters back, mild weather characterized the months of December and January,—and during January, investigation showed the insect to be in fine working condition, congregated in knots and patches upon the roots of young trees in the nursery and orchard. I had abandoned all hopes of saving the trees budded in the nursery the preceding fall from their blighting ravages. In February, however, a severe spell of freezing weather visisted us, which put a complete 'quietus' upon the little intruders, and that spring the trees escaped all harm from them.

Last winter, on account of the total absence of hard freezing, was very favorable for the preservation of the innumerable pests that had fastened themselves on the roots of the trees for shelter; and, as a result, we had them last spring in such quantities as to baffle all our efforts at their destruction. Although their natural enemies—such as Lady-bugs, and several kinds of flies—were feasting upon them all the time, the supply steadily increased rather than diminished. Now this aphis question is gradually looming up as a subject demanding the best study and thought of peach growers on the Peninsula. May not the increasing variableness in fruit of some of the standard market varieties, such as the Heath Cling, for example, be attributed to the under-ground operations of these depredators? Last spring in digging trees—upon the roots of which the insects had subsisted all the winter—many of the fibers and smaller roots were found to be entirely dead, and in many cases roots as thick as a knitting-needle were deadened and the bark secuingly rotten for a half inch outwardly from their junction with the main roots. The aphis works in the same manner upon bearing trees, as has been several times proven by investigation; and this assuredly weakens the vitality of the trees to a considerable extent, and, as a natural consequence, materially influences the yield of fruit.

I have not yet been able to notice anything in the appearance of trees repeatedly attacked by the aphis, that will support the belief of many intelligent and prominent peach-growers, that the aphis and yellows are identical in their influence upon the tree; or, in other words, that the aphis on the roots, produces yellows in the branches. On the other hand,

the spindling, wiry, sickly and yellow-looking suckers, that are thrown out about the forks and along the main limbs of the tree affected with the yellows, have in no single instance, to my knowledge, shown themselves on trees the roots of which were infested by the aphis. Neither have I any fear that the aphis will ever cause any serious trouble north of Maryland, as my observations respecting the effects of frost upon the insects while on the roots, convinces me that no great destruction to trees either in the orchard or nursery, need be anticipated on this account in Pennsylvania and farther north; though I am aware that the insect does occasionally appear in southern Pennsylvania, and that it has killed some trees in New Jersey in times past.

I have experimented considerably in trying to find an effectual remedy for these pests, when blackening by their immense numbers whole blocks of buds just starting to grow in the nursery, ranging from the bursting bud to those three or four inches in length; but all my researches have been useless, as I could not find anything that would destroy the lice and leave the buds uninjured. So, upon the advice of Prof. C. V. Riley, given in the New York Tribune in 1874, I have lately left them to the Lady-bugs and other foes, giving protection to the latter as far as practicable.

Caroline Co., Ind. J. W. KERR.

The Apiarian.

OUR BEE HINTS.

THE time for active work in the apiary is again near at hand. Indeed, in the more southern latitudes vegetation has already begun, and with the coming month of March the swelling buds will develop into tender sprigs of green and open their inviting blossoms to the busy bee that will eagerly search them for fresh food after the long winter's rest. It may be well briefly to consider a few points of interest in connection with the opening of spring work and bee keeping in general, and especially would we recommend such consideration to amateurs who have, as yet, but little experience, as well as to those who contemplate starting in this pursuit in the near future.

There are two classes of persons that will, and profitably may, engage in bee keeping—those who begin the work with a view to make it their business, who make it their only or, at least, their main occupation, and those who begin it, not so much for the profits as for the sake of the recreation and pleasure it affords. This latter class is by far the larger of the two, embracing the majority of our farmers and many professional men. We may add a third class: those who have heard of the profits realized from the business, and, thinking it a most excellent way to get rich without any outlay, study or work, madly rush into it with the idea that all they have to do is to market the honey and pocket the money. For these we write not, however; they had better never begin.

The first step one should take in this direction is to study the bee literature. Study the physiology of the bee. Acquaint yourself with what others have done and are doing. Learn which are the most difficult points, such as Italianizing, queen raising, artificial swarming and the like, and master them. By having all this clear in the mind, you can begin with confidence and work intelligently. There will then be nothing mysterious about it, which, because not understood, you must leave to chance and guesswork.

Next study the facilities you have for bee keeping, your locality, your honey-producing plants, your market, and see what difficulties you will be likely to encounter. When all this is clear, you can start; but do not begin on too extensive a scale; half a dozen stocks are sufficient to begin with. If the enthusiasm is kept up and all goes well, their number can be readily increased.

The time to remove the bees from their winter-quarters to their place in the apiary will vary with the latitude and the season. In many of the Northern States it is well to wait until the beginning of May. At any rate, if they are not diseased and have a sufficient supply of food, it is best to let them remain in winter-quarters till there are spring flowers enough to gather honey from, and until there is no more danger of cold weather. By keeping the bees packed up, they will remain quiet till quite late in the season. There are more bees lost during the early spring, from cold, dwindling and lack of food, than perish during the whole winter.

If, on examination when brought out, they should be found to have consumed their whole store of food, it is necessary to feed them at once. In every hive found without enough of food a frame of capped honey must then be exchanged for an empty one. If no comb honey is on hand, feed them good extracted honey, or the best quality of sugar made into a syrup by dissolving it in hot water. Half a pound to a pound daily is usually sufficient.

The situation of the apiary is also of importance. A place sheltered from the high winds, and partially, though not densely, shaded by trees and bushes, is preferable. Next to a sheltered orchard, a grove of evergreens, which may be kept low and spreading by pruning them back, is perhaps the best. Place the hives on the north side of these so that they may be shaded from the hot noonday-sun, and let them face the east, to protect the entrance from the fierce westerly winds. The hives should not be more than four or five inches from the ground, and a piece of board, on which the bees can alight, should be put slanting up to the entrance. The old practice of raising the hive two or two and a half feet from the ground has no advantage that we are aware of, and it has the positive disadvantage that bees coming home chilled, or weary and heavily laden, often fail to strike the entrance, and falling to the ground below the hive, there perish, being unable to rise again.

Realizing the important position this branch of industry occupies among the rural pursuits, and believing that every farmer, be his farm large or small, ought to keep a few hives of bees, we shall in future have more to say on apiarian matters than we have had heretofore.

Rural Architecture.

A FEW AXIOMS IN BARN-BUILDING.—3.

W. I. CHAMBERLAIN.

ONE of the axioms already given is, that we should make the force of gravitation *help and not hinder us.* In no case will gravitation help us more than in the storage of hay for sale, especially if there is a steep slope, at the foot of which the barn can stand. Near the middle of a forty-acre field on my own farm, is a sharp descent of 20 feet, which curves on three sides around a space large enough to place a barn 45 feet square. The ground is level above the slope and again below it. The place was dug out in past ages by the wash of a brook which is now dry, except in very wet weather. The formation of the land has suggested to me the building of a barn on the plan indicated in Figs. 1 and 2. Fig. 1 gives the curve of the hill and the ground-plan of the barn which I hope to build. Fig. 2 is the perspective view, taken from the southwest, the beholder's eye being about the hight of the eaves of the barn. In Fig. 1, a, a, a, a, is level ground; b, b, b, b, is a steep descent of 20 feet, curving around the flat on which the barn is to stand; and f, f, is level ground 20 feet lower than a, a, a, a; c, d, e, are the three bays of the barn, and run from ground to roof: g and g are bridges (see also Fig. 2) on which hay is drawn in above the big beams, the top of the load reaching so high as to give the pitcher just room enough to stand beneath the ridge of the barn as he

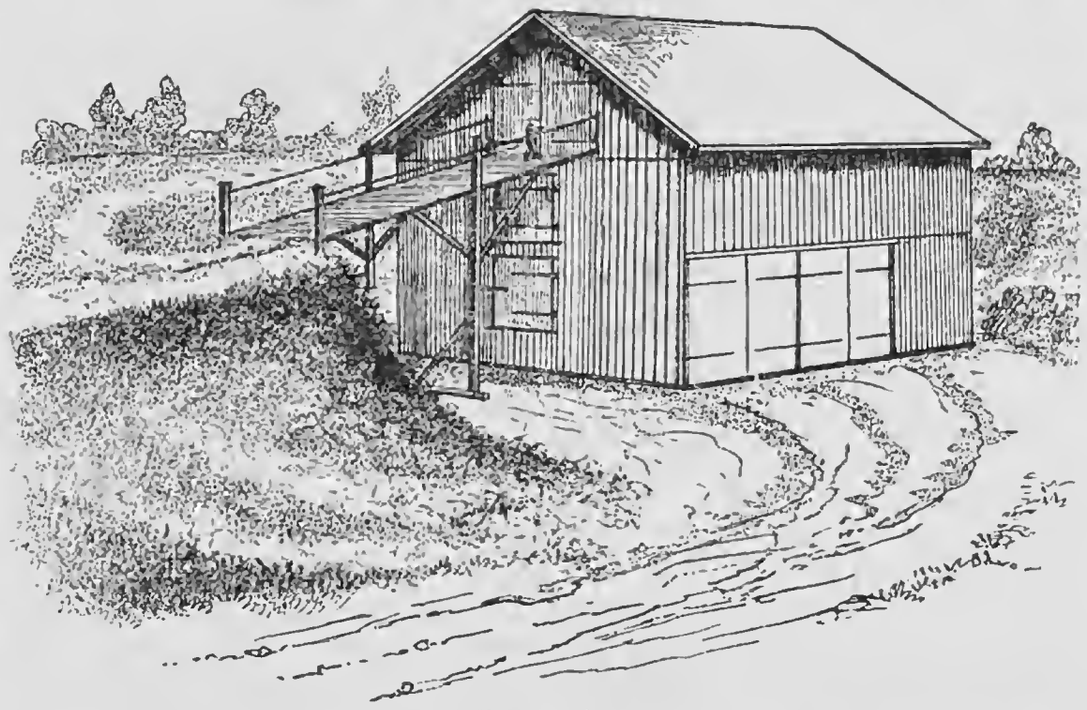


FIGURE 2.

begins to pitch off his load. The hay will go down 30 feet *by its own weight*, but if it were on the ground, it would take a sight of muscle, either of man or horse, to lift it to the top of the barn by forkfuls. H, h, are doors used in removing the hay for sale.

Fig. 2 shows the barn in perspective, and shows the curve of the hill, the general form of the barn and one of the bridges. The barn hides the other bridge, which slopes slightly from the other end, in the same manner as the one seen in the figure, and permits the team and wagon to drive through and out at the other end when the load is off. Where there is no hill at the other end, the team must, of course, back out the wagon or be unhitched and the wagon be run out by hand.

The barn is 45 feet square and 25 feet from ground to eaves, and will easily store 100 tons of hay below the eaves. The barn floor is above the big beams, under the "ridge-pole," and between the two rows of posts that support the purline plates. A "girth," or heavy railing, runs along on each side to prevent the possibility of man's or horse's stepping or backing off. The two west bays have barn floors laid on timbers resting on the ground and not framed to the sills, so that the ground, and not the barn, supports the hundred tons of hay. (These bays also have doors; see Fig. 2.) Now for the storage of the barn. Suppose it empty at the beginning of haying. The lower doors are all shut and firmly fastened. The large doors above the bridge (see Fig. 2.) are opened, and the load of hay is driven up the slight ascent of the bridge, into the barn, and along the elevated barn floor above the big beams, to the east end, and the east bay is filled to the roof, except the space occupied by the barn floor. Every forkful of hay goes below the hand of the man that throws it off, and is easily moved away, even by a boy. This floor is 14 feet wide in the clear, and 45 feet long, and each night two large loads of hay can be left on it, standing on the wagons, ready to be pitched off before the dew is off in the morning.

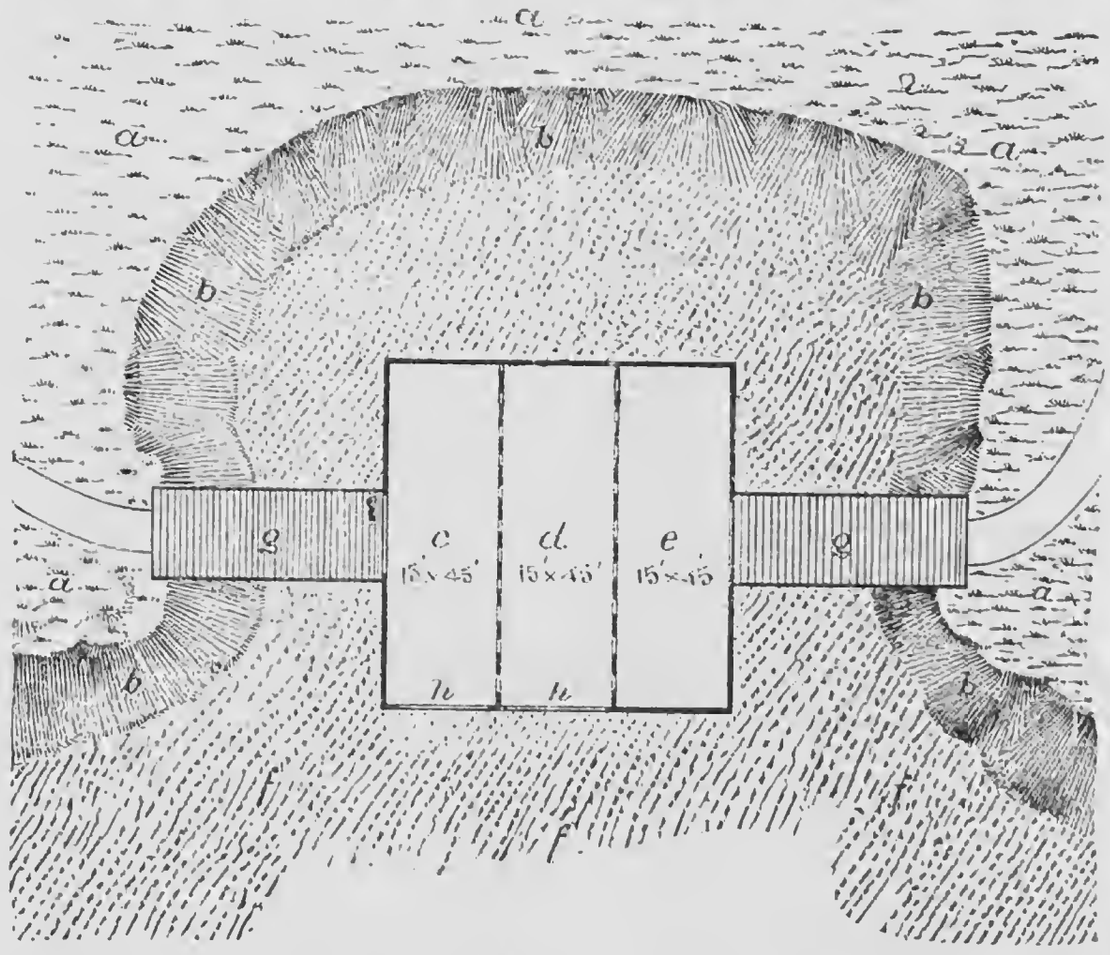

FIGURE 1.

When the bays are filled, one after the other from the east towards the west, and haying is over, the barn floor can be used for the storage of mowers, horse rakes and other summer machines, implements and tools till the next summer.

As before remarked, the barn is intended for the storage of hay for sale. In my case it is drawn to market loose, but the barn could easily be adapted to bailing, the machine and power standing at first under a shed, at the west end, from which they could be moved on to the west barn floor or bay as soon as the hay is out of that, and finally into the second or middle space. But for loading the hay loose, the wagon at first stands at the west end and the hay is pitched out and down from the small doors. When the first bay is empty, the wagon stands there and loads from the second, and finally stands on the second and loads from the third or east bay. Thus neither in storing nor in loading for sale is the hay pitched up. If the ground on which the barn stands is sloping, say towards the east, the loading for sale might be made easier by making each bay two feet lower than the one next west of it, and so one might begin the sale of hay from the east end, and then the bottom of each bay would be two feet above the bottom of the wheels of the wagon on which it must be loaded. But even as the barn stands in the figure, it is no worse pitching on to the load than in the level field, and far better till the hay is nearly out of each bay.

Such a barn, 45x45, with posts 25 feet high, may be built, as here indicated, for less than $400, rough, unpainted and without cornice, or for less than $500, with cornice and paint. The barn does not support the hay, and therefore does not require heavy timbers. It will store 100 tons of hay. The interest, at 6 per cent. on the cost, would be 30 cts. *per ton* for the storage of hay each year. It will save this, above stacking, in the labor of storage. It saves it again in the labor and convenience of loading for market, and it saves it twice over in the value of the hay for market. And with an abrupt descent of ground, even 10 or 15 feet high, a team can draw the hay in above the big beams as well as on the level of the ground below, to be pitched up. And most farms, except on prairie land, have such descents for at least one end of the barn, and one bridge.

Summit Co., O.

Miscellaneous.

WHEN TO SOW TOMATO SEEDS.

WE sow tomato seeds in the house about the middle of February and they yield ten days earlier than those sown in the hot-bed in March. Old tin fruit-cans answer excellently to sow seeds in. Our method is to unsolder the cans so that the sides can be lapped, and they are kept in place by strong strings tied tightly around them. These cylinder-shaped cans are much more convenient than clay pots and do not dry so soon, and the rust seems to act as a tonic to the plants.

Set the cans in earthen saucers and fill with earth; sow a seed in the center of each; place them in different parts of the house to see which do best. We keep some in the south window of the kitchen, others are in the east window and a few among the house plants.

When the weather is sufficiently settled—which in our climate is usually in May—so that transplanting to the open ground may be safely done, the plants can easily be slipped from the cans without injury to the roots. They should be covered at first to protect them against chilling winds at night and from the sun during a portion of the day. In setting them out it is best not to put them all out at one time, but to take out some at intervals of a few days, as otherwise a sudden change in the weather might destroy the whole. For covers we use large drain-tile with thin cloth tied over the top. They are easy to handle and can be removed in a moment. The varieties of tomatoes are so many, and most of them are so highly recommended, that we hardly know which to choose. Whenever we try "novelties" we also sow a few seeds of the old "Smooth Red" as a safe resort if the new kinds fail.

Lyons, Iowa. M. G. R.

SOME of our readers ask us to give illustrations and articles upon hot-beds, cold-frames, etc. Now the RURAL has placed before its readers such illustrations and articles for the past twenty-five years, and we do not propose to fill our columns with such old news again, unless it be to illustrate new plans or labor-saving designs as they become known to us from time to time. The information asked is given with all needed detail in half of the catalogues we have been noticing for weeks past. Send for them, if there are no old files of RURALS at hand.

BEAUTY OF HEBRON.—Mr. Hugh L. Wysoe, of Pulaski Co., Va., writes us that he received Beauty of Hebron from the Agricultural Department last spring, and can say that it yields more and is ten days earlier than Early Rose.

The Poultry Yard.

A POULTRY ACCOUNT.

For some ten years the care of poultry has afforded me much pleasure, and at the same time has been a source of considerable profit. For the last three years I have endeavored to test the profit-and-loss account, and each year I have seen a good balance on the credit side of my poultry account. Cholera has swept away whole flocks, and that quite near my place; but thus far mine have escaped, and I do not think I ever lost a fowl by contagious disease.

My poultry have enjoyed the advantages of comfortable houses, cheaply constructed, and designed to combine light, warmth and good ventilation. I always give an abundance of good, sound, nutritious food, varied with different kinds of grain, together with a daily supply of clean, fresh water. They also get plenty of broken oyster-shell, old mortar, coarse sand, etc. Their morning meal consists of wheat bran and middlings, mixed with boiling water. At noon, I give them cabbage, turnip, onions, apples, etc., and about four o'clock all the whole corn they will eat.

My plan has been to hatch chickens in May and June, and as soon as they are large enough for broilers the roosters are sold. During the early fall months I feed liberally. When cold weather comes, the fowls are in good, warm houses, of which there are three. I am careful to keep these reasonably clean, and frequently burn a pound or two of sulphur in them. The result is, the houses are free from lice.

The reader will see that the total stock for the year numbered 486. Should the number of eggs appear small, it must be noted that during April 130 fowls were sold, leaving but 40 hens to hatch and rear the chickens. My reason for selling then was that the prices of dressed poultry ruled higher than at any other season of the year—from 50 to 75 per cent. above prices obtained at Thanksgiving or during the holidays. Moreover, by disposing of a part of my flock then, I was not troubled during the summer months with a large flock of old fowls.

In Account with 174 Fowls.

Jan. 1, 1878.	*Dr.*
To 174 fowls, at 80 cts. each	$104 40
1½ tons wheat bran, $18	27 00
40 bushels corn, at 60 cts.	24 00
1 ton cracked corn	22 00
5 bushels rye, at 56 cts.	2 80
20 bushels oats, at 30 cts.	6 00
76 bushels corn, at 50 cts.	38 00
150 lbs. meat scraps, at 2 cts.	3 00
4 Plymouth Rock hens bought	7 50
40 dozen eggs set, at 13 cts.	5 20
Total cost	$239 90
Dec. 31, 1878.	*Cr.*
By 756½ doz. eggs	$156 47
130 hens sold, April 5th to 20th	88 40
150 roosters, July to Oct.	71 64
19 selected fowls, Plymouth Rocks	25 65
Hen manure	42 00
187 stock on hand, at 60 cts.	112 20
Total proceeds	$496 36
Deduct cost	239 90
Profit	$256 46

Review.

Rural, April 7th, 1877, page 217.

Record of 84 fowls.

Total proceeds	$352 80
Cost	150 20
Profit	$202 60

Rural, Feb. 9, 1878, page 91.

Record of 1877—144 fowls.

Total proceeds	$582 81
Cost	244 70
Profit	$338 11

Record of 1878—174 fowls.

Total proceeds	$496 36
Cost	239 90
Profit	$256 46
Total profit during three years	$797 17

Walden, N. Y., Feb. 2, 1878. Ruralist.

Various.

HONOR TO WHOM HONOR IS DUE.

In the issue of the Rural for January 18th, I notice a fine engraving of Pinus ponderosa pendula, and some remarks on its excellence by Mr. H. W. Sargent, of Fishkill-on-the-Hudson, the possessor of the original and only existing specimen. It seems that some varieties more or less similar have occurred in England, but apparently they are not really the same. There are, at the most, only one or two weeping Pines, and they are extremely rare. A distinct, hardy variety therefore, like Pinus ponderosa pendula, will unquestionably be a great acquisition. But the point on which I desire specially to dwell, is the fact that the high honor is due to Mr. H. W. Sargent of having been the first to introduce two of the best weeping evergreens in existence, viz.: the Weeping Hemlock and the Weeping Pinus ponderosa. No one who has seen these trees fully developed, can doubt this assertion; and I conceive that the remembrance of this fact is very pleasant to Mr. Sargent. Indeed, the increasing delight these varieties will doubtless afford future generations, should be always associated with his name. I therefore hope the names, Abies Canadensis pendula Sargentii, and Pinus ponderosa pendula Sargentii, may be accepted and employed. Moreover, there will be an advantage in this, because other Weeping Hemlocks may possibly receive distinctive names, as may also weeping forms of Pinus ponderosa. In any such case, Mr. Sargent's varieties should be fully designated.

S. Parsons.

Lost Nation Wheat.—A correspondent, from River Falls, Pierce Co., Wisconsin, confirms what another friend of the Rural from the Northwest, told, in a late issue, about this variety of wheat, as tested in that section. Fife is the standard sort thereabouts, and spring wheat the regular crop. Lost Nation is selling at a discount of ten cents per bushel at the mills, and at a heavier discount with the majority of farmers, mainly because it is so liable to be affected with smut. When good, its yield in light soils is superior to that of Fife, but it is not so reliable.

CATALOGUES, &c., RECEIVED.

Silica *vs.* Ammonia. Some of the most progressive of the Southern States are paying a great deal of attention to the agricultural resources of their soils, and to the best methods of developing them. Probably there is no part of the country in which so much commercial fertilizers are used as in some portions of the cotton States. It has, therefore, become a matter of prime importance with the farmers throughout that section that every precaution should be taken to test the relative values of the various fertilizers offered to them for sale. There were two means of doing this open to them, and, as a rule, both have been adopted with excellent effect. Of these two means, the first was the establishment of experiment stations at which samples of the various fertilizers sent in by any of the citizens of the State could be analyzed by upright, impartial experts of known ability, and reports made on the fertilizing value of the various constituents. Some of the cotton States have already adopted this excellent system, and the stations of North Carolina, Georgia and Tennessee have gained a national reputation for the thoroughness of their work, while saving enormous sums each year to the agriculturists of those States, by quickly exposing all fradulent or worthless fertilizers, as well as reducing to a slim possibility the chances that any extensive adulterations could escape speedy detection and exposure. The second method was to test the relative effects of various fertilizers on growing crops, the experiments being conducted by trustworthy farmers acting in connection with, and under the direction of the experiment stations, to which reports should be made. This has also been done; and Dr. A. R. Ledoux, the director of the experimental station at Chapel Hill, N. C., sends us in a neat 24-page pamphlet, the results obtained in the case of Popplein's Silicated Phosphate, from a combination of these two methods of testing the value of a fertilizer. Some time back this Baltimore firm, makers of a fertilizer according to a formula in which soluble silica, at the rate of five cents a pound, is substituted for nitrogen at the rate of twenty cents a pound, expressed their discontent at the money valuation put upon their fertilizer by Dr. Ledoux, and offered to donate five tons of it, or less, for the purpose of making a practical field test of its agricultural value in comparison with that of other fertilizers. The offer was accepted, and the tests made on various crops by three skillful farmers in different parts of the State. Those who have read Mr. J. B. Lawes's contribution to a late Rural, treating of the abundance of silica naturally in most soils, and the consequent needlessness of any artificial supply, will have no difficulty in guessing the result. In every case the silicated fertilizer was less beneficial in its effects than either the ammoniated fertilizers, Peruvian guano or barnyard manure, used alongside of it under similar conditions.

The Blessed Bees.—By John Allen, published by G. P. Putnam's Sons N. Y., price $1.00. This is an admirable little book of 169 pages, on bee culture. In it the author relates his experience with bees during one year. He tells how he started in bee-keeping: how he Italianized; how he produced comb-honey; uncleus swarming; how he marketed the honey; his profits, and preparation for winter; and finally he considers the reasons of his success and gives advice for others. The whole is an admirable narrative treating of all the points essential to successful apiculture, and from the manner these points are presented, the book has nothing of the dryness that characterizes didactic works generally. The reader enters into sympathy with the author, partakes of his enthusiasm and his pleasures.

To give a specimen, we quote from the author: "It was on the twenty-ninth of May that the work of Italianizing was completed. The work had been really exciting. I entered into it with an *abandon* which I believe is seldom found. People often complain that their work is a slavish toil. Mine had been a daily delight. Although several years have passed since then, and I now number my hives by the thousand, still as I write this account of those absorbing days, something of the old enthusiasm stirs within me."

Again in the notes in the back part he says: "The eggs deposited by a fertilized queen in worker cells, are impregnated, and develop into worker bees. The workers are imperfectly-developed females. All the work in the hive is done by them. They build comb, collect pollen and honey, take care of the queen, nurse the growing brood, protect the hive from robber bees, and keep it clean. Should the queen die or be taken from them, they will, if they have worker eggs or worker larvæ not more than three day old, raise a new queen in the manner described in the chapter on Italianizing."

The book is printed in distinct type, on stout, tinted paper, and neatly bound in cloth.

Harris's Moreton Farm Seeds. Descriptive catalogue of field, garden and flower seeds, cultivated and for sale by Joseph Harris, Rochester, N. Y. We trust that our readers have, ere now, discovered that our "notices" of catalogues are not influenced by the value of the advertising patronage of their authors. Our sole object in commenting upon them at all, is that our readers may be guided by a comparison of prices and lists, in purchasing of those who will supply them the fullest equivalent for their money. We have no acquaintance with Mr. Harris, but the catalogue in question is one that we should recommend our readers to apply for, being both notably original and interesting. We quote a few paragraphs:

It is sixteen years since I commenced to grow seeds. But this is the first year that I have issued a catalogue. I fear it will be a poor one, but I shall try and comfort myself with the reflection that no one will be asked to pay anything for it. I propose to send it free of all charge, prepaid by mail to any and all of my friends who desire it. I hope my seeds will prove to be fresher and better than my catalogue.

I have been an agricultural writer for twenty-nine years. My first article was written on this farm and appeared in the Genesee Farmer (to which the Rural New-Yorker succeeded. Eds.) for October, 1850. My friend, James Vick, was then the publisher of the paper—and never was there a better friend or a better editor. In 1851 he ran up the circulation of the paper to 50,000 copies, and the following year he put my name in the paper as one of the editors. I have been writing ever since. I have been connected editorially with the Genesee Farmer, the Rural New-Yorker, Albany Cultivator and Country Gentleman, the Hearth and Home and the American Agriculturist. I have also written a book which the publishers, somewhat to my annoyance, called "Harris on the Pig," and last year I wrote another book called "Talks on Manures."

Second Annual Report of the New York State Dairymen's Association with transactions and addresses for the year 1878. We have not space here to notice this neat and excellent compilation as fully as it deserves. A study of its contents containing the condensed results of the study and experience of some of our best teachers on dairy matters, would be of advantage to all our readers who may keep even a single cow. Among the most noticeable articles in it are: Suggestions for the improvement of Domestic Animals—S. Hoxie; Principles of Breeding Domestic Stock—J. F. Gulliver; Butter Making—R. Day; Guenon's System of Judging cows by the Escutcheon—Willis P. Hazzard; Statistics of Dairy Interest of New York—L. B. Arnold; The Production of Milk—Prof. I. P. Roberts; Dairy Interest Abroad—F. B. Thurber. Josiah Shull, Ilion, N. Y., Sec.

Descriptive Pamphlet of Thoroughbred Poultry, owned by J. T. Lovett, Cornwall-on-the-Hudson, N. Y. Illustrations of Brown and White Leghorns; Pea-Combed Partridge Cochins, and Plymouth Rocks. Of the last-mentioned Mr. Lovett says:

"My yard of this breed is composed of extra fine, pure-blooded hens of the Drake strain (acknowledged to be the best in the country), for which I paid a large sum, mated with a brother of "Bob," of the Rural Grounds, figured in the Rural New-Yorker of December 21st, 1878. This fine bird was presented to me by that journal, looks almost exactly like "Bob," and is one of the finest specimens of the breed in existence."

We have before us the Scale Catalogue and price-list of Jones of Binghamton, N. Y. Mr. Jones is nothing loath to sound his own horn—and says so. He is, too, ever ready to put a beam in a neighbor's eye, if it is agreed that it shall be a scale-beam with Jones engraved thereon. The reason why good scales may be made and sold so cheaply is clearly explained, and it is distinctly stated that the scales are not sold upon mere representation. They are guaranteed to be perfect and then sent out on trial, no money or conditions being exacted until the scale has abundantly demonstrated its worth. Any one who has had the pleasure of meeting Mr. Jones, will see the man reflected throughout the Catalogue. He is as honest as his scales are trustworthy.

Useful Arts: A Journal of American Industries; James A Whitney, Editor and Proprietor; published monthly at 312 Broadway, this city; price $1 per annum. This is the first number of a handsome, instructive, illustrated venture in periodical literature. From its contents, the fact that its owner—an occasional contributor to the Rural—does a large patent agency business, and its prospectus, we should judge that it will be devoted chiefly to the same department of industrial arts as the Scientific American. Its table of contents is varied, its matter instructive and interesting, its make-up in every respect commendable, and we heartily wish it all the success it may deserve.

Roses—Roses—Roses! The New Guide to Rose Culture. The Dingee and Conard Co. of West Grove, Chester Co., Penn. He who loves Roses ("and who does not?") needs this catalogue. It is about Roses of all sorts, and of their culture. Among a collection of new varieties sent to us by this company, we were especially pleased with that originated and named by Eugene Verdier of Paris, in honor of this company, "Dingee-Conard." It is of the hybrid perpetual class, is perfectly hardy, blooms incessantly, and the fragrant flowers are of a scarlet color with a flush of violet. But we heartily commend this catalogue and this firm to all of our friends.

Pamphlet. Choice Strawberries and other small fruits, grown and for sale by F. R. Pierson, Tarrytown-on-the-Hudson. Cuts are given of Cumberland Triumph, Crescent Seedling, &c. This pamphlet is free. We would say to our readers that it would be well to consult the Rural New-Yorker of Sept. 7, 1878, before ordering Strawberries for spring planting. In that will be found trustworthy information as to the best new and the best old varieties, from many who have stated the results of careful tests.

Cole & Brother's Illustrated Catalogue and guide to the flower and vegetable garden for 1879. Pella, Marion Co., Ills. Drooping Sorghum is a specialty in this catalogue of all sorts of flower and vegetable seeds. See Rural of Jan. 18, for remarks and illustration of this plant. Artichokes, Chufas (about which we are constantly having inquiries), are also offered. Free—that is, the catalogue.

Notes on the Aphidiæ of the United States, with descriptions of species occurring west of the Mississippi; by Chas. V. Riley and J. Mouell. This illustrated pamphlet of 40 pages gives a full account of the history, habitat, ravages, etc., etc., of the Plant-lice families of the country, in the clear style and comprehensive manner characteristic of the authors.

Report of S. L. Polk, Commissioner of Agriculture, for 1877 and 1878. This is another of the many excellent Reports with which Commissioner Polk instructs and stimulates the farmers of his State. It is a 61-page pamphlet, treating chiefly of fish propagation; commercial fertilizers; sheep husbandry; fences; crops and miscellaneous matters.

Benson, Maule & Co., 223 Church St., Philadelphia. Illustrated and descriptive catalogue of garden, field and flower seeds—a choice selection of small fruits, trees, plants, bulbs and agricultural implements—also a brief price-list of thoroughbred poultry and eggs for hatching. Free to all of our subscribers who apply.

C. H. Hovey & Co., 22 Tremont St., Boston, Mass. Spring Catalogue of plants, seeds etc. This catalogue offers a great variety of new things, some of which we have ordered for testing. Among them are several singular Philadelphuses and Weigelas.

Reid's Illust'd Floral Tribute, Rochester, N. Y. This is a costly catalogue of all sorts of seeds and plants, with about fifty showy little colored plates and many practical cultural details. So far as we see, it is offered free to applicants.

Beach, Son & Co., 7 Barclay Street, N. Y. Catalogue of all kinds of seeds and bulbs. This is a large, handsome catalogue, which will be sent without charge. The beautiful Gladiolus is a specialty with this firm, and the list is long and full.

J. M. Childs & Co., of Utica, N. Y., send us their Catalogue for 1879. It is well arranged, comprehensive, and contains almost everything in the way of farm tools, low prices, and good advice.

Address of the Hon. Marshall P. Wilder at the annual meeting of the New England Historical Society, and other proceedings. Published at the Society's House, 18 Somerset St., Boston.

L. J. Denton, Prospect Hill Nursery, Plainfield, N. J. Trade price-list of trees, flowering shrubs, vines, &c.

William Rennie's Seed Catalogue, Toronto, Canada. Eighty pages, well illustrated. Plants, seeds, &c.

Isaac F. Tillinghast, Factoryville, Pa. Catalogue of warranted vegetable and flower seeds, free to all.

A. Whitcomb's Descriptive Catalogue of bedding and greenhouse plants, Lawrence, Kansas.

Everywhere.

RURAL SPECIAL REPORTS.

WISCONSIN, Outagamie Co., Feb. 14th, 1879.—The snow which has come so freely to almost all sections of the country this winter has failed to reach us. Our fields have been bare and our roads hard, smooth and dusty so far all winter. Once or twice we have had snow enough to whiten the fields, but none to make sleighing. Farmers have had to haul their surplus wood and timber to market on wagons. In the lumber woods, the lumbermen have made ice roads by sprinkling them every night with water. A cheap sprinkler is constructed similar to those used to sprinkle streets in towns. By using it freely every day, a smooth, hard road is formed, by means of which our lumbermen are getting in about their usual supply of logs. The talk of "hard times" among our farmers is getting to be rather an old story. And although prices of all kinds of farm produce are low, still those who have anything to sell find a ready market for cash, and a little cash now goes some ways in the purchase of farm and other supplies. Those who have old debts to pay, do have rather "hard times." Some few such are giving up their farms and going "West" to again seek their fortunes and build up homes—not always for themselves. J. R.

INDIANA, Denver, Miami Co., Feb. 10.—Being located in the fertile country known as the "Eel River Valley," I thought a few lines might be of interest to some of your readers. This Eel River Valley region has greatly improved of late as an agricultural and stock-raising country. A good, strong, sandy loam or "Blackwalnut Bottom" stretches along the "Eel River" for miles, and seldom fails to produce good crops of wheat, corn, oats, grass and the various fruits and truck. Railroads traverse this section to the four points of the compass. The past season we had the largest crop of wheat and corn, of good quality, ever produced here. Wheat averaged twenty bushels per acre. Some pieces yielded thirty to thirty-five bushels per acre. Corn averages about fifty bushels per acre. Very little rain this winter but a good deal of severe cold. Fall wheat looks well. Wheat sells for 85c.; corn, 25c.; clover seed, $3.50; potatoes, 50 to 60c.; pork, $3.50 to $3 per cwt., gross. Most of pork sold from $2.25 to $2.40. Good horses, $75 to $125; milch cows, $20 to $35; land well improved for $40 to $60 per acre. D. A. F.

WISCONSIN, Arcadia, Trempealeau Co., Feb. 13.—So far times have been very hard here in Western Wisconsin. Many are losing their farms through indebtedness; and improved farms are consequently very cheap—from $5 to $20 per acre according to location, and the condition, not of the farm alone, but of the owner also, for the tighter the latter is pressed, the lower the price he must consent to accept for his holding. Many of us have learnt a good lesson from the present distress, and will be loath to run so heavily in debt in future. Lost Nation wheat has been a failure in the Northwest this year. It was more affected by hot weather than our older varieties. Millers will not give as much within five or six cents a bushel for it, as they will for Fife. The previous year, however, it yielded well, and was promising well last year until the advent of frost, and it will therefore be tried this year to some extent. Produce is low: wheat, 65@70c. per bushel; corn, 20@25c; oats, 17@18c; potatoes, 30@40c; hay, $5@$8 per ton. F. A. R.

OREGON, Shedd, Linn Co., Feb. 15.—It is no wonder that people from the East who visit this State in winter, call us "Web-Feet." We are now having our regular down-pour of rain; but we don't complain; for we must have it, or otherwise our crops must fail, as they sometimes do from drought in California. We have had a very pleasant winter with but less rain than usual this year. Our fall grains, both oats and wheat, look splendid. The area sown to grain last fall was twice as large as usual. Trouble from immense flocks of geese and ducks is one reason why so little fall grain is sown in this State. These pests eat up most of the seed and young stalks, unless one stands in the field with his gun up ready to shoot at all times. Stock of all kinds are doing well on our growth of grass this winter. It is now green and growing nicely. Wheat is selling at this station for 80c. per bushel; oats, 40c.; potatoes, $1; corn, $1. WEB-FOOT.

ALABAMA, Dunville, Morgan Co., Feb. 18.—Times are extremely dull in this State; never has money been scarcer hereabouts at this season than now. Cotton is selling for 6c. to 7½c. per pound; wheat, $1.00 per bushel; corn, 40c. to 50c; flour, 3½c. to 4c. per pound; corn meal, 50c. to 60c. per bushel; beef, 3c. to 3½c. per pound; pork, 4c. to 4½c; horses, $40 to $80; milch cows, $10 to $15; land, $2 50 to $10 per acre; and plenty to spare at either figure. We have good schools and churches of all denominations, as well as a healthy country, and we want good farmers to come and utilize our unused advantages. New comers of the right kind will be cordially received. H. N. V.

MINNESOTA, Howard Lake, Feb. 17.—We are having delightfully pleasant weather, not too cold since the coldest weather about and just before New Year's. Notwithstanding this, there has been more sickness than usual—a kind of epidemic a little like pneumonia, lung fever, or uncommonly bad colds. Some have not survived, and many consumptive persons who came here a few years ago to save their lives have not been able to overcome this tax on their strength and are fast failing. Some have already passed away, from that disease. Very many invalids, however, have come here for health and have saved their lives by so doing. S. A. M.

CALIFORNIA, Riverside. Del Norte Co., Jan. 29.—Much more frost than usual and stock getting thin. The chief businesses here are dairying and lumbering. Wheat is worth $1@$1.20 per bushel; oats, 50c.; potatoes, 60c.; butter, 25c.; eggs, 25c.; dressed pork, 6c. per pound; hay, $10@$12 per ton; interest on money, 12@15 per cent. per annum; taxes, 2½ per cent.; farm labor, $25@$30 per month, with many idle because they will not work for less than "going rates," and times are, of course, tight. B. B.

ILLINOIS, West Jersey, Stark Co., Feb., 18.—Snow nearly all gone and weather as fine as one could wish—a boon for the stock that have to glean their living in the corn fields. H. E. M.

The Querist.

ANSWERS TO CORRESPONDENTS.

Angora Goats, Once More.

Y. L. L., Williamston, N. C., asks where can he get Angora goats, and whether it is likely they can be raised with profit in this section.

ANS.—Questions similar to this, were fully answered in our last issue. We may, however, here add that the animals are, also, for sale by Wm. Kloewne, Hicksville, L. I. The praises of Angora-goat raising in this country have hitherto been sung chiefly by those who have had the animals for sale or by enthusiasts who are always over-hopeful of every fresh addition to our agricultural industries. It is said by those who have experimented in keeping them in Europe, that their native climate is so peculiarly adapted to them that the fleece of exported Angoras soon deteriorates. It is probable, however, that this real or apparent deterioration is caused either through lack of proper attention in feeding the animals or through negligence in sorting and otherwise preparing the wool for market. At the Cape of Good Hope and in some parts of Australia large herds of Angoras are kept, according to late accounts, very profitably; but in this country whatever profit has hitherto been made from them, has, in nearly every case, been made by importers and breeders. In view of the plethora of most kinds of agricultural products in our markets at present, it is very desirable that farmers should turn their attention to as many new agricultural industries as they can with profit; but from all our present information, we cannot include the keeping of Angora goats among these. For experimental or "fancy" purposes the Angora may still find purchasers, but as an addition to the regular farm stock, kept for profit, we cannot as yet recommend the animal.

Shorts vs Hay.

R. R. M., Swansea, Mass., asks what is the value of shorts compared pound for pound with good hay—not timothy, for that he considers an inferior sort for feeding cattle and sheep, unless cut before in bloom.

ANS.—Shorts are twice as valuable as good hay for food; that is to say, one pound of shorts will contain as much nutritive value as two pounds of hay. Tables in books differ very much and are often unreliable guides, owing to the difference in climate and condition. Shorts will make more valuable manure, too, owing to the larger amount of nitrogenous matter contained in them. This would make their feed value greater.

Miscellaneous.

B. H. N., Chazy, Clinton Co., N. Y., asks, 1, if the Pulvermacher belts advertised in the RURAL are what they pretend to be; 2, where can he obtain the best medical treatment.

ANS.—The Palvermacher belts are very effective in many cases, and the advertisers have the reputation of being trustworthy. 2. We cannot advise about a disease of which nothing, even the name, is mentioned. On general principles, however, we may say that the best doctors and other conveniences for treatment in cases of sickness, can be found in New York or any of the other large cities.

T. T., Businessburg, Belmont Co., Ohio, asks whether patent roofing paints are what they pretend to be, and whether we or our readers can, from personal experience, recommend a good recipe for painting and preserving oak shingles.

ANS.—Most of the chemical paints are reported to be good by those who have used them. The Rubber Paint Co., 506 West street, N. Y., will send samples of colors and all needed information. Who has found a good preparation for preserving oak shingles?

W. J. C., West Andover, Ashtabula Co., Ohio, asks where barbed wire fence can be obtained.

ANS.—Washburn & Moen Manuf'g Co., Worcester, Mass., and 42 Cliff street, N. Y. Ohio Barbed Wire Fence Co., Toledo, O. Thorn Wire Fence Co., Chicago, Ill.

Rita Bell—no address—asks whether the "American Book Exchange" of this city is trustworthy.

ANS.—We cannot say positively. We would not patronize it ourselves.

SPECIAL NOTICE.

OF ALL OUR SPECIAL NUMBERS, NO OTHER HAS CREATED AMONG OUR SUBSCRIBERS SO LIVELY AN INTEREST AS THE COMING CORN NUMBER. WE SHALL HAVE AN EXTRA EDITION PRINTED AND WILL SUPPLY, FREE OF CHARGE, SPECIMENS TO ANY OF OUR SUBSCRIBERS WHO APPLY FOR THEM. WE ARE CONFIDENT THAT THIS CORN NUMBER WILL DO GREAT GOOD, AND WOULD BE GLAD IF A COPY COULD BE PLACED IN THE HANDS OF EVERY FARMER IN THE COUNTRY. IN IT WE SHALL NOT ONLY OFFER TO SEND A TRIAL QUANTITY OF SEED (OF THE NEW VARIETY TO WHICH WE HAVE ALREADY CALLED ATTENTION) TO ALL OF OUR SUBSCRIBERS WHO APPLY, BUT WE HAVE DETERMINED UPON OFFERING PREMIUMS TO THOSE WHO, FROM THIS SEED SO SENT, SHALL PRODUCE THE LARGEST YIELDS OF CORN.

COMBATTING RESTRICTIONS ON OUR CATTLE TRADE.

THERE are few unmixed evils in the world; few mishaps from which wisdom and energy cannot wrest some good, and it happens not unfrequently that what at first appears a sheer misfortune is ere long transformed by these virtues into a godsend. It may yet be so with the present embargo on our live cattle exportation. It has forced public attention to the existence among our cattle in more places than was suspected, of a plague whose ravages wherever it has become widespread elsewhere, have been more disastrous than those of all other epizootic diseases combined. Had it not been for the seemingly hostile action of the British Privy Council this insidious malady might have been negligently permitted to advance stealthily among our herds until it had caused the loss of millions where its thorough suppression now will not cause the loss of as many thousands. It has forced upon the notice of the British public the importance of their meat supply from this country, so that already Liverpool, rather than temporarily lose our live cattle trade, is willing to spend upwards of $170,000 in constructing conveniences for slaughtering the beasts on their arrival so long as the present regulations remain in force. It has also directed public attention to many shortcomings and abuses connected with the cattle trade, and should attention to these lead to their speedy reform, such a measure would save millions to our farmers and stock-owners, save much suffering to stock of all kinds, materially lessen the chances of sickness or death among animals in transit, and, together with the complete suppression of pleuro-pneumonia among us, would place our cattle trade with Europe on a firm and more profitable basis. To secure these blessings, however, wisdom is necessary in concerting measures and energy in carrying them into execution.

One of the first things needed is to ascertain precisely the extent of the plague among us. This can be satisfactorily done only by official investigation aided by the co-operation of cattle owners. The number of the skilled veterinarians in this country is lamentably small, and the ignorance of the common run of cow doctors, especially with regard to pleuro-pneumonia, is lamentably great. Official investigation, therefore, can alone, as a rule, decide upon the prevalence of the disease in any neighborhood. To render even this effective, our farmers must contribute their help by giving to the appointed officials prompt notice of every case in which the existence of the malady is suspected. Whenever, either through selfishness or carelessness, the owner of ailing animals neglects this duty, his neighbors should promptly supply the omission. Such a man deserves little consideration from the community in which he lives, as the existence of the disease among his herd would be an imminent danger to all other cattle in the neighborhood. Inasmuch as cleanliness about the stable and sound food for neat stock tend to prevent the outbreak of the disease, to modify its severity and check its extension, every owner of cattle should, for the present at any rate, observe these conditions in his own case and bring pressure to bear upon his neighbors to induce them to do likewise.

Even before ascertaining the full extent of the malady, however, it is the duty of each State in any part of which pleuro-pneumonia has made its appearance, to take prompt measures for stamping out every ascertained instance of it. Delay in doing this is inexcusable in those in authority, who should be held to a strict accountability for dilatoriness in this pressing obligation. If there is only a single case in the whole State, the greater the necessity for eradicating it at once, before the disease can spread and become more unmanagable. That early and vigorous action can extirpate the malady with comparatively small loss is shown by the experience of England, where it is accustomed to make its appearance in several parts of the country every year, but where in each case it is promptly stamped out by slaughtering the affected animals, quarantining their healthy companions and thoroughly disinfecting all the possibly contaminated surroundings.

On the other hand, the losses likely to be sustained by this country should the disease be allowed to spread extensively in it, may be calculated from its disastrous results, some years ago, in Great Britain and from its ravages in a single instance shortly afterwards in this country. From Parliamentary papers it is estimated that in the six years ending with 1860, the losses from pleuro-pneumonia in Great Britain and Ireland amounted to $60,000,000. In 1859 the disease was introduced by Dutch cattle into Massachusetts, where for a short time no effective measures were adopted to check its propagation. When it had secured a firm foothold, a government commission was at length appointed with power to isolate exposed herds and kill all infected animals, remunerating the owners out of State funds; but to thoroughly extirpate it cost six years' struggle and the slaughter of 1,164 cattle, besides those that died of the plague. It is, therefore, fortunate that the Legislature of New York has already passed severe laws which have enabled the Governor to take effective measures for promptly stamping it out within this State. The Legislature of New Jersey is reported to be about to follow this salutary example, and the people of every other threatened State should insist on immediate legislation in the same direction.

To the Federal government belongs the duty of regulating our commerce between the States and with foreign nations; and upon the Federal government, therefore, rests a grave responsibility in the present conjuncture. According to the best obtainable information the disease is at present confined to a few—a very few—places in the Eastern States; chiefly to cows fed upon swill. The vast herds of the West are entirely exempt from it. It is of the utmost importance that this immunity should be maintained, not only on account of the probable losses its introduction there would entail, but also because, owing to the absence of disease in this chief source of our export cattle trade, the Canadian and British restrictions upon that trade, so far as that broad region is concerned, should be promptly rescinded. Already the representations of the Foreign Office at Washington to the English government, and those made to the government of the Dominion by the Canadian railroads and other interests injured by the embargo, tend to hasten the date of their repeal. To add to the weight of these representations, by giving assurance of safety to our foreign customers, and to remove the possibility of spreading the disease, all movements of cattle westward from suspected districts in the Eastern States, should be at once prohibited until it shall be proved that the plague either never existed there or has been permanently suppressed.

Every dollar of expense on the transportation of cattle from the pastures to the shambles comes out of the grazier's pocket, be he farmer or stockman; for the dealer's price to the owner of the animal is regulated by the outlay and risks necessary in taking it to market, coupled with the figure it will fetch there. By the present system not only is the expense of transportation rendered exorbitant by the exactions of the stockyard and railroad monopolies, but the risks to the health and life of the animals in transit are unnecessarily increased by the recklessness that overpacks them in filthy cars in which a fall frequently means injury or death, and by the cruelty that often keeps them for long journeys without food or even a drop of water to relieve their feverish thirst. Not only does this system unjustly lower the price of cattle to the original owners and inflict much needless suffering on the animals, but the physical condition induced by it, injures their meat and predisposes them to disease if it does not actually produce it. The interests of the vast body of cattle raisers, therefore, unite with the dictates of humanity and the welfare of the consumers in importunately demanding Federal legislation to put a speedy end to the overcharges and heartlessness of the present iniquitous system of cattle transportation.

The laws of the United States authorize the inspection of live stock at the port of shipment and the grant of a clean bill of health on the report of the inspector that the animals are free from all disease; but the laws do not forbid the shipment of diseased stock, neither do they provide that the inspectors shall be men competent to detect the presence of disease. A change in the laws regulating this matter should be made at the earliest moment. At every port at which live stock are shipped skilled veterinarians should be appointed as inspectors; their certificate of the healthy condition of the animals should be necessary before their embarkation; each certificate should state from what part of the country the animals therein mentioned had come; that no contagious disease was there prevalent, and that the animals had incurred no risk of contagion along the route from their pastures. In the appointment of these officers skill and trustworthiness, not political influence, should, and *must*, be the sole considerations. To them also should be assigned the duty of inspecting all animals imported into this country, and it should be made obligatory on them to rigidly quarantine all stock coming from countries in which contagious diseases might prevail. By these means immunity from the possibility of infection would be guaranteed to our foreign customers as well as to our own herds.

This country is so large and its ports for the shipment of cattle, are so far apart, that it would be about as reasonable for Great Britain or Canada to prohibit the importation of cattle from the whole European Continent because a few cases of pleuro-pneumonia had occurred in little Belgium, as to maintain an embargo on cattle from our vast borders, because the same disease had made its appearance in a very few places in that section of the country from which very few cattle are ever shipped abroad. Prompt action here by stock-owners themselves, as well as by the State and National Governments, will not only rid our own herds of all danger from infection, remove all the pretexts for the present embargo, and all risks of future restrictions; but must secure the speedy repeal of the interdiction that now hampers our foreign cattle trade.

CAN WE OVER-PRODUCE?

THE doctors of political economy are just now very busy explaining the cause of the continued existence of what is called "hard times." One avers that "over-production" is the chief cause; another blames "under-consumption." There may be a nice distinction between the meanings of these terms, but to our mind the difference between them is hardly apparent. It is a question if we can possibly produce such a surplus of products as will check all the avenues of trade, reduce prices to a point below a living profit, and cause "hard times" through an excess of what is really the most substantial wealth we can possess. It seems clear that to do so, is simply impossible. Let us suppose a case: Four men, who may represent four hundreds, or thousands, or millions; or four nations, if we wish, exist upon an island in the ocean. One of these men cultivates the soil and produces more than he can consume or even gather and care for. The others are laborers or mechanics and, finding no employment or demand for their labor, they are idle. Now, the first man needs help to handle what he fears is his over-product. What will he do with it? This troubles him. He calls one man to help him gather it; another to carry it to a safe place; and another to make a store for it. He pays them with part of his product and they are immediately supplied with what they have lacked. The farmer then wants a score of things which he never knew of before, and he finds one or the other of these men is able to supply what he needs. So, by-and-bye the whole four are busy and soon they are in a comfortable condition of dependence upon each other, and the next year the farmer does not fear to plant more than ever, because he sees a way to dispose of his products. By-and-bye the people of an adjacent island learn the fact that there are many things in abundance across the water, and they come over and exchange products, perhaps gold or something else they may have produced by their labor, for the farmer's superabundance.

Now, it is evident that so long as these men do not, each and all, produce so much of every product of their labor, that it cannot all be used, there cannot be over-production, or too much of any one thing; but especially there cannot be too much of the farmer's products, because everybody wants some of them, and they require so much labor to take care of them. It is precisely so in actual fact. Think for a moment of what is involved in the fact of 400,000,000 bushels of wheat, for instance. What a host of laborers of all kinds will this vast amount of grain call to work! Here are, for one thing, about twelve million tons to be freighted, stored, sold, transferred, receipted for, milled, bagged, barreled, shipped abroad, or used at home; and every one of the great army of men engaged in handling it, will use a portion of it for food, and wear out shoes, clothes, machinery and a thousand other things in the doing of it, to replace which will use up more of it. If the surplus of our crops were an idle, useless thing, it would be different; but it is the bread of life to the whole world, and there is scarcely an individual in any civilized country, where bread is eaten, whose labor is not stimulated and increased by an abundance of it. The political economists should look elsewhere for the cause of the hard times, than to an over-production of what is necessary to our life or comfort.

SPECIAL TO OUR SUBSCRIBERS.

We have sent out up to this time 60-000 packets of seeds and so far as we can judge, the distribution is hardly more than one quarter completed. Several of the varieties of seeds mentioned in our columns are exhausted—but we are well prepared with a reserve that will carry the free distribution through. Now this is the point to which we desire to call attention. We cannot *publish* what these reserve seeds are for the reason that hundreds of our subscribers would at once desire changes and additions, sending us stamps &c., which would give rise to an amount of work and correspondence that we are not prepared for. The reserve seeds are no less valuable than those in our already published lists and, like those, cannot for the most part be procured elsewhere. Those seeds of which our supply is exhausted will be *again* offered next summer, so that those who receive others in their place *now* can obtain them then if they so desire. We are again making arrangements for our *next fall* free-seed distribution which we shall endeavor to make even more valuable than any of the others. Subscribers who have not already applied for seeds will oblige us greatly by doing so AT ONCE, since next week's issue will announce the *corn* distribution and the premiums which we shall offer for the largest yield from the seed sent.

PELARGONIUMS.

We have never yet seen a Pelargonium (Geranium) with striped flowers, that was worth owning. The heads are small—the flowers open one after another—the petals fall almost as soon as they are well opened. Among a number of high-priced novelties, to which reference will in due time be made, we have purchased a new variety of the striped-flower class called "New Life," which may or may not prove more desirable than those to which we have referred. In color the flowers, judging by the one sent us, are scarlet lined and striped with white, making a clear, striking contrast. We have worked for the past five years to produce, by crossing and seedling cultivation, something remarkable in the way of Pelargoniums, with feeble results. Once we were well on the way towards producing leaves with white centers and green margins. Just at that time, "Happy Thought" was announced. Then again we thought we were on the sure path towards obtaining a crimson flower having a white border, and then, one with a white ground and a crimson border. A longer experience dissipated these vapors. We have to show, as the sum total of our labors, a half dozen plants which may, perhaps, be worthy of a name—and that is all.

BREVITIES.

NEXT week will be the CORN number.

THERE is a war in England between the Telegraph and Telephone—peas!

AMONG the varieties of celery, Clayworth's Pride is mentioned in England as the best.

MR. LIBBY has severed his connection with the American Agriculturist, of which journal for a few months past he has been managing editor.

THE electric light is now used in photography when the sun is obscured. Perhaps it may one day be turned to account in forcing plant growth.

SUBSCRIBERS are requested not to send their applications for our corn until they have received and read the next number of the RURAL. They are also requested not to make out their order for the corn on the same page with other business matters.

For Women.

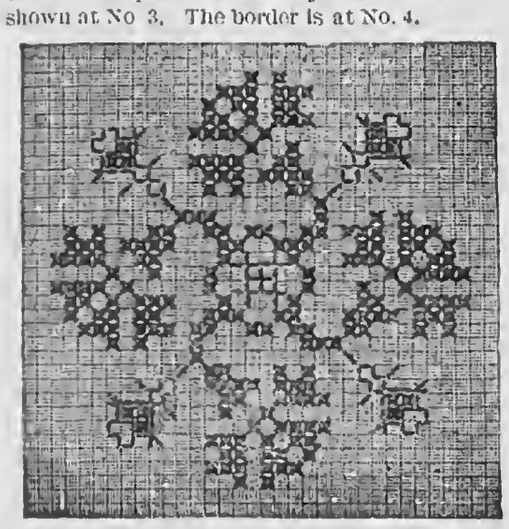
CONDUCTED BY MISS FAITH RIPLEY.

CORN IS KING,

or rather will be, of the RURAL domain next week, and so jealous is he of his royal prerogatives that it is doubtful whether he will permit any purely literary matter to be published in the RURAL of 8th of March. He may be induced to allow space for a short installment of "Weaker than a Woman," but the prospects are he will "spread" himself over the entire paper. For that one occasion then, we ask our readers' indulgence for omitting the customary literary departments.—[LITERARY EDS.

DESCRIPTION OF CUTS.

No. 1.—This table-cover can be easily made and it is extremely fashionable. It is made of Java canvas, embroidered in cross-stitch, in red and blue ingrain cotton. The corner for this is shown at No. 2, and the design which is worked in the center of the squares formed by the narrow line is shown at No 3. The border is at No. 4.



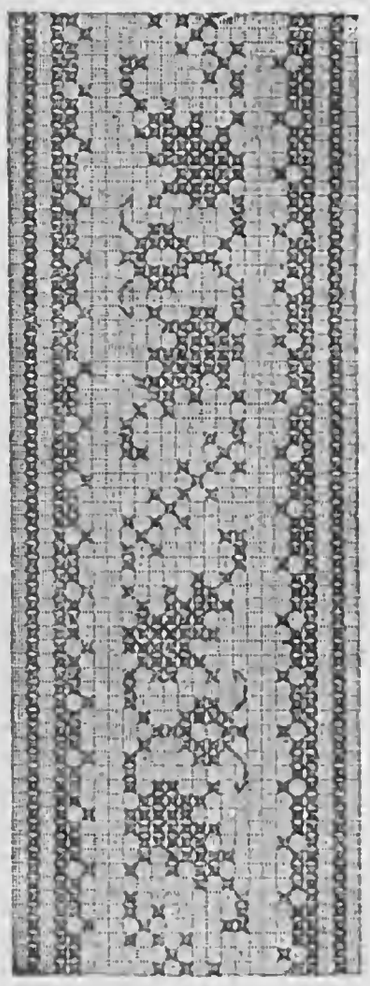
No 3.

No. 5.—COVER FOR TOILET-TABLE.—The foundation is of oat-cake cloth, embroidered with cross-stitch border and corners, worked with crewels. The fringe is made of the threads of the material drawn out and knotted together with lengths of crewels. No. 6 is a pretty border design for this cover. No. 7 is monogram in cross-stitch.

THE WOMAN'S CLUB.

INTELLECT vs. FASHION PLATES.

As a sprightly writer, in a late number of the RURAL, considers the Woman's Club by far too pacifically inclined, and as she forthwith proceeds to stir up matters, I vote that others follow her example. Concerning the last RURAL letter written by Free Lance, I differ with her decidedly; in fact, I am so much pleased with that same letter, that I want to pat him on the head. I think the matters of dress, "table fixings," and ornamental work occupy too much space in the papers, and (because they are kept so persistently before them) too much place in the minds of women. The plan of study referred to by F. L. must be an excellent one, and I should think such an opportunity to partially atone for the wasted hours of a lost youth, or to supply the deficiencies caused by early years of poverty or toil, would be eagerly embraced by thousands; but, as there are *men* who, although surrounded by every moral and intellectual advantage, never have an idea above neck-ties and hair oil, so there are women whose highest thought is the



No. 6.

arrangement of their head-gear and whose fondest affections twine about their new dresses. Now, this being the case, we must accept the fact, and not try vainly to change the unchangeable, but how unfair it is—there being as many of these pigmies in male as in female form—to allow the female member of that class to monopolize so much newspaper space! We do not see a half-dozen columns filled with pictures of the latest style of dress-coat, the newest thing in neck-ties, and smoking caps "too sweet for anything," with other such trumpery. This is intended to convey the idea that men are sublimely indifferent to such matters, whereas all the fashionable ignorance, all the petty vanities, all the fuss and feathers and frivolities of the race are made up into a bundle, and labeled—Woman! And so, for the sake of a few empty-headed nonentities, the whole sex is, figuratively, fed with milk instead of meat. I am glad Free Lance wrote that letter; go on, my son—you are developing beautifully, and will be a credit to us yet. By your leave we'll hereby bury the hatchet.

Concerning cooking recipes, they are well enough, provided a woman doesn't convert herself into a walking cookery book, or sacrifice all that is best of herself at the shrine of her kitchen stove. Of course, as a newspaper must cater to the tastes of different sorts of people, these minor matters should have a place, but they should be limited to a much smaller space than they now occupy.

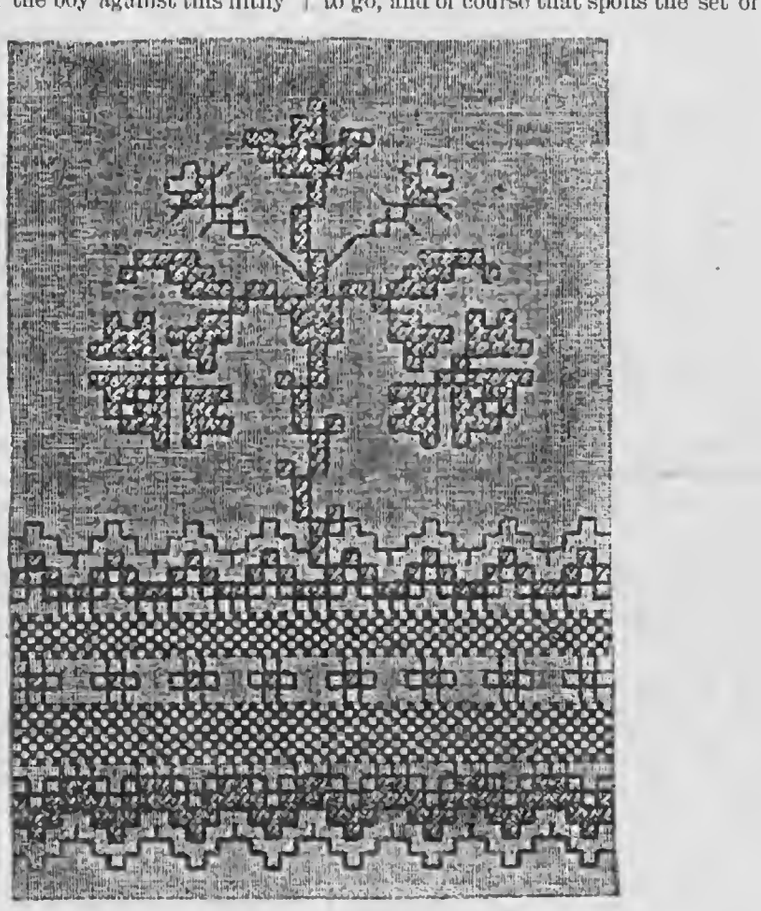
I heartily sympathize with the lady who is so troubled upon the subject of tobacco. The most you can do, my friend, is to use every means of prejudicing the mind of the boy against this filthy habit; make your own influence over him as strong as possible, pray daily for the success of your efforts, and leave the result with God. The probability is that his father will continue to use it to the end of the chapter, as only about one in five hundred ever does succeed in overcoming the habit after it is once firmly fixed. I disagree with the lady who does not believe in the expediency of trying to put down intemperance by political means. Moral suasion is all very well, friend, as far as it goes, but, as the great majority of rumsellers, would, probably be about as much moved by it as graven images, or as their friend and patron, his Satanic majesty. I go in decidedly for legal suasion; and when the right of suffrage is no longer withheld from half the intelligent citizens of the United States—as my prophetic soul tells me will be the case ere long—you shall see what legislation can do. With an exception or two, I liked Jicks' article on women's dress, of which, perhaps, more anon. ERMENGARDE.

IT is proposed to raise $40,000, with which to endow a professorship in the Syracuse University, to be filled by a woman.

A LAUNDRY HINT.

I BELIEVE it was only against cooking recipes and fashion articles that Free Lance fulminated in a recent article, and I may hope that my poor effort to make collar and shirt ironing a more satisfactory and easier process for my sister Ruralists will not be censured by his august self. (By the way Washtenaw, I don't think he is so immature and foppish; I've an idea he is an old fossil. Wonder if he couldn't be induced to allow a portrait of himself to be published in the RURAL, and thus set at rest these perplexing questions as to the location of his hair-parting, his age, &c.)

Now for the collar talk. Damp linen is very pliable, and a good pull will alter a fourteen-inch into a fifteen-inch collar in the twinkle of an eye. Collars ought to be stretched crosswise, and not lengthwise. Then in straightening out shirt-bosoms they ought also to be pulled crosswise instead of lengthwise, particularly in the neighborhood of the neck. A lengthwise pull draws the front of the neck-band somewhat directly under the chin, where it was never meant to go, and of course that spoils the set of a collar.

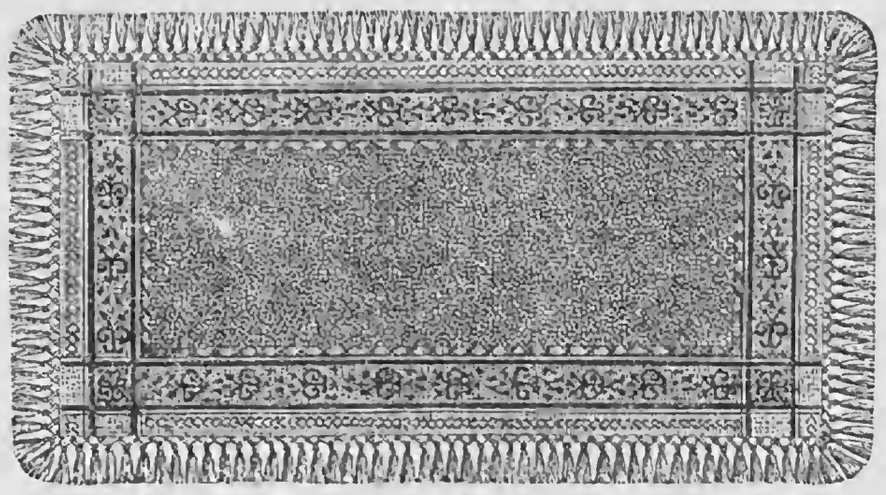


No. 4.

With the front of his neckband an inch too high and his collar an inch too long, it is hardly to be wondered at that the unhappy victim is betrayed into using expressions not sanctioned by Sabbath-school teachers. Try crosswise instead of lengthwise and report progress. DAME DURDEN.

A PROTEST OR TWO.

DEAR CLUB-ITES:—Because no protests or objections are made to the opinions of the "Club," it does not prove that we *agree* with all of them. I differ with Margaret B. Harvey about the economy of a silk dress. If you can afford two or three dresses for second and third best, and have a silk dress besides for extra occasions, then, by all means, have the silk dress. But I have seen a lady buy a nice silk dress (paying as much as two woolen dresses would have cost), then wear it on all occasions, for traveling, to parties, church, choir-meeting, &c., and in a short time it was so shabby as to be scarcely fit to wear. For people in moderate circumstances, I think it looks more suitable, if in traveling, they wear linen in summer and some tasteful, woolen suit in winter, instead of their one silk dress.



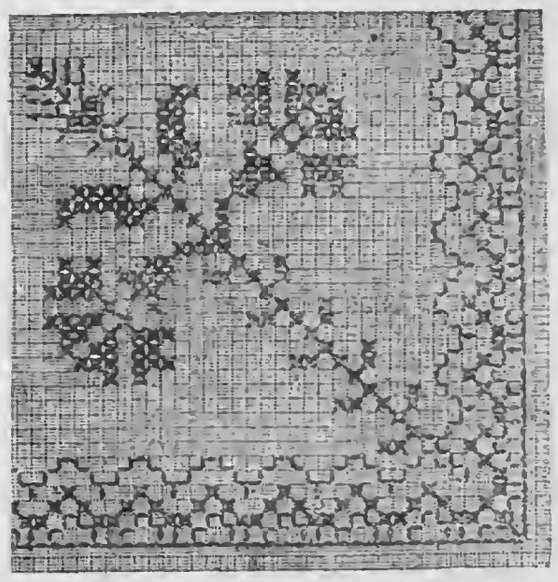
No. 5.

And again—In "Mop-handle Papers" No. 12, I find some remarks I would like to criticise. Some people may be "more nice than wise" about doing perfectly *unnecessary* work, but there are hundreds of women, I'm sure, (not idle or lazy ones, either) who would be glad to help in "Sewing Societies," etc., if they could get their own *necessary* work done. "Charity begins at home," and I think that is very *poor* charity which leaves undone family duties to help in outside matters.

What might be the test of *one* house-keeper's neatness, does not apply to all. My bed-room floor could not be "rubbed with a cambric handkerchief" and not soil the handkerchief. My bed room is also my sewing-room and the children's play-room. I don't think "Louise Upton" can be blessed with children. If she is, I would like to know what she does with them. "Aunt Mary's" box was a good arrangement for *very small* children, but the older they grow, the more active and restless they become. It is impossible to let children of three and four years play out of doors during cold weather, at least, in this locality as we are very much exposed to the wind. If left to themselves, children will get into mischief and often cause a great deal of extra work, not intentionally but because of their healthful activity.

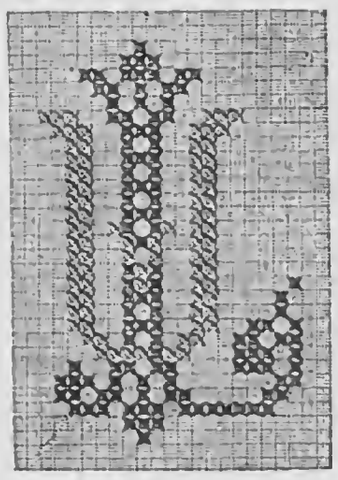
MRS. E. E. O.

If I may be allowed I wish to express an utter want of sympathy with the lady whose "tobacco grievance" induces her to air it through your columns. It is difficult to conceive of a wife whose influence for good is so slight, that the practice of the "small vices" of her husband go on unchecked to the detriment of her child (even supposing him callous to their effect); and it is more difficult to conceive of a mother whose influence for good is so slight that she should fear to have it overcome by the effect of habits which, to the uninitiated, are conceded to be revolting and disgusting. Few sinners are so hardened that they cannot be reclaimed. Let this lady continue to use her influence and to try, by all arts to strengthen it, and persevere in her endeavor to conquer, or at least lessen, the force of this "confirmed" habit. Let her, above all, retain and increase her influence over her child—of *how* to do so she must be the judge—let it grow with his growth, and she will find no fascination for him in the influences she dreads that can at all compare in strength with the safeguard her influence gives. CORNELIA.



No. 2.

WOMEN INVENTORS.—The question is often asked us: Do the inventions of women ever amount to anything? From our long experience with inventors of both sexes, we conclude that a larger proportion of inventions patented by women prove more useful and profitable than those of the sterner sex. We see by the New York Sun that the Metropolitan Elevated Railway Company has selected a device, from the many that have been under consideration, for lessening the noise of the trains, and that it is the invention of a Mrs. Walton, of this city. She gets, according to the Sun, $10,000 for the use of the invention on the Metropolitan line, and the company is to control its adoption on other roads, paying her a royalty.—*Scientific American.*



No. 7.

CANCER CURE.

THE proper formula for this "cure" is: Two ounces of Sulphur; ¼ ounce of Quicksilver; 1 ounce of Cream-of-Tartar; ½ ounce of Saltpeter. Put into a pint of molasses, stir; take a tablespoonful before going to bed. As published originally, ½ ounce of Quicksilver was given instead of ¼ ounce, as it should be.

QUERY.—Can any of the RURAL readers give us the words of "The Sexton" a short poem, the opening clause of which is, "Nigh to a grove?" Address answer to Literary Editor RURAL NEW-YORKER.

Literary Miscellany.

"GOOD-BYE!"

T. FERGUSON.

THE sun was bright, the world was fair,
My love stood by my side,
The scent of flow'rs was in the air,
The river's rolling tide
Rippled along, with silver song,
To the ocean deep and wide—

To the ocean many a mile away,
Where the stately vessels sail,
And the waves dash up to the little bay,
And the mighty winds prevail.
My love, I know, was thinking so,
For I watched her lips grow pale.

To-morrow I would speed afar
Across the heaving foam,
By dawn and dark, by sun and star,
Full many a league from home;
And this she knew, my love so true,
Whose lover needs must roam.

She turned her sweet face to the sky,
Wan, piteous, and dismayed;
The time had come to say "Good-bye,"
And, sobbing and afraid,
"God shield and save from wind and wave
My only love!" she said.

The sky above us, golden-bright,
To redder radiance grew—
"Good-bye!" she sobbed, "my heart's delight—
You take my love with you!"
But, dark as night, across the light
A croaking raven flew!

"Good-bye!"—and with a fervent pray'r
I strained her to my breast,
A flash of eyes, a gleam of hair—
The green leaves hid the rest;
And in a shroud of scarlet cloud
The sun sank in the west.

But did we ever meet again?
Nay ask not this of me.
The ship sped safe across the main—
Alas, but can it be?
The wrecks are more upon the shore
Than ever were at sea!

[*Family Herald.*

WEAKER THAN A WOMAN.

CHAPTER XXXIV.

(Continued from page 126.)

"I have come to chat with you, Eve," he would say. "Have you an hour to spare?"

Then one look at his face, at the shadowed eyes, would tell her that he was doing fierce battle with his foe. She would go into the pretty old-fashioned sitting-room, and, making him sit in a comfortable arm-chair, would talk to him. To herself she said often that it was like the laying of an evil spirit. She would read to him, converse with him, give him all the news she could. She knew, and he knew, why he was there, what ailed him, what old sorrow was crying aloud, what vain wild passion, what vain deep regret, was in his heart; but it was not discussed.

She knew when her wise, sweet, tender words took effect; the shadow would fall from his face, and he would listen in silence. At times he would sit for an hour listening, never speaking, and then, rising with a brightened look that did her heart good, he would clasp her hand warmly in his own.

"Thank you, Eve," he would say to her; "I know best what you have done for me."

Miss Lester was not very well pleased just then with her niece. Eve had received two good offers of marriage, and had refused them both; and, though Miss Lester disliked men, she had always a keen eye to the main chance, and said that if Eve refused one she ought to have taken the other.

She confided her grievance to Felix.

"I wish," she said, "that you would talk to her; you have known her so long—you are an old friend. Talk to her, Felix; tell her how foolish it is to refuse every good offer."

"But I thought you disapproved of marriage, Miss Lester, and disliked men."

"So I do—so I do; but I shall not live for ever, and Eve must have some one to take care of her. Squire Hethway would have made her a good husband. Talk to her, Felix."

"I really do not like to speak to Eve on such a matter," said Felix; she might not like it. She must have had her own reasons for saying 'No.'"

"Reasons," quoth Miss Lester. "She hasn't any. She is waiting until the man in the moon proposes to marry her, and I hope it will be soon."

Felix went away laughing, but he thought of Evelyn that evening more than he had ever thought.

"Whoever marries her," he thought, "will certainly have a treasure of a wife. Eve deserves the truest love that a man can give her."

Yet it never once occurred to him to love her himself. In his honest heart he believed that love was all ended for him; he could not realize that a man could love twice in a lifetime. His love, he told himself, had been slain. He never thought now of any future for himself; he never pictured himself with fair wife or loving children; he never dreamed again of a home. He filled his mind with work and study—love had ceased to be for him.

While he steadily rose in the world Sir Owen just as steadily went down. Five years had served to injure both the Baronet's character and estate; but for the restraining hand of Darcy Lonsdale, he would have been ruined. The clever honest lawyer had acquired a kind of influence over him; he would not allow him to live above his income; when Sir Owen made some extraordinary demand for money, his answer was always, "If you persist in spending more than your income, Sir Owen, I must resign my office;" and that threat invariably brought the Baronet to reason. He knew that he was about as capable of managing his estate as of translating Greek.

Sir Owen had had one great disappointment—Heaven had not blessed him with a son and heir. One good quality amongst a host of bad ones was his love of children. While he was cruel to animals, almost furious at times with his wife and servants, he loved little children; and the chances were that if he had had children round him he would have been a better man. As it was, the disappointment made him sour and morose; he could not bear it; he was sullen and fierce by turns.

"No son to succeed me!" he would say. "Why should I care about my fame or my name? I want a son. I should have something to live for if I had a son. Why, some of the laborers on my estate have half a dozen strong, sturdy sons; why should not one at least have been given to me?

"You may depend upon it, Sir Owen, Heaven knows best where to place the little ones," Darcy Lonsdale would say; and then Sir Owen, knowing how far he was from being able to take care of a child, would say no more.

He would have loved his wife better if little children had been there to soften him; as it was, he now spent half his time in quarreling with her and tyrannizing over her, and the other half in fierce love-making. That to her was the worst mood of the two.

He was not loved, the rich Baronet; the simple townspeople told strange tales of him when gathered round their fire at night—strange evil stories that never came to his wife's ears, or she would have left him.

"I would not let him marry my daughter," the poor women would say; "no, not if he had been twice as rich."

There was no mistake about the fact that his name was in very evil repute amongst both rich and poor.

Francis Haye talked over the matter with his wife sometimes. Mrs. Haye looked at it quite philosophically.

"I am told," she said, "that he drinks over a bottle of brandy each day; if that is really the case he cannot live long."

"I do not see how that improves matters," rejoined her husband.

"I do; she is sure to have all his money, and then in a short time she can marry again."

Francis Haye was not particularly sagacious; but this view of the matter struck him at once.

CHAPTER XXXV.

Lady Chevenix was standing in her superb drawing-room alone; she held a folded paper in her hand which she was reading attentively; then she meditated for a few minutes, and afterwards rang the bell. To the servant who answered it she said—

"Will you ask Mrs. Haye if she can come to me? I wish particularly to speak to her."

Mrs. Haye was spending a few days at Garswood—that was what the world was told; in reality she was there because Lady Chevenix feared for her life. Sir Owen had been drinking heavily, and he had grown dangerous, as she believed. She had lost all control over him, and the terrified servants told each other of sobs and cries that sounded at night when all the house was still. She grew alarmed at last, and sent for Mrs. Haye.

That philosophical lady said nothing to the fierce angry man who was beyond reasoning with; but she sent for a physician, and the appearance of a doctor frightened him into better behavior. Lady Chevenix would not part with her mother.

"You must stay with me, mamma," she said. "I have been through scenes that would make you shudder, and I have lost all heart—quite lost all heart. You must stay with me."

Mrs. Haye was one of those women who, even when alone, never under-value appearances, and she always moved and spoke as though people were looking at her. She merely answered—

"I shall be very pleased indeed to stay with you until your husband is stronger and better, my dear."

And it was arranged that she should do so.

Lady Chevenix stood waiting for her now. As she stood there, so tall and stately, with such ineffable beauty and grace in face and figure, she did not look like one who had lost heart. Her girlish loveliness had developed into womanly magnificence; but there was little trace in her of Violet Haye, the sweet girl coquette—little trace of the girl who had loved Felix Lonsdale, or even of the woman who had asked him so piteously to be "friends" with her. A darker sheen lay on the golden hair, a deeper light lay in the lovely eyes, the red mouth had not its wonted smile. One could see at a glance that the years had embittered her. She had not grown soft and tender, but stern, proud, and cold. She had hardened her heart, and tried to care for nothing but the wealth and luxury she now possessed.

She looked exquisitely beautiful; her morning-dress fell in artistic folds, a tiny cap of white lace and blue ribbon lay lightly on her golden head. Yet, though she was so wonderfully lovely, and was surrounded by all that was most desirable, she did not look like a happy woman.

She raised her eyes as her mother came into the room.

"Mamma," she said, holding out the paper, "I wish you would read this and tell me what to do."

Mrs. Haye took the paper from her daughter's hand and read it.

"The Loomshire Hunt Ball," she said. "Of course you are going?"

"That is what I want to know, mamma. You see, Sir Owen is one of the stewards. If I show it to him, and he goes, you can guess what is almost sure to happen—he will not keep sober. If I do not show it, and he finds out that I have received it——" A shrug of the beautiful shoulders conveyed the rest. "What do you advise me to do?"

"You must show it to him, my dear; there is no alternative. As steward and patron he must attend—that is, if he is well."

"He ought not to go, mamma. You know what will happen. Doctor Bell advised me to keep him at home and quite quiet; but, if he finds out that this has been withheld from him, I can imagine what will follow."

There was no sorrow, no despair in her voice. She merely gave hard, cold utterance to what she knew to be certain. She looked musingly at her mother; Mrs. Haye gazed at her.

"You cannot shut yourself away from all society, Violet, because you are afraid that your husband will not behave himself. You might as well be out of the world."

"Well, as matters stand, that is quite true," she replied. "You do not know, mother, what I suffer when he behaves in that way. I think sometimes that if I had been born an aristocrat I should not feel it so much. Then I could have stood aloof from the disgrace; now it falls upon me."

"Nay, that it does not, Violet," said Mrs. Haye, warmly. "You cannot force Sir Owen to keep sober. He drank before he knew you."

"Yes, that he did. I cannot expect any one to understand me; but that is really my feeling, that I share in the disgrace. Still that is not the point in question. Do you advise me to show him this or not?"

"I think you must show it to him," said Mrs. Haye—"it would not be safe to keep him in ignorance, I am sure—and we must do our best afterwards with him. You need not remain very long at the ball, you know."

"I will do as you say, mamma," she replied; and Mrs. Haye could read neither pleasure nor pain in her face.

Left alone again, Violet walked to the window, and stood looking out on the brilliant flowers and the stately trees.

"Of all strange turns," she said to herself, "to think that my life should have taken this—that the brightest part of it should be spent in keeping a fierce, coarse, violent man sober."

She was always just. She had sought her own destiny; it had not been forced upon her. She had that which she had coveted, and she must take the drawbacks with it.

She found that she had acted wisely in taking her mother's advice. One of the first things Sir Owen asked about was the ball.

"Shall you go?" she asked her husband.

"That I shall," he replied; "and you too. Lady Maude Arlington is going; every one who is any one will be there."

It was a favorite festival of his; he enjoyed making himself popular. He never missed the Hunt ball.

"Violet, mind you have a dress worth looking at. Lady Chevenix of Garswood must be second to none on this occasion. If there is anything you want, no matter what it costs, you must have it."

She thanked him; but there was neither gratitude nor pleasure in her voice. Bitterly enough she said to herself, "What will it matter if I am covered with diamonds? I shall have a weight of care on my mind which all the diamonds on earth could not balance—the ever-present fear that my husband will disgrace himself."

But during the next few days Sir Owen improved. The doctor had given him a serious fright; he assured him that unless he led a more abstemious life he must soon die. He bore the warning in mind and drank less.

He began to interest himself in the ball. Lady Chevenix looked forward to it with pleasure; Lady Maude would be there, and she liked Lady Maude. Felix would be there too—she had heard Sir Owen say so. She longed to see him again; she felt that there would be a sense of rest and protection in his presence that never came to her with any other. She wondered to herself if he would ask her to dance.

"I should like to dance with him," she thought to herself, with a smile that was almost pitiful.

She took great interest in her dress and her jewels, hoping that he would notice her presence more than he generally did. Very beautiful she looked in her favorite colors, white and blue—white satin and blue velvet. With her exquisitely-moulded arms and neck—fair as a sculptor's dream—a diamond necklace clasped round her throat, a diamond cross gleaming on her white breast, she looked like one who could sway men's hearts. Sir Owen was proud of her, and said so in his blunt fashion.

"There will not be a woman in the room like you, Violet," he said; and she wondered whether there would be one with such a load of anxiety on her mind.

The ball was always held at the Assembly Rooms in Lilford. It was very exclusive, very select, and at times very dull. But this year the party from Bramber Towers was a large one; several officers were visiting there. They at first voted the Hunt Ball a decided "bore;" but when they saw Lady Chevenix they thought differently. She was worth coming many miles to see, they declared; and she was soon surrounded by a crowd of admirers.

The rooms were beautifully decorated and filled with a brilliant crowd. Lady Chevenix looked for Felix first; she saw him, but he did not approach her. She observed that he chatted with the Countess of Arlington, and then with Lady Maude; she wondered if he would seek her. She kept her would-be partner in suspense. But Felix did not come; he danced with Lady Maude. Violet could not help hearing what people said—"How well they look together! Can it be possible that there is anything in it?" She could not help hearing it; and a pang of jealous pain seemed to rive her heart. Surely that could never be? Felix marry Lady Maude! It was all nonsense—the gossip of foolish people who did not know what they were saying.

She checked herself abruptly. What if it were so? What did it matter to her? Felix and herself were more than strangers. The greatest stranger in that room thought more of her and said more to her than Felix did. She was the queen of the night. Her wonderful beauty, her gorgeous dress, her costly jewels, made her the very center of observation. She had her triumph. The lover she had forsaken treated her with coldness, her husband kept her in a state of terrible suspense; but the crowd admired her. No one present would have believed that the beautiful, radiant woman had a weight, as of lead, at her heart.

Her spirits rose as the night wore on. It was something to see all the men admiring her; to see them strive for one smile from her; to see how they surrounded her, how they struggled to be of service to her; how her smiles and bright words swayed them as the sweet western wind sways the leaves. That was her triumph, and, to one so vain, it was no small one. She saw that Lady Maude, with all her aristocratic influence, was not sought after and admired as she was.

"Beauty rules the world," she thought, and then added, with a smile and a sigh, "Beauty and money combined, I mean."

Half the evening had passed, and she had exchanged no word with Felix. Presently chance brought them almost side by side in a quadrille. He bowed and spoke to her. Would he ask her to dance? She gave him the opportunity, but he did not take it. He never even thought of it. He had taken his farewell of those false hands; he would touch them no more.

When she went to partake of an ice with Major Morrison, she saw her husband standing by the buffet. He was holding a tumbler in his hand, and she could tell by his face that he had drunk too much. Her heart almost stopped beating. What should she do if there was a scene here?

"Pray excuse me," she said to Major Morrison.

She went up to Sir Owen, and laid her hand upon his arm.

"We have had a very pleasant evening," she said—and her poor lips were white with fear.

"Very," he replied; and in the effort to look dignified he spilt some of the brandy on her dress.

"I am tired," she said, trembling in every nerve; "and, if you will, Sir Owen, I should like to go home."

Her one wish was to get him away before any one noticed his condition.

"I shall not go home yet," he said. "Go back to your dancing. When I am ready, I will send for you."

She dared not disobey him. She went back to the ball-room, a deadly fear nestling in her heart.

Whether he ever did send for her, or whether it was but the fancy of an excited brain, Violet never knew. She had not ventured to disobey him when he said, "Go back to your dancing;" she did as he had directed. She had not dared to disobey or to plead with him, or to urge one entreaty on him. She read contempt for her husband and pity for herself in the eyes of Major Morrison. He made no allusion to the scene, nor did she; but when the dance was ended she asked him to take her back to the same spot. When she reached it Sir Owen was gone.

Felix had been to escort Lady Maude to her carriage—the party from Bramber retired early—and as he was returning he saw Sir Owen assisted into his carriage. Sir Owen called to him,

"Mr. Lonsdale," he said in a thick voice, "will you take a message to Lady Chevenix from me? Tell her that she did not choose to come when I sent for her, and now she may get home as she can; she may walk through the mud if she likes!"

"Stop, Sir Owen!" cried Felix.

But, with great dignity and ferocity mingled, Sir Owen shouted, "Home!" and the horses started off rapidly, leaving Felix angry and full of wonder.

At first he thought it must be a jest—no one could treat a young wife so barbarously, so cruelly—and he half expected the carriage to return; but it did not, and there was nothing left for him but to make the best of his message. He went back to the ball-room; it was difficult to believe that the beautiful, brilliant young queen round whom the best men in the room had assembled was the wife of the stupid, fierce, drunken Baronet. He made his way to her, and waited until he could find an opportunity of speaking to her.

"Lady Chevenix," he said, "I have something I wish to say to you."

She turned eagerly to him, and the light that came over her face caused him keen pain. She rose from her seat, dismissed her train of admirers with a queenly smile and bow, and laid her hand upon his arm. If the touch of the little hand made him tremble, she was not aware of it. They walked through the crowded ball-room until they came to a small recess at the end of it; then she raised her face to his.

"You wanted to speak to me," she said. "I shall be very happy to listen.

She decided that he had come to tell her that he would like to be better friends with her; no other thought entered her mind. Her limpid eyes were filled with light as she waited eagerly.

"I am afraid it is not a very agreeable subject," he began. "May I ask if you have seen Sir Owen lately?"

He saw the light and the color fade, the cold hard look come back again; the very tone of her voice changed.

"I saw him half an hour since, and wanted him to go home with me," she replied.

"Then there has been some mistake—just as I imagined. The truth is, Lady Chevenix, Sir Owen has gone home, after intrusting to me a message so brusque and abrupt that I do not like to deliver it."

Prouder and colder grew the fair face, yet into it there came, he saw, a shadow of fear.

"Gone home," she repeated, "and left me here?"

"I am sure there has been a mistake," he said. "Sir Owen wished me to say that he had sent for you, and—and that as you did not come he had gone home without you."

"But he will send the carriage back for me?" she interrupted.

"I am afraid not," he replied. "But I would rather not repeat his words. I am sure the carriage will not return."

"And he sent me this message by you," she cried—"by you of all men!"

"I am sorry to have had to deliver it, but I had no alternative," he replied. "May I advise you, Lady Chevenix?"

"If you please," she replied.

"Then I should counsel you to return home at

Come before any one has time to notice Sir Owen's absence—it will save so many unpleasant remarks. I will order a carriage, and no one need know for whom it is intended.

"Thank you," she said gently; "that will be best. I will go to the cloak-room at once."

She did so, and a few minutes afterwards she stood, with her opera-cloak round her, waiting for him.

"The carriage is ready, Lady Chevenix," he said; "allow me." He opened the door for her, and stood waiting until she had taken her seat. "It will not be long before you are home—you have a capital horse and a good driver."

She looked at him, and her eyes filled with tears.

"Felix," she said, "will you accompany me home? I would not ask you but that I am frightened. I am indeed. I dare not go alone."

He hesitated a minute, and then he said to himself that he must not think that she was Violet Haye or Lady Chevenix; she was simply a woman in distress, and it was his duty to help her.

"I am afraid," she continued—and he saw that her face was quite white and that her hands trembled. What a mockery her diamonds and her superb dress appeared now! "Sir Owen is very violent when he is not quite himself," she continued. "If he is at home alone, I dare not go."

"I will accompany you, Lady Chevenix," he said; "have no fear—you may rely upon me."

They said but little during the journey, and Felix was glad when the carriage reached Garswood.

"You will come in with me?" said Lady Chevenix; and, seeing the white frightened face, he would have done anything to help her.

He was thankful that he had consented, for Sir Owen had worked himself into a state of uncontrollable anger. He was in the drawing-room, with a decanter half full of brandy by his side, and when the pale woman entered he launched a volley of furious oaths at her. She made no reply, but, turning to Felix, said quietly—

"Will you take any refreshment, Mr. Lonsdale? You have had a long drive."

Another volley of oaths followed. Pale, scared and trembling, she fled from the room and took refuge in her own. If she had been alone, he would have followed her, and then she would have had to save herself as best she could; but Felix was there, and the very thought of his presence comforted her. He stayed with the furious man, whose violence soon changed into the extreme of friendliness, until he had stupefied himself with drink and was carried off helpless to bed, and then Felix started for Lilford.

As he left Garswood Felix raised his face to the calm evening skies.

"Heaven help her!" he said. "Poor Violet!"

No reference to this little scene passed his lips, but in his mind he felt infinite pity for her.

A few days later Sir Owen, feeling ashamed of his recent escapade, insisted upon having a dinner-party. Lady Rolfe, that veteran diner-out, with her daughter Lavinia (who had married a curate and subsided into "parish work"), the curate himself (a mild inoffensive gentleman who had perhaps deserved a better fate), the Reverend Mr. Clayburn, Darcy and Felix Lonsdale, Captain Hill, with one or two more, were to be present.

(To be continued.)

BOSTON LETTER.

The Carnival of Authors; "Uncle Tom;" Memoirs of Motley; The Tourjee European Excursion.

WHEN the salvation of the Old South Meetin'-house shall have been fairly accomplished, what will Boston uppertendom do for excitement? It will certainly be a dull day when there shall be no more original entertainments and grand balls for which the Old South fund may serve as a *raison d'etat!*

The last experiment, made by the ingenious and active committee of ladies and gentlemen who have devoted their energies to this great patriotic enterprise for nearly three years past, was the Carnival of Authors, which took place at Music Hall. This was one of the most originally and thoroughly delightful entertainments that was ever given in Boston, and it was thronged every evening with immense audiences, made up of the best people of the city, each individual of whom represented $1.00 in good money, for there was no "paper" in the house, it being very difficult for even the scribblers to get passes. The entertainment consisted of a continual succession of living tableaux from the works of the famous authors, who were each represented by a booth gotten up in the most picturesque and characteristic style, these mimic stages entirely circling the hall. Of course it was impossible to see all that was going on, omnipresence not being a finite quality, especially as there were platform tableaux and pantomimes following each other in quick succession. Perhaps none of the entertainments were more thoroughly enjoyable than the Saturday matinee, when Mother Goose received the most ample justice at the hands of forty children, with some of their older friends. I never saw anything more intensely amusing and "taking" in my life.

There was considerable dissatisfaction felt by those who did not have much opportunity to attend, that the carnival could not be prolonged, but it was quite out of the question. It is hoped, however, that at least the platform tableaux will be repeated in a series of entertainments to be given in the same hall in the course of a few weeks. Certainly they could not fail to be as thorough a success as was the carnival itself.

The original "Uncle Tom" is in Boston, raising a fund to build a new and substantial church for his colored friends in the little Canadian town of Dresden, which is his home. Nearly all these people were fugitives from slavery in the old days and many an interesting story can this aged man tell of them, to say nothing of his own thrilling history.

Perhaps you did not know that the very individual from whom Harriet Beecher Stowe framed the character of the hero of her wonderful book is still living, but it is a fact, and he is well and hearty, and looking not more than sixty years old, though he will really be ninety next June. He is tall, straight and broad-shouldered, though he is not able-bodied, having only had the use of his arms from the elbows down since he was eighteen, at which time he was nearly beaten to death and received this lasting injury. His laugh is the very jolliest "ki-yi-yi!" you ever heard; he has the very blackest of skins and a perfect type of the African face, illumined with a rare degree of cultivated intelligence. His head is well protected by "kinky" gray hair and a full gray beard softens his features. Father Hanson, as he is called, gives most interesting entertainments, lecturing, singing and giving bits of his history.

You should hear him tell how he escaped from the land of bondage forty-eight years ago, with his wife and four little children. A few years afterwards, he wrote and published a little book, and bought his brother. This family now is no small one—for he has ten children, forty-four grandchildren, and eleven great-grandchildren! His conversation and manners are perfectly refined, for he is accustomed to the best society, not only here, but in England, where on his recent visit he was honored by a personal interview with the Queen, who invited him to visit her at her palace.

The success which Mrs. Stowe's "Great American Novel" has met in the twenty-seven years of its existence is certainly very remarkable. There have been no less than 103 entirely distinct versions published in English and the various languages into which it has been translated, the last and most elegant edition of all having been brought out this season by Houghton & Osgood. It is beautifully gotten up on thick, tinted, red-lined and gilt-edged paper, with very full illustrations and rich binding, and a bibliography of the work precedes the story. It is said that no book except the Bible was ever translated into so many different languages—among those in which it is known to have been published being the Armenian, Bohemian, Danish, Dutch, Finnish, Flemish, French, German, Hungarian or Magyar, Illyrian, Polish, Portugese, Romaic or Modern Greek, Russian, Servian, Spanish, Swedish, Wallachian and Welsh.

Messrs. Hougton & Osgood have just published a valuable addition to biographical literature from the pen of that most graceful writer, Oliver Wendell Holmes, in the form of a memoir of the famous historian, John Lathrop Motley. Boston has the honor of being the birthplace of this talented, though often misunderstood, author and statesman, and his two chosen playmates with whom he used to enact mimic dramas, at his childhood home on Walnut Street, were Wendell Phillips and Thomas Gold Appleton. When thirteen years old he entered Harvard College, and it was here that Dr. Holmes first knew him, they being fellow-students. Years after they, with other bright and shining lights of the Hub, started the now famous and exclusive Saturday Club.

Apropos of the cooking fever now raging among fashionable ladies, the same house publishes a little volume by Mrs. A. D. T. Whitney, called, "Just How; a key to the Cook-Books," which will, I expect, be well received by the fair cookists. Now somebody ought to publish a "Just Why; a key to the Unabridged Dictionaries;" for cook-books and dictionaries are about equally blind and self-revolving in temperament!

The Tourjee European Excursion for 1879 is rapidly filling up. The books were only opened a few days ago, and I hear that a goodly number of ladies and gentlemen have already registered. They are the wise ones, for "first come, first served," with choice of staterooms, etc. It seems that not every one who tries can run one of these gigantic enterprises successfully. It is rumored that another ambitious Boston gentleman, who undertook to experiment in getting up a big picnic party for European travel next summer, has found himself compelled to withdraw from the field.

ROBIN.

RECOLLECTIONS OF SIR WALTER SCOTT.

ZENO CLAYBOURNE.

As Jennie sat beside the couch of a pretty young invalid friend, an uncle of the sick girl, a rigid, canny old Scotchman came in. The greetings were warm, in remembrance of the time, long past, when Jennie had tried to follow the intricate leading of the Scotchman's theological arguments and researches in the Bible class to which they belonged, and the conversation, like a current of air, rushed to fill up the time which intervened.

Among the events of interest mentioned, was the wonderful, many-sided Centennial Exposition, and, incidentally, the Zoological Gardens of Philadelphia, and the swans in them, when Mr. Hogg remarked, "Walter Scott used to keep swans at his home, at Abbotsford, and I have often fed them."

This remark fell like a lighted match dropped among shavings, for Jennie had just finished reading the brief biography of Scott found in Mitchell's Stories about Old Story Tellers, and she exclaimed with eagerness,

"Why, did you ever see Walter Scott? and his dog Maida, and his family?"

"Oh, yes! many's the time I've seen the fine old fellow, walking about his grounds, leaning on his favorite servant. You know he walked with a limp, having been lamed by a sickness in boyhood."

"Scott was a powerful man, physically, and had coarse features.

"Tell me all you remember about him," said Jennie.

"It seems to me quite wonderful to meet a man who has seen Walter Scott. Mitchell says that Maida was a noble stag-hound, whom Scott loved almost as well as any creature about him."

"Well, I was a little youngster then, and I thought the dog an enormous, ugly brute," said the Scotchman. He certainly had to be kept muzzled with a large leather muzzle. When he died he was buried on one side of the large front door, and a figure of him cut from stone, after a photograph taken in life, was placed over his grave and used for a horse-block. Another large dog was named Nimrod, and two rat-terriers, Spice and Pepper, belonged to Scott's lady, who was a French woman, of small stature, with black eyes and hair. There were four children, two sons and two daughters; Charlotte, named after her mother, Anne, Walter and Charles. Charlotte became Lockhart's wife, and their daughter afterward married a Catholic, who took the family name, Scott, with the homestead at Abbotsford, and removed an old mill to make way for a Roman Catholic chapel. Anne, favored her father in appearance and was a most excellent girl. The sons were both wild fellows. Walter married a Highland lady, and I remember little about Charles. The grand old place has passed entirely out of the family. The present incumbents have built an addition to it, in which they live, and keep the original house intact for exhibition. It is a ponderous house of Gothic style, and full of Sir Walter's own conceits; for instance, it contains a prison-door, which was once presented to him.

There are great halls, and corridors, and turrets, and courts; and the whole cost £125,000."

"No wonder," said Jennie, "that it is called a romance of stone and mortar?"

"Scott bought farm after farm," continued Mr. Hogg "to make the estate of Abbotsford; but he only enjoyed it a few years. It was never opened to the public, but twice, first when his son Walter was married, and last, when Sir Walter, himself lay dead in the house.

"You see, he sold his copyright to Constable, a publisher in Edinboro, and by the failure of that house and of Ballatyne & Co, he was involved to the amount of £117,000. The Duke of Buccleugh offered to pay his creditors every pound, but Scott was too proud to accept this favor. He determined to pay his debts by writing more books as the Waverly Novels were already very popular; but his health failed, and he died, from overwork, £30,000 in debt. He went to Italy in a ship which the government placed at his disposal, hoping to get better, but it was too late; he could not rally. He was so well loved by the people of London, that when he stopped there on his way home, they carted straw and spread on the street to deaden the noise in front of the hotel, where he lay. He came home and died, on a still September day, within hearing of the Tweed rippling over its pebbles, which Lockhart says, was the sound most delicious to his ear."

Here the speaker stopped, and the impressive silence was broken by Jennie's inquiring "Was not your uncle, the poet, a friend of Sir Walter's?"

"Yes," said the Scotchman "James Hogg, the Ettrick Shepherd, often went to the great house, and he considered Sir Walter a very good friend. He said that Scott would never help any one, in a literary way except Lockhart, but he often gave money to unsuccessful authors, and, in fact, supported several.

"Scott was a lawyer by profession and obtained the office of Sheriff, which corresponds to our Circuit Judge. He was also knighted, which gave him the title of Sir.

"When the King, Geo IV. visited Scotland Sir Walter was appointed to receive him."

"I have read," said Jennie, "that Dominie Sampson, Dandy Dinmot and other characters in his books were real people. Did you know any of them?"

"O, yes," answered her friend, laughing, "Dominie Sampson was his book name for Mr. Geo. Thompson, a learned preacher at Melrose. Meg Merilles was a gypsy, and Dominie Sampson was quizzing her closer than she liked when she exclaimed, "Gape, sinner, and swallie."

"The Dominie was engaged by Scott to make a catalogue of his library, and got along very well until he came to a very interesting book, in which he found himself portrayed, and he became so much absorbed, that when he was called to dinner, he stood with one foot on a chair, and the other on the floor in which position he had been reading for three or four hours.

"Dandy Dinmot was a man who lived in the vicinity and raised rat-terriers, and with them hunted hares for other people. Mr. Laidlaw was another inhabitant of Melrose, who lived in a good house, and was employed by Scott to write his later novels, by dictation, as the paralysis made Sir Walter unfit to use a pen. Tom Purdy was Scott's game-keeper, and was often brought up to the mansion by the servants to make sport for them. Wine was freely used by all in those days and their feastings were times of reckless dissipation. In this, the servants committed greater excesses than their masters, and one night Purdy was taken home from a revel in a state of stupid intoxication. He was placed by a stand, on which he threw his arms, and dropped his head.

"His wife exclaimed. 'There! I guess you have killed him now!' and surely enough, in the morning, he was found in the same position, dead, Scott felt very badly to lose his faithful servant, who had so often hunted with him, and supported him in his walks, and he caused a likeness of him to be cut in a marble wall, on one side of a corridor in his house. Our friend, the schoolmaster tells me he saw this and the stone dog, Maida, when he visited Abbotsford, a few years ago; but it is getting late and I must begone. Good-night," and before Jennie could thank him for the pleasure he had given her, the Scotchman was out of hearing.

BITS OF GOSSIP.

MANNA is a saccharine juice derived from a species of ash. It is a mild purgative.

FIFTY-ONE metals are now known to exist, thirty of which have been discovered within the present century. Four hundred years ago but seven were known.

THE Chinese and Japanese use fans as we do scrap-books. Friends inscribe on them impromptu, *bon-mots*, caricatures, &c. There are many of these blank paper fans in the Japanese shops in London.

THERE is usually very little to record as regards any innovation in men's costumes, but just now in Paris many of the dandies wear very tiny hooks at the top of their boots, and corresponding eyes on the trousers by which to keep them up on wet days.

ALTHOUGH the existence of kerosene oil in several of the provinces of Japan is said to have been known for twelve hundred years, the Japanese did not know how to refine it till about six years ago. Now, however, refining establishments are springing up rapidly, and its manufacture is becoming an important industry.

THE following is recommended as a good means of getting rid of mould in cellars. Put some roll brimstone into a pan and set fire to it; close the doors, making the cellar as nearly air tight as possible, when the fungi will be destroyed and the mould dried up. Repeat this simple and inexpensive operation every two or three months for two or three hours at a time.

A RECENT number of the Levant Herald gives a lengthy definition of the meaning of the word "Pasha." According to it, the title is derived from two Persian words which signify "the feet of the Shah," and dates from the days when Cyrus gave to his different officers of state the names of hands, feet, eyes, ears, and tongues, according to the different vocations assigned to them. Thus the title conveys in its derivation the idea of military service.

SIMPLE LIFE-SAVING MEDIUM.—Most men, in disasters at sea, have at command a means of keeping themselves afloat which can be extemporized in a minute. It is simply this. Spread a handkerchief on the deck of the vessel, place a hat in the center of it, mouth upwards, lift the opposite corners of the handkerchief and knot them very firmly. Grasp the knots tightly in the left hand, and leap into the water, keeping the hat under the surface. This provides a floating power of from five to six pounds with tall hats, and say half that with felt hats, which is ample to support the head and shoulders above the water for a considerable time.

SOUP.—Physiologically, soup has great value for those who hurry to and from their meals, as it allows an interval of comparative rest to the fainting stomach before the more substantial beef and mutton is attacked, rest before solid food being as important as rest after it. Let a hungry and weary merchant or lawyer begin boldly with roast beef, and what is the result? The defeat is often as sudden as was the attack. When the body is weary, the stomach cannot stand the shock of an ill-masticated half-pound of beef. But, if a small plateful of light soup be taken, nourishment will soon be introduced, and strength to receive more substantial material will follow.

CIGARS.—Rapid seasoning of a cigar is undesirable, as a high temperature is injurious. A dry atmosphere, with a temperature of about sixty or seventy degrees Fahrenheit, is best, the box being opened, and bundles untied. Some connoisseurs remove the cigars from the box, and place them loosely, in single rows, in a cabinet which is kept warm by the burning of a spirit-lamp. Unless caution and judgment be used, the cigars will lose flavor under such treatment. A cigar, after being well seasoned, should always be kept in a dry place, as it will rapidly absorb moisture and spoil. At sea, or by the seaside, a well-stoppered glass jar, or metal box with well-fitting lid, is best for the storage of cigars.

TO JUDGE SILKS.—There are two ways to judge silks. Note the closeness and evenness of the rib, and hold it to the light to judge the better of this. That shows the texture. Then crush the material in the hand and release it suddenly. Note if it springs out quickly; that is the verve, and should leave no crease behind. The quality of the silk is denoted by the verve. The Italian silk is the softest in the world, and often wanting in stiffness of appearance. The Bengal silk is the poorest, and deficient in verve. And, again, there is a great deal of silk manufactured which is adulterated with a material called jute, which is interwoven in the fibre of the silk. This manufacture will be found very deficient in verve. It is a silk which, if wetted, stiffens almost like paper.

GAMES.—Dice were known to the Lydians 1500 years B.C. Perseus is credited with the invention of quoits, and the Hindoo Tessa with that of chess. Ardschio, King of Persia, invented backgammon. Palamedes draughts, Pyrrhus tennis, and the Greeks the noble game of goose. Loto is a comparatively recent discovery, due to an Italian, Celestino Galiani, in 1758. Dominoes owe their name to the piety of a monk who originated them, and who was happy to pronounce a holy word while taking his amusement; and it is a nun who is believed to have invented both the game of battledore and shuttlecock and the catgut racket used in playing tennis. Excavations at Hissarlik, the presumed site of Troy, have brought earthenware "marbles" to light; and those at Pompeii have yielded a number of jointed dolls in ivory, which prove that the custom of giving costly toys to children is not one of modern development.

SEAWEED JELLY.—The Japanese not only eat seaweed in many forms, but they also largely employ it in their manufactures, and showed specimens at the Paris Exhibition. They use it in sizing paper, dressing silk, cotton and thread, as well as in dyeing. The French now collect the seaweed on their coasts and make thao, and employ it at Rouen on their fine cotton goods and prints. It has been observed that rain or fog (damp) does not affect materials dressed with thao. It also answers well for sizing papers; and the only obstacle to its more extensive use is the cost of production. It yields ten times as much jelly as an equal weight of isinglass, but for purposes of food that jelly is not quite so pleasant as an animal jelly, such as isinglass, as it does not melt in the mouth, and it contains no nitrogen. It is being tried in France in some of the hospitals, but as yet no official report has been issued.

News of the Week.

Monday, Feb. 24, 1879.

MISCELLANEOUS.

All the cows badly infected at the Blissville stables have been slaughtered on the spot and buried with slashed hides; those slightly affected were taken to the butchers', on permits, and there killed, as the meat was considered unfit for food. A small lot of cattle that arrived here by rail from Watertown, Conn., were also killed on the same account, and their carcasses dumped into the river. A few diseased animals were likewise slaughtered in a couple of other stables in the neighborhood. Wherever the malady has made its appearance hereabouts, the infected animals have always been fed on distillery or brewery swill and filthily stabled. The board of a cow here on hay, etc. costs about $2 a week; whereas the price at the Blissville stables was only 50 cents; hence the popularity of swill feed among those who look only to profit just under their noses. Gaff, Fleischmann & Co., got a few so-called veterinarians to testify that the cows in their stables had only sporadic, or non-infectious pleuro-pneumonia; but the testimony of Prof. Law and of the excellent veterinarians attached to Brooklyn and New York Health Departments contradicts this opinion flatly. Here as elsewhere, a fat fee has a marvelous effect in deciding the verdict of some pretentious experts.

There is a bill now before the Senate for a much-needed improvement in the method of transporting animals. Reliable testimony shows convincingly that in many instances they are confined in cars without food, water or rest for from 80 to 120 consecutive hours. Many distinguished physicians and sanitarians declare that the flesh of such animals killed before they have recuperated, is unfit for human food. The proposed bill makes it compulsory that animals in transit should have good food, pure water and rest every consecutive seven hours. It also provides that cars loaded with live-stock shall have the right of way over all trains, thus preventing any unnecessary delay. When animals are properly fed and watered in the cars, they may be confined for 60 consecutive hours, but in all cases they must then be unloaded. No invidious distinction must be made between the railroads within the United States and those a part of which run through Canada. Penalties for the violation of these rules can be summarily inflicted by civil action.

It is calculated that from 12 to 20 per cent of those drawing pensions, do so fraudulently; yet the Secretary of the Interior thinks that about 100,000 ex-soldiers or their representatives entitled to pensions under the recent act, have not yet applied for them, and arrangements are suggested by him for dividing the country into districts so as to facilitate their applications. Secretary Sherman estimates that the amount payable by way of arrears of pensions, will amount to *only* $41,500,000 and says that the result will be a deficit for the coming fiscal year of $27,000,000, to provide for which he recommends the imposition of some new tax. There is before the Senate a fierce struggle over a bill permitting the railroads to use their own telegraphs for the transmission of general news. The Western Union and the Associated Press are contending against such a measure as sure to endanger their own monopolies. Machinery Hall, the largest of the Exposition buildings, has been sold for $26,000; it cost $334,867. New Orleans has just got a line of fast steamers to the Mediterranean. Since Memphis found "a new way to pay old debts" by surrendering her charter, Mobile and Galveston have been pondering on the expediency of doing likewise.

In Wyoming Co., N. Y. last week hay sold for $3 a ton! Vanderbilt has bought the Tifft grain elevator in Buffalo, capacity per hour, 8,000 bushels; storage, 300,000 bushels; price $255,000. The courts of Wisconsin and Illinois have decided that where parent and teacher differ with regard to the studies a child shall pursue, the parent's wishes shall decide the matter. Jay Gould has sold out many heavy blocks of Union Pacific Railroad stock, and with them the control of the road; but he is consoled by an estimated profit of four and a half million dollars—or he ought to be. The House has voted an installment of $26,852,300 towards paying arrears of pensions according to the Act lately passed. but it is a trifle hard to tell where it will come from, as no extra tax has been imposed. Atlanta, Ga., doesn't want the State Fair this year. About 200,000 valentines were sent through the P. O. here on St. V's Day. Kearney and his "sand-lot" followers are willing to accept the anti-Chinese bill as a partial relief. Complete relief will come only when every Celestial suicides in the Pacific Ocean. Alaska Indians are threatening terrible things to the few white settlers. An English war-vessel is protecting these until they get an answer to their request for troops. The shareholders of the Keely motor company are alive enough to elect directors; it's doubtful whether the motor has a spark of life. A clergyman in Nashville lauded public honesty the other Sunday from his pulpit; and straightway the legislature that had just repudiated the State debt, indignantly censured him for doing so—and that by an official vote, too.

In 1861 there was 46,049 Federal office-holders; 53,067 in 1865; 86,600 in 1873; 99,384 in 1877. Since the war the number has nearly doubled—now moralize; there's your text. It seems that for a long time back the police authorities of St. Louis have been in the employment of the gamblers of that city—salary from $50 to $400 per month. Like other rascals, they now think it was an awful thing to be "found out." Four "road agents" "got the drop" on Col. Rice, Lieut. Sibley and a civilian named Cahn and an escort of seven troopers out near Bismarck, D. T., the other day, forced them "to up hands" and relieved them of nearly $3,000, of which poor Cahn forfeited $2,500. One of the robbers has been captured by a detachment of the "boys in blue." Fires have been uncommonly common all over the country of late, and the insurance companies begin to complain of this mode of disposing of poor stock at a high figure. There's a good deal of talk about an extra session of Congress, but neither party seems willing to be guilty of forcing such an outrage on the public interests of the country. The only excuse it could have would be the necessity for adopting vigorous measures for protecting the stock and other interests of the agricultural community. The committee appointed to investigate Senator Stanley Matthews' connection with Jim Anderson and Louisiana matters have at length found out that, like most of the others in that connection, he did nothing wrong. The Teller Committee is trying to find out fraud in Mississippi. The Potter Committee's labors are nearly ended. The latest census shows there are in this country 6,000,000 farmers, or thereabouts; the statistics of the advertising agencies show that the circulation of agricultural papers is about 600,000, and a large proportion of those who take these are not farmers, while many take two or more of them.

H. C. Burchard, of Illinois, has been nominated to succeed the late Dr. Linderman as director of the mint. The reduction of the tax on home-grown tobacco from 24c. to 16c. is causing a temporary stagnation in the business, as manufacturers do not want to buy more than necessary before April 1, when the law goes into operation. Texas has had heavier immigration this year than any State in the Union; but life there is not altogether happy. Upwards of 300 *known* murders have been reported during the last five years; eight murderers only have been hung. The other day a desperado who was well known to have committed three murders there, was arrested for them out in Kansas, but had to be released because no money had been appropriated by the Legislature of the Lone Star State to pay the cost of hunting up criminals, and the authorities didn't care therefore to go after the rascal, who is now boasting of his crimes with impunity. The Catholic Church is joining the railroads in the coal regions of Pennsylvania in attempts to break up the order of the "Knights of Labor," which is reported to be a second and hardly improved edition of the "Molly Maguires." Premier Macdonald of Canada, is about to retaliate on us "Yankees" by imposing a duty of from 60 to200 per cent. *ad valorem* on woolen goods imported from this country; from 40 to 80 per cent. on cottons; 35 to 50 per cent. on machinery and tools; $1 to $2 per ton on coal; 10 cents per bushel on corn and 20 cents on wheat. Extremely cold weather and heavy snowfall nearly all over the Northern States during the four last days of the week just ended. It looks as if March is about to come in "like a lion." Railroad smash-ups were nearly as common during the past week as bank smash-ups and downfalls of social saints in ordinary times. Zack Chandler's little boy's "Splendid Papa" was elected to the U. S. Senate on the 18th, at Lansing, Michigan, *vice* the elderly invalid, Christiancy, who will seek *otium cum dignitate* as our Minister in pleasant Peru.

FOREIGN.

Strikes are diminishing, but public distress remains about the same in England. There's an outbreak of pleuro-pneumonia in Yorkshire. Liverpool has voted about $170,000 for the construction of buildings for the receipt and slaughter of American cattle during the present restrictions on their importation. The Privy Council prohibited the landing of animals there after March 3, unless conveniencies suitable for this purpose were provided. In South Africa an English detachment of 1,200 men is surrounded by hostile Zulus, and reinforcements are being rapidly hurried forward. From Afghanistan there is a report, *via* Russia, that Shere Ali was at the point of death last Tuesday. In Russia the plague is said to be abating, but more implicit belief might be accorded to the report were it not that all news from the infected regions is submitted to a rigid censorship by the authorities. All communication between Russia and the rest of the European world is interrupted by a strict quarantine of all travelers on the frontiers. Bismarck's attempt to curb free speech in the Reichstag has been defeated by a strong majority of the votes of that body. It is said that the Chancellor is determined to force another dissolution, hoping that by means of the powers lately placed in the hands by the laws for the suppression of socialism, he will be enabled to secure the election of members of the legislature more subservient to his dictates, than those returned last fall before the passage of the anti-socialist laws. Meanwhile the enactment of a strong protective tariff law, is pretty certain.

President Grevy will get a salary of $100,000 a year and $50,000 for household expenses. His private fortune, too, places him among the very rich men of France. McMahon also is very well off, his wife having inherited an ample fortune. After congratulating his successor and wishing him all success the old Marshal retired to his estate at Grasse. It may therefore be said that Frenchmen have sent McMahon to Grasse while taking Grevy

HERMAN.

John Reed the gas-man of the Walnut Street Theatre, Philadelphia, for fifty-four years, during which time he has never missed a performance, has just celebrated his golden wedding. He is an eccentric genius and in his will bequeaths his head to the theatre for use as the skull in "Hamlet."

Judge "Jerry" Black's wife, who was a bride at seventeen, was niece of Walter Forward, Secretary of the Treasury under President Tyler. When Judge Black was Attorney-General, and afterwards Secretary of State, under Buchanan, Mrs. Black, then in her prime, was a distinguished ornament to official circles of the day.

Tennyson loves English farm life in its most practical ways.

Domestic Economy.

CONDUCTED BY EMILY MAPLE.

THOUGHTLESS ERRORS.

REV. A. W. MANGUM.

MANY persons who are generally discreet and commendable, are guilty of acts and practices that are very objectionable, but not regarded in the true light by those who commit them. Some of these improprieties are of so insignificant a character that they are seldom or never mentioned in papers or other mediums of reform. It is my purpose to call special attention to some of them.

In the country, particularly in the case of small farmers, the grain is often carried to the mill on horseback. The sack into which the grain is put is, not unfrequently, very much soiled—not having been washed in a long time. In some instances, a crude thought of something like cleanliness suggests the policy of spreading something next to the horse, to protect the sack of grain, going, and of flour, returning. That something is, most likely, a foul, stained blanket that has been used, for a long while, under a saddle; or, it may be an old, worn, filthy sack. In other instances, the bag of wheat or flour is simply thrown across the unprotected back of the horse. Then the boy or man mounts and sits directly on the uncovered sack. This is quite offensive to decency in the winter season, but is exceedingly disgusting in warm weather. Sometimes, when the trip to or from the mill is ended, the sack, on being removed, is found to be saturated with the sweat from the horse. A moment's reflection convinces any sensible person that the flour is more or less contaminated in such a case. It looks perfectly pure, both before and after cooking; but it cannot be as it looks. The farmer, perhaps, is very watchful that everything be neat and clean in the kitchen; and the good housewife is very fastidious in her notions about sweet, pure biscuit. Unfortunately, their attention begins too late.

It is very remarkable that so glaring and inexcusable a custom should, in so many instances, pass unchallenged and unchanged from generation to generation. Of course, I exempt from these charges all the multitude of good, thoughtful farmers who so properly scorn the very idea of such uncleanliness, and assume that they will join me in condemning the very offensive custom that I have stated.

I respectfully suggest as a useful subject for some of the accomplished writers in the department of Domestic Economy, "*The History of a Biscuit.*"

Univ. of N. C.

ONE OF THE SOLOMONS AND SOME OF HIS WAYS.

ADELINE E. STORY.

"I vow and declare for it," said Tabitha Trimsharp, as she picked up two pairs of boots and a pair of slippers which Solomon, The Profound, had left scattered about the room; "I'm getting clear out of conceit with smart folks, 'specially as they're only smart one way. There's Solomon now, a tip-top farmer, as every one allows; sound as a fresh-laid egg, when he's out on the mower or the grain drill, but as useless as a cast-off shoe the minute he steps foot in the house. Just ask him to tend the baby a minute, or dish up the potatoes, or turn the griddle cakes, or tie up a cut finger, and see whether he'll do it like a rational being that's seen these things done all his life?

"I tell you he's the awkwardest creature! Such a botch as he'll make of it. I, for one, never ask him to try. Don't tell me I never tried to develop his talents, for I have. Time and again I've tried to make something of that man when I hadn't much else to do, and I thought I'd be so proud of him—for you see Samantha was always telling me what a man's mother hadn't made of him his wife couldn't—if I could bring him to do such things as pile up the last week's papers on the top shelf in the closet without knocking everything off the other shelves; light a candle without throwing the burning match on the carpet or wiping the tallow from his fingers on his hair; or set the kettle off the stove without scalding the cat.

"I felt mortified and cut up at the work he made of it all, I can tell you; for I used to think a woman that couldn't teach another person how to do a thing, didn't half know how herself, but I've come to the conclusion that it makes a difference where that person is a man. But if ever I actually *suffered* it was once when I lay for a day flat on my back and no one to do anything but Solomon. You ought to have seen the toast he made for me! You wouldn't have hankered for a *taste* any more than I did. He washed the childrens' faces with the dishcloth, put their clothes on hind side before, and gave them the tongs and dear mother's daguerreotype to play with. He melted off the tea-kettle spout and burned a hole in the table-cloth. Just how he managed to do that I never knew. *He* thinks it must have happened when he shook the crumbs in the fire. But all that was nothing compared to the way he used the baby. He squeezed it so hard between his great, awkward hands every time he took it out of its crib that it grew black in the face, and then he walked the floor with it under his arm, heels up. He choked it with hot potato and stuffed it with cold apple-dumpling and cream till it cried, and then trotted it on his knees till its neck snapped, to stop it.

"But I would't mind Solomon's unhandiness so much," continued Aunt Tabitha, as she folded that worthy's night-shirt and tucked it under the pillow, "if the men folks far and near didn't think it small to be handy about the house, and if the boys that I've tried to bring up differently, didn't think it manly to take after their father. You'll notice boys do take after their father in such things.

"I like to see a man—yes, and a woman too, for the matter of that—able to turn his hand to a few things outside of his regular business without danger of twisting it off. If I had a daughter, now, I'd have her know how to do everything around the barn, in case of need, as well as the men could do it. She should be able to tie up the cows and milk them without getting on the wrong side to do it. She should know how to harness a horse and drive him when harnessed without feeling that she must *always* sit exactly in the middle of the seat and hold her arms extended, with a rein in each hand, in such a way as to make them ache for twenty-four hours to come. She should know how to use a hand-saw and drive a nail without splitting the board or smashing her thumb. She should know how to do various other things too numerous to mention, and if she didn't—well, she wouldn't take after her mother, that's all."

DOMESTIC RECIPES.

Bologna Sausages.

Three pounds of lean beef, three pounds of lean pork, two pounds of fat bacon, one pound of beef suet. Boil the lean beef and pork one-half hour; then chop fine, each by itself, as likewise the bacon and suet. Season with pepper, salt, thyme and ground mace. Fill ox skins with it; tie them in lengths, and put in a beef brine for ten days; then smoke them the same as hams or tongues.

Pigs Tongues.

Partially boil the tongues in order to remove the skins. Place them in brine for a week, then dry them and put into sausage skins. Fasten them up at the ends and smoke them.

Apple Batter Pudding.

Peel six tart baking apples; take out the cores and fill the cavities with sugar; put onto a pie-dish and cover them with a light batter. Bake until the apples are tender. Serve hot with cream and sugar.

Tartlets.

Cut as many rounds of rich puff paste with a tin cutter, as you wish; then again cut an equal number and press a smaller cutter inside them to remove the center and leave a ring. Moisten the rounds with water and place the rings on them. Bake from ten to twelve minutes in a moderate oven, and when done, fill the center with jelly or preserves. Stamp out a little of the paste rolled very thin into stars, etc.; bake them lightly and place one on top of each tartlet.

MARY B.

QUESTIONS ANSWERED.

Short-Cakes.

I have observed in the Domestic Economy column, published in the RURAL NEW-YORKER, a number of recipes for making strawberry short-cake, but have not yet discovered one for making what I term the genuine short-cakes without fruit, such as I remember, at least forty years ago, in the village of Claverack, N. Y. At that time my father's house was frequently the resort of prominent citizens of New York and elsewhere, and his residence became famous for the simple tea-table luxuries, such as coffee, waffles, whigs and short-cakes.

A colored woman cook who had been in the service of the family many years, acquired the pastry cook's art, and made short-cakes superior to any I have ever seen since that day, and no written recipe was used. I fancy that cream was one of the ingredients and liberally used. The dough was rolled out to about one-half an inch thick, then cut out with a tea cup, and baked in a quick oven. The cakes were light and flaky—like good bakers' bread. They excelled all others made at home. You will oblige me by giving your experience or the best recipe you have at command.

Near Hudson, N. Y. C. M. LUDLOW.

ANS.—I have never tried making short-cakes otherwise than with sour cream and soda, mixing only stiff enough to roll readily—in fact a cream biscuit—and these, although very palatable, I fear would scarcely answer your description of short-cakes which resembled "flaky bakers' bread." Neither have I a recipe.

but let us hope that some of the RURAL's experienced housewives, who brewed and baked forty years ago, will be able to furnish us with a recipe which will meet the requirements.

E. M.

IMPLEMENT NOTES.

A NEW WHEEL-HARROW, that is a departure from the common method of construction, will be introduced this season by J. & J. W. Belcher, Chicopee Falls, Mass. It has been successfully tested and found to be a very serviceable implement. We believe circulars descriptive of the harrow are now ready for distribution. A new hard-metal plow is another specialty of this firm, which will be presented to the consideration of *farmers* this year for the first time.

A NEW MACHINE for grinding mower and reaper knife sections, is being made by the Boston Blower Co. It is very complete and very substantially made. By taking off the knife-holder and substituting another wheel, it becomes a serviceable implement for other grinding purposes. A new blind awning fixture, by applying which it becomes easy to convert blinds into awnings, is also a thing likely to meet with great favor.

MR. C. C. POST, of Burlington, Vt., who has become identified with the maple sugar interest through his Eureka Sap-spout, has, this year, increased his business facilities by combining factory and office under one roof. The Eureka is so thoroughly known as a sap-spout that combines cheapness with the greatest efficiency, that its name has become a standard, and hardware dealers everywhere keep it in stock as a matter of course.

CALHOUN'S Broadcast Hand Seed-Sower, so long and favorably known as an efficient implement, has recently been modified and improved in a way that greatly adds to its value. The Goodell Co. of Antrim, N. H., the makers, have met with gratifying success with this broad-caster, and a reference to their advertisement will explain what they claim for the implement.

THE Clipper Mower and Reaper Machine Co. is building factories at Keene, N. H., and will, this season, enter into active competition for the trade in this class of tools. Those who own Clippers and have been at a loss to secure repairs, may get duplicate parts now without trouble and at small cost.

For Bronchial, Asthmatic and Pulmonary Complaints, and Coughs and Colds, "*Brown's Bronchial Troches*" manifest remarkable curative properties.

We earnestly request that all letters containing money, or any communication intended for the BUSINESS DEPARTMENT *of the paper, be addressed to* THE RURAL PUBLISHING CO., *and not to any individual. We cannot otherwise guarantee the prompt entry of names upon our books, or the acknowledgment of money.*

WE offered, some time ago, to sell the cuts used in this Journal for twelve cents the square inch. Many have requested us to send proofs of our cuts. As we have upwards of ten thousand, we could not undertake to do so. Persons wishing to purchase, must select from files of the RURAL NEW-YORKER.

THE MARKETS.

PRODUCE AND PROVISIONS.

NEW YORK, Saturday, Feb. 22, 1879.

BEANS AND PEAS.—There is a better movement in beans, but it is not sharp enough to favor prices in any grade. As it is quality of either mediums or marrows must be strictly prime to realize extremes. California is sending limas and red kidney beans. Southern N. E. peas, $2.65@2.75. Green Peas steady at $1 30@1.32½; Canadian generally 74c. in bulk and bond. Medium beans, prime, $1.59; fair to good, $1.15@1.20; marrows, prime, free on ship, $1.33@1.35; fair to good, $1.25@1.35; pea, $1.20@1.50; white kidney, $1.55@1.80; red do., choice, $2.40@2.45; fair to good, $2.20@2.30; black beans, $2.0@2.25; Cal. Limas, $1@1.25.

BUTTER.—There is no revival in local activity and sellers of even the best grades name prices with more tameness than is consistent with winter business. Exportation still keeps that side of the market bright, and a favorable feature is the fact that foreign buyers are running upon any one grade. Receipts begin to diminish, and many dealers feel that late ounces lots is all they will have to yield in table and useful grades. Creamery, Western and State, and all upper classes of stock feel the unusual winter pause in demand more severely than lower grades.

Single extra State half tubs, 25c.; choice lines, 21@23c. State, full dairies, special, 19c.; other, 16@18c.; firkin dairies, fair to prime, 15@17c.; Welsh dairies, fine full, 16@17c.; fair to prime do., 14@15c.; choice Welsh, 19@21c., fair to prime, 17@17c.; choice creamery 24@26c.; best western creamery, 27c.; other, 19@25c.; early packed creamery, 17@20c.; poor State, 8@1 c.; Western dairy, fine fresh, 18@19c.; fair to good, 10@15c.; factory, ladle packed, 17@19c.; good, 14@16c.; other, 7@9c.; rolls, 10@15c.; grease 4@5c.

COTTON.—There has been a very dull market this week on the easy English markets and a decline in price, but a partial recovery at the close on a falling off of the port arrivals: latest prices are for February, 9.76c.; March, 9.77@9.78c.; April, 9.92@9.93c.; May, 10.01@10.03c.; June, 10.20@10.21c.; July, 10.31@10.32c.; August, 10 40@10.41c.; September, 10.21@10.25c.; October, 10.01@10.0 c.; November, 9.85@9.86c.

Quotations for spot cotton are based on American standard of classification, and on cotton in store running in quality not more than half a grade above or below the grade quoted:

	Uplands.	*N. Orleans.*	*Texas,*
Ordinary	7 13-16	7 15-16	7 15-16
Strict ordinary	8¼	8¾	8¾
Good ordinary	8¼	8¾	8¾
Strict good do	9 1-16	9 3-16	9 3-16
Low middling	9 5-16	9 7- 6	9 7-16
Strict low middling	9¼	9¾	9¾
Middling	9 11-16	9 13-16	9 13-16
Good middling	10 1-16	10 3-16	10 3-16
Strict good middling	10 7-16	10 9-16	10 9-16
Middling Fair	11¼	11¾	11¾
Fair	11 15-16	12 1-16	12 1-16

STAINED.

Good ordinary 7 15-16	Low Middling 8 15-16
Strict good ordinary 8 7-16	Middling 9 5-16

CHEESE.—The low grades have had a good export demand, especially stock to be had at 3@5c.; qualities from 6@8c. move slow. Fine stock is having a fair sale; on the whole the market has a very steady temper.

Quotations are 9@9¼c. for fancy; 8¼@8¾c. for fine lots; 7¾@8c. for good; 3@5c. for skimmed; State, farm dairy at 8@8¼c. for fine; 7@7½c. for good to prime. Wisconsin factory, fine and fancy, at 8¾@9c.; do. good to prime, at 7¾@8¾c. Western factory, fine 8c.; good and prime, 6¾@7¾c.; do. full skimmed, 3@5c.

DRIED FRUITS.—Apples have had continued fair export movement, and the local trade good, with prices well sustained. Peaches rule at firm prices, and small fruits generally are steadily held. State plums, 14¾@15c.; Blackberries are quoted at 5c. Peaches—Pealed Georgia, 6@7c. for poor; 8@9c. for fair to good; 10@10¾c. for prime; choice North Carolina, 11¾@12½c.; good do., 9@10c.; unpeeled halves, 3¼c.; quarters, 3@3¼c. Pitted cherries, 21c. Apples—New, 2@2¾c. for southern quarters in bags.; 3¾@4c. for prime sliced; do., fair at 2¾@3¼c.; State at 3¾@4c. for new sliced; and 3@3¾c. for new quarters; Western at 2¾@3¾c. for new quarters. Raspberries, 28c. Apples, evaporated, fancy at 10@11½c.; other processes at 5¾@7¾c.

EGGS.—The market has declined daily. Sellers are forced to humor buyers to avoid accumulations. Retailers will not buy ahead when the market begins to settle and quotations may be regarded weak.

Near-by, ₱ doz., 20@21c.; State, 19½c.; Western, prime to choice, 19@19½c.; do. medium to good, 15@18c; Southern, prime to choice, 19@19½c.

ESSENTIAL OILS.—Nominal in a wholesale way Peppermint, glass (Hotchkiss), $2.30; in tin, $1.50; wintergreen, $2; sassafras, 40c.; pennyroyal, $1.25; spearmint, $2.25; wormwood, $3.

FLOUR.—There has been a recovery of 15 to 20c. per bbl. on an upward tendency of wheat, and increased inquiry from both exporters and home trade buyers.

Quotations are $3.40@3.70 for very inferior to fancy superfine State; $3.70@4.10 for very poor to good extra do., odd lots and lines; $4 00@4.25 for good to very choice do., and fancy lots above this; $3.40@3.70 for inferior to very choice superfine Indiana, Iowa, Michigan, &c.; $3.70@4 00 for inferior to good shipping extra do. and $4.10@4.25 for good to choice extra do.; common to about choice white wheat extras, $4.25@5.35; choice to fancy do., at $5 35@6 15; red and amber winter wheat, very inferior to very choice trade and family, at $4.10@5 85 (fancy held higher); round hoop Ohio at $4 00@4.35, and trade and family brands of do. at $4.50@4 85, the latter rate for very choice (a few fancy lots held higher); St. Louis, $4.25@5.10 for very inferior to good extra; $5.10@6 00 for good to very choice (with a few very fancy brands in high favor with the jobbing trade), quoted up to $6.50@6.75; Minnesota clear, very inferior to strictly fancy, at $3.75@5.00; few brands going above $4@4.75; Minnesota "straight," inferior to fancy at $4.50@6 00; and patent poor to strictly fancy at $5.25@6.25, few brands going above $7.50@7.75; unsound stock at from $2.25@3 25; city mill extra at $4.85@5.25 for West Indies (the latter rate for fancy in new packages); do. for England $3.75@3 90; do. trade and family extras, $5.25@6 25; do. for South America, $5.15@5 65 for fair to very choice; No. 2 at $2 40@3.25 for poor to very choice.

CORN MEAL.—Sales at $2.75 for Brandywine and $2.25@2 40 for yellow Western.

GRAIN.—Wheat has shown a declined advance with a freer business, including more of an export movement; sales of ungraded spring at 90@93c.; ungraded amber at $1 08@1 12½; No. 2 amber at $1 13@1 13¾; No. 1 red at $1.13¾; No. 2 red at $1 13@1.14½; No. 3 red at $1 09¾@1 10; ungraded red at $ @1 12¾; extra white at $1 13¾@1 14; white State at $1 13¾, No. 1 white at $1.13; No. 2 white at $1.10¾@1.11; ungraded white at $1.08@1.12; Canada white, in bond, at $1 06; No. 2 amber, February option, at $1 13¾@1 13¾; do., March option, at $1.13¾@1 13¾; No. 2 red, February option, at $1.13¾@1 13¾; do., March option, at $1.13¾@1 13¾; do., April option, at $1.14¾@1.15; do., May option, at $1 15¾@1.15¾; No. 1 white, February option, at $1 13¾; do., March option, at $1 13¾; do., April option, at $1 15¾; do., May option, at $1.15¾@1.16. Rye at 61@63c. for State and 63@63c. for Western. Corn has been in larger supply, but fairly sustained in price; sales of steamer mixed, in lots, at 44@44¾c; New York old No. 2 at 46¾@47c.; New York No. 3 at 42¾@43c.; ungraded mixed at 44@46c; New York No. 2 new at 46¾@46¾c; Jersey yellow at 46½c.; steamer yellow at 44½c; New York yellow at 45½c.; do. old at 47c., delivered; round yellow quoted at 46@48c. for new yellow western, old, at 46@47¾c.; do. new at 45¾@46½c; southern white at 51c.; New York No. 2 white at 51@5 c. for old; do. new at 49@50c.; yellow southern at 44½@46c; New York No. 2, February option, at 46½c.; New York No. 2, old, same option, at 46¾@46¾c.; New York No. 2, March, at 46¾@46¾c. closing at 46¾; New York No. 2 April, at 47¾@48c.; do., May at 48¾@48½c.; steamer mixed, February option, at 44½c.; do., March, at 44¾@45c. Oats have been active at some improvement in price; sales of New York No. 1 white at 35½c.; New York No. 1 at 32¾@32½c.; New York No. 2 at 32¾@32½c. New York No 2 white at 33¾c.; New York No. 3 at 31c.; New York No. 3 white at 32½c.; white Western at 33@34½c.; mixed do. at 31½@33c.; white State at 33@35½c.; mixed do. at 32@33c; New York extra white quoted at 38¾c.; No. 2 Chicago, afloat, at 33@33½c.; unmerchantable at 2c.

BEESWAX.—Has not varied in price, with light sales quoted at 25@2 c.

FRESH FRUITS.—Greening apples are taking their accustomed place at this part of the season: only parcels free from scald can be quoted at the extreme. Fancy red almost nominal, Spitzenbergs and Baldwins selected, $2.25@2 50; choice greenings, $2@2 25; fair to good lots, $1.50@1 75; these are quotations at stores and lofts. Eastern and railroad lots, $1.62½@1 87 few at the latter. Little barrels cause a good deal of grumbling on the part of retailers. Cranberries quiet, but firm with higher apples. Prime to fancy bbls., $8@9; other, $5@6; N. J. crates, fancy, $3; other, $2@2.75. Florida oranges very dull, foreign calling off the demand; hf. bbl. boxes, fair to best, $3; discolored, $1@1.50; bbls., $4@6. Peanuts firmly held, with only a moderate trade. Hand-picked Va., slow of sale, holders' views firm; $1.10@1.15; other, 80@90c. Hickory nuts a drug at $2. Pecans, small, 6@6½c.; large, 7½@8c.

FURS AND SKINS.—Our quotations are for prime round skins; torn or irregular parcels will not sell for export. The market has lost some of its activity. The Russian plague reports checked some trade, but the alarm has now subsided and it is likely that all good stock will find a place abroad from time to time forward. Badger, 50@$1; bear, black, N., $8@12; do. S., $3@5; cub, N., $5@8; brown, $3@7; beaver, Can. W., $1@1.40; S. and W., 80c.@$1 10; N. W., $1.52@1.75; N. and Can., $1.75@2 30; cat, wild, N., 25@50c.; S. and W., 10@20c.; house, 10@15c.; deer, W., summer, 20@25c.; winter, 10@ 5c.; elk and moose, 12@15c.; fisher, S. and W., $7@8; N. and Can., $7 40; fox, silver, $2@2 75; cross, $2@5; blue, $3@5; white, $1.50@2; red, N. and E., $1.50@1.75; N. and N. W., 70c.@$1; gray, N. and N. W., $1@1.25; S. and W., 40@70c.; kitt, 25@35c; lynx Mink, $1.50@2; Can., $2@2.50; marten, large dark, $3@8; small and pale, 75c.@$1.25; mink, S. and S. W., 30@35c.; W., 50@60c; Middle States, $1@1 25; N. W., $1@1.50; Eastern, $1.50@1.75; Can. and N. S., $1.75@2; muskrat, S. and W., fall, 8@10c.; S. and W., winter, 10@14c.; S and W., spring, 14@16c.; N. and E., fall, 10@12c; N. and E., winter, 14@18c.; N. and E., spring, 18@20c; kitts, 3@5c; opossum, N. and W., 2@4c.; S., 8@10c.; otter, S., 3@4c.; N., 5@7c; rabbit, 1@3½c; coon, S. and S. W., 3@4c.; W. and N., 50@65c; Mich. and N. W., 75c.@$1; seal, Atlantic, 40@60c.; Pacific, $10@15; skunk, black cased, $1.50@1.70; half-striped, 80@90c.; full, 40@50c.; white, 10@20c; wolf, large, forest, $1.75@2.00; prairie, 75c.@$1; wolverine, 2@3c.

HAY AND STRAW.—There are larger receipts, but prime stock is having a good demand and is at firm prices; medium grades are most difficult to sell; sales at 40@45c. for shipping, and 65@70c. for retail qualities. Straw quoted at 50@60c. for long rye, and 40@45c. for short rye, and oat at 40@45c. Salt Hay—N. J. meadow, $6@7 per ton.

HOPS.—The exporters have taken rather freer quantities of prime stock, but move slowly in the lower grades. Prices have barely varied.

Quotations are for New Yorks, new crop, choice, 13@15; New Yorks, new crop, good to prime, 8@11; New Yorks, new crop, low to fair, 6@8; Eastern, 8@12; Western, 8@12; Yearlings, 4@6; Olds, all growths, 2@3; Pacific coast, 12@15.

HONEY—Stock remains almost stationary; prices low and undecided.

OIL CAKE.—Western has had a freer export demand, and is quoted at $27@27.50.

POULTRY AND GAME.—Live fowls firm and scarce; turkeys and geese lower.

N. J. fowls, 13@13½c.; Western, 11@12c.; young roosters, 8@10c.; old do., 6@7c.; Turkeys, hen, 13@14c.; do., toms, 10@11c.; Ducks, 60@90c.; N. J. Geese, $1.50@1.75; other, $1.12@1 37 ₱ pair.

Dressed poultry arrives about equal to general wants; prices higher for extra stock.

Turkeys, choice, including dry picked, 17@18c.; prime, 15@16c.; do. fair to good, 14@15c; chickens, Philadelphia, dry-picked, 17@18c.; Jersey, ₱ lb., 15@16c; do. Western and State, ₱ lb., 13@14c. Fowls—Prime, ₱ lb., 14@15c; fair to good, 11@13c. Ducks, State and Jersey, 16@18c.; Western, prime, 15@16c.; fair to good, 14@15c. Geese, 9@14c.

Game is in moderate demand, but reduced supplies and receipts keep the market firm.

Quail, choice, $1.00@1.25; other, 60@75c.; Grouse, trapped, 60@62½c.; soft, 45@50c.; Canvas-back Ducks, $1.75@2; Red-head, $1.00; Mallard, 50@80c.; Teal, 40c.; common, including Broad-bills, 20@25c.; Hares, 22@25c.; Rabbits, 16@20c.

PROVISIONS—Have tended higher, due partly to the falling off of receipts of hogs and a brisk speculative inquiry. Mess pork closed at $8.30 bid and $9.20 asked for old for February; $10.40 bid and $10.55 asked for new for February; $8.35 bid and $9.20 asked for old for March; and $10.15 bid and $10 60 asked for new for March, and $10 60 bid and $10.75 asked for new for April, and May at $10.70@10.80. Bacon at 5¼c. for long clear and 5¾c. for short clear. Lard—Western steam at $7 for spot; $7 for February; $7@7.02½ for March; $7.07½ for April, and $7.15 for May. Stearine at 7c. for choice. Tallow at 6¾@6¾c. for prime. Beef Hams at $18@18.50. Beef, extra India mess, $18@20, as to quality; packet, $11; plain mess, $9.50@10.25; extra mess at $10.50@11.

SEEDS.—Clover is fairly active at 6¼@6¾c. for prime and 6¾@6¾c. for choice western. Timothy is held firm at $1.40@1.50.

TOBACCO.—Export movement has been very moderate, but the local trade better. Prices are unchanged.

VEGETABLES.—The potato market is less oppressed with fresh receipts; but in the absence of a real wholesale demand late prices are very full. Onions higher. Marrow squash also. Bermuda potatoes, $6@7. Eastern Early Rose, $2.50@3; State at $2@2 62; Nova Scotia, $2 62@2.75; white Peach Blow, $2 50@2.75; red do., $2.25@2.50; Prolific, $2.25@2.50; Peerless, $2@2 37; Jackson white, $2.12@2 25; mercer, $1.87@2 (the extremes are for double heads.) Onions, white, $4@5; per box; do, yellow and red, $2.50@3; chester, $2@2.50; marrow squash, $2@2.50; Hubbard, $2@2.25; cabbages per 100, $4@8; ₱ bbl. turnips, per bbl., 75c.@$1; carrots, 75c@$1; beets, 75c.@$1; celery, per doz., 30@75c. Bermuda tomatoes, 50@75c.; Nassau, 40@60c.

WOOL.—There has been more interest shown by manufacturers, and with the freer business the market is the turn steadier.

Ohio, Pennsylvania and Virginia—XXX and picklock, 35@37½c.; XX, 33@35c.; X, 33@34c.; No. 1, 33@35c.; No. 2, 32@33c common, 29@30c.; combing, 34@39c.

New York, Michigan, Indiana and Wisconsin—XX, 28@32c.; X, 28@31c.; No. 1, 31@33c.; No. 2, 27@30c.; common, 26@28c; combing and delaine, 33@37c.

Iowa, Vermont and Illinois—X and XX, 28@30c.; No. 1, 30@33c.; No. 2, 27@28c.; combing, 33@36c.

Missouri, Kentucky and Tennessee—Washed fleece, 30@33c; unwashed fleece, 18@21c.; unwashed combing, 22@25c.

LIVE STOCK MARKETS

Saturday, Feb. 22, 1879.

BEEVES.—Receipts for the week, 11,222 head; do., 9,654 last week. Fair demand, quick trade at ¼c. advance for Monday, closing, however, with an easier feeling and in favor of buyers. Trash, including cows and stags, 7@8c. to dress 55 lbs.; ordinary to good, 8¾@10¾c. to dress 55@56 lbs.; prime, 10¾@10¾c. to dress 57 lbs. Exporters used 2 0 at 9¾@10¾c.

COWS AND CALVES.—The close scrutiny now given milch cows almost silences traffic. Nominal range, 38@65.

VEAL CALVES.—Receipts, 136—four days, 171—no change. Live veals, 6@8c.; fed and grassers, as before; hog-dressed, 9@10½c., with selected Jersey, 10¾@ 11c.

SHEEP AND LAMBS.—Receipts for the week, 23,469 head; do. last week, 19 60 do. Market rather tame, with slow sales at former prices, or 4¾@4¾c. per lb. for ordinary to prime. Few tops, 5¾@5c. Choice lambs quoted at 6¾@6¾c.

SWINE.—Receipts for the week, 33,355 head. No sales of live hogs. Nominal figures reported at $4@4.25 per 100 lbs. for fair to good: two cars sold on afternoon of Monday—very rough Ohio culls at $3 85.

Dressed hogs—N. J., light, 6@6¾c.; medium, 5¾@5¾c.; heavy, 5¼@5¾c.; city, 5@5¾c.; western, 4¾@5c.

SYRACUSE CHILLED PLOW.

PRICE, FULL RIGGED, $16.

SAMPLE PLOWS DELIVERED FREE OF FREIGHT ON RECEIPT OF PRICE.

The Syracuse Chilled Plow Co.

have enlarged the capacity of their works *three-fold*, in order to supply the demand for the year 1879.

THEY MAKE THE

BEST CHILLED PLOW

THE WORLD HAS EVER SEEN.

IT IS LIGHTER OF DRAFT.
IT IS MORE PERFECT IN SHAPE.
IT IS MORE DURABLE.
IT CLEANS IN EVERY SOIL WHERE OTHER PLOWS FAIL.
NO PLOW SO WELL PREPARES THE SOIL FOR A CROP.
THE PECULIAR WAY IT PULVERIZES THE SOIL IS ONE OF ITS GREAT EXCELLENCIES OVER ANY OTHER PLOW.
IT IS MADE IN DIFFERENT STYLES—ONE HORSE, TWO-HORSE, OR THREE-HORSE.

Every Plow is Guaranteed under the Seal of the Company.

BEWARE OF COUNTERFEITS.

The reputation of the Syracuse Chilled Plow has induced unprincipled manufacturers to palm off on the farmers plows that they call *chilled*, which are, in fact, nothing but common plows, with the word "chilled" painted or branded thereon.

The SYRACUSE CHILLED PLOW has been made but two years and a half, and in that time

Nearly 35,000 Have Been Sold.

No other new style of Plow sold over Six Thousand in the same length of time.

HORSFORD'S Bread Preparation

UNSURPASSED FOR MAKING

LIGHT BREAD

Biscuit, Rolls, Cake and Pastry.

It is Better and Healthier than ordinary Baking Powder, Cream Tartar or Yeast.

The cost of raising Bread, Biscuit, &c., with it is only about half as much as by ordinary Baking Powder, and the result is much better.

It restores the nutritious elements which are taken from the flour in bolting. No ordinary Baking Powder or anything else used for raising bread does this.

Universally used and recommended by prominent Physicians.

If you cannot get it of your Grocer send a three-cent stamp to the manufacturers for a sample.

Manufactured according to the directions of Prof. E. N. Horsford, by the Rumford Chemical Works Providence R. I.

Reading for the Young.

THE DEVIL-FISH.

UNCLE MARK.

"DEVIL-FISH," you say? "What an ugly, irreverent, disgusting name!"

Well, that is true; it is not a handsome name, certainly, but then the gentleman that bears it is almost frightful enough for such a name. But few of my nieces and nephews may have heard anything about this animal, and fewer still have seen a real one or formed a clear idea of how it looks.

There it is in the picture. Notice the eight long arms, growing out from the head and surrounding the mouth, with their numerous sucking-discs on the under side. Notice the large, bright eye and the bulky, trunk-shaped body. If any one ever told you of such a monster, and you were not perfectly sure that your informer always told the truth, you might have doubted its existence.

There are many species of this class of animals, which are found in the sea the world over. Devil-fish is, however, not the real name—the one they always go by—Cuttle-fish is more common. They are also known as *Octopods*, which means that they have eight feet, and scientists put them in the class *Cephalopoda*, meaning head-footed, because the arms, which are also used as feet, grow out from the head, and when they walk, they walk with the head downward.

Some of them have ten arms, in which case two of the arms are much longer than the others, and are called *tentacles*. Cuttle-fishes differ very much in size. Some are only a few inches long, and others measure scores of feet. There is a large specimen, preserved in alcohol, in the New York Aquarium, which measures forty feet to the tips of the tentacles, and yet, this is but a baby compared with some that are found in the Pacific and Indian Oceans.

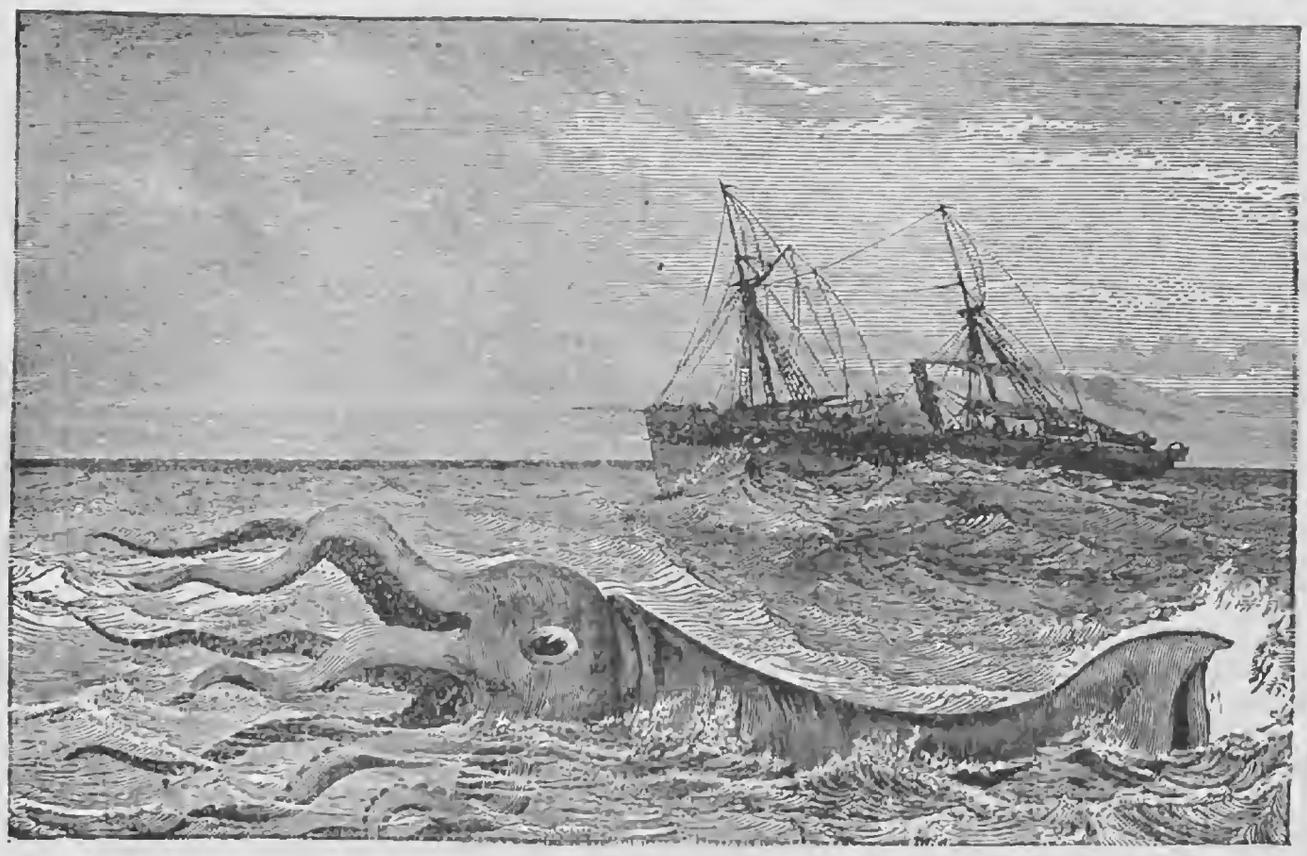
The body has no structure. It is one loose, flabby, jelly-like mass, inside of which is a bone called the cuttle-bone, used in the arts for polishing soft metals. The arms are used both for swimming and walking, but principally for catching the prey, and woe be to the poor victim that these long, cold, slimy, snake-like limbs wind about. The suckers hold the prey so firmly that it is impossible to escape from their grasp, and gradually it is worked towards the mouth and disappears in the stomach.

Victor Hugo, the great French writer, of whom I trust many of the Cousins have heard, says:

"Seized by this animal, you enter into the beast; the hydra incorporates itself with the man; the man is amalgamated with the hydra. You become one. The tiger can only devour you; the devil-fish inhales you. He draws you to him, into him; and, bound and helpless, you feel yourself slowly emptied into this frightful sac, which is a monster. To be eaten alive is more than terrible; but to be *drunk* alive is inexpressible."

Many of them are also provided with an "ink bag," filled with an inky fluid which they use as a weapon of defense. Whenever they are pursued by an enemy, they pour a cloud of this ink out in the water and hide from the pursuer.

The color is changeable. Generally it is brownish, but when irritated they assume a purple or violet color. As a means of protection, they can also take the color of the rocks upon which they walk on the bottom of the sea.



THE DEVIL-FISH.

TO THE SONS OF THE FARMER.—No. 2.

REV. A. W. MANGUM.

SOME may desire to go to the city because they will there have specially favorable opportunities to gather information—to become very intelligent. I do not deny that facilities for acquiring knowledge of certain kinds abound much more in towns than in rural districts. But you should understand that the country furnishes really better opportunities, in some respects, to the student than the city does. When once regularly engaged as a clerk in a mercantile house, or as a subordinate in any city business, your time for self-improvement, if not entirely wanting, is, at most, sadly limited. Your work is apt to need, and your employer to demand, most, if not all, of your time.

It is better to attend school in the country than in town. The fewer and simpler the attractions around the school, the more likely you will be to study faithfully and learn fast. I do not hesitate to say that the farm is a good place for gathering information and cultivating the mind. There, any literary work is more like recreation. I know what it is to plow all day and sit down and read by torch-light at night. The night—all the year round—in the farmer's home furnishes excellent opportunities for mental improvement. There are also many rainy days or other times of leisure which can be occupied in reading and study. As you have less company—less to divert your mind—in the country, you will there feel more interest in your books. They can charm you more because they have fewer and less potent rivals than in town. And you ought to learn much and have a well-trained mind before you wander from the circle of indulgent friends to risk your fortune among strangers.

As to the essential literary advantages, you can find them or procure them in your rural home or community. Good publications of every kind are numerous and cheap. You cannot spend your money more wisely than in the purchase of valuable publications, both periodicals and books. You should be careful to spend your precious time on such books and journals as will make you the wiser for the reading.

But you may have attended high schools and college. If so, you will be liable to conclude that you ought at once to seek a place of greater prominence than the quiet farm-house. Don't be in too great a hurry. Read! Study! Work! Wait! If you expect to enter a literary profession—one that will thrust you before the public—and feel the need of locating where there is more business than around your home, even then you will, likely, be the more respected and the more successful if you take time to furnish your mind thoroughly and to grow strong before you enter into hazardous competition with the able and experienced. Young men, like young plants, do not often thrive when they are under too thick a *shade*.

There is also decided advantage in recognizing the relations between plain, practical work and the duties of one of the so-called "learned professions." It will be profitable to you if you will take recreation from your professional studies by devoting yourself, now and then, to some practical pursuits on the farm. It will harden and strengthen your muscles and make you capable of more and better work with your mind. It will nurture that invaluable mentor—common sense, without which even the master of books is the slave of folly. It will enable you to carry with you into your profession a rational sympathy with the interests and peculiarities of the great laboring masses. It will develop that wisdom which will guide you in your efforts to utilize your powers and attainments for the welfare of those unto whom you hope to be a benefactor. It will aid materially in the formation and maintenance of that spirit of mutual trust and kindness which ought to prevail between those who pursue, respectively, the practical and professional duties in society. It will fasten in you a true regard for that great, all-sustaining department of human labor—the cultivation of the fields—and save you from the disastrous folly of divorcing, in your judgment and feelings at by your conduct, the two interdependent departments of human enterprise—the plain toil of Production and the more intellectual work of the learned Profession.

HISTORY OF A SNOW-FLAKE.

TOLD BY ITSELF.

WHEN I first began to notice the world I lived in, I found myself, together with my companions, floating in space, far above the loftiest mountains, where the earth looked like a dull plain beneath me. In appearance I was like a tiny drop of water—I was what is called vapor, then—and I was one of a great company of such drops. We floated in the clear air, dancing up and down, sparkling like a shower of diamonds. Driven by a light breath of air, we floated across a great body of water, high above it, so that the white winged ships seemed like little swans beneath us. While we passed over the water, our number was increased by other drops of vapor, which were separated from the water by the heat of the sun. Onward we went again, this time over the house-tops of a great city. We could see the people passing up and down its streets, looking like tiny moving specks. We passed over the city, and came again to the country. At last, after we had floated along for many days, we saw in the distance a lofty range of mountains. We went on towards it, but just as we were about to pass over, I felt a cold shiver pass through me. It was a very strange feeling, unlike anything I had experienced before. Of course, being an old traveler, I took little notice of it, and was going on, when I saw a strange change in my companions. I told you before that we were like tiny drops of water. They still shone as brightly as ever, but their *form* was changed. They looked like thistle-down, but were of the most lovely forms imaginable. Some were like simple stars, others were ornamented with delicate tracery, like ferns, but they all retained one primary form, that of a six-pointed star. You cannot see their shape with the naked eye, but I could, being one of them myself. We had been changed by the cold air into snow-flakes. The air seemed filled with us, whirling around, and bounding up and down. It was like a wild waltz.

The wind blew us fiercely about, but we did not care; we were wrapped up in the enjoyment of the hour. We went lower and lower down towards the earth, until at last I was stopped suddenly by the branch of a pine tree. The shock of the sudden stoppage was so great that it quite stunned me, and I must have remained insensible a considerable time, for when I next recollected anything the storm had ceased, the sky was clear, and the stars were shining. How beautiful everything was! The trees were loaded with pure snow, Nature's coverlet, with which she tucks up the earth to protect her from the biting cold. All around me I could hear the jingle of the merry sleigh-bells.

But do not think I am only good for *amusement*. No, indeed! Without our friendly covering, the tender plants would freeze during the winter, and the ground would be frozen so hard that it would take very long to thaw it out, and the growth of everything would be much retarded. In hot countries, too, where there is no ice, the snow on the high mountain tops is used as we use ice here.

I staid for many days on the pine branch, but after a time I noticed a great change in some of my companions. The sun was very warm, and after a few days they actually *melted* and disappeared. I was very much shocked by this, and my horror was increased to find the same symptoms were manifested in myself. I gradually melted, and became part of a pool by the roadside. After staying in that form for several days, the heat of the sun again separated me from my fellows. Again I became a tiny drop of vapor, and again I float about in the air with my companions, wondering over the strange experiences I have been through.

E. L. T.

LITTLE JACK HORNER.

"LITTLE Jack Horner
Sat in a corner,
Eyeing his Christmas pie;
He put in his thumb
And pulled out a plum,
And said, "What a brave boy am I!"

THESE six lines, I suppose, are as familiar to you as your A. B. C.—Indeed, I wouldn't much wonder if you knew all about Jack Horner, Mother Hubbard, Jack and Jill, long before you ever knew there were such torments in the world as A's and G's, and S's and W's. I do not believe you have ever heard the true story of the small Jack, this celebrated person in the literature of the nursery. Will you listen while I tell you the story, the real, true story? There is a tradition in Somersetshire, that the Abbot of Glastenbury, hearing that Henry VIII., had spoken with indignation of his building such a kitchen as the king could not burn down—It being domed over with stone—sent up his steward, Jack Horner, to present the king an acceptable present; viz: a dish which, when the crust was lifted up, was found to contain deeds transferring twelve manors to his sovereign, and that as Jack Horner traveled up to town in the abbot's wagon, he lifted up the crust, and stole out the gift of the manor of Wells, still possessed by his descendants, and when he returned, told the abbot that the king had given it to him, but was found, or suspected, to have imposed upon his patron.

Then there is another version of the story: When the monasteries and their property were seized, orders were given to take the title deeds of the abbey estates at Wells, which were very extensive and valuable. After some delay, it was determined by the Abbot of Glastenbury to give them up, and, for want of a safe mode of conveying them, it was decided that the most likely way to avoid their being seized by any but those for whom they were intended, was to send them in a pasty.

The safest messenger, and least likely to excite suspicion was considered to be a poor lad—our young hero—Jack Horner, who was the son of poor parents living in the neighborhood of the grange.

The lad set out on his journey on foot, laden with the pastry.

It was a weary road, and, England, not being so thickly inhabited as now, he sat down to rest in as snug a corner as he could find on the roadside.

Hunger at last overcame him—as it will some small children (do you know any children who are ever hungry, who like bread and butter and sugar?) Well as I was saying, hunger overcame him, and he was at a loss what to do, when he bethought him of the pastry and thought there would be no harm in tasting ever so little a bit of the pie which he was carrying.

He, therefore, inserted his thumb under the crust, when lo! there was nothing but parchment—poor disappointed boy—no pudding and no plums, and parchments are not very satisfying to a hungry stomach. Although Jack could not read these parchments, he thought they might be of value. He, therefore, pocketed one of the papers, and pursued his journey with the rest of the pastry.

Upon his delivering the deeds, it was found that one of the chief ones was missing; it was thought that the abbot had withheld it, and an order was sent for him to be executed this was all from Jack's stealing the plum. The sequel was that after the monasteries were despoiled, there was found in the possession of the family of Jack Horner a piece of parchment—which was his title-deed of Wells Abbey—the abbot having been executed for withholding the deed, as was supposed.

Jack ought to have confessed stealing the plum and not allowed the poor abbot to lose his head. I am real glad our plums are real, live ones, and not dried tough parchment.

FRANCIS STEVENS.

Sabbath Reading.

THE CASUISTRY OF THE CONFESSIONAL.

THE mistress and the Irish cook are in colloquy.

"Indade, missus, and what for should I stale from ye? I must go and tell it all to the priest. I kneel down to confess me sins: and he asks me so many questions; there's nothing in me that he doesn't find out. I daren't tell *him* a lie. I must tell him just what I took from ye, and all about it; the tay, the sugar, the coffee, and all unbeknowst to ye. He asks me jist what it is all worth; and I must tell him to a penny; for I mustn't tell a lie to *him*, ye know. 'Is that all,' he says, says he. 'Ye stop and think, and tell me ivery thing;' and his eyes look into me very sowl. And I takes care to put it high enough, to be sure of me sowl. Then he says to me, says he, 'Have ye got the money wid ye?' I says, 'Yes, Father B.' Ye know ye must have the money about ye whin ye go to confess. And thin he points up to the poor-box, hanging there before me eyes; and he says, says he, 'See that ye don't lave this house, till ye've put ivry penny of that ye stole into the box yonder, fornont the post.' And I must do it, missus, just as he tells me, wid his eyes looking at me so; or I go home wid a lie to the priest; and thin what's the good of confessing, and what becomes of me sowl? So what's the good to me, if I stales your sugar?"

The above was a veritable occurrence in the city of Boston, not long ago. It carries internal evidence of truth, so far as this—that an Irish servant would not be likely to *originate* the adroit casuistry of giving to the poor the proceeds of her pilfering. Some shrewder mind than hers started that idea. But is that the casuistry of the confessional? A certain old Book declares of the Almighty, "I hate robbery for burnt offering."—*Congregationalist.*

HOME PIETY.

IT is in the family life that a man's piety gets tested. Let the husband be cross and surly, giving a slap here and a cuff there, and then see how out of sorts everything gets. The wife grows cold and unamiable too. Both are toned on one key. They vibrate in unison, giving tone for tone, rising in harmony or discord together. The children grow up saucy and savage as young bears. The father becomes callous, peevish, hard, a kind of two-legged brute with clothes on. The wife bristles in self-defense. They develop an unnatural growth and sharpness of teeth, and the house is haunted by ugliness and domestic brawls.

Is that what God meant the family to be—He who made it a place for love to build her nest in, and where kindness and sweet courtesy might come to their finest manifestations? The divine can be realized. There is sunshine enough in the world to warm all. Why will not men come out of their caves to enjoy it? Some men make it a point to treat every man's family well but their own—have smiles for all but their kindred. Strange, pitiable picture of human weakness, when those who love best are treated worst; when courtesy is shown to all save our friends.

If one must be rude to any, let it be to some one he does not love—not to wife, sister, brother or parent. Let one of our loved ones be taken away, and memory recalls a thousand sayings to regret. Death quickens recollection painfully. The grave can not hide the white faces of those who sleep. The coffin and the green ground are cruel magnets. They draw us farther than we would go. They force us to remember. A man never sees so far into human life as when he looks over a wife's or mother's grave. His eyes get wondrous clear then, and he sees as never before, what it is to love and be loved; what it is to injure the feelings of the loved.

IN answer to the question, "Is it right for our churches to use fermented wine at the Lord's Table?" we unhesitatingly answer, *no*. When we properly celebrate that sacred ordinance with unfermented wine, we have no misgivings in regard to obeying our Lord. But on the other hand, how often do our churches use a fiery liquid which is not in any sense the fruit of the vine, and never was.

Let us then leave to the votaries of Bacchus the intoxicating cup. It contains a dangerous element, which Moses calls the poison of dragons and the venom of asps. Solomon calls it a mocker and a deceiver. Paul calls it the cup of devils, and it is appropriate for devil-worship and an idolatrous feast. But let the Church of Christ never pollute herself with such a cup, nor call it an appropriate emblem of Jesus' blood.—*National Baptist.*

YOUTH is the age of folly, of vain hopes, and overgrown confidence. How wise many might have been, had they not been wise in their own opinion too early! Lean not to great parts, lean not to natural or acquired accomplishments, lest you lose them and yourselves too. It was an excellent saying of St. Austin, "He who stands upon his own strength shall never stand." Ah, young men, if you must needs be leaning, lean upon precious promises, lean upon the rock that is higher than yourselves, lean upon the Lord Jesus Christ, as John did, who was the youngest of all the disciples. John leaned much, and Christ loved him much. Oh! lean upon Christ's wisdom for direction, upon His righteousness for justification, upon His blood for remission, and upon His all-sufficient merits for salvation.

MURMURING is a black garment, and it becomes none so ill as saints.

PERSONAL ITEMS.

Thomas S. Drew, elected Governor of Arkansas in 1864 and again in 1850, died recently in Texas.

The claimant for the Arlington estate, George Washington Custis Lee, eldst son of the late General Robert E. Lee, does not propose to remove the dead soldiers' bodies therefrom, but simply wants the fair value of the property. Mr. Lee is a tall, handsome man, apparently about thirty-five years old.

Senator Butler, who returned from South Carolina week before last, says that he rode with Gov. —Senator—Hampton for two hours on the Saturday before. The Governor is rather low-spirited, but his physical condition continues favorable. It is probable that another amputation of the leg bone will be necessary, as the flesh has receded and the wound cannot heal over in its present condition. Senator — Governor — Hampton says that he suffers more from the old bullet wound in his hip than from the amputation.

Fertilizers.

STOCKBRIDGE
MANURES

Originated by Levi Stockbridge, Professor of Agriculture in the Massachusetts Agricultural College. They have been extensively used for six years. Send for a little book describing them and giving directions for cultivating farm and garden crops. Every farmer, gardener or cultivator of a kitchen garden should send for a copy *mailed free*. **BOWKER FERTILIZER COMPANY, 43 Chatham St., Boston; 3 Park Place, New York; and 21 North Water St., Rochester, N. Y.**

CATARRH.
THE
NORWEGIAN BALM
acts upon the mucous membrane of the Nasal passages the same as SOAP and WATER act upon the skin of the body. It immediately cleanses, softens and opens the pores, admitting of a free secretion of mucus, and if the body is kept clean and the bowels regular, the worst features of CATARRH will soon be overcome. Cleansing the Nasal passages of all foul matter *immediately restores the breath to its natural purity.*

EXTRACTS FROM TESTIMONIALS.
(For full text see Pamphlet).

PATERSON, N. J. December 16, 1878.
Mr. N. B. PHELPS, —Dear Sir: We are pleased to inform you that we are selling more of your *Norwegian Balm for Catarrh* than all other remedies for that disease, and find that it gives good satisfaction.
VAN DALSEN & SYKES, 131 Market St.

19 MURRAY ST., NEW YORK, Jan. 8, 1879.
Members of my family have used your NORWEGIAN BALM with great satisfaction. It really seems to have all the merit that you claim for it. *We surely should not know how to do without it.*
SAMUEL HOLMES, Treas. Bridgeport Brass Co.

905 Eight Ave., New York, Dec. 17, 1878.
I think your remedy for Catarrh "One of the greatest discoveries of the age." Before using the NORWEGIAN BALM my wife *suffered untold misery for years.* We sought medical aid, far and near, but to no effect. Our regular Physician, distinguished for his knowledge, skill and honesty, pronounced the disease incurable: that it would extend from the nasal organs to the throat and bronchial tubes, and finally to the lungs—and that death would be the result at no distant day. This was well nigh the case. But in your NORWEGIAN BALM *she found immediate relief;* the extremely offensive odor of her breath, from which she had suffered so many years *entirely disappeared within two weeks* after she commenced to use the BALM. After having used only one bottle, if not fully cured, she feels well on the way.
C. C. SULLIVAN,
Produce and Commission Merchant,
155 Chambers Street, New York.

IMMEDIATE RELIEF GUARANTEED.
Quart Bottle, $1.00. (*sufficient for Two Months' use*). Trial Bottle, Twenty-five Cents.
Ask Your Druggist for it, or send for Circular to
N. B. PHELPS, Prop'r., 6 Murray St. N. Y.

Wit and Humor.

An illiterate farmer wishing to enter some animals at an agricultural exhibition, wrote as follows to the secretary of the society: "Enter me also for a jackass." And he took the prize.

Fitz Hugh Ludlow, in his narrative of travel in "The Heart of the Continent," tells of an eccentric genius who improved on the old yarn to the effect that "the weather would have been colder if the thermometer had been longer," by saying he had been where "it was so cold that the thermometer got down off the nail."

A Newcastle man had occasion to appease the demand of the inner man at a London restaurant the other day. On calling for the bill, he paid it, and was leaving, when the waiter suggested that the amount did not include the waiter. "Ah," said the man from the extreme North, "but I didn't eat the waiter."

Scene at a wedding breakfast—company all seated about the table. A pause in the general conversation. Happy husband to his wife's little sister at the other end of the room.—"Well, Julie, you have a new brother now." Julie.—"Yes; but mother said to papa the other day that she was afraid you would never amount to much, but it seemed to be Sarah's last chance."

"Baboo" English History.—That native Hindoo students are acquiring a mastery not only of correct expression, but of accurate English historical knowledge, is shown by the following extract from an essay on Cromwell by a Baboo, which appears in the Allahabad Pioneer:—"Oliver Cromwell was a very stern man. He destroyed Charles I. by repeated beheadals. After this he was never seen to smile, but was frequently heard pensively to murmur, 'If I had only served my God as I have served my king, he would not have deserted me in my old age.'"

Nantucket fishermen are credited with the power of being able to sniff the land when some distance out at sea. An old skipper was said to possess this power to such a degree that, by a mere smell of the lead after sounding had been taken, he could discover his boat's position. Sending for the instrument one night when he was too champagned to leave his berth, some one, anxious to test his faculty, inserted the end of it in a flower-pot containing a small rose-tree. The skipper sniffed at it in the dark, and then exclaimed: "Why, Nantucket must have sunk, and we are over Mother Brown's garden."

Quite recently a gentleman giving a dinner-party was persuaded, much against his wishes, to allow his young Hopeful, a spoilt child, to join the company. Thinking that many of the rich dishes were not good for the boy, he objected to his partaking of them, but eventually gave way on the child threatening, "If I'm not allowed to have it, I'll tell!" This went on for some time, until the father made a stand, refusing firmly to let the boy have any wine, adding, "and you may tell if you like." Amidst roars of laughter, the child at once called out, with glee, "My new knickerbockers are made out of a pair of ma's old curtains!"

A clergyman was called upon on one occasion to officiate at a colored wedding. "We assure you, sah," said the gentlemanly darkey, "dat dis yere wedding, sah, is to be berry much in de fashion, sah." "Very well," replied the clergyman, "I will try to do everything in my power to gratify the wishes of the parties." So, after the dinner and dancing and supper were over, the groom's "best man" called again on the minister, and left him a ten-dollar fee. "I hope everything was as your friend desired it?" said the urbane clergyman. "Well, sah, to tell de trut. Mr. Johnson was a little disappointed," answered the groom's man. "Why, I took my robes!" said the minister. "Yes, sah—it wasn't dat." "I adhered to the rubrics of the Church." "Yes, sah, dat was all right." "I was punctual, and shook hands with the couple. What more could I do?" "Well, sah, Mr. Johnson he kind o' felt hurt, you see, 'ease you didn't salute de bride."

The True Way to Invigorate.

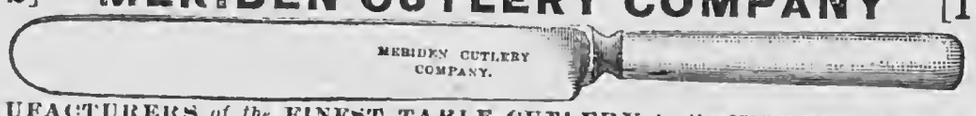
The true way to invigorate a feeble system is to infuse activity into the operations of the stomach, that wondrous alembic in which the food is transmuted into the constituents of blood, the chief element of our vitality. Hostetter's Stomach Bitters, because it accomplishes this end, is greatly to be preferred to many so-called tonics, useful indeed as appetizers, but inoperative as aids to digestion and assimilation. This sterling cordial, while it invigorates the stomach, healthfully stimulates the liver, bowels and kidneys, insuring the escape through the regular channels of effete and useless matter thrown off by the system, which is thus purified as well as invigorated by it. Its tonic influence is soon made manifest by an increase of vital energy and a more active and regular discharge of every physical function, and it has the further effect of rendering the system unassailable by malarial epidemics.

STRANGE RESEMBLANCES.

No. 1.

No. 2.

1832] **MERIDEN CUTLERY COMPANY** [1879



MANUFACTURERS *of the* FINEST TABLE CUTLERY *in the* WORLD. *Their* CELLULOID HANDLE *is superior to* IVORY, *and especially suitable for* HOLIDAY GIFTS. *Warranted and sold by all dealers, and by* MERIDEN CUTLERY CO., *43 Chambers Street, New York.*

SEEDS.

Garden, Flower & Field Seeds,
Reliable, fresh and pure, at reasonable prices.
(Established 1839.
STAIR & KENDEL,
Cleveland Seed Store, Cleveland, Ohio.

Pearce's Improved Cahoon Broadcast Seed Sower.

For Sowing all kinds of Grain and Grass Seed.

This machine does as much work as 5 men can do by hand, and does *better* work than can be done by any other means whatever. No more sowing too much to the left. Agents wanted in every county in the United States. Price $6.00. Send stamp for Circular.
GOODELL COMP'Y,
Antrim, N. H.,
Sole Manufacturers.
R. H. ALLEN & CO.,
Agents, New York City.

NEW PROCESS

For Incubation & Artificial Hatching.

Apparatus, 100 eggs' capacity, $25. 41 gold and bronze medals and diplomas awarded to the inventor, Prof. A. Corbett, 7 Warren St., N. Y. City. Send for Circular

Cider Presses and Graters.
Boomer & Boschert Press Co., Syracuse, N. Y.

SALICYLIC DIPHTHERIA LOZENGES.
Price, 50c. per box — 3 Boxes for $1.00.
Celebrated European Salicylic Treatment.
Croup, Catarrh, Coughs, Colds — Trade Mark — Paris & Leipzig.
SORE THROAT, BRONCHITIS,
AND
All Diseases of the Throat, Head, Chest or Lungs.

DIRECTIONS.

Children may take as many as 3 or 4 in an hour; grown persons 6 or 8; in severe cases to be used in conjunction with gargles and doses of Salacylica Powders, price $1 a box, containing 30 powders, both sent by mail to any address, on receipt of price. The only antidote for preventing the spread of Diphtheria and Croup in families. Address

WASHBURNE & CO., Sole Agents,
212 Broadway, New York.
Cor Fulton St., (Knox Building.)

Gifford's Swinging Stanchion. Self-closing, self-fastening. First farm right in each town for 30 cts in stamps. For Illustrated Circular, address W. C. GIFFORD, Jamestown N. Y.

Portable Farm Engines

Using Patent Angular Driving Belt.

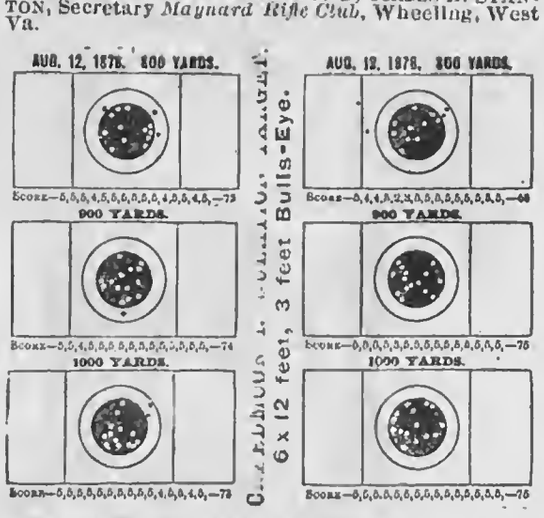
Mill Manufactory
Established 1851.
Grist Mills
OF
FRENCH BUHR STONE
Portable Mills for Farmers, Saw Mill Owners, etc. Price from $80 up. Complete Mill and Sheller $96. A boy can grind and keep in order. Adapted to any kind of suitable power. Complete Flouring and Corn Mill very cheap.
NORDYKE & MARMON CO.
Indianapolis, Ind.

MAYNARD CREEDMOOR RIFLE.

The Maynard Ahead.

The following Targets were made by Prof. Chas E. Dwight of Wheeling, West Va., on Woodland Range, August 12th and 13 h, 1878, with a *Maynard Long Range Rifle*, and are the MOST REMARKABLE ON RECORD. The grand total of 437 in a possible 450,—90 shots at the long ranges,—has never before been accomplished by any Rifleman, or Rifle, in the world.

These scores were made in the competition for position on the American team for 1878; open to all native-born citizens of the United States, and were shot under the rules of the N. R. A., Fulton position, no sighting shots at either distance. These scores were all witnessed and sworn to by James D. Stanton, Secretary *Maynard Rifle Club*, Wheeling, West Va.



THE MAYNARD ARMS are the most perfect in workmanship as well as accuracy, of any make in the world. *particular attention being paid to the fine shooting as well as the mechanical qualities of the Arms.* For full particulars and price list, address
MASSACHUSETTS ARMS COMPANY.
CHICOPEE FALLS, MASS., U. S. A.

The Best Paper, and the Best Premiums to Agents, is our motto. We ignore Chromos and all other cheap colored pictures, preferring to put our money in the paper and in Premiums to All.

TREES ROSES SHRUBS

The largest and most Complete Stock of Fruit and Ornamental Trees in the U.S. Priced Catalogues sent as follows: No. 1, Fruits, with colored plate, 15 cts.; plain, 10 cts. No. 2, Ornamental Trees, etc., with plate, 25c; plain, 15c. No. 3, Greenhouse, Free. No. 4, Wholesale, Free, and No. 5, Catalogue of Roses, with plate, 10c.; plain, Free. Address,

SEED-CORN.

DR. E. LEWIS STURTEVANT.

WERE the average farmer to be asked to name the one thing most essential in growing a large yield of corn, he would reply "manure." And yet, there is no greater mistaken belief current than that applying manure will produce the large crop. It is a truth that each reader can verify, that while fertility of soil is essential to every crop, yet that the mere applying of manure alone cannot produce the crop. Many a farmer manures in excess of the capacity of his seed, and hence is wasting capital. In the presence of *sufficient* fertility to mature a crop, we from experience, place in their order—first, seed, then cultivation. It is a matter of common observation with us, that the best-manured land does not produce the largest crop, and that the land planted with the best seed, and sufficiently fertile, does produce the largest crop. If we have a poor seed, whose normal capacity is 40 bushels of corn per acre, we can easily obtain the 40-bushel crop by applying manure and culture, and yet we may be unable to obtain an 80-bushel yield by doubling the amount of manure used. On the other hand, if we have seed of the normal capacity of 80 bushels, we can obtain this 80-bushel yield without much trouble, and with but slight excess of manurial application over what we have assumed was used for the 40-bushel crop. Indeed, in a series of fields, or in one field differently manured in its portions, we need not expect to find the largest crop where the most manure has been applied, but probably we shall find it where less manure, but sufficient manure, has been used. And this leads to another proposition, viz.: that manuring beyond the capacity of the seed may be absolutely injurious to the crop.

We have manured a portion of a field, hoping to realize an enormous crop, using the chemicals which 200 bushels of crop would remove, and harvested but 99½ bushels of shelled corn per acre; while an ordinary field under farm culture, adjacent, fertilized with chemicals for 60 or 70 bushels of crop, has given us 123 bushels of shelled corn. We did not understand the reason at the time, but experiment has since shown that over-manuring does diminish the crop, by forcing leaf growth at the expense of grain development. Indeed, this last year, we have known a field upon which 20 carts of dung were used, to furnish less crop than an adjacent field manured with six bags of Stockbridge manure per acre. Under like manuring, two crops may vary widely according to the seed used, and an examination of the reports which are scattered through our Agricultural Society publications,

BLUNT'S WHITE PROLIFIC CORN.—(From Life.)

will make plainly evident how much more valuable one variety of seed is than another.

If we examine a little into the botanical history of the corn plant, we shall find that the ovaries in the ear, through the intervention of the silk, are fertilized by the pollen grains which are shed from the tassel. We will furthermore observe, that generally the pollen is shed from each plant before the silk in that plant is sufficiently developed to receive it. This is a provision of Nature in favor of cross-fertilization, and against self-fertilization or in-breeding. Hence, as the ovaries on an ear are fertilized by pollen from other plants, each kernel is liable to have a different male parent, and, as a matter of fact, these kernels, or the majority of them, are not brothers and sisters, but half-brothers or half-sisters; that is, they have the same mother but different fathers. Hence, we should expect what we actually find—a great diversity of inherited character between adjoining kernels in the cob. In our experiment, with three kernels in a hill, under equivalent circumstances of culture, under the same excessive manuring, the difference of growth between the three plants throughout the whole period of growth, was well marked, and the crop capacity was so different, that while one hill yielded one pound of ear corn, an adjoining hill yielded 3¼ pounds of ear corn, and while one hill yielded 1½ pound of fodder, another hill yielded 6¾ pounds of fodder. As a matter of fact, two kernels of corn which are taken from the same ear and which are neighbors, may produce plants so different that one shall be agriculturally barren, another of extreme prolificacy; one may be very leafy, another with far less leaf expansion, etc., etc.

We will furthermore observe, if we study our fields, that while every plant bears a tassel which sheds pollen, there are a great many plants which are either absolutely sterile, or agriculturally barren; that is, bear such inferior ears that they might as well be sterile, so far as their contribution to the crop is concerned. After many countings of stalks in many fields, among good farmers, we have concluded that about one-half the stalks in an ordinary corn-field are agriculturally barren, and the last we have counted were in the field mentioned above as yielding 123 bushels; here 74 per cent. bore ears worth counting, and 26 per cent. were either sterile or agriculturally barren.

This being the condition of affairs in our corn field, it is seen that to obtain good seed, something more is necessary than to select good ears, or twin ears, etc., the probabilities being that every ear has at least half its kernels pollinated from barren stalks, and as we have no means of distinguishing the kernels which result from prolific parentage, we must necessarily in this kind of selection improve the shape of our cob, the arrangement of the kernels etc., much more readily than we can improve the prolificacy. Indeed under the method of selection now in vogue, progress must be slow and uncertain until through intention or through accident, the barren pollen is eliminated from our fields; then, *then* only, are the conditions such that progress will be rapid, and results certain. The first mention of the breeding of seed corn, by confining the fertilization of ovaries to pollen from fruitful plants, is in the American Agriculturist of December 1867, when N. S. Bidwell, of St. Paul, describes the process of castration as practiced in Tennessee. Whether the corn being disseminated by Mr. Blunt of Tennessee, so remarkable for its prolificacy, (we have seen many stalks with eight or nine fine ears to a stalk, and a whole armful, cut as stated from a limited area, containing from six to nine perfect and fine ears) is the result of this castration of infertile stalks, we know not, but the *facts* are suggestive. The next mention we find is by Professor Beal, in the Scientific Farmer of April 1877, where the matter is ably

discussed, and the claim fairly presented. This latter communication, as well as Darwin's work on cross-fertilization in the Vegetable Kingdom, received at the same time, called our attention to this point, and we immediately put it in practice. In 1877, we cut out from our seed field about one-half the stalks; in 1878, we found it necessary to cut out only about one-fifth. Think of this gain: fifty per cent of barren stalks one year, and only 20 per cent from the field planted with this prepared seed the next year!

When this process becomes general, we shall see an immediate and great improvement in the crops that we raise; now, farmers are hampered with poor seed, and so few farmers know what they want, that they feel satisfied with what they have. Sure progress in corn culture must come from the *breeding of the seed:* yes, we mean it, the *breeding of seed.* The careful selection of the corn ears of the type of cob and kernel that is desired, and then the fixing of this type by using males of approved quality — the same as in breeding animals.

We are already over-stepping our limits as to space, and hence cannot go further into this interesting subject, or state what are the qualities that are desired in the corn and the corn plant. We will but say that some qualities can be impressed on the corn in three selections; other qualities require for their fixation twice or thrice three selections. It is very desirable that farmers should think over this matter of seed, and if the subject is studied, the student will be surprised at his own power over the corn plant so long as he works within the limits set by naturnal laws.

Waushakum Farm, So. Framingham, Mass.

CORN versus WHEAT.

BY PROF. ELBRIDGE GALE.

It is well known that there are portions of the great West where corn is the leading crop, while there are others that are almost exclusively wheat regions. This is especially true of Kansas, the eastern portion being eminently, though not exclusively, a corn region, while the western portion is decidedly a wheat region. Having a farm located between the two extremes, I may be permitted to give a comparative view of these two great farm crops.

The wheat farmer will urge from his standpoint the claims of wheat to a leading place in our agriculture, while the corn farmer will, with equal earnestness, sing "Corn is King." The wheat farmer will proudly tell us that Kansas ranks to-day first among the States in the production of wheat, and the corn farmer will tell us, with as much show of State pride, that Kansas ranks only the fourth among the corn-producing States. As for wheat, we know that on a very large area of the Western plains it is a decided success, while in the eastern portion of the State the corn crop is equally successful. The writer thinks that he has seen a heavier crop of corn growing in the valley of the Blue than in any of the States East. Now, while not prepared to speak disparagingly of either, I may be permitted, both from personal experience and observation, to judge somewhat of the comparative merits of these two great staple crops. It will be well to remember, before making any comparison of the two, that almost all statistics of farm crops are greatly in excess of the reality, both as to the average and the aggregate amount. The experienced farmer has already learned that it will never do in his calculations to put very great reliance upon the reports that are gathered up by our agricultural bureaus, or that find their way into the land-advertising sheets of the West.

Let us first consider the comparative cost and return of fifty acres in corn and wheat respectively. First the corn crop.

	Dr.
To plowing 50 acres	$50.00
6¼ bushels seed	1.30
Planting, 50 cts. per acre	15.00
40 days tending	80.00
Picking, 8 cents per bushel	60.00
Total cost	$206.30
	Cr.
40 bush. corn per acre, 2 000 bush., at 20 cts.	$400.00
Value corn stalks, 50 cts. per acre	25.00
Total credit	$425.00
Less cost	206.30
	$218.70

The wheat crop will stand about as follows:

	Dr.
Plowing 50 acres	$50.00
50 bush. wheat for seed	30.00
Seeding, 30 cts. per acre	15.00
Harvesting, $2.00 per acre	100.00
Thrashing, 8 cts. per bush	60.00
Total cost	$255.00
15 bush. wheat per acre, at 60 cts.	$450.00
Less	255.00
And we have	195.00

above cost of production against $218.70 in the case of the corn crop. In both cases we have sought to give the average figures. In these estimates the corn crop has a few dollars the preference, but not enough, perhaps, to be taken into account if there were not other points of difference which the figures only partially reveal. These points favor the corn side of the argument. It is worthy of note that the farmer and his regular help can mainly handle the corn crop, and hence the extra price of harvest labor is avoided. The farmer has also more time for handling the corn crop both in the culture and in the harvesting, which is very important to the man of moderate means. Again, the seeding of the corn crop is a very small item, while the seeding of the wheat crop is a heavy tax. It is an important fact also that the outfit of machinery necessary for handling the wheat crop is very expensive, while the corn crop demands very little in this direction. It should not be forgotten also that the corn crop can be marketed in the concentrated form of beef, pork, butter, cheese or wool, always paying a good percentage upon the original value of the corn for the expense of feeding, besides adding materially to the fertility of the farm, while on the other hand wheat will be a constant drain upon the fertility of the soil, and at the same time involve a heavy expense for marketing. An abundance of corn results in a bountiful supply of beef and pork, while wheat produces neither.

As we move west over the plains we soon reach a point where the corn crop becomes uncertain, and at last where it fails altogether, while wheat comes in as the great staple. Before the emigrant moves beyond the corn belt, he will act wisely if he takes the above facts into consideration. He should remember that though corn may be the rougher, it is, all things considered, the richer crop. With the wheat crop there is no alternative but to haul it to market and take what it will bring; while with the corn the farmer is more nearly master of the situation, for if the market price does not suit, the thrifty farmer will find a way to feed it at home and market the products in a concentrated form. In view of all the facts then, we are prepared to choose the corn-producing lands for a successful agriculture. And I cannot repress an expression of the belief that those who have been so eagerly moving out upon the wheat lands of the Far West, beyond the corn belt, have made a financial blunder that many, when too late, will sorely regret.

CORN EXPERIMENTS AT CORNELL UNIVERSITY.

PROFESSOR I. P. ROBERTS.

EXPERIMENTS IN CORN, 1875.

	Sound lbs.	Soft lbs.	Total lbs.
1. Ridge culture, heavily hilled with plow twice, cultivated twice	352	55	407
2. Deep flat culture (4 times)	290	19½	309½
3. Shallow flat " (4 times)	324	43½	367½
4. Continuous flat cultivation (7 times)	362	22	384
5. Drilled 1 stalk to the foot (flat culture, 4 times)	365½	18	383½
6. 5 stalks in a hill (flat culture 4 times)	369	29	398
7. 4 " " " (4 times)	438	44	482
8. 3 " " " " "	301½	127	428½
9. 2 " " " " "	266	49	315
10. Unlimed " " "	335	51	386
11. Limed, 200 bush. per acre (4 times) flat culture	493	57	550
12. Unsuckered " " " 4) times)	338	50	388
13. Suckered twice " " "	308	42	350
14. Unlimed Western corn, did not get ripe " " "			341½
15. Limed, Western corn (200 bush. per acre did not get ripe			545

REMARKS.

All plats but 14 and 15, common eight-rowed yellow. All plats unless otherwise designated four-stalks per hill, and 3½ feet apart both ways. Ground sandy loam, except one small corner which inclined to stiff clay. Plat 1 had the most clay soil. Plat 4 the least, and it disappeared at plat (five) 5. The field corn adjoining on clover sod, clay land, not good; yield only 40 bushels of shelled corn per acre, season cold. The land used for experiments, had a southern slope, had grown two crops of clover—a little timothy in it—in 1872; one crop in 1873; the second crop was left on the ground. Plaster—gypsum—was applied (two bush. per acre) to the clover both years. Plowed in the spring of 1874 and planted to field corn without manure, except a small quantity of plaster applied to the hills soon after the corn was planted. Plats one-tenth of an acre. Corn husked last of October and weighed in the field; to get the yield per acre of shelled corn multiply the totals by ten and divide by seventy-two.

EXPERIMENTS IN CORN, 1876.

No. of Plat.	Yield per acre. bush.	lbs.
1. 5 stalks per hill, no manure	41	10
2. 4 " " " " "	42	22

REMARKS.

Ground inclined to be too sandy and gravelly; entirely free from clay. Had been in clover two previous years; mowed twice each year. Southern slope; season dry and suffered much from drought. Four stalks in a hill, except where otherwise designated. Hills three feet and a half apart both ways. Variety of corn, eight-rowed, yellow. Cayuga plaster used unless otherwise designated. Corn very dry when husked, and 70 lbs. of ears counted as a bushel. Cultivated four times, hoed once. Moderately ridged culture. All superphosphates dropped in the hill thoroughly mixed with the soil and the corn dropped on them. Plats small, less than 1-40 of an acre each.

All experimental plats, except those of 1875 were separated by one vacant row.

EXPERIMENTS IN MANURES, ETC., 1877.

	lbs. per plat.	Bushels per acre.
1. 25 lb Stockbridge Corn Manure.	58½	25 5-70
2. Nothing	72½	31 5-70
3. 20 lb Soluble Pacific Guano	95	40 50-70
4. 20 lb Lister's Ground Bone	114	48 10-70
5. 20 lb Lister's Superphosphate	131	56 10-70
6. Nothing	138	59 10-70
7. Crofut Superphosphate	135½	58 5-70
8. Seed Soaked 12 hours, and rolled in plaster, and about one tablespoon of plaster dropped in each hill	125½	53 55-70
9. 20 lb Plaster sowed broadcast, harrowed in	140½	60 15-70
10. Nothing	119½	51 15-70
11. 25 lb Stockbridge, sowed broadcast, harrowed in	108	46 20-70
12. *Seed soaked in Vitative compound	106	45 30-70
13. Suckered	120½	51 45-70
14. Unsuckered—four stalks—compare with 15	112	48
15. 5 Stalks	112	48
16. 3 "	125	53 40-70
17. 2 "	110	47 10-70

REMARKS.

All manures, unless otherwise stated, were dropped in the hill and mixed with the soil. Ground, clover and timothy sod. The plats, with extreme numbers, 1 and 17, were the poorest, the ground growing better toward the middle. Plats, separated by one vacant row. Soil, a little too porous; spring, dry; corn, somewhat injured for want of moisture. The land had borne a crop of clover and timothy the preceding year. Plowed once.

* *Vitative Compounds, directions for using:*—Dissolve the Compound in sufficient water to immerse the seed, then add the seed and allow it to soak from thirty-six to forty-eight hours. The Compound is poisonous to animals.

The package sent contained TWO OUNCES, and was—according to directions—to "invigorate" one-half bushel of seed. An analysis shows it to be composed of nearly equal parts of lead oxide and sulphate of zinc, † manufactured from phosphate rock and fish scraps.

EXPERIMENTS WITH STOCKBRIDGE MANURE, 1876.

½ acre—180 lbs. Stockbridge manure applied to the surface and thoroughly harrowed in; yield	1,070½ lbs. corn in ear.	
½ acre—No manure; yield	1,071½ " " "	

REMARKS.

Soil rather a heavy clay, from which had been cut two crops of clover in 1874; one crop in 1875; second crop plowed in, in October; ground harrowed in spring and replowed about May 1st. The stalks on the manured plat were perceptibly taller than those on the unmanured, and the ears of corn were much higher colored; moderately ridged culture; four times through with Western Corn Cultivator (two-horse).

EXPERIMENTS IN CORN CULTURE, 1876, TO TEST VARIETIES.

	lbs. of sound corn.	lbs. soft corn.	Bushels per acre.
1. 8-rowed yellow, home-raised seed	141	17	73 69-70
2. Maryland yellow, from D. C. Agl. Dept		97	
3. 8-rowed yellow glazed, fr'm Pa	155½	37	81 28-70
4. 8-rowed yellow, seed raised by Mr. Coy, South Hill	130	17	68 14-70
5. 8-rowed yellow, seed raised by Mr. Bates	145½	22	76 23-70
6. 100-day corn, seed raised by Mr. Holden, Etna	104½	11	54 60-70
7. White corn, seed raised by Mr. Ayers, West Hill	131	20	68 53-70

REMARKS.

Soil and conditions same as in preceding experiment, except that farm-yard manures were liberally applied in the winter. The utmost care was taken to make this test a fair one. Results quite as marked have been obtained since on a larger scale, but no figures were kept.

EXPERIMENTS IN VARIETIES, 1877.

	lbs. in ear.	Bushels per acre.
1. 8-rowed yellow—Mr. Bates	64½	36 60-70
2. 100-day corn—Mr. Holden, Etna.	63½	36 20-70
3. 8-rowed yellow, glazed, from Pa.	72½	41 30-70
4. Gold-drop	60½	34 40-70
5. Western corn, acclimated two years	64½	36 60-70
6. White corn—Mr. Ayres	95	54 20-70
7. 8-rowed yellow—Mr. Bates—planted with pumpkins every third hill	67½	38 40-70
8. Bates's corn—no pumpkins	78¾	45
9. Cook's yellow	128¾	73 30-70
10. Western Hicks's, acclimated four years	122	69 60-70
11. Bates's corn	121	69 10-70
12. 100-day corn	97	55 30-70
13. Penn. corn	96½	55 10-70
14. Gold-drop	107½	61 30-70
15. Western corn, acclimated two years	63	36
16. White corn—Mr. Ayres	66¾	38 10-70
17. Cook's yellow	90¾	51 60-70
18. Western Hicks's	58⅝	33 30-70

AVERAGE OF DUPLICATES, 1877.

	Bushels per acre.
No. 1 and No. 11—Bates's seed	53
" 2 " " 12—100-day corn	45 60-70
" 3 " " 13—Pa. seed	48 20-70
" 4 " " 14—Gold-drop	49
" 5 " " 15—Western corn	36 30-70
" 6 " " 16—Ayers's seed	46 15-17
" 9 " " 17—Cook's yellow	62 45-70
" 10 " " 18—Western Hicks's	51 40-70

REMARKS.

All the plats were separated by three rows of potatoes. Ground clover sod, one year standing, gravelly and variable in quality. The ground, from No. 8 to No. 10 was the best, and the poorest at No. 1 and No. 18. On plat No. 7 pumpkins were nearly a failure, with few vines. Plats 1-40 of an acre each. Culture same as in 1876.

GENERAL REMARKS.

No experiments were conducted in corn in 1878 on account of my absence in Europe, except in the regular experimental corn field, which contains about two acres divided into 33 plats, and which has been in experimental corn for four consecutive years. These experiments are conducted for the purpose of ascertaining the value of various fertilizers of known composition, when applied to the soil continuously. Not knowing the history of the management of the land except during a few years prior to its use for experimental purposes, it is thought best by those having the experiments in charge, to defer the publication of results, at least for another year. There are some difficulties in experimenting, that it is hard to overcome. If the plats are large, the variation of soil often changes the results; if small, some local cause, so slight that it is likely to escape notice, may change results perceptibly in the yield per acre. I prefer to let each one draw his own conclusions from the results given, rather than state any myself. Some results appear to contradict others, the reasons for this I cannot tell. I can only go on and try to ascertain the true ones. Some of the phosphates used have been analyzed and most of them are of good, fair quality; some being very good; but notwithstanding this, they have failed to produce any marked results either in wheat or corn, though the tests have been very numerous and under varied circumstances. Good phosphates produce marked results within ten miles to the north of us, while near Elmira no more marked effect is produced than with us. While visiting Mr. J. B. Lawes of England, I received some hints that I think will assist me in solving this mystery. I have already instituted a series of entirely new experiments for that purpose.

HOW TO GROW A BIG CROP OF CORN.

BY A WESTERN FARMER.

"Like produces like" with seed as with animals. One cannot therefore produce a large crop of corn from seed that has been used to grow amongst a number of barren stalks. Where five stalks have grown in a hill and but one has borne an ear, that corn is useless for seed. Seed should be selected from a crop where each stalk bears at least one ear, and if there is an attempt at two, if it be only in the shape of a husk without even a nubbin, the ear from that stalk should be chosen. This habit of shooting out ears at the joint may be encouraged in this way, and varieties with stalks producing several ears have thus been originated. But unless the seed has been selected with care it is in vain to expect a large yield of corn. The seed is the first requisite. The soil is the next. Too rich a soil is not prolific of grain. Enormous stalks often appear with the smallest nubbins, or only moderate ears. Excessive manuring will not help the yield of grain so much as the production of foliage. The popular method of planting corn on a clover sod may not be advisable in all cases. This is an Eastern practice and is disregarded in the West. It grows out of the necessity for some auxiliary fertilizing by rotation of crops, the prevention of weeds, and the saving of labor in cultivation; an Eastern farm being unable to grow weeds and corn both. We have come to that now in the West, although we follow wheat with corn, or corn with corn; and do not depend much upon breaking up a sod for this crop. It may be a question if it is not wiser to carefully nurse a sod and try to get more permanent meadow than we usually have, rather than break it up so frequently. But to grow a good crop of corn it is not necessary to turn under a sod. Stubble land will produce a heavy crop if it is rich enough in the right sort of fertilizers, and is kept free from weeds. Where the soil is not in good condition manuring is necessary; to put the manure in the hill or drill, is the best method. The crop then gets its food when and where it needs it the most.

An early start is the great point. One ear may be matured on a stalk with a late start, but to mature the secondary ears and give them their full growth, is impossible unless the crop makes a start from the first and *keeps it up.* If we use only a small quantity of manure in the hill to start the plant and the roots have then to grope several inches, or feet, away into the soil for food, time is lost and the crop is sacrificed. No after start can make up for this lost time. An excellent fertilizer to start the growth is a good handful of mixed

poultry manure, wood ashes and plaster. This old-fashioned fertilizer has in it all that the modern formulas provide—nitrogen, phosphoric acid, potash and lime; and the useful effect upon the soil in a chemical way, of these materials, as well. But there must be something else. If stimulating fertilizers are used in the hill or drill, manure must be provided outside and near at hand to furnish food as soon as the former have been exhausted. So that there should be either a bountiful provision of manure in the hill or drill and a good dressing of soluble fertilizer in the soil outside of those, or *vice versa*. Either will answer the purpose required.

The next point is cultivation. This should be immediately after the seed is sown or at least before a weed is to be seen. By running the cultivator in the rows very soon after planting, the soil is loosened, the young sprouting weeds are killed outright before they have done any harm, and the manure and soil are more closely intermingled. Whatever may be the effect otherwise of cultivation of the soil, we know that it helps the crop. The best crops are raised by the use of the plow, occasionally, in the rows. It may be the root pruning as is claimed by Dr. Sturtevant; it may be the mellowing and aerating of the soil: it may be that the soil is kept moist about the roots by covering them more deeply; or it may be all of these; but it is certainly true that the big crops that have been grown have been cultivated with the plow more or less. Suckering may be dispensed with. Indeed with some varieties of corn, this habit of suckering adds to the yield, as the early suckers often bear ears. The stripping of the suckers stimulates the growth of stalk, and that is to be avoided when we are endeavoring to produce grain. Nothing remains to be done after this when the attempt is made to grow a crop of unusual yield, a dressing of 150 lbs per acre of dissolved bone or Peruvian guano of low grade in ammonia, may be cultivated in at the last working. This will help the formation of ears, and as it will cost from $3 to $4.50 per acre, 6 to 10 bushels of corn per acre extra will pay for it. The filling out of all the imperfect ears will far more than make up this quantity, and every corn grower knows how many imperfect ears there are in the best crop grown. From recent successes in growing large crops of corn, it is difficult to say what the full possibilities of this crop may be; 100 bushels per acre are now frequently grown and it is thought possible that this yield may be greatly surpassed. The truth is we are about now beginning to learn how to grown corn.

CORN CULTURE.

CONRAD WILSON.

Conditions of Success.

SUCCESS in corn culture depends on conditions that are not only numerous but very important; and the more clearly the farmer understands them, the more easily and surely will he be able to comply with them, and to win the prizes they hold out. The leading questions that enter into the final yield and profit of corn are;

1. The natural fertility of the soil.
2. The question of fertilizers and manures.
3. The various problems of tillage
4. The variety of grain planted.
5. The question of pedigree.
6. The distance in planting, etc.

Each of these has an influence on the crop much greater than most of us perceive, and helps to determine not only the yield, but also the quality and the cost. Yet it is amazing how many practical men lose sight of nearly all these factors, and rest their hope of a maximum yield on giving special attention to a few leading conditions, by which the profit is supposed to be mainly determined.

The Road to Success.

One man, for example, gives great attention to *plant-food* and little heed to anything else. Another is all engrossed with the problems of *tillage*, and discovers but little value in the other factors. A third attaches exceptional importance to the variety of the grain, or the question of pedigree, and so on to the end of the catalogue. But rarely do we meet with the farmer who is wise enough to divide his attention fairly between all the essential conditions that belong to a maximum crop. Yet it is entirely true, and not to be denied, that very fair results are often reached, even in spite of important factors having been overlooked, and it is also true and still more remarkable, that among all the corn products yet recorded, there is not a single case in which all the elements of success are included or even recognized.

This fact is exceedingly suggestive, and teaches some useful lessons. And especially it teaches in what direction we are to look for progress hereafter. If the largest yield and lowest cost of corn yet reached by the foremost farmers are the result of merely limited and partial attention to the true conditions, while many essential factors have been neglected, what may we not expect from the coming farmer, when all the conditions of success will be more clearly perceived, and more perfectly worked out. Does not this view help to explain the strange contrast often witnessed between the present average of corn production and the higher results frequently reached by practical farmers; and does it not tend to show how the possibilities realized by the latter may yet become the average yield of the country?

It is gratifying to notice, that

More Rational Views,

than formerly, are now held in regard to maximum crops. While reflecting men, on one hand, do not claim that exceptional yields obtained on fractional areas of land, are, in any sense, a fair test for entire acres, so, on the other hand, practical farmers no longer claim that their own experience is the necessary limit of production. They frankly admit that larger yields are often obtained by those who *comply with the essential conditions*. Farmers of this class hesitate to accept accounts of unusual yields without vigorous proof; but when thus proved they admit them at their true value, as exceptions to a general rule. In this they are right; for it sometimes happens that too much is claimed for a maximum yield.

If a man with persistent energy, and favorable conditions succeeds in getting 150 bushels of corn per acre, with also a reduction of cost, even if he proves the fact beyond any doubt, still it does not follow that all others can do the same, or even that he himself can repeat it. Yet it is, none the less, a grand achievement, and stands out as an evidence of what may be accomplished. If timid men get alarmed, or discouraged by such evidences of progress, that is their own fault, but not at all a reason why successful men should suppress their triumphs, or conceal valuable facts from the public. Earnest farmers of true fiber and pluck always find in such conspicuous examples an inspiration that animates their efforts, and impels them forward.

Let me now refer briefly to a few examples tending to illustrate the main question in hand, which is the importance of *all* the factors that belong to a maximum yield.

Distance in Planting.

The crop of 120 bushels per acre, raised many years since by Jesse Buel; the yield of 132 bushels resulting from an experiment by Samuel Chidsey of Cayuga Co., N. Y.; the remarkable product of 160 bushels per acre, obtained by Major Williams of Kentucky; and the still larger result of 170 bushels per acre by the Pratts of Madison Co., N. Y., were all of them largely attributed to the effect of close planting in drills. Though other factors of course had some influence on the yield, yet this question of distance in planting having received special attention, was reasonably considered a special cause of success.

Plant Food.

In the remarkable crop raised by A. Campbell of Owego, N. Y., the cost of production, with all the factors included, was less than 10 cents per bushel, on a yield of 106 bushels of grain, and five tons of stalks. In this case, the abundance and variety of the plant-food added to the soil, were the special feature of the crop, and the real cause of success.

Tillage.

When Joseph Harris announced a profit of nearly $700 on his memorable corn crop of 15 acres, it was shown that the result was mainly due to the exceptional amount of tillage persistently applied to the crop both before planting and during the growth.

In another case, the surprising result obtained by J. W. Dickey of Pennsylvania, (169 bush. per acre,) was mainly the outcome of both the conditions last named. It was due in part to the efficacy of sheep manure long accumulated, and in part to the telling influence of thorough tillage which, as in the case of Harris, was often repeated both before and after planting.

Pedigree.

Again, the recent efforts of enterprising men who have investigated the *prolific capacity* of this cereal, clearly prove the great importance of pedigree, and show that the transmission of quality by descent is destined to become an important element of success The results obtained by Mr. A. E. Blunt, in Tennessee, Dr. Sturtevant in Massachusetts, and others who have practically examined the subject, clearly indicate the possibility, not only of greatly increasing the number of ears on the stalk, but of transmitting this quality so as to insure a *permanent* increase of yield per acre.

Conclusions.

From this cursory view of the possibilities, as well as the actual products often resulting, or mainly resulting from single causes, or from a few conditions only, we may derive the following instructive suggestions:

If the intensive development of a single element of success shows such striking results in the yield and profit of corn, what would be the effect, should the farmer distribute the same energy and skill among all the processes of the crop, giving equal and uniform attention to all the conditions of success?

In other words, if intelligent farmers would combine these best methods, applying plant-food with the liberality and judgment of Campbell, Compton, Parker and others; if they would test the value of tillage with the courage and faith of Harris and Dickey; giving the same prominence to pedigree as Sturtevant and Blunt, and adapting the spaces in planting to the varieties of grain, and to a maximum yield, after the manner of Williams and Pratt; how can we help seeing that by thus giving the full benefit of natural laws to *all* the conditions on which the crop depends, they would increase in the same ratio the amount and certainty of the yield, as well as the rate of profit.

Of course, there are some who will be ready to exclaim that all this is impossible. In reply, it only needs to be said, that all this may be accomplished with comparatively little difficulty, and with large remuneration, whenever American farmers will adopt, as they easily may, a system of experiments adapted to produce such results.

CORN AND ITS CULTIVATION.

HUGH L. WYSOR.

As the time is approaching when farmers will begin to prepare for spring planting, and as the seedsmen in their catalogues are already beginning to offer different varieties of seed corn, perhaps a few observations in reference to the seed and the cultivation of this cereal, derived from my own experience, may not prove uninteresting to your readers.

In Johnson's Encyclopedia of Agriculture, we are informed that there are only five original varieties of corn cultivated in the Middle and Southern States, and that all other varieties are only intermixtures in some form or other of these five, to which by careful selection year by year they may be brought back. These five are described as being the big and the little white flint, the big and the little yellow flint, and the white Virginia gourd seed. The yellow gourd seed is said to be a mixture of one or the other of the two yellow kinds and the white gourd seed. At the same time, by years of careful selection, a fixed characteristic may be given to a mixed variety at which it will remain with but little variation. I believe that what is here stated is in the main correct.

In the spring of 1875, I purchased in New York city, one-half bushel of a corn called the Mammoth White Dent, which I planted about the 15th of May. In this climate (it must be understood that I live in southwest Virginia, the climate of which is not greatly different from that of Maryland or Pennsylvania) corn is generally planted between the 20th of April and the 20th of May following, unless the variety be the pure white flint, called here Rareripe, which may be planted as late as the middle of June. As a rule, the pure white flint is not planted except by some few for bread, nor do we plant the pure white gourd seed, but all shades of varieties between the two mentioned. I planted the white Dent, which must have originated in some Southern or Western State, as before stated; and on the 15th of October, although it was not then mature, cut it in order to avoid frost. It proved to be a rather short-eared variety, with very deep grains, a large cob, carrying from 20 to 30 rows, and the best ears would easily shell out a pint of corn, though it would not weigh nearly so well as a flinty corn. From the half bushel planted, I saved only a bushel which I thought would germinate. This I mixed with the same quantity of a corn raised from seed received of the Department of Agriculture, called Rumer's White, a very white, floury corn, with long ears of 16 to 18 rows. A large proportion of this mixture still failed to mature as it ought, and accordingly the year following, I put in with it some of the kinds usually planted here, which had the general effect of rendering the ears more plenty, and of rendering the size of them from 12 to 14 rows. I can now go to my crib and pick out ears representing as many as 20 different sub-varieties, varying in characteristics all the way from pure flint to pure gourd seed. The same is the case to a greater or less extent with the cribs of a majority of farmers in the country, as even where a single pure variety is planted it is difficult to keep it so, from the ease with which different kinds intermix. The question then arises, whether it is better to plant mixtures of the sort above described, a pure original variety, or a mixed variety with a fixed characteristic. For my own part I have no information on this point.

To show how difficult it is to fix the character of any mixed variety of corn, I will state my own experience. Last spring I selected from my crib one ear each of two kinds—one a 12-rowed corn, with grains rather deep but hard, broad, fluted between the rows, and easily shelling out one pint of grains; the other, an 18-rowed corn, with deep, narrow indented grains carried on t smallest cob I ever saw, with the rows perfectly straight and the smallest possible space lost between them. I planted those two ears in such a manner that I was pretty certain that they could not intermix with each other, and so that the prevailing winds would not blow the pollen from neighboring crops among them. When I gathered the product, I found of the first kind not a single ear like the one I planted, and only two or three approaching it; and of the second, I found 20 or more ears like one another, but not one like the original ear. I conclude from this that a fixed character could not be given to a mixed corn in less time than ten years, and not then unless unusual care should be continually taken to make the selections very nearly approach the given standard. I should, perhaps, explain that by a mixed variety is meant not one that has different kinds of grains on the same ear, but one that has resulted from the intermixture of some of the five original corns. In one of your city contemporaries of last year, the question was raised whether more corn to the acre could be raised by planting the small flint corn as at the North or the large dent as at the South. This, of course, in a climate where either would mature equally well, as they would here for instance. I would remark in passing, that it is the practice here to sow the ground in wheat after the corn has been cut off, and for this reason it is in some respects preferable to plant a corn which will ripen not later than the 1st of October. Allowing that the small corn will produce two ears to the stalk—and many of the small sorts will do this—and that each ear shells out one gill; and that the large corn will produce one ear to the stalk, which on the average will shell out one-half pint, then the yield of each will be precisely the same; and this, I think, is about the truth of the matter. But if the small kind has only one ear to the stalk, then the yield of the large would be much greater.

We may now make a calculation of how much corn it is possible to raise to the acre, and see how much is actually raised. When the ground to be planted is checked three feet each way, as, I believe, is generally the course pursued by farmers, and two stalks left in each hill, there will be 9,680 plants to the acre; and if we suppose that every two plants yield one pint, the yield per acre will be 75 bushels. Now I can pick from my crib 64 ears which will shell out a bushel, or one pint to the ear. If, then, we suppose that every plant yields one pint, with the ground laid off as before, the yield will be double, or 150 bushels per acre. Thus, under the most perfect conditions, it is always possible to raise 150 bushels to the acre; but then these perfect conditions are rarely if ever obtained. Such a result as the above is frequently obtained on small plots of ground or on fractions of an acre, sometimes on one or two acres, but it is not at all probable on a large field. As a matter of fact, I have averaged 70 bushels on eight acres. A man may select ears which will shell out one pint to the ear, but he cannot do this by taking the ears in the order they grow in the field, for there is always a large proportion of nubbins, and many plants fail to ear at all. These nubbins come either from replants or from the thin parts of the field. A stand of corn is never so good but that there is more or less replanting to be done, and not unfrequently the replants constitute a very fair share of the field. Replants do not usually ear well, not because, as is frequently supposed, there is not time for them to mature, but because they are shaded by the earlier and larger plants, which cut off the sunshine and the air from them and cause them to grow as they would under the shade of a tree. Making all necessary allowances, 50 bushels per acre on good land ought at present be considered a good yield.

How far apart the plants stand, and whether they should be checked or drilled, is a question which depends for its answer on the variety to be planted and the character of the soil. The small kinds, may, of course, be planted much closer than the large.

It must always be borne in mind that air is as necessary to the existence of corn as to that of the human being. Want of air has pretty much the same effect on a crowded field of this crop as it has on a great number of people closely collected in a small house on a hot day in summer.

Plants that grow 12 to 14 feet high should stand not less than four feet apart each way, as then they can get air in four directions. Corn which has been checked has the advantage that it can be worked with less hand labor, especially when the land is very foul with weeds. In very sandy soils, it is absolutely essential that the ground be marked off both ways, as otherwise the plants will burn up, or "fire," as it is called. It is meant by this that when the corn is about to shoot, the blades will turn yellow from the ground to above the ear, the stalk becomes hard, and the ear fail to fill. Drilling may be practiced with advantage in clay soils. A plan sometimes pursued here is to lay off the rows three feet apart, and plant every 12 inches in the row, thinning to one stalk. This gives nearly five thousand more plants to the acre than where the rows are

three feet apart each way with two stalks in the hill, and supposing the ears to average equally well in both cases, the yield per acre would be one-third greater. I once saw a field of 100 acres planted in this way, which was estimated by good judges to average 60 bushels per acre. Here we never leave more than two stalks in a hill, as in this way the ears are so much longer and larger, that they will yield more than when three or four stalks are left, especially as in the latter case, the plants frequently do not have any ears at all from being too crowded.

It would be the hight of folly for a man here to pursue the plan followed by Judge Buel in raising 120 bushels to the acre, which was to plant in drills, two rows in a drill, the plants nine inches apart, and three feet nine inches from the center of the drills. As an illustration, I may state that on one occasion I determined, if possible, to raise 100 bushels on an acre. I marked off an exact acre of sandy land, which had been heavily manured for the purpose, and planted the corn in rows three feet apart, with the plants two feet apart, and two stalks in the hill. The corn grew nearly 14 feet high—it was a large yellow kind from Ohio—but on two-thirds of it there was not a single ear, so that instead of raising 100 bushels, I raised scarcely ten. The corn was burnt up for want of air.

A word now as to the object to be sought after in cultivating corn, and I shall cease to try the patience of your readers. One object is, of course, to keep down the weeds, but the principal object is to *stunt* the growth of the stalk. In this, I concur in the opinion of Dr. Sturtevant that the roots must be pruned. That corn should grow to the hight of 14 or 15 feet, as the seedsmen in praise of a variety which they have for sale, often say it does, is in my opinion a serious disadvantage for more reasons than one.

The best ears of corn I ever saw grew on stout, stubby stalks not over 8 or 10 feet high. Whether the side roots be cut or broken off by either deep or shallow plowing does not much matter, as the tap root is out of the way of being injured by either method. It is certainly, however, a useless, if not injurious practice to throw hills around the plants, as it cannot possibly do them any good. It has been the result of my observations that the stalks can be thoroughly stunted only by rapid successive plowings. If an interval of a week or ten days is allowed to elapse after the first working before the second is begun, there will scarcely be any check to upward growth of the stalk. As soon as the first working is finished, the second should be begun at once, cross-plowing, if the ground be checked. These workings should be continued till attention is demanded by other crops. Here, we have no particular time to "lay by" corn. We generally quit working it at harvest, which occurs between the twentieth of June and the first of July.

Newbern, Va., Jan. 20, 1879.

THE PROFIT OF CORN RAISING AS COMPARED WITH WHEAT.

"Can we produce corn in the East profitably," is a question often asked, but seldom answered satisfactorily. The greater ease of cultivation in the West, the heavier production, the low rates of transportation added to the natural adaptability of the soil, all tend to detract from the corn as a principal crop. Many stock feeders are buying Western corn and affirm that they do so much more cheaply than they could produce it on their own lands East. Besides, the quality of the grain for feeding purposes is in advance of our own production. If we cannot raise corn at a profit, equal to that of other grain, we are unwise to pursue its cultivation, except what is needed for home consumption, and even that may be more profitably purchased in many instances. In 1876 the corn crop of Illinois was estimated at two hundred and twenty-three million bushels; that of New York at only twenty-one million. This shows that the production of this crop here is not profitable. Again, let us compare the average cost of corn on a given area of land with the cost of wheat on an equal area. Two fields of ten acres each were taken for experiment, and a careful account kept of the disbursements and receipts, with the following results:

Corn Field, 10 Acres.

	Dr.
To 10 days plowing	$30.00
" 3 " dragging and marking	9.00
" 5 " planting	5.00
" 20 " cultivating	40.00
" 10 " shocking	10.00
" ⅛ of crop for husking	31.25
" 5 days cribbing	15.00
" 100 loads manure	50.00
Total	190.25

Corn Field, 10 Acres.

	Cr.
By 1,000 bushel ears	$250.00
" stalks	50.00
Total	300.00
Less cost	190.25
Bal.	109.75

The account above is estimated at a very low figure, and as will be observed, no mention is made of hoeing or fertilizing. One hundred bushels are far above the average crop in the East, especially on the hills. Some men understand corn and have large yields nearly every season; but of these there are few. Now let us note the profit of the same field sown with wheat.

Wheat Field, 10 Acres.

	Dr.
To 10 days plowing	$30.00
" 2 " dragging	6.00
" 6 " harvesting	9.00
" drawing	6.00
" thrashing	19.27
" 100 loads manure	50.00
Total	120.27

Wheat Field, 10 Acres.

	Cr.
By 350 bushels	$385.50
" 5 loads straw	15.00
Total	400.50
Less cost	120.27
Bal.	280.23

By comparing the two we find a balance of $170.48 in favor of wheat, or while from the ten acres planted with corn we receive a profit of $109.75, from the same field sown with wheat we would receive $280.23, aside from cost of production. With this difference it is not profitable to raise corn here for market. But little corn will yield well on old ground without hand culture, and if this item were also added, the difference would be considerably greater.

Hector Bertram.

GROWING CORN ON THE 43rd PARALLEL.

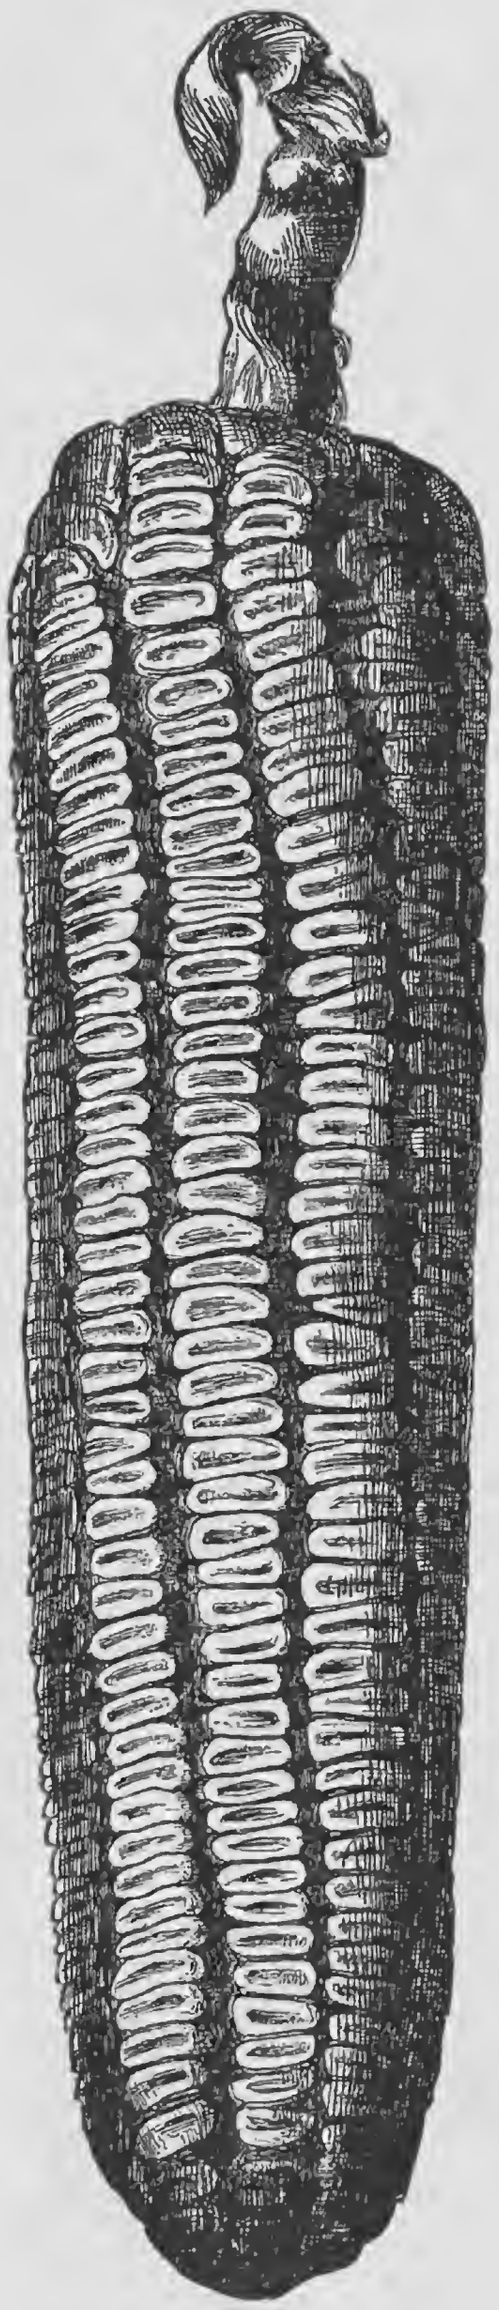
F. D. CURTIS.

Indian corn is the most important crop, next to grass, grown in this region. The farmer depends upon it almost entirely to make his pork and beef, to winter his poultry, and to a considerable extent for feeding his working teams, for which it is well adapted. It does not enter into the domestic economy of housekeeping as much as it should. The hard, or flint corn, is the only variety grown and this is not so well adapted for cooking, and is much harder to digest, than the lighter and softer dent variety. The latter does not contain so much oil and makes lighter and more digestible food. Farmers have not arrived at the progressive point of purchasing meal made from dent corn and using it in their families, thus saving flour, and bringing to their table a healthy, nutritious and cheap food. In making a collection of corn grown in this latitude for exhibition in Paris last year, under the supervision of the Agricultural Department, we found twenty different kinds. In color they were yellow, brown, white, and red, and one was variegated, each kernel being tinted with yellow and brown. The largest number contained eight rows on the cob; one, the Dutton, had ten, twelve, and even sixteen rows. There is a late and an early kind of Dutton, the early having the longer ear and the late containing twelve and sixteen rows with a thick and heavy cob. The kernels of the Dutton corn are very small and closely set. Some varieties have an exceedingly small cob and these are usually the earliest sorts. Ninety days are sufficient to ripen several of these kinds. They were brought from Canada. Our latitude is nearly as high as corn can be made a successful crop in New York State, or New England. It is planted in May, or as soon as the ground is dry, and warm, and cut up at the bottom as soon as ripe, the last of August or the first of September, always if possible before a frost. It is set up in stooks of twenty-five hills each and when dry enough is usually drawn into the barn where it is husked. Corn in this region is planted in hills, the rows being from two feet and a half to three feet apart. The early kinds, having smaller stalks, can be planted closer together. Three and four kernels are put into a hill.

In olden times a good deal of hand labor was used in tilling corn, but with the improved cultivators it is found that corn can be pretty thoroughly tilled without much hand hoeing. The hills are not now rounded up as they were formerly because experience has demonstrated that good crops can be grown by leaving them more level. One hundred bushels of ears are more than the average yield to the acre and would be considered a large crop. Farmers prefer to plant corn upon sod ground although on rich land successive crops of larger yield may be grown. Corn will bear any quantity of manure. Early and thorough tillage are essential for a good crop; by early tillage we mean when corn is young. Grass and weeds growing with the crop are destructive to it. The best and surest crops are grown when the manure is spread upon the sward in the fall, as it then becomes thoroughly incorporated with the soil, and is in a condition to feed the plant at the beginning, and all through its growth. When put on in the spring, if the season should happen to be dry, it does not decompose, and the crop does not receive the benefit.

By selecting the ears which ripen first, any kind of corn can be made to mature earlier, and it has been proved that by selection and good tillage corn can be improved both in the time of maturing and in quality. The same general law applies to it as to other grains. When different kinds are planted contiguous they generally mix in the ear, but sometimes hybridize, and produce a new variety. Corn stalks well cured will make more milk than any other fodder. A bushel of corn fed to hogs is estimated to make ten pounds of pork, but if ground and cooked it will make twenty-five per cent. more. Farmers calculate it will pay to feed corn to hogs when the pork will bring as many dollars per hundred, as the corn will shillings per bushel. This old rule has been handed down from father to son for many generations.

Kirby Homestead, Saratoga Co., N. Y.



BLUNT'S WHITE PROLIFIC, EAR.

CORN AND CORN DODGERS.

Corn is the king of all crops. It calls for some little help from the hand of man, but it responds in yield and quality, in exact proportion to what it gets. It is so universally grown and is so common, that words to teach of its culture seem out of place. Yet, the average yield in our whole country is not one-fourth its capabilities. As a nation we seem to be satisfied with about twenty bushels per acre, while ninety is within the reach of every farmer in the corn-growing belt, which covers nearly all the States. Here is an evident lack of either the knowledge how to grow the crop, or the energy to put the knowledge into practice. The whole matter of its cultivation is so simple, so easily understood, the seed, soil and climate are so well suited to each other, and the crop is so valuable when ripe, I may say from the time it is knee-high till the following month of March, that the neglect and abuse it generally receives is one of the wonders of American farming. The fact that a farmer may lose all his other crops, and still do well on a good corn crop speaks in its favor. Corn needs, in order to insure a heavy yield, less labor and preparation, in these days abounding with farm machinery, than any other field crop. The time of harvesting it, too, comes at a time when there is little else to do, and with all these advantages what do we get? What can we expect to get from a crop to which we give nothing?

How many of us use good seed, and give the land deep plowing, or subsoiling, manure, and timely and thorough cultivation? Do we not generally plant it on land known to be foul, for the very purpose of making the corn crop clean it? We make the crop a farm scavenger, and then groan over a poor yield. Why do we put all our efforts into small grain planting, so that by corn planting time we have none left for our most important crop? I will tell you—it is because we are all corn dodgers.

We dodge the questions involved in growing corn, and excuse ourselves for having a short crop, by saying, "Oh! anybody can grow corn." But in turning around to escape the eye of our questioner, we are confronted with a chance grain or two which had fallen on good soil, grown up, made a shade and shelter for the hens, by them been scratched and manured, till in all the pride of independence it had reared its tassel ten feet in the air, and thrust out from its robust stalk three or four ears of *seed corn*. Why did not the farmer scratch around it, manure it, and grow a crop of seed corn?

He dodged his duties;—what is a man who dodges his corn crop but a corn dodger, and what right has he to complain if his corn dodges him?

S. Rufus Mason.

INDIAN CORN FOR MILCH COWS.

L. S. HARDIN.

In this country, with our improved methods of dairying, the sheet-anchor of success is Indian corn. This remark applies as well to summer as to winter feeding, though it is a far more important factor in the latter than the former system of dairying. Men have discovered that no machine, not even a cow, can do profitable work with only a half supply of material. Of course, you can choke a machine, and overfeed a cow, just as you can blunder in anything else; but the man who proposes to carve out success must learn, by diligent application, the exact point to which a cow can be profitably fed, and, having found it, he must not hesitate to supply the food.

To take the subject up in an orderly manner, it is proper to first treat of the effect of feeding corn to cows in milk.

Effect on Milk Yield.

The practical dairyman need hardly be told that Indian corn, properly fed, will cause the cow economically to yield more milk to the pound of food than any other variety of feed. It is not only of prime value itself, but it renders many other kinds of food valuable, that, when fed alone, do almost as much harm as good. In the West, where high feeding has probably been brought to its greatest perfection, the favorite mixture is one-half, in bulk, each of bran and corn meal. The best results are reached by an addition of one pint of oil-meal daily when the cow is fresh. A mixture of bran, shorts and ship-stuff, which at the West is called "mill-feed," may do as well in milk-making if fed with cut straw; but it is not in sufficient use, or cheap enough, to call it an economical milk food that will compete with corn meal. Some of our best authorities state, as the relative value of meal, that 100 pounds of corn meal is equal to 76 pounds of wheat, 83 of oats, 90 of rye, 111 of barley, 60 of beans and 40 of oil-cake. This is pound for pound and does not relate to values, which, of course, is a vital question with cow feed. The heaviest profitable feeding, with corn meal and a cow of average weight, is four quarts of finely-ground meal a day, mixed always with coarser food.

How to Feed Corn.

When we speak of how to feed corn, we by no means propose to confine ourselves to the grain alone. We should consider its feeding quality in all its varied forms, as meal, whole grain, the stalk, as fodder and in ensilage. That every particle of this plant is valuable, even to the cob, there can be no reasonable doubt. The only question is as to how it is manipulated. If the corn is ground fine and the cob course and the two mixed, there is no better food for making milk. This I have seen demonstrated year in and year out with a herd of Jerseys, and it convinced me the cob meal did a good part in the economy of milk-making, and did not injure the animals in the least. When mixed in a slop it forces the highest possible yield, but I do not think it pays to cook meal for cows, unless it is done merely to

accompany other and coarser food that is being cooked.

In the Ear.

At the West corn is often fed in the ear, particularly the nubbins, and when we consider the cost of grinding and the cow as having an abundance of time to chew the corn and cob, it is an open question which way is the more economical to feed, especially when the cows are in fine health with active, digestive organs. Corn is very hard, and requires hard and continued boiling, or long soaking, to improve its quality with water. This is probably caused by the oily nature of the outside skin or husk. It will take up about as much water when soaked cold in twenty-four as in forty-eight hours. When the corn is not in small nubbins it is always broken into three or more pieces before being fed. If slightly salted, the cows relish it better.

Feeding the Stalk.

For many years I carried a herd of dairy cows through every winter with little or no other rough food than corn-stalks, cut into inch lengths. With this I would mix wet at the rate of four quarts per cow a day of corn meal and bran mixed and slightly salted. There are few, if any, better rough crops, not excepting the best timothy or clover hay, for making milk, than common corn fodder when fed as suggested. Some of the largest pieces would be rejected, but if a little meal was scattered over them, unless the cow was more than usually delicate in her tastes, they would soon be eaten up. Young heifers in full flesh would reject this part of the stock, but it was then useful as bedding and manure. The chief recommendation of this fodder is its low price, when compared with hay or even straw, containing so much more nutriment than the latter. It usually costs about one-fifth the market price of timothy hay, and for purposes of feed is, in my opinion, of equal value pound for pound. In feeding they will be of about equal waste one with the other, while their manure qualities are about equal.

As Cultivated Fodder.

This is the cow feed for which I have a special weakness. In strong land the rows should be planted three and half feet apart, twelve to twenty grains to the foot, and well cultivated as long as the horse can pass through the rows. After the corn has reached that stage when the tassel begins to wither and the lower blades on the stalk turn yellow, the fodder should all be cut and allowed to lay one day in the sun, or two days in the shade, when it should be bound into sheaves and shocked just as wheat is. These shocks, if properly put together, will stand without further trouble until needed for food in mid winter, when the leaves will be found green and nourishing, while the small stalk and little nubbins found here and there in it, give it a constant charm for cattle. The amount of this food that can be raised on an acre of land is simply amazing. There should be eight or ten tons of it to the acre, even after it has dried out in winter. Cows will eat it ravenously without its being cut up, but as meal is so much better for cows when mixed with cut fodder, I would always recommend that it be done. The most serious trouble I have ever had in raising corn fodder, was that the heavy growth would sometimes blow down and break off near the roots. This need not be any loss, however, as it can be fed green to the cows after the order of soiling. Fodder should be raised this way to help out the pastures when they get brown and dried up late in the season. Sweet corn seed is said to be more valuable than any other variety for this purpose, but never having tried it, I would be a little slow in recommending it, as sweet corn does not grow as luxuriantly as the gourd seed varieties.

Ensilage.

This plan of preserving green fodder has hardly been developed in this country, and certainly not to an extent that would justify one in trying it on a large scale. It consists in burying green fodder, cut into short lengths, in the earth sufficiently deep to prevent fermentation, and it is said to keep perfectly until needed for the stock, be that months or years. The labor looks portentous, while, even in its most perfect green stage, corn fodder is but little if any more valuable for cow food than it is in mid-winter, if properly cured and preserved as described above.

NOTES ON CORN INSECTS.

PROFESSOR CYRUS THOMAS.

INDIAN corn, which is one of our most valuable cereals, is subject to the attacks of a host of insect enemies; about forty species are known to be more or less injurious to it in this country. A large portion of these, it is true, do so little damage as to require no special notice except where it is desirable to give a full and complete list. As it is the intention to make this brief article practical and not scientific, I shall only notice those species which at times do sufficient damage to this crop to make it desirable on the part of the farmer to find, if possible, some remedy against their depredations. There is scarcely a moment from the time the seed is deposited in the ground, until the crop is harvested, and I may say consumed, that it is not subject to the attack of some insect pest.

As soon as the hill is covered, it often happens that a hidden foe, which has slept securely beneath the surface during the winter, comes up from its retreat, hungry and in search of food. The grass roots, its favorite food, having been removed by the plow, it finds a welcome substitute in the kernels of corn. Not relishing the hard outer coating, it bores its way into the interior where it finds more appropriate food; or, if sprouting has already taken place, it feeds upon the little roots and sprouts. The reader is doubtless aware that I allude to the

Wire-worms.

So much has already been written concerning these troublesome insects that it is unnecessary for me to enter into a detailed description of them. It is sufficient to state that they are the larvæ, or grubs, of certain slender beetles generally known as "Snapping-bugs," "Click-beetles," "Snapping-Jacks," etc., belonging to the group known scientifically as Elateridæ. They are slender and wire-like in form, with three minute pairs of legs situated on the first three segments behind the head and varying in color from a creamy white to a light brown. Those found injurious are rather small, varying in length from three-fourths of an inch to an inch and a half, and in thickness, from that of a knitting-needle to a small wheat stem.

They are long-lived and strong-lived, and hence difficult to destroy. Lime, salt, soot, and such topical applications seem, as a general rule, to have but little effect upon them. Where the soil is sandy and light, these may be beneficial, but oftener they prove unsatisfactory. Labor is too costly in this country in comparison with the price of corn to justify digging them out, or trapping them with slices of turnips, etc., as is often done in England. To poison them with Paris-green on rope, cake, turnip slices, etc., is not only too costly a process but is rather dangerous for practice on a large scale.

The starving process, I am satisfied, is the best practical method of fighting them that can be adopted, except in small areas, such as garden spots, where the more tedious process of hunting them out may sometimes be followed. But simply allowing the field to remain fallow for one or even two years, is not sufficient; one year's fallow with the ground kept well and deeply stirred, and free of weeds and grass, will be more effectual than thrice that time without this precaution. If they are to be starved, they must be deprived of food, and this means keeping the ground perfectly free of vegetation, unless planted in something that is obnoxious to them, and the list of such plants I am of the opinion will be found quite brief. If strong lime is plowed in, dry, somewhat late in the spring or early in the summer, it will probably prove advantageous and assist in driving these worms away. The starving process is most likely to be effectual in a dry season. The soil conceals other enemies besides those we have named.

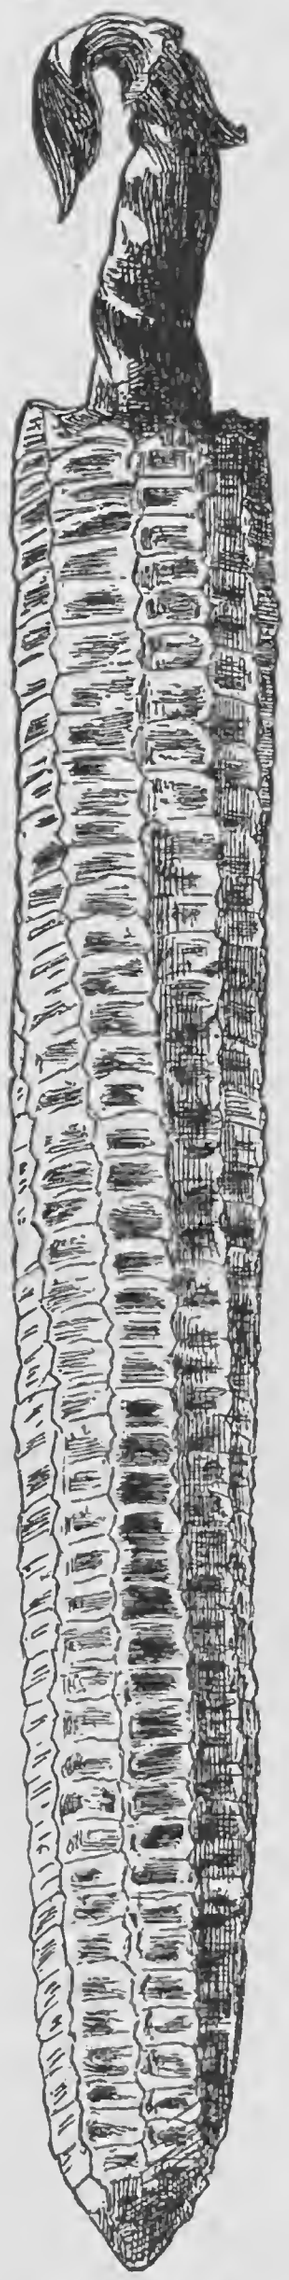
The White Grubs,

or larvæ of May-beetles (Phyllophaga), are often very troublesome in some fields. The treatment recommended for the wire-worms is equally applicable to these insects. There is quite a large number of species whose larvæ may be called "White Grubs," but those that injure corn, grass, etc., by eating the roots, belong to three species. Phyllophaga fusca, P. fraterna and P. pilosicollis, are the most common.

As soon as the young blade shows itself above the ground another host of enemies commence operations upon it. Chief among these are the larvæ or caterpillars of a certain group of moths belonging chiefly to the genus Agrotis, and known by the common name

Cut-worms.

As these have somewhat similar habits, and a remedy applicable to one is usually applicable to others, I will omit a detailed account of the different species, which would require more space than can be devoted to this article. Hunting them out and killing them are undoubtedly the most effectual remedies, and where the result will justify the trouble and expense, it is best to adopt it; but it is scarcely practicable in this country for field culture. The value of fall plowing has probably been over-estimated both in reference to its use as a means of destroying noxious insects and of increasing the next season's crop. But in reference to this, as with most other things, the accompanying conditions must be taken into consideration. If a field has been badly infested with cut-worms, fall plowing, if properly done, is undoubtedly one of the best remedies that can be adopted. But this, to be effectual, means that the ground should be kept clear of weeds and other vegetation during the fall after the preceding crop has been harvested; hence more than one plowing may be necessary. The value of the practice does not lie so much in turning them up to the weather—which is but imperfectly done if the ground is weedy or grassy—as in keeping the ground clear of vegetation and thus preventing them from obtaining a footing. The parent moth in depositing her eggs will avoid situations which furnish no food for her progeny. These pests are usually most injurious when the weather is moderately warm and moist.



BLUNT'S WHITE PROLIFIC, COB.

Last spring I noticed that the young corn during damp weather was attacked by an innumerable host of very small, brassy black beetles, marked with minute punctures, and having the feet, tibiæ and basal joints of the antennæ yellow. These little

Flea-beetles,

which belong to the species named Haltica (Psylliodes) punctulata, injure the plant by eating minute holes in the blade, as do the flea-beetles that often injure young cabbages. This appears to be unusual; at least it is the first time, so far as I am aware, that any one of this group of beetles has been noticed attacking corn.

But the insect which does the greatest injury to this valuable cereal, and which farmers observe with greatest alarm, is, beyond all question, the

Chinch-bug, Blissus leucopterus.

As I have shown by careful estimates given in my Second Report as State Entomologist of Illinois, the loss occassioned by this insect to corn in that State in 1874, amounted to nearly $20,000,000. I can only notice one or two points in reference to its history and habits. I may remark, first, that dry weather is necessary to the development of the pests in large numbers. And in order that the number may become excessive, too favorable, that is, dry seasons are necessary. Their habit of passing the winter in the perfect state, hid under rubbish, in the crevices of stumps, bark, etc., suggests the best practicable remedy that has yet been proposed; which is, to burn, as far as possible, the rubbish and other material that affords them hiding places. It is probable that it would be best to do this earlier in the fall than has been generally suggested. This is not necessary every season, as it is an easy matter for farmers to ascertain in the fall whether they are likely to appear in injurious numbers the following season. That moisture, especially in the form of heavy rains, has a tendency to destroy them, has been so clearly demonstrated that it can no longer be considered an open question. This being so, it is evident that in the winter following a rainy season they will be reduced to a minimum in respect to numbers, and although the following season may be favorable to their development, (that is, dry,) they cannot increase to the same extent possible when two favorable seasons come in succession. The second brood of the following year may excite some alarm, but usually it attracts but little attention. If the season has been dry, and an examination (and farmers should be careful to make thorough and close examinations) in the fall shows them to be present in considerable numbers, although they may not have done any material injury, or attracted attention, yet it may be set down as probable, in fact almost certain, that if the next season is dry, unless destroyed by an unusually wet winter, they will appear in destructive numbers. The warfare against them should at once commence, and fire should be carried to every possible hiding-place, even the fallen leaves of the surrounding forest, if there be any, should be burned. I am aware that some of our best entomologists have some doubts in reference to the value of this remedy; but so far it appears to be the best that has been proposed, except where thorough irrigation is possible, which will undoubtedly be most effectual. Various methods of checking the migrations of the first brood from field to field have been tried with varying success, such as ditching, drawing lines of coal-tar, setting up planks and tarring them, etc. As the season is always dry when they are injurious, the following simple plan has been found effectual where the soil is favorable. Plow a narrow strip around the field; keep it well pulverized by harrowing and rolling, then plow one or two furrows in this dusty strip. Do this every day or two while they are migrating.

Another enemy of the young corn, which, fortunately, only makes its appearance occasionally, is the

Army Worm,

the larva of a dull brownish-yellow moth (Heliophila unipuncta). As these caterpillars always, or nearly always, make their appearance in corn-fields by traveling thither over the surface of the ground, the best method of keeping them out is by ditching; but care must be taken to have the side of the ditch next the field, in the direction of which they are marching, perpendicular. Holes should also be dug in the bottom of the ditch at intervals of fifteen or twenty feet. If the holes and ditch become filled, the insects must be killed in some way and thrown out, or a new ditch made.

The Corn Plant-louse

(Aphis maidis) infests the tassels, ear-stalk and roots, but seldom appears in sufficient numbers to do any material injury.

The stalks are subject to the attacks of a caterpillar which bores into them and feeds on the pith. This is the larva of a moth,

Gortyna Nitela,

whose history and habits will be found described in THE RURAL NEW-YORKER of Sept. 22, 1877.

Another caterpillar which often does serious damage to corn by eating the silk and grains at the tips of the ears while they are soft, is the

Corn-Worm,

or, as it is called in the South, the Boll-worm, the larva of Heliothis armigera. It is not a very uncommon thing in Southern Illinois, Kentucky and Tennessee to see one-half the ears of a crop more or less injured in this way. So far no experiments have been made in order to find a remedy, but it is possible, as suggested by Prof. French in my last Report, that early planting and topping the corn, at least in this latitude, will prove advantageous, by bringing it to maturity before the caterpillar appears. He thinks from his observation that late fall plowing of the fields, where the insects have been numerous, will destroy a large number of the chrysalids which remain in the ground during the winter.

There are also

Several Species of Locusts

which must be enumerated among the insects that injure the Indian corn. The scourge of the West, the Rocky Mountain Locust (Caloptenus spretus) has been so thoroughly written

up by the U. S. Entomological Commission that it is needless for me to add anything in regard to it here. The common Red-Legged Locust (Caloptenus femur-rubrum) and the Lesser Locust (C. atlanis) occasionally do considerable damage to corn; and I have also known the American Locust (Aeridium Americanum) to attack this cereal in small armies.

The Corn Curculio

(Sphenophorus Zeæ) has been found puncturing the stalk, but I cannot ascertain that it has been troublesome at any point for several years.

The

Rice Weevil,

or, as it is sometimes called in the Southern States, the Black Weevil (Calandra oryzæ), does not confine its attacks to Rice, but appears to revel in the rich food it finds in the grains of wheat and corn. The close of the summer of 1878 developed the fact that, although a Southern species, it had found its way in vast numbers to the wheat fields and wheat stacks of southern and central Illinois, and in some instances the grains of stored corn were found riddled with holes by these minute curculios. This little species, which is a true curculio or Snout-weevil, is about one-eighth of an inch long, of a dark-brown color, and very similar in size, form and color to the notorious European Grain weevil (Calandra granaria), from which it is distinguished by four bright red spots on the wing-covers. Its extension northward was doubtless caused by the unusually warm weather of last season; it is therefore more than probable that its stay will be brief. The remedies which have been found most effectual for the European species will be equally applicable for the Rice weevil.

A number of other species might be named, which occasionally attack Indian corn, but they seldom cause sufficient injury to call for any special effort to counteract them.

Large Farms Favorable to Insect Pests.

In closing, allow me to say that so long as the present system of cultivating this cereal in large areas and year after year on the same ground, as done in many places, prevails, so long may farmers expect to have a continual warfare with insect pests. Where the favorite food of a certain species is massed, year after year, in large bodies, it is but natural that the species should be attracted thither and rapidly develop in numbers. If it is subject to the attacks of parasites, these will at length follow, and if the season, etc., favor them, will ultimately develop in number to an extent corresponding with that of the insect upon which they prey. But they are seldom able to accomplish the work of destruction until the injury to the crop has been done. Absolutely clean farming, if kept up by all farmers, would, as a matter of course, tend largely toward preventing the increase of injurious insects. But it is scarcely to be expected that this will ever be accomplished.

Extensive farms and large fields are perhaps the greatest evils, or, if a milder term may be used, mistakes in the American agricultural system. The inordinate desire of our agriculturists to increase the size of their farms has caused them to overlook the evil consequences which follow. One of these evil consequences, and the only one with which I am concerned at present, is that such large farms tend greatly to increase the number of the farmer's insect foes, and render it more difficult to counteract them.

If farms were small and fields small in proportion, the cultivation would be more thorough, better care would be taken of the crops produced, the farms would be cleaner and afford fewer hiding-places for insects; the soil would be better supplied with fertilizers and thus increase the vigor of the plants, and the rotation of crops would be more complete. This would to a very great degree prevent the immense development we sometimes see of certain species of insects. Small fields, diversified crops, proper rotation and clean, thorough culture afford the best possible means of counteracting insects which are injurious to farm products.

ROOT-PRUNING CORN.

The following experiments were performed at the Mich. State Agr'l College during the summer of 1878:

About the middle of May several plats of corn were planted on the same day and received the same treatment up to June 27th, when the process of root-pruning was commenced.

On one plat two rows were root-pruned, the next two simply cultivated without pruning, and so on throughout the whole plat.

On another two rows were root-pruned twice a week and two were cultivated twice a week. Others were pruned once a week and still others every two weeks. This treatment was continued until July 17th, when the dry weather prevented any further pruning.

The following are the results of these plats as found by weighing the seed. The figures given are the average number of bushels per acre reduced to shelled corn:

Two rows,	root-pruned twice a week	.....	58 bush.
" "	cultivated " "	.....	60 "
" "	root-pruned once a week	.....	55 "
" "	cultivated " "	.....	66 "
" "	root-pruned once in two weeks	...	58 "
" "	cultivated " " "	...	63 "

Another plat, situated just at the end of the one above mentioned, was heavily manured and treated in the same manner, with the following results:

Two rows,	root-pruned twice a week	.....	66 bush.
" "	cultivated " "	.....	72 "
" "	root-pruned once a week	.....	79 "
" "	cultivated " "	.....	84 "
" "	root-pruned once in two weeks	....	79 "
" "	cultivated " " "	....	85 "

In this experiment the largest amount of seed was in every instance produced by rows not pruned. Of course, but little weight can be given to the results of a single experiment. In other years, and on a different soil, far different results might be produced.

[The above is furnished us by J. Troop, who had charge of the experiments under the direction of Professor Beal.—Eds.]

NOTES FROM THE RURAL FARM.

Experiments with Corn.

During the summer of 1878 some experiments with corn were performed here. One-half acre was divided into twelve plats, numbered from one to twelve. Nos. 1 and 2 contained one-eighth of an acre each, measuring 165 feet long by 33 feet wide. The remaining ten plats contained one-fortieth of an acre each, measuring 33 by 33 feet. On all the plats the corn was planted in hills, 4 by 4 feet, with the exception of No. 1, on which it was drilled in. After harvesting, stalks and corn were weighed, the stalks being free from all atmospheric moisture, and partially dried, and the corn weighed in the ears—or corn and cob together.

The object of the experiment was to ascertain the comparative value of the fertilizers used, but by reason of variations in the soil of the different plats, and other counteracting circumstances, the experiment proves but little more than the already well-known fact, that but very little weight can be given to a single season's experiment; but as it may interest our readers, and benefit those that are too prone to draw, as they think, definite and reliable conclusions from a single trial, we publish the facts.

In plat No. 1 (containing one-eighth of an acre) the corn was planted in drills, four feet apart, and about six inches between each kernel, and manured with Mapes's corn manure in the drills. This plat produced 760 lbs. of corn and 900 lbs. of stalks.

In No. 2 (one-eighth of an acre) the corn was planted in hills and manured with phosphate of lime in the hills. It produced 600 lbs. of corn and 640 lbs. of stalks.

No. 3 (one-fortieth of an acre), manured with Mapes's corn manure in the hills, produced 122 lbs. of corn and 120 lbs. of stalks.

No. 4 (one-fortieth of an acre) was manured with stable manure in the hills, and produced 120 lbs. of corn and 126 lbs. of stalks.

No. 5 (one-fortieth of an acre), manured in the hills with Mapes's complete manure, produced 120 lbs. of corn and 120 lbs. of stalks.

No. 6 (one-fortieth of an acre), fertilized with a handful of Mapes's corn manure in each hill, produced 130 lbs. of corn and 140 lbs. of stalks.

No. 7 (one-fortieth of an acre) was fertilized with Mapes's nitrate of soda and dissolved boneblack in the hills, and produced 125 lbs. of corn and 130 lbs. of stalks.

No. 8 (one-fortieth of an acre) was manured with a handful of Mapes' corn manure in each hill; from it were gathered 140 lbs. of corn and 136 lbs. of stalks.

On plat No. 9 the corn was planted in hills, as in the others, but manured with phosphate of lime sown broadcast over the plat and raked in. It produced 160 lbs. of corn and 144 lbs. of stalks.

No. 10, adjacent to No. 9, and manured in the hills with Mapes's nitrate of soda and dissolved boneblack, produced the same amount —160 lbs. of corn and 144 lbs. of stalks.

No. 11 (one-fortieth of an acre) was manured with a handful of phosphate of lime in each hill, and produced 140 lbs. of corn and 130 lbs. of stalks.

On No. 12 (one-fortieth of an acre), which is a very flat and low plat, the corn was planted in hills, as before, but without any fertilizer whatever, and gave 125 lbs. of corn and 126 lbs. of stalks.

Plat No. 1 (corn drilled in) averaged 152 lbs. of corn to each one-fortieth of an acre, while Nos. 3 and 6, which were manured with the same kind of fertilizer, only averaged 126 lbs. —one 122 lbs. and the other 130 lbs. So, to account for the yield in No. 1, it seems reasonable to give more credit to the drilling than to the fertilizer.

Again, No. 2 (one-eighth of an acre, adjacent to No. 1), which was fertilized in the hills with phosphate of lime, averaged but 120 lbs. of corn to each one-fortieth of an acre, and No. 11 (the same fertilizer) gave 140 lbs., while No. 12, with no fertilizer at all, produced 125 lbs.

CORN AND ITS CULTIVATION.

The pollen from the tassel falls upon and fertilizes the silk and the silk the grain. If from weakness or other causes the silk fails to come out of the husk to be impregnated by the pollen the corn fails to appear or develop on the cob; hence the vacant rows so frequently seen on the cob.

A further examination of the stalk shows an ear, or the commencement of an ear, on every joint that has a groove. Generally about two-thirds have it, and in every one is seen an embryo ear undeveloped. The question arises right here, why this incomplete development? I have contended for several years that every such organization would develop on every grooved joint were proper attention given to selecting and sowing seed, to proper culture and proper plant-food.

Like all other cereals, corn has so deteriorated by bad treatment that it has not health enough to mature even one good ear to the stalk. With ordinary treatment all other grasses develop their heads or ears to some extent, and why should not corn do the same? For several years I have been giving corn and wheat some attention. I find corn susceptible of much greater improvement than most farmers are willing to admit. It is not in the province of this article to give the results of experiments. I will, however, give one to prove that there is much room for improvement of corn. Several years ago I commenced selecting my seed corn *in the field*, taking only those stalks that ripened earliest and that had not less than two good ears. These were cut up as soon as the husk was brown and the ear well glazed, and shocked in the field to cure. After standing a month or more the *top ears* only were saved *for seed*.

Great care should be taken in selecting not only those stalks that have the greatest number of ears, but those that look most like corn —nice, trim, uniform, vigorous and healthy. Large over-grown stalks are too gross and too sterile—they cannot be made prolific. The result of this method of saving seed, together with proper culture; has increased my yield on the same six acres, in six years, from 20 to 75 bushels per acre.

Before treating of the soil, I will give an account of the actual loss most farmers sustain in "pulling fodder," "cutting tops," and letting their corn dry up in the field before it is gathered. Fodder-pulling injures the grain nearly 13 per cent., cutting tops nine per cent., and by letting the whole crop dry up in the field, it loses 20 per cent. of its own weight. So you see by this slip-shod way of treating the best and surest crop we have we lose nearly 50 per cent. of it all. How shall we save it then? you ask. In a very simple way. When fodder-pulling time comes and the ears are well glazed, instead of taking the blades off, cut the stalks up close to the ground, and shock immediately in bunches the wind cannot twist or blow down. In this way the fodder is all saved, and the stalk too. The husk is much better and the corn loses nothing, but makes much better food, much better feed, much better seed and much more money. "But," you say, "it will shrivel and become loose on the cob." Not a bit of it! All the substance of the stalk at the time of cutting is absorbed by the ear, and it is matured in the same way that wheat is when cut in the dough state. This method insures the full weight, and saves the 20 per cent. lost by the old plan.

Another item. The stalk fodder and husk cured in this way are worth at least $3 per ton to any farmer, whereas, if left to die in the field, they will not amount from a hundred acres to a day's wages.

Any soil can be made to produce corn, provided it is not too wet. Soils differ so materially even on the same farm, that the farmer, to produce good crops, has to make them a real study. Once knowing them, and what they need and demand, he very easily increases the yield. For corn, land should be plowed, turning the sod only as deep as the grass roots extend, at the same time subsoiling with a heavy subsoiler and a strong team. The best fertilizer a farmer of limited means can use for his corn crop can be made behind his cows. Straw, chaff, leaves, muck, surface soil, barnyard scrapings, refuse of every description, well tempered with the droppings and manure water of the cow stalls make as good compost as the farmer needs. His compost heap must be kept under cover, and should be turned over at least once a month. The straw, chaff and leaves should not be thrown upon the heap until the cattle have well wet them.

In conclusion, I must urge upon my brother farmers the importance of putting in less land and preparing it better. With good seed, one acre well cultivated will yield 50 bushels, which gives infinitely more satisfaction and is done with much less labor and expense than the skimming over of ten acres with the same result. Almost any of our upland soils can be made to produce 50 bushels by a little scientific culture and saving of seed. A. E. Blunt.

East Tennessee.

POSSIBLE YIELD OF CORN.

HENRY STEWART.

Blunt's White Prolific.

The remarks in the Rural New Yorker of January, on page 12, on "Excessive Yields of Corn," prompt me to state my experience the past two seasons. In 1877, I planted one-tenth of an acre accurately measured, with a variety of corn known as "western horse tooth." The plat was fertilized with 50 pounds of Mapes's corn manure. The soil was poor and had not been cultivated the previous year. It was, however, possessed of considerable latent fertility, which was doubtless developed by the action of the fertilizer. The corn was planted in the usual manner, with three grains of seed to each hill, and the hills were three feet apart. The crop gathered amounted, when shelled, to nine bushels by measure. In 1878 the same ground with a piece of somewhat less size adjoining, which had been in potatoes in 1877, was again planted to corn. The whole plat covered 7776 square feet or a little more than one-sixth of an acre. There were 857 hills, thus giving about 4800 to the acre, which was the intention, the hills being as nearly as possible three feet apart. The variety planted was a corn known as White Prolific, (Blunt's White Prolific. Eds.) grown in East Tennessee, by a gentleman who has been for some years experimenting in the improvement of this grain, and which has the peculiarity of bearing several ears upon each stalk. I have sent you two stalks from one hill which have four ears each. The ground was fertilized with 100 pounds of the Mapes's Corn manure, which is compounded on a formula intended to provide exactly for the needs of the corn crop for grain production. No other manure of any kind was used. The crop when harvested yielded 43 baskets weighing 40 pounds each. After two months the corn was shelled, one basketful at a time; the majority of the baskets yielded more than a level half bushel and the whole product measured 25 bushels and nearly four quarts of shelled corn. A little figuring will show that this is equal to nearly 150 bushels of grain per acre. Some of the hills from which I cut specimen stalks—such as I have sent herewith—yielded three pints of shelled corn. The corn produced no suckers, or at least every sucker that appeared was removed at once. In the cultivation, there was no "new fangled" method or such as might be thought so—as root pruning, etc.; the ground was kept free from weeds and was loosened occasionally by a hand cultivator passed both ways through the rows.

In the article referred to, it is suggested that "an abundance of potash and phosphoric acid is the right condition for developing multiple earage." This is undoubtedly true, and as the fertilizer used in my experiments contained these elements chiefly and but little nitrogen, this corroborates the view taken. This variety of corn has, I believe, been carefully cultivated for several years, so as to fix this habit of multiple earing upon it; and in general bears more ears than it averaged with me. One stalk, which was unfortunately missed in the gathering, and was husked in my absence, bore seven ears, growing alone in a hill. What one man can do another may. If this Tennessee experimenter can grow corn with so many ears upon it, others can if they will take the trouble, and if by proper fertilizing, as much as 90 bushels of common corn and 150 bushels of improved corn can be grown upon an acre of ground, there is hope that farmers may largely increase their average yield. They need not fear to oversupply the market. Such a fear is a mere "bugaboo," and never yet troubled a farmer and never will. Corn is now in demand all over Europe as feed for horses and fattening cattle, and at present prices the market is almost unlimited. Two thousand millions of bushels—when we shall reach that—will be no burden on the market, and the great object with farmers should be to grow as much as possible at the least cost; 100 bushels on one acre may be grown at one-third the cost of 100 bushels on four acres, allowing for increased cost of fertilizing, husking and shelling. The extra cost of my 25 bushels was simply the fertilizer, worth about $2·75; and this undoubtedly returned two-thirds of the crop for its share. To repeat your closing sentence: "These things are worth studying."

BLUNT'S WHITE PROLIFIC.

Fort Collins, Feb. 10, 1879.

Eds. Rural New-Yorker:—Your letter of the 3d just received. I can give you no other history of my Prolific Corn than the inclosed, which I carefully cut from "Killebrew's Grasses of Tennessee." I made my corn all it is by *science*. First, a thorough knowledge of the *habits* of the plant; second, a thorough knowledge of the *laws* that govern the plant; third, its *demands*, viz., what plant food is best suited to it; fourth, soil, &c.

So far as the prolific nature of the plant is concerned, I am satisfied my theory is correct, viz., that *every joint that has a groove should*

bear an ear; and further that the *top ear* bears the only true seed.

In improving this variety I have gained several advantages. From 144 days I have reduced its period of ripening to 110 days. From one and two 6-oz. ears on each stalk, I have increased it to from four to six good 8 to 10-oz. ears, besides nubbins. From a cob that some call large, I have decreased its size at least a fourth, and nearly an eighth in weight. I have also made the fodder finer, the stalks more handsome, &c. A. E. BLUNT.

The following are some of the reports to which Mr. Blunt refers in the above communication:

VIRGINIA.—White Prolific, reported on favorably, giving three to four ears to the stalk, matured well. Another: good, early, six ears on some stalks; corn from department yields considerably more than common varieties.

NORTH CAROLINA.—White Prolific yields well, two to three ears on a stalk; many prefer the white corn.

SOUTH CAROLINA.—One report: the corn from the department is a great acquisition here. Another: yields largely, three to five ears on a stalk; the corn did very well considering severity of the drought.

GEORGIA.—White Prolific, ears large, cob small, kernels long. Another report makes "two crops a year with the yellow Dent;" another, White Prolific, month earlier, and five large ears on a single stalk.

MISSISSIPPI.—Prolific white corn, from the department, planted March 10; glazed July 1; too hard for table use; very prolific on rich land, three to five ears on a stalk. Another report, 10 feet high, two to four long ears on a stalk.

LOUISIANA.—White Prolific has given good results, making seven and eight good ears to a single stalk, long and well filled; it is an acquisition.

TEXAS.—White Prolific, yellow and other varieties, from the department, have proved valuable. Reports: early, large yield, three to five ears on a stalk, at least one hundred fold. Another: the corn from department is a great acquisition to this section of country.

KENTUCKY.—The few reports received from this State show the White Prolific to be valuable.

ARKANSAS.—"The Prolific White is very prolific indeed, averaging three ears to the stalk; shall plant it next season."

KANSAS.—Compton grew well, yield large; White Prolific grew finely, giving average of three ears to the stalk, and 90 bushels to the acre. Good grain.

INDIAN TERRITORY.—Report from Chickasaw Nation says: White Prolific, planted too late, 1,550 pounds from eight pounds planted, four to six ears on a stalk; this is about 180 fold for one planting.

BLUNT'S WHITE PROLIFIC.

A NOTE from Mr. Mason says:—I raised this last season but about four bushels of Blunt's corn, and rejected all but a peck for seed, as the balance had but eight and ten rows to the ear. I saved all that had twelve rows which will, I think, develop into a first rate variety by such treatment. With but common culture, it yielded me at the rate of 77 bushels per acre, not a nubbin in the whole of it. The cob is white, small and short, but the heavy yield is made up by each stalk producing on an average four ears, in some cases as high as nine. I believe it was to this especial point that Mr. Blunt directed all his efforts.

My article written for the RURAL NEW-YORKER in January, gives all the particulars of my little plat, (I had but a half pint of seed) and is correct in all particulars except in stating the year in which I grew it. I wrote 1878, the types say 1875. S. RUFUS MASON.

Dodge Co., Neb.

CORN AS A CLEANSER.

CORN is the best crop to act as a cleanser of the soil, when it becomes foul. When grown for this purpose, it should be planted three feet apart each way. It should be cultivated once a week, until too large to admit a horse, when the corn will so occupy the ground that weeds will give little trouble after. What few do start must be cut out with a hoe, or pulled out by hand. If well done, the land will be in fine condition the succeeding year and the corn will pay for the labor. This is the manner in which I fit my ground for strawberries, it leaves no grubs to destroy the plants. I have cleaned land of Canada thistles in this way the first season. NELSON RITTER.

CORN NOTES.

THE average weight of corn an ear is about five ounces.

STARCH is now largely manufactured from maize. A dilute solution of caustic soda is used to dissolve the albuminoid. The starch and bran remaining, are separated by diffusing both in water, when the bran settles, and the water being run off at the proper time deposits the pure starch, corn-starch of commerce.

NEBRASKA, Dodge Co., Jan. 20.

MR. EDITOR: I inclose you a corn article. I don't believe anybody wants to know *how* to grow corn, they all know too much already. It is very certain that as much as folks know on the subject, it is useless knowledge, as long as they won't apply it.

If we can make it a disgrace to a farmer to produce a poor crop of this grain, we shall just astonish the natives. I could give you the whole process for this section, but it would read like an explanation of why twice one made two—everybody knows it, but won't do it—that's all. S. R. M.

VARIOUS FACTS RESPECTING CORN.—Humboldt says corn belongs to South America. The Chinese are said to have a book describing corn, which dates back to the sixteenth century. Columbus found it growing when he discovered this continent. There is a proof that it is a native of this continent. Corn flourishes from 40° south latitude to 45° north. The best corn lands are probably found between 40 and 45 degrees. The valuable elements in corn are starch, sugar, gluten and oil. Southern corn contains most starch. White corn contains about 70 per cent. of starch. Sugar corn has but little starch and this causes it to shrivel. It contains a large amount of phosphate. Yellow corn has the most oil, and a large per cent. of gluten. The hard or flint varieties contain the most gluten, and the soft the most starch. Small varieties contain the most oil, and next to these the yellow corns. In comparing corn with wheat, oats and grasses, to see which is the most exhaustive, we find that the important elements exhausted by these crops are potash, phosphoric acid and nitrogen. The following table shows the relative proportions:

	Potash.	Phos. acid.	Nitrogen.
Corn, 50 bu.	77 lbs.	31	64
Oats, 25 bu.	50 "	12	24
Wheat, 24 bu.	24 "	20	41
Potatoes, 100 bu.	34 "	11	21

These figures include grain and straw. It is a discouraging fact that the general average of corn is not increasing, but this may be all the better for the enterprising farmers who are improving their methods of growing this crop.—*Professor M. Fenland.*

CATALOGUES, &c., RECEIVED.

INNISFALLEN GREEN-HOUSES, Springfield, Ohio. Catalogue of "Roses, Geraniums, Fuchsias and Bedding plants. Free.

ELLIS BROTHERS, Keene, N. H. Catalogue of "choice plants and seeds." Some new and very fine Pelargoniums are offered. Free.

VANDERBILT BROTHERS, 23 Fulton St., New York. Catalogue of seeds, farm implements, Peruvian Guano, Superphosphate, &c., &c. 28 pages, free.

HOVEY & Co., 16 South Market St., Boston, Mass. Illustrated Guide and Seed Catalogue. A long list of novelties—illustrated—88 pages—free to applicants.

THE advertisement of the Farmers' Publishing Co., announcing a series of *Charts* for farmers, will be found on page 164 of this number, and deserves attention.

WM. E. BOWDITCH, 645 Warren St., Boston, Mass. Commercial florists as well as practical seedsmen. An illustrated, interesting catalogue of 70 pages, sent free of charge to applicants.

STAIR & KENDEL—established 1839—115 Ontario St., Cleveland, O. Price-list of native and imported field, garden and flower seeds, agricultural implements, etc. Among varieties of sweet corn, Early Minnesota, Moore's Early Concord, Stowell's Evergreen and Triumph (an excellent variety) are offered. The price-list which will be sent on application specializes Cabbage and Onion seeds.

STORRS, HARRISON & Co., Painesville, Ohio. No. 2.—Spring catalogue of New and Rare Plants for 1879, including greenhouse and bedding plants. 80 pages fully illustrated. No. 3.—Trade-list of fruit and ornamental trees, small fruits, vines, evergreens, shrubs, Roses, etc., 16 pages. No. 5.—Retail price-list of No. 4. No. 7.—One-dollar collections of roses and plants sent free by mail. A trustworthy establishment, and we commend the above catalogues (which will be sent to applicants) to all of our readers.

ROBERT BUIST, JR., 922 and 924 Market St., Philadelphia, Penn. One of the oldest establishments in the country. This is an Almanac and Garden Manual for this year of nearly two hundred pages. It is designed to furnish "concise hints to cottagers, farmers and planters" on the cultivation of vegetable and flower seeds and plants. It is well illustrated; gives hints for every month in the year, and is alive with all sorts of information for those who are interested in plants or seeds. This book, so far as we can find, will be sent free to applicants, and it is certainly worth applying for.

PROF. A. CORBETT, 7 Warren St, N. Y. A pamphlet of 23 pages, setting forth the merits of his apparatus for the artificial hatching of eggs—the incubator or Artificial Mother. We are not willing to speak either in favor of or against this or any other incubator, having had no experience in their use whatever. The pamphlet gives copious extracts from the leading journals of the country, including one from MOORE'S RURAL NEW-YORKER of 1875, which is prior to the date of the present management. Our readers are advised to send for this pamphlet, and to give the matter full inquiry before purchasing.

MATTHEWS'S Seed-drill, that has become so thoroughly well known as an effective implement has been improved in detail this season by the addition of an indicator, with names of the various seeds thereon, attached to the side of the hopper. The dial is in plain sight, easily got at, and by the merest twist of the wrist the gauge is immediately set for sowing any desired seed. The improvement is a concession to lazy people, certainly, but at the same time it is a great convenience. The important features of the drill are unchanged—in fact there is no reason why they should be modified.

R. H. ALLEN & Co., 189 and 191 Water St., New York. Descriptive catalogue of choice farm, garden and flower seeds, roots, plants and garden requisites. "Location and soil for a garden"—"Frames and Hot-beds"—"Lawns"—about which we receive many inquiries at this season of the year, are definitely treated. Webb's New Kinver Yellow Globe Mangel Wurzel, to which we have already referred—Pearl Millet—Doura or Guinea Corn, Indian Millet and Sorghum—Prickly Comfrey—Early Amber Sugar Cane—Cow Peas—are all marked as specialties. The list of *Corn*, both field and garden, is likewise a leading one of this catalogue which will be sent free to our friends.

PARSONS & SONS Co., Kissena Nurseries, Flushing, N. Y. Catalogue of New and Rare Plants.—Hardy Plants may be considered a speciality with the RURAL NEW-YORKER, and we therefore take pleasure in calling attention to this catalogue, which enumerates about 250 which, with the exception of 26, are by no means well known among those who prize hardy ornamental plants for their lawns. Of the 250, about 100 have been added this year, the firm having been for several years past engaged in testing their hardiness. About 40 of the list of 250 have been, in effect, introduced to the trade by this enterprising firm, among them the Japanese Maples, which we ourselves have been foremost in introducing to the public. The list will be sent to all who apply for it.

HENRY A. DREER, 714 Chestnut St., Philadelphia. Garden Calendar for 1879: 128 pages finely illustrated. This is a valuable publication, and one that has been prepared with unusual care. The "Vegetable Garden"—"Remarks on the failure of seeds"—"Useful Tables"—and list of vegetable and agricultural seeds, take 38 pages; 40 pages are given to flower seeds, 4 to novelties, among which we note the Pelargonium "New Life," which bears flowers, some of which are striped red and white, while others are not striped at all, and of a rose or salmon color; also, the two much talked of Hydrangeas—Thos. Hogg (white) and The Climbing Hydrangea figured in RURAL of Feb. 15. Then the plant department of 128 pages finishes the interesting catalogue which we think Mr. Dreer will furnish our subscribers without charge.

THE Agricultural Insurance Co.'s Almanac and Guide to Safety. 1879. This little pamphlet has the usual almanac features, but is more especially valuable on account of its very plain exposition of the causes of most of the disastrous fires that consume farm property. Here is an insurance company that has paid over two and one-half millions for losses by fire during its twenty-five years' experience, and as it is confined by law to accept only farm and private residence risks, it becomes interesting to note that the majority of losses are almost invariably the result of carelessness. The almanac points out clearly and forcibly how unthinkingly negligent most people are, and a glance at the record of fires from preventable causes is calculated to instil precaution. The almanac is free to all who may ask for it, but it would be a cheap and desirable hand-book to safety, even if a price were demanded for it.

RURAL SPECIAL REPORTS.

PENNSYLVANIA, West Chester, Feb. 26.—Sunshine, rain, hail and high winds in succession. Water courses swollen and roads very muddy. We are looking for the "Corn" number in pleasurable anticipation. This, you know, is a great corn county. R.

INDIANA, Roanoke, Feb. 20, 1879.—We had a thaw, enough to remove the old snow, about three weeks ago; but the last few days have again been very stormy, and we have now six inches of snow. Corn, 30c.; potatoes, 80c.@$1; eggs, 12@15c. A. C. H.

PENNSYLVANIA, Annville, Lebanon Co., Feb. 18.—Weather since December has been unusually cold, with almost continual sleighing. The *ice harvest* is about over. The amount housed by our icemen is immense. Farm products are all low—Amber red wheat, 90 to 95c.; corn, 45c.; oats, 25c.; potatoes, 95c.; butter, 10c.; eggs, 15c. J. A. B.

CORRECTION.—In "Notes From Kentucky' Jan. 25th I am made to say "lowest 20 deg." I wrote "—20 deg." which I understand to mean "twenty degrees *below* zero. In the same article the Editor inserts "(sic)" and "(!)" after my "at the rate of three hundred barrels (of potatoes) per acre." If *any* doubt the correctness of my statement I will refer them to my neighbors, the Messrs Conways who will state that with them the Peerless has yielded at the *rate of four hundred barrels per acre.*

Milton Ky. S. E. HAMPTON.

KANSAS, Sedgwick Co., Feb 20.—The crops in our county the past year were good, wheat and corn being specials. At our county fair last fall were shown a greater variety of cereals and fruit than I ever saw in the county fairs of much older States. All kinds of fruit grow to perfection in the Arkansas valley. We have had a very cold winter with us, but it has let up at last, and farmers have started the plow for oats, Defiance wheat and Pearl millet. I shall try the Golden Rural and Beauty of Hebron as my specials, from your valuable collection. Our market is about as follows: Wheat, No. 2, 65c.; No. 3, 58 to 60c.; corn, 18 to 20c. per bushel; pork, live, $3.25 to $3.50 per cwt.; oats, 20c.; potatoes, 80c. to $1; apples, $1 to $1.50 per bushel; butter, 10 to 16c. per lb.; eggs, 10c. per doz., which we think very fair market for a new country. W. J. BROWN.

MICHIGAN, Laingsburg, Feb. 25, 1879.—We have had an excellent winter for business. The roads have been good since before Thanksgiving, most of the time sleighing, and to-day sleighs run well and snow is falling fast, with steady cold weather. Last winter we had very little sleighing; and hauling wood, ties, lumber, logs, etc., was sadly behind hand, but business has now caught up, and all classes are being benefited. Wheat did not promise highly last fall, but so far, the winter has been favorable. Many complain of hard times, but if most people are obliged to retrench a little, and learn how to do so, it will do no harm, for that is just what we must come to. People have lived beyond their incomes, and must cut down. Wheat, 88 to 91c. for white extra. Potatoes were short, and bring 40 to 50c. People here are waking up somewhat to the interests of agriculture—mostly through the influence of the Grange—and farmers are beginning to think and act more intelligently than ever before. May this state of things continue and increase. G. M. K.

KENTUCKY, Bowling Green, Feb. 24, 1879.—Many thanks for the seeds received a few days since; I am very proud of them and will take "particular pains" in planting them; as soon as the ground gets dry will plant the wheat and potato. We have had a great deal of very wet weather, so much that the farmers have done very little farming, scarcely any plowing for corn. Prospects, to-day, are very good for good weather, and farmers are making preparations for sowing oats, of which there will be above an average crop sown; there will also be a great deal of clover and orchard grass sown, more of the latter than ever before; farmers have known very little of the nature or value of orchard-grass until within the last two years; and now, as they know, it comes on earlier and lasts longer than any other grass. They sow more of it than ever before; the seed are worth $1 75 per bushel. Clover, $4 50; wheat, 80c. to $1; corn, 30c. to 35c.—some are holding for 40c.; oats, 30c. to 50c.; hogs, $2 50 to $3 50 per 100 lbs.; cattle, $2 to $4 per 100 lbs. Our wheat is not looking as well as it might, as it is not quite thick enough—the seed wheat was very bad on account of dry weather when it was beginning to head. The peaches are killed by the cold weather—a great many trees are dead. The apples and small fruits are damaged so that I fear we shall have a "bad" fruit year. JOE D. SMITH.

WIDE-AWAKE farmers on the 32°-33'-5" parallel are beginning to talk corn planting so hurry up your "corn number."

Rust-proof oats are in their beds and the Gray oats are shelling off their outer garments for the same position.

This is a second rate climate only for fruits. Apples are planted, cared for, nursed and doted up only to die before bearing. Peach trees live about six to nine years, "alternating in off years." Texas is always on extremes, either abundance or nothing at all; however, care and patience would obviate many of these failures.

I hope much from pear culture as blight is not known in this section. It is also generally acknowledged in Texas that this county (Collin) is the banner county for grain growing, stock feeding and grain shipping enterprise. Pearl Millet advertised in your columns grows well here. From 5000 seeds I obtained three-

quarters of a bushel of clean nice seed, all of which I shall sow for seed another year. Chufas, or earth almonds, do well. But, oh! the digging of them. Sweet potatoes yield 200 to 300 bushels per acre, but Irish potatoes do not do so well WILL N. WILLIS.

KANSAS, Parsons, Feb. 20.—For a couple of weeks we have been having frosty nights, with warm and drying days. The *winter* frost is out of the ground, and the present crust is of recent formation. Fattening cattle have done well this winter, giving one more proof of the advantage of dry, cold winter for making fat. Last winter, which was mild and wet from beginning to end, was exceedingly bad for cattle, many farmers having fed all their corn without making much, if any, increase of flesh. Winter wheat is said to be looking fairly. Spring wheat has been generally discarded here; but, in consequence of the scant sowing of fall wheat, many farmers are going to try spring. Wheat here is as reliable a crop as can be raised, and the quality is dry, making the flour eagerly sought by bakers, who are enabled to make more bread from dry than from moist flour.

The slight showing of prairie grass, which we had a week or two ago, has become seared by the recent frosts, but the blue-grass is still green. Indeed the latter keeps its color all winter. It is a most desirable grass. Our prairie grass is not good more than 10 or 12 weeks—say from the first of May to the middle of July, when it becomes scarce and woody. Though its life be short, it makes the flesh roll. It seems to excel other grasses during this time, but, of course, it is undesirable from the shortness of its availability. The hay made from it is often cut as late as August, and even September, and the best of such is so nearly worthless that cattle will eat musty corn fodder and corn cobs in preference to it. Horses seem to eat it much more eagerly.

Timothy and clover, wherever tried, have given good satisfaction, but grasses other than prairie, do not prevail to the extent of one per cent.

Blue grass is believed to be so congenial to the country that it is commonly supposed close cropping will alone induce the growth. I am certain, however, that it would require eight or ten years to insure a growth. In 1875 I sowed forty acres with it in a pasture of eighty acres. I looked in vain for its coming, but concluded the grasshoppers, which were very thick that spring, had taken the whole. The succeeding year revealed a few patches about a foot or two in diameter, and these have so extended themselves that the portion in which the seed was sown can be easily distinguished from the other. Indeed, on the unsown portion there is not a single patch. In another year, or perhaps two, I expect to have forty acres of good blue-grass. I omitted to say I sowed in February, on the prairie grass, at the rate of say ten lbs. of seed to the acre. J. B.

WORK FOR MARCH.

PLANS made in the two past months are now ready for execution, in whole or in part. The sun is getting higher, and his rays more penetrating. This stimulates activity in all outdoor work. The melting snow and lengthening days of March infuse life into every human being if he has a spark of vitality left in him.

CELLARS.

Sort over the fruit and vegetables, and carry out everything which is decayed. The odor of rotted vegetables penetrates the cracks of the floor and the carpet above, and carry disease and sickness to the people who dwell there. It is customary to have a cellar under the house, but there are serious objections to such a custom. Ventilate the cellar when the air is cool and dry, and close it in the warmest part of the day, and on all wet warm days. Give the walls a good heavy coat of whitewash.

LIVE STOCK.

The sight of bare ground and the approach of milder weather, and the long, monotonous diet of dry feed make all kinds of stock long for a change. If allowed they will work for hours on an old meadow or pasture where there is the least chance for a taste of green grass. They should be kept from these fields, as they tread them full of holes, damage the grass, lose their appetite, and get nothing which is valuable to them. Let off the surface-water and keep the yards dry, if possible. In such times never feed on the ground, but in stalls or racks. The changing weather of spring "between hay and grass" is a critical one for most kinds of animals. Several well littered box-stalls are convenient and almost a necessity for brood mares and cows in calf. Such animals should be well fed, though not highly fed. They need a little, oil-cake, bran, shorts or roots to keep them in the best condition.

WELLS.

Keep the snow shoveled from the platform over the well, also for a few feet each way, to prevent the surface-water getting in. This is easily done if the ground slopes each way from the well as it should.

ROADS.

If the water settle away and the roads get dry or nearly dry, do not fail to run the scraper. This will fill the ruts and small holes. A few hours of scraping, just in the right time, will save as many weeks of work later in the season. The people of some road districts have learned this long ago, but there are many who have not.

THE HEALTH.

The warm days of spring, mixed with sudden cold snaps and raw winds, are the most trying part of the year to the health of farmers. The appetite should not be stimulated. Winter clothing should not be given up. In sloppy weather, the feet need especial care. Cold, wet feet are the cause of many ills. In some way, keep the feet warm and dry. It will often be well to change the stockings during the day for a pair that are dry. Warm weather relaxes the system, and man and teams feel less able to do hard work than in steady cold weather.

A CHANGE OF BUSINESS.

Just now pork is low and sheep are looking better. We have heard numerous inquiries for sheep, and know of men who are bound to get rid of their hogs at any price. There are many farmers who always buy at the highest price in the dearest times and sell off when there is a depression. Pork will not always be so low. It is a good time to buy improved swine and give them a good chance. It is probably a good time to sell part of the sheep if they will bring an extra price. The farmer generally does the best who keeps the even tenor of his way, paying little regard to the "ups-and-downs" of certain articles or lines of business.

SELECT TREES AND PLANTS.

Almost every farm would be more valuable, if it contained a few more fruit trees and grape vines of certain desirable varieties. For a choice of varieties, consult the reports of fruit growers in your immediate vicinity. Every farm, even every village lot should have some grape vines. How many there are without this luxury. There is a sort of mystery about grape vines, which troubles beginners and often keeps them from planting.

PRUNING APPLE TREES.

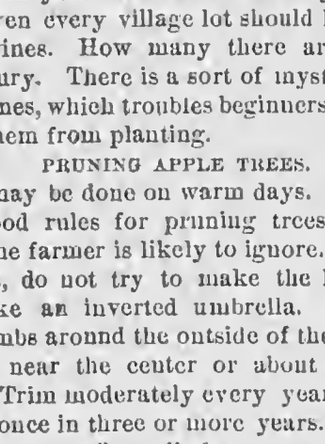
This may be done on warm days. There are often good rules for pruning trees, some of which the farmer is likely to ignore. In severe climates, do not try to make the head very open like an inverted umbrella. Thin out small limbs around the outside of the top rather than near the center or about the large limbs. Trim moderately every year and not heavily once in three or more years. Make it a rule to cut off no limbs over an inch in diameter.

SELECT GARDEN SEEDS.

Procure seeds early from a reliable source if you have not saved a full supply. Plan the garden and have everything ready on the approach of spring, for manual labor. Sow clover seed, and to insure a good catch, put on a fine-toothed harrow. This may seem to injure the wheat, but shut up your eyes and go ahead. Leave a strip without harrowing and you will be convinced that it pays to harrow wheat in the spring.

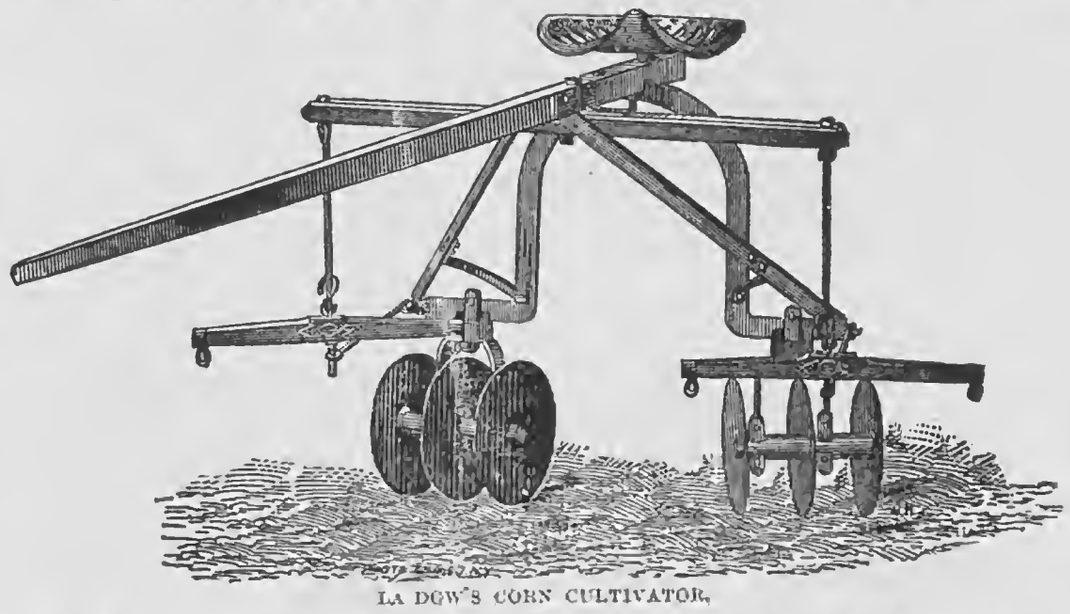
RADISH (Raphanus sativus.)

THIS favorite little vegetable is so well known that comments upon it are almost superfluous:



yet we do not think it is raised in as many gardens or found on the table as often as it deserves. Every family having a square yard of garden, can have a bed of radishes. What vegetable is a more sprightly relish with one's lunch than a few cool, crisp and tender radishes flavored with salt? Market gardeners raise large quantities which are consumed in the cities during early spring and summer.

The seed may be sown as early as the weather will permit, either broadcast or in rows six or



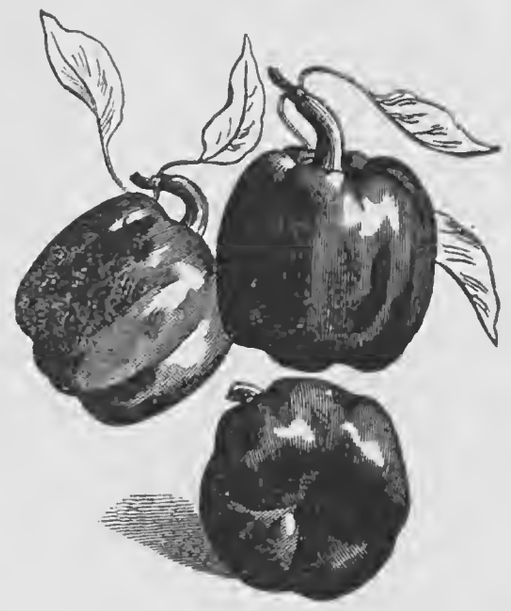
LA DOW'S CORN CULTIVATOR.

eight inches apart, in a light but rich soil, though it will thrive in any soil. But as radishes grow rapidly and may be pulled before they have time to interfere with other vegetables, the seed is most frequently sown between the rows of early cabbage or mixed with other seed, such as parsnip, parsley, carrot and the like. To obtain the best flavor, they should be grown rapidly and used while young; otherwise they will be as coarse as turnips and have a strong, pungent taste. They should also have plenty of water while growing or they will be soft and spongy. In Europe they are in such favor with most people that they are raised in the hot-beds as early as February, and to have a continuous supply of young roots, the seed is sown every week.

Any one who has a sunny window can have radishes all winter, by raising them in boxes six inches deep, filled with rich, light soil. There is any number of varieties, of almost all colors and shapes. Long Scarlet, Scarlet Olive, French Breakfast, Golden Globe and Black Spanish, are some of the best varieties. Our engraving shows the Scarlet Olive.

PEPPER (Capsicum annuum.)

THE use of this vegetable for pickling, and other purposes where strong flavor is required, is known better to every good housewife than we can tell it. Suffice it to say, that it is a favorite with all good cooks. Its cultivation is very simple. It is a tender plant, a native of South America, therefore cannot be sown in the open ground in northern latitudes



until the latter part of May. Sow the seed in rows and cover it lightly. When the plants are about three inches high, they should be set one foot apart in light but rich soil, and kept clean during the summer. Larger plants and more fruit may be obtained by sowing the seed in the hot-bed in March.

The Cayenne pepper used on the table, is the fruit of this plant, dried and ground to a powder. It is in no way related to the black pepper, which is a small berry, the fruit of a vine that grows in the East and West Indies.

Botanically, Capsicum annuum is a near relative of the potato, Solanum tuberosum, both being kindred genera of the same family, Solanaceæ. Our illustration represents Sweet Spanish.

COVERING SEED.

THERE are certain principles governing the germination of seeds and the after growth of the plants, and not only is it of great importance to the farmer to understand these, but attention to them is also of vital moment to the plant itself. Seed must be germinated in the dark until the young roots are sufficiently formed to begin to feed, because if exposed to the light, they grow of a green color, which does not belong to roots, but only to the upper parts of the plant,—those parts which grow in the light. Roots having a green epidermis cannot feed, because the green color is preliminary to the formation of bark, which is meant to exclude moisture, and not to absorb it. When seeds are sown broadcast over the field, and then covered so lightly as to allow the sun's rays to reach them, instead of forming healthy roots, capable of imbibing nourishment from the soil, they become incapable of feeding, because the mouths of the roots have grown up sealed, as it were, by the change to an incipient bark, which, if the exposure to light continues, finally becomes a perfect bark, by which their whole character is changed.

Crops grown from seeds scantily covered, suffer from starvation at the moment of germination, which is continued by natural circumstances so long, or so far into the life of the plant, as to obstruct its growth in every stage. The consequences are a feeble plant, having its growing period thrown into the season for filling up, and finally its ripening season thrown into so late a part of the year as to compel it to produce weak, shrunken and immature grain at a time beyond its natural time of harvest. Shallow covering stunts the plant and its produce, owing to an excess of light at germination. S. RUFUS MASON.

Dodge Co., Neb.

BETTER TIMES COMING.—Wm. A. Macy says: "The foreign demand will carry off all our surplus meat at present prices. If we have not made anything in handling hogs during the last year, I think we can look upon the introduction of our meat in foreign countries as being favorable to future prices. The day is not distant when we shall be fully compensated for our work, and fully make up for present losses."

LA DOW'S CULTIVATOR.

THIS is a modification of La Dow's harrow, adapted to working in rowed crops. There is a number of riding and walking cultivators, but this one is among the latest improvements, and it possesses sterling qualities. The illustration shows how the principle of the wheel-harrow has been made to meet the new requirements. These discs, or wheels, may be adjusted to turn the soil from or towards the growing corn; and may be run extremely close to the plants, scraping, burying, or cutting up the weeds, without injuring the roots of the crop.

In its mechanism the Cultivator is very simple, easily managed and there is little or nothing to get out of order. The draft is adjustable by means of the whiffletrees and hangers, and an evener that, it will be seen, is up out of the way of tall corn. By loosening a nut the gang may be reversed in a moment, or the line of draft changed. A strong feature is the lightness of draft. At a recent trial with a dynamometer, with driver riding, only 175 pounds were indicated. The Wheeler & Melick Co., of Albany, N. Y., make the implement, and can supply any further information.

THE EUREKA MOWER COMPANY of Towanda, Pa., succeeds the Towanda Eureka Mower Co. in the manufacture and sale of Wilber's Direct-draft Eureka Mower—an implement very widely known for its thorough work and light draft. The new company is very strong financially, including capitalists and business men of Towanda and Wilkesbarre who are well-known. The management is under vigorous direction, and it is its determination to furnish "not only the largest, but the cheapest mower in the market." The western trade will be supplied by The St. Paul Harvester Works, St. Paul, Minn., who manufacture under royalty. The Eureka seems to have made a very favorable impression in the West, especially among large farmers, because of its practical operation with six, seven and even eight-foot cutter-bars. Those not familiar with the merits claimed for the Eureka will find the advertisement on another page.

THE Thomas Smoothing Harrow is said to owe its success to the slant of its teeth, and its popularity to the excellence of material and workmanship, combined with the reasonable price at which it is sold. It is well adapted to "new breakings" and will put such land in condition to yield a crop the first year. Its chief claim—thorough pulverization—makes it very effective in sod, clay soil, and in distributing manure with evenness and fineness; and it has met with success in old corn-fields by driving the harrow before the plow, breaking the corn-stalk down lengthwise, which the plow then easily turns under. Its most conspicuous success as a specialty is in its use as a corn-cultivator. The best method for securing the most satisfactory results in this connection is amply explained in a small pamphlet gratuitously issued by the Thomas Smoothing Harrow Co., of Geneva, N. Y.

OUR CORN DISTRIBUTION.

After reading the preceding articles, comments as to the probable value of the variety of corn which we have called Blunt's White Prolific, seem unnecessary. We *know* of one instance in which it has yielded at the rate of 130 bushels of shelled corn per acre within twenty miles of this city, and it was this which first induced us to secure all that we could in order to distribute it among our subscribers. It seems to be a variety that is well adapted to a great range of country, having produced enormous yields in various parts of the South and West as well as in this vicinity. Our seed is procured from Mr. A. E. Blunt himself who, as already stated, has devoted several years to making it what it is. As agricultural and horticultural editors we have a dread of raising hopes which, in all probability, will never be realized. We believe that the agricultural press has, by "cracking up" new seeds and plants, which have upon trial proved inferior to old sorts, impaired the confidence which it ought to command from the farmer and horticulturist, and we are far from denying that our own journal has, in days past, at least, merited a full share of reproach. At present we desire, in so far as it is possible so to do, first, to test in our own grounds all novelties as fast as they appear in the market, and, second, to enable our readers to test them at a cost which, should they prove worthless or comparatively so, will leave little room for regret. Accordingly we are prepared to send to all of our subscribers who apply, a quantity of Blunt's Prolific White Corn, that shall enable them to judge whether it be or be not an improvement upon the varieties they have previously cultivated. The quantity so to be sent will require a two-cent stamp to carry it through the mail, and this two-cent stamp must be sent to us in the letter of application.

PREMIUMS.

In order to insure for this corn, trials in every part of our country where the cereal can be advantageously raised, and to invest them with the interests which a friendly competition may provoke, the following premiums are offered: On the part of the Rural New-Yorker $100 in cash, the details and plan of which will be fully given hereafter.

OTHER PREMIUMS.

Batavia, Ill., Feb. 22d, 1879.

Rural New-Yorker:—In answer to yours of the 15th, we will offer our $65.00 Feed and Meal Mill to the one having the largest yield of your new variety of corn. The details and all questions, as to who did raise the largest amount, or rather the best yield, we leave to you. Respectfully yours,

Challenge Mill Co.

St. Louis, Feb. 20, 1879.

Eds. Rural New-Yorker:—Yours of 15th rec'd and noted. You may offer one of our Improved Big Giant Feed-mills, No. 2, two-horse, price, $45, as a premium for your new corn, in such a manner as you may see fit, as suggested in your letter of above date. Yours,

J. A. Field, Son & Co.

P. S.—The mill will be delivered here on board cars or boat, free of charge.

Albany, N. Y., Feb. 19, 1879.

Rural Pub. Co., 78 Duane street, New York. Gentlemen: In reply to your favor of the 17th, we will say that we will join you in offering a prize of a La Dow Jointed Pulv. Harrow, for fitting the ground for a corn crop, or a Two-horse Disc Wheel Corn Cultivator, at the option of the winner, for the best yield of the corn you send out. Yours truly,

Wheeler & Melick Co.

Sandwich, Ills., February 21, 1879.

Rural Publishing Co. Gentlemen: We are pleased to offer one of our "Veteran" Corn Shellers complete (retail price, $35), as a premium for best yield of corn from seed to be sent out by you, as per your letter, or for second best if your premium exceeds ours in value and you deem it best to offer in that way. Or, if you contemplate awarding for any other excellency in connection with this scheme, other than the best and second-best yield, we shall be pleased to place our premium "where it will do the most good." You may announce this prize, therefore, as being given by us and in connection with your own announcement, and we presume your announcement of the *purpose* of the distribution and gifts will sufficiently cover the ground, and that it will not be necessary for us to make a separate announcement of the specific object of our prize. Yours truly, J. P. Adams, Sec'y.

Pittsburgh, Pa., Feb. 19, 1879.

Eds. Rural New-Yorker:—In reply to yours just to hand, we would say we will offer two Corn Shellers as prizes for yield or quality of your new corn. You can arrange the competition as you see fit. Wishing your enterprise abundant success, we remain very truly yours, Livingston & Co.

Eds. Rural New-Yorker:—Fully approving, as we do, the sound policy of the Rural in making Indian Corn a special feature for one number, and equally approving the liberal premium offered by this journal, the undersigned will cheerfully co-operate in the good work by offering the following *Book Premiums* to farmers, for weight of corn raised from the seed given out by the Rural. For the best weight of shelled corn per bushel, to be determined after an interval of three months from harvest, we offer the following *Books:*

1. Prof. Miles's New Book on Stock-breeding.
2. A complete set of Dickens's Works, in 19 vols., published by Appleton & Co.
3. Any books from Scribner's Catalogue to the amount of $5.
4. The first 30 vols. of Harper's half hour series.
5. The Wilson Series of Books for Farmers, bound in cloth.
6. The Rural New-Yorker for one year.

Farmers' Publishing Co.,
[Box 2,695.] 104 Duane St., N. Y.

THE
RURAL NEW-YORKER.
PUBLISHED EVERY SATURDAY.

Address
RURAL PUBLISHING CO.,
78 Duane Street, New York City.

SATURDAY, MARCH. 8, 1879.

UNLESS WE SHOULD HAVE SEEDS LEFT OVER, NOTICE IS NOW GIVEN THAT OUR FREE SEED DISTRIBUTION OF 1878-9 IS CLOSED. ALL APPLICATIONS RECEIVED WILL BE FILLED PROBABLY BEFORE THE 24th INSTANT.

THRASHING CORN.

If corn, after being cut up and cured in the field, could be made ready for grinding or market as conveniently as the small grains, a much larger area would be cultivated, especially in New England. It has always been supposed that no other than the old-fashioned routine of husking and shelling was practicable, and this is so slow and tedious, and constitutes so great a percentage of the whole cost of the crop when brought to a marketable condition, that it materially limits the area of this grain in the Western States.

Many ways of evading these onerous tasks have been tried. Some farmers feed the crop whole, ears and all, just as it comes from the field, believing the loss from feeding thus not equal to the cost of husking, shelling and grinding. Others break off the ears and thrash them with flails upon the barn floor. Still others cut the stalks and ears, by machinery, to a more or less short and fine condition. But all these ways are unsatisfactory. It is quite doubtful whether there is not even a loss, over all savings, in feeding the grain and stalks as they come from the field, aside from the awkwardness and slovenliness of the practice. Thrashing the ears is hardly less labor than shelling by the ordinary hand-shellers, while it does not leave the cobs so clean and wastes the husks.

In cutting up ears and stalks together we find several objections. The ravages of rats, mice and squirrels during the winter destroy much grain, and greatly damage the stalks by fouling them with the urine and excrement of the vermin. Then, unless cut very fine, and this requires power, the cattle pick out the ears and are with difficulty made to consume the fodder.

Some recent experiments lead to the hope that our Eastern corn may be thrashed effectively and cheaply by the ordinary thrashing machines, delivering the corn clean and whole, and leaving the fodder in an excellent condition for storage and feeding. Nothing more than a careful adjustment of the concave and a little practice in feeding the machine seem to be required, and we trust that thrashers generally, will see what can be done in this direction. Even if a little change in the machinery is required, it would still be profitable to make it, not only on account of the large quantity of corn already grown, but on account of the great increase of acreage that would be likely to follow when the disagreeable tasks of husking and shelling are done away with. Unless corn thrashed by machinery is well cured in the field, it is probable that it would require some drying before taking it to mill. But if the early varieties of 8-rowed corn (some of which are very productive and mature in from 90 to 100 days from planting), are generally grown, it would usually be quite as dry as any other grain after standing in small stooks for four or five weeks.

QUALITY IN CORN.

We all recognize a great difference in the quality of flour from different kinds of wheat, and the same with oat meal. Some are worth much more than others on that account. But when we come to corn meal it would seem that the quality of different kinds is not well appreciated. Corn meal is corn meal, with a great many buyers. If any distinction is made, it is between Eastern and Western, or Northern and Southern corn, with no consideration of the many different varieties embraced in each one of these grades.

The reason why this is so is, probably, because we eat much more corn *cake* than corn *bread*. On most tables where corn meal appears it is made up with sweetening and eggs into various forms, the edible quality of which depends upon what is added to the meal, rather than upon the meal itself. But there are not a few who delight in the sweet, rich and delicate flavor of the corn itself. A large number of people, it is true, never taste this, except, perhaps, in pop-corn, and this is quite too often sophisticated with sugar. Those who come from the city into the country are often very much surprised at the excellence of our hasty puddings and Johnny-cakes, made of pure corn meal and salt, mixed only with water or milk. But those who use corn meal in this way soon discover that there is a great deal of difference in its adaptation to different uses, and also in the quality, sweetness and freedom from any strong taste in the meal of each particular variety.

Southern people, who eat much more corn meal than Northerners, complain of the Northern yellow corn as being strong in flavor and unfit for human food. On the other hand, Yankees going South almost always complain of the tastelessness of Southern "corn pones" and the like, frequently thinking, until assured to the contrary, that the meal is mixed with wheat flour before being cooked. These differences of local taste, however, are not what we particularly refer to. The varieties of corn grown in a single county or neighborhood, North or South, East or West, will be found to be very different in quality for bread-making. The same variety also differs according to its stage of ripeness when cut up, the care with which it in handled, and in the selection of perfect, sound ears, free from mold, smut, or dirt of any kind, for grinding.

There is a great difference also in the way in which meal is prepared for the table. There is plenty of poor white bread made out of good flour, and it is the same with corn-bread made out of good flour. The agricultural Indians of New Mexico grow a peculiar variety of maize, and prepare it for food by boiling the meal to a thin gruel and then smearing it upon a smooth, hot stone, where it quickly forms a thin brown cake, hardly thicker than paper. These cakes are piled one upon another, four or five thick, and immediately rolled up in a tight roll, which hardens somewhat in cooling and retains its shape. These rolls are said to be very delicious by those who have eaten them, and we think our cooks might well take a hint from this method of cooking meal. One has done so, and furnishes the following recipe for a thin Johnny-cake which "is all crust." From the table where this Johnny-cake appears every morning during the winter, hot biscuits have been banished for lack of demand. The preparation is very rapid and simple, as follows: Take one pint of milk and stir into it half a cup of sifted corn meal. If from new corn, a little more meal is required. Add half a teaspoonful of salt. Have ready a sheet-iron pan, ten inches square and one inch deep. Set it on the stove, drop into it a piece of butter (or lard) half the size of an egg; let it melt, and by tipping, flow the melted grease all over the bottom and sides of the pan; then pour what remains into the meal-batter. Turn this into the pan, and bake in a quick oven to a full brown. This batter will appear very thin and the milk will rise to the top when it is poured into the pan, but it comes all right in the baking. A family of six will want about four pans for breakfast.

A HALF ACRE TO VEGETABLES.

We are anxious to use all the influence we have among our readers to induce them to give more attention to the home vegetable garden another season. Instead of an acre or more *called* the vegetable garden, that after planting and sowing is left, with barely sufficient after-labor to provide against the supremacy of weeds, try half an acre, or even less. Be generous with manure (if needed); plow, roll and harrow thoroughly, and then plant in even, straight rows, and *keep the weeds down.* Give a few rows of Celery, Salsify, Pie-plant, Asparagus and Cauliflowers a place. Make one or more paths through this garden and on either side set Currant and Gooseberry bushes, also in straight lines, to make the path boundaries. Give one plot forty feet square to Strawberries, another of the same size to Blackberries and Raspberries. Half an acre thus attended to, will, we are confident, gratify those who have never tried gardening in a small and painstaking way.

Farmers, occupied with their field crops and farm projects, are, without meaning to be so, perhaps, unmindful of the power which a varied supply of garden produce during the season exerts to make the country home a sprightlier and happier place than in a majority of cases it is found to be. Under "Catalogues, &c., Rec'd" we have placed before our readers, with any comments that have occurred to us, the catalogues of the foremost seedsmen in this country. These catalogues contain lists of all the vegetables which are worth planting, and they may be had for a nominal sum, or, in some instances, free of charge. Now, we say to our readers what we have said before: Send for these catalogues—read them—compare them. Order of those that seem to offer the best and the most for the price, and then be guided by our advice to try what *can be* done upon a half acre.

MOONSHINE.

There are many persons who are waiting for the "right time of the moon" before they will venture to plant their potatoes. They were governed by the same idea in slaughtering their hogs last season. They firmly believe that the phases of the silver satellite have a potent influence on the products of the earth. This need not be regarded as superstition; for it respects the theory of a natural cause, and is extenuated by the many surprising discoveries of causes and effects by modern science. The opinion is the result of the common tendency to cling to beliefs that are inherited, without questioning their soundness or seeking for rational explanations of them. As far as the moon theory seems to be sustained by experiment, there is, no doubt, in every case, an unrecognized cause that should rather be accepted as the true one.

Those farmers that pay no attention to such notions, are just as successful as those who do. We venture the affirmation that every one who is governed by the state of the moon and is blessed with a good result, invariably uses the ordinary indispensable conditions. He selects suitable land, applies proper manures, and cultivates the crop as it requires. If he hadn't done these things, his expectations would have proved a mere matter of *moonshine.*

BREVITIES.

Zea Mays.

The corn plant has been known to grow 28 inches in a week.

There is no variety of table corn which is sweeter and richer than the Black Mexican.

We had excellent green corn the 15th Oct. last. It was planted the 5th of July.

The average shrinkage of corn in a year is about twenty-five per cent. It would therefore be as profitable to sell corn at seventy-five cents per bushel after harvest as at one dollar the next summer.

There are few plants in which it is so easy to fix any desirable peculiarity or feature by selection of seeds for a few years as in corn. Hence it is there are so many well-marked varieties.

The corn plant is what is called in botany monœcious—that is, the male or staminate flowers are borne on one part, and the female or pistillate flowers upon another. The former is known as the tassel, the latter as the ear. The silk is the pistil. The cob is the rachis, and the chaff is the glumes (abortive flowers) and palets.

The Executive seems resolved to do its duty vigorously in order to check and suppress the spread of pleuro-pneumonia among our cattle. Already importations of live cattle from infected countries has been prohibited, and, curiously enough, a shipment from England has been the first prevented from landing by the orders just issued. The prompt and radical measures taken by the Governor of New York must soon stamp out the plague in this State, and the Legislature of New Jersey is already busy framing laws in the same direction. The bordering States also seem to be awakening to the necessity of prompt action.

We have stated that different species and varieties of the Gourd family as, *e. g.*, the melon and the cucumber, may be planted together or near one another and yet not "mix" the first season. It is the *seed* that is mixed, not the edible part. Seed sown from plants of different kinds that were raised near each other, may show that a cross has occurred. This being the case, we have been asked the question why *corn* mixes the *first* season? Now that part of the grain of corn which shows by its color that a cross has occurred, is the enlarged ovule or seed which is at once affected by cross-fertilization the same as in the *seed* of the melon or cucumber or any other fruit.

Literary Miscellany.

WEAKER THAN A WOMAN.

CHAPTER XXXV.

(Continued from page 143.)

THE Baronet wished to give this little party to remove any bad impression there might be on the minds of the people after the ball. He had resolved upon being most amiable, polite and attentive, to his wife especially.

But circumstances were against him. His favorite horse that very morning had been found lame, and the groom had the insolence or the courage to tell him that he had caused it himself by his reckless riding. He turned to dismiss the man on the spot, and then suddenly remembered that he could not replace him, for he was one of the most valuable servants that he had. He was obliged to rein in his temper, which in itself was enough to drive him almost mad, so little was he accustomed to self-control. His favorite mastiff, too, was ill, and he was annoyed about that. The veterinary surgeon said that the dog had better be shot, and Sir Owen swore roundly at him; to which the surgeon answered by saying that he could please himself, and that for the future he should not attend at Garswood if he were sent for. Sir Owen was very angry. It was incredible that a Baronet worth forty thousand pounds a year could not swear as he liked; such a thing was not to be borne.

So when the guests sat down to dinner, Sir Owen was not in the best of humors. He was a discontented man by nature. The first thing that always occurred to him was to complain, to find fault—never to praise. If he saw a clear soup, he was cross because it was not thick; if it were thick, he wanted thin. If one dish were placed before him, he was quite sure to complain because it was not another.

On this particular day he was very much annoyed because some of his favorite fish was not cooked as he liked it. In vain Lady Chevenix, seeing a storm brewing, tried to avert it; the more amiable and complacent she looked, the blacker and angrier he grew. An uncomfortable silence fell over the guests. Felix did his best; he tried to make conversation, but it was difficult with those muttered growls running on like an undercurrent. At last some other dish raised Sir Owen's ire, and he exclaimed—

"If I had married some one who understood these things, I should have been better off."

The guests saw Lady Chevenix's face grow as pale as the pearls she wore. Her silence irritated her husband, for he cried out angrily against her, with a word so coarse and insulting that there was not a man present who did not long to horsewhip him. She rose with quiet grace and dignity to quit the room; she felt that she owed it to her own self-respect not to remain. No sooner did he see her do so than he sprang from his seat and cried—

"Go back to your seat, my lady—do not show any of your airs here!"

The gentlemen rose quickly, but she mastered herself with an effort, for which they commended her. She repressed the hysterical cry that rose to her lips, smiled, and went back to her chair.

"Sir Owen does not always choose his jests wisely," she said; and order was at once restored.

They admired her more than they could say—it was impossible to help it. Her grace, her beauty, her self-possession, her self-control, her tact, all struck them. There was no one present who did not think highly of her for her behavior through so trying a scene. Sir Owen tried to laugh it off. He made some awkward apologies about having been annoyed by horses, dogs, and servants; nevertheless the incident left two disagreeable reminders for him. Darcy Lonsdale told him that same evening that the next time he insulted Lady Chevenix in his presence he must seek another adviser. Captain Hill did better.

"I want to say a few words to you, Sir Owen," he began, when on the point of departure. "You invite gentlemen to your house," he told him, "and then presume to insult them by behaving in the most brutal fashion to your wife. Do not repeat the experiment, Sir Owen. I have broken bread with you for the last time."

And no further word would the sturdy old sportsman exchange with him.

CHAPTER XXXVI.

Sir Owen was alarmed—he found that, although he was a Baronet, he could not do as he liked with impunity. Society had certain laws that must be kept—and one was that a man must, if he wished to be considered a gentleman, treat his wife with respect. Sir Owen found that he must alter, for people were beginning to give up his acquaintance; some of the best families in the county, who had welcomed him with open arms, now did not even invite him to their formal parties. He was losing caste as fast as he could lose it, and he said to himself that something must be done; he must alter, or every house in the county would be closed against him.

Withal there was something good in him—he was not without some redeeming qualities. On the day after the discreditable scene in his own house he rode over to Captain Hill's and asked to see that gentleman. The Captain looked very black when he saw who his visitor was, but Sir Owen held out his hand.

"I disgraced myself yesterday, Captain," he said "and I am come to beg your pardon—to say how sorry I am. I deserved every word that you said to me, and now I make you the most ample apology. Will you shake hands?"

It was impossible to refuse; but Captain Hill assented with an ill grace.

"Have you apologized to your wife?" he asked. 'That is the chief thing."

"Yes; I have made it all right with her. Upon my word, I am quite ashamed of myself. It shall not happen again."

For some time he did not give way to an excess; and in a shamefaced kind of way he tried to make up to his wife for his recent outburst of violence, he always did when he had offended her almost beyond forgiveness. He lavished new dresses, new jewels, new ornaments of all kinds upon her, for in his heart he loved her better than anything else on earth, though he insulted and ill-treated her.

Mrs. Haye had gone home, pleased at leaving matters a little better than she had found them; but Lady Chevenix had vowed to herself that she would not, if possible, be left alone with her husband again. She found that the presence of a third party made some difference, was some restraint, some check upon him. She invited Miss Hethcote to spend a few weeks with her, and that young lady, who had a girl's adoration for the beautiful, graceful Lady Chevenix, gladly consented. Marian Hethcote was a bright, pretty, clever girl, and her companionship was very pleasant to the Lady of Garswood.

They spent the greater part of the time together during the first few days of her stay. Sir Owen was most gracious to her. Then, as was usual with him, familiarity bred contempt. Miss Hethcote herself could not endure him. When her father remonstrated with her one day about her openly-expressed dislike of the Baronet, she said—

"I could never like a man who swears at his wife, papa—and Sir Owen very seldom speaks to Lady Chevenix without doing so. A man who swears at his wife will do anything."

Her dislike to him was not unjustified. She was sitting one morning with Lady Chevenix in her boudoir, the room that was like a shrine for the woman who used it. They were talking gaily and happily enough, when in the distance they heard the voice of Sir Owen speaking in most angry tones. The sound grew nearer and nearer.

"He is coming here," said Marian Hethcote; and the two ladies looked at each other in distress. The door opened with violence, and Sir Owen strode into the room, his face purple with rage. He did not speak to Miss Hethcote, but looked at his wife.

"Where is my silver-mounted riding-whip?" he asked.

"I do not know, Owen," she replied.

"You do know. You had it last, and now it is gone; no one can find it. The grooms say you had it last week."

"I do not remember having had it," she replied gently.

But the gentle words did not touch him. His temper was, as he expressed it, "all in a blaze," and when that was the case he spared neither man, woman, nor child. Miss Hethcote shrank back, startled and scared at the insults and abuse he lavished upon his wife. Lady Chevenix stood quite calm and still. When the angry oaths had ceased, she looked up at him.

"I will go and try and find it, Owen," she said. "I am sorry if I have annoyed you by misplacing it."

She left the room, and the Baronet went to the window. He felt rather ashamed of himself, for in his anger he had quite forgotten Miss Hethcote's presence. He stood there looking out for some minutes in silence. Then he turned to her.

"Women are so stupid," he said.

She was young, and loved Lady Chevenix very dearly, so she was not unwilling to take part in the fray. She had not yet learned that all-important lesson, that it is never safe to interfere between a man and his wife.

"They are remarkably stupid," she replied, "to tolerate such words as you have just used to Lady Chevenix. If I were in her place, I know what I should do."

"What would you do?" he asked sneeringly.

"When I did find the silver-mounted riding-whip, I know what use I should make of it."

He laughed. The idea of a riding-whip in those delicate little hands for the purpose hinted at amused him.

"If you were in Lady Chevenix's place," he said, "you would do just as she does—submit; it is woman's lot."

"I should not mind submission; but my submission would be to a gentleman, not to a swearing, loud-voiced tyrant."

"You speak pretty frankly," he said. "Do not vex me, though."

"I would rather vex than please you."

She was interrupted by the opening of the door. Lady Chevenix entered with the riding-whip in her hand."

"I have found it, Owen," she said quietly, as though no unkind word had passed his lips. "I am sorry to say that I did mislay it. It was put away by mistake with mine."

"I must request you, for the future," he returned, "not to touch anything belonging to me. What is mine is mine, and not yours. Do not let me be vexed in this way again."

He left the room with a quick angry bang of the door. Lady Chevenix quietly took up her point-lace and resumed the conversation. Marian Hethcote looked at her, wondering tears in her eyes. She went over to her, and clasped her arms round her neck.

"Dear Lady Chevenix," she said, "is it possible that you do not really care? I thought you would come back broken-hearted."

"Care, my dear, for trifles I am so thoroughly used to?" questioned Sir Owen's wife. "Certainly not."

"I do not understand how you can bear it. It is wonderful to me. I should run away. I could not live under it."

"My dear child, we learn patience as we grow older," said Lady Chevenix gravely.

But sweet, impulsive Marian would not be satisfied.

"I think it is dreadful. Do not be angry with me, Lady Chevenix, please. I have never heard such words before. They have filled me with horror. I cannot bear to think that you listen to them daily, you who ought to hear only sweet, kind, tender words."

"We will forget all about it, Marian," said Lady Chevenix. "It does not matter; everything comes to an end at last."

But Marian's heart had been stirred.

"Dear Lady Chevenix," she went on, "do not think me rude—that which would be rudeness in another is only love in me. I do love you so dearly, and I cannot bear to hear you spoken to in that fashion. If I were in your place, I should run away."

Lady Chevenix smiled.

"That would not be of much use," she said. "I find as the days pass that I cannot run away from my trouble."

Marian stood watching her, with a sad look on her fair young face.

"I often think about you, Lady Chevenix," she said, "and I wonder why—pray do not be angry with me—you married Sir Owen; you are so gentle, and he is so much the reverse."

"Dear Marian, marriages are made in heaven," she returned, with a slow sad smile.

"Are they? Well, dear Lady Chevenix—do not think me irreverent—if your marriage was made in heaven, mine shall be made on earth. I often wonder if I ever shall marry. Do you know that in my short career I have not seen very much happiness in married life? I am not greatly in love with it, therefore."

"It is like everything else—a lottery and a chance," said Lady Chevenix.

"I have quite made up my mind what kind of man I should like to marry," went on Marian. "He must be good, to begin with—clever, distinguished and handsome, gentle, and yet brave—something like—do not laugh at me, Lady Chevenix—something like Mr. Felix Lonsdale; he is my *beau-ideal* of a man."

She wondered why Lady Chevenix turned away with a little low cry on her pale lips.

"You like Mr. Felix Lonsdale then, Marian?" she said, after a time. It was a pleasure to talk of him, to utter his name and to hear it—a pleasure that she had long been deprived of.

"Yes, I like him better than any of the gentlemen I have met—much better. He seems to me a gentleman in every sense of the word. I like him very much," she continued warmly, quite unconscious of the pain she was inflicting on Lady Chevenix.

"He would be flattered if he knew how highly you thought of him, Marian."

The sweet girlish laugh rang out gaily.

"Would he? I do not think so. He does not seem to care very much for the society of ladies; he talks more to Lady Maude Arlington than to any one else. He is not what most people call a lady's man."

"He has other things to think of," said Lady Chevenix.

"Perhaps so. Mrs. Clayburn told me he had had a great trouble, a great sorrow, in his early life."

"Did she tell you what it was?" asked Lady Chevenix; and Marian Hethcote did not see the trembling of the white hands.

"Yes; he loved some one who forsook him; she married some one else. Mrs. Clayburn did not tell me much about it, but she said that that accounted for his not caring much for the society of ladies; he had loved this lady so long and so truly that he had taken it deeply to heart and he had never recovered from the sorrow."

"I do not believe it," said Lady Chevenix slowly.

"Indeed, it is true. I watched him after she had told me, and I saw that whenever his face was in repose it was sad."

Lady Chevenix was quite silent for a few minutes, and then she said—

"Did Mrs. Clayburn tell you who the lady was?"

"No, it is no one near here, I think," answered Miss Hethcote. "She did not say very much; but it was just what I had thought myself. I said to myself the very first night that I saw him, 'That man has had some great sorrow in his life.'"

"I have noticed nothing in him to make me think that," said Lady Chevenix.

"You see so many people that it has escaped you. I am quite sure that he has wasted all the love of his noble life on some one quite undeserving of it. I have an instinct that tells me so."

Lady Chevenix stood up before her all pale and trembling.

"My dear Marian," she said, "never speak to me of this again. Some one else will tell you if I do not. It was I whom Felix Lonsdale loved; it was I who gave him up to marry Sir Owen. Hush! Do not cry for me. I deserve it all, and much more; but, Marian, never talk to me of Felix Lonsdale again. We will go now, dear. The bell has rung for luncheon."

CHAPTER XXXVII.

"Violet," said Sir Owen to his wife, "I want you to give a garden party; they are much in vogue. There could be no more beautiful time for one than during this lovely weather. The grounds look superb; we have not a tree that is not in full leaf. Send out your invitations to-day."

"I will do so with pleasure," replied Lady Chevenix; and Marian Hethcote, who was present, appeared delighted.

"You are growing quite amiable, Sir Owen," she said.

"If one garden party makes me amiable, two ought to make me charming."

"Perhaps they will do so," said Miss Hethcote.

"We will give one now worth remembering. I think I can get the military band from Ordstone—I shall try to do so—and we will send to London for a *chef de cuisine*. We will have everything of the very best."

The invitations were numerous. Lord Arlington decided to accept his.

"I do not like the Baronet," he said, "and I am grieved for his young wife; still we cannot send him to Coventry. We must visit him sometimes—and a garden-party is better than a dinner-party. We need not stay so long and we need not see very much of our host.

So Sir Owen was made happy by a polite note from Bramber, saying that the Earl and his wife and daughter would be present at the gathering.

The Lonsdales all promised to be present, and it seemed as though the garden-party was to be a success.

One day Sir Owen sat with Lady Chevenix and Miss Hethcote after dinner discussing the coming event. He turned to his wife.

"Violet," he said, "I saw a very pretty girl the other day—a girl that quite took my fancy. I met her at Darcy Lonsdale's office."

"Indeed!" returned Violet. "Who was it, Owen?"

"Let me see now—what did they call her? Evelyn—Eve Lester—the niece of a certain strong-minded Miss Lester who lives at the Outlands. You must know her—of course you know her!"

"Yes," was the quiet reply, "I know Eve Lester."

"You ought to like her too. I quite admire her. I have not seen such a pretty face for some time—yours of course excepted, Miss Hethcote," he added laughingly.

"Lady Chevenix's face excepted, you mean," said Miss Hethcote; "hers indeed is a most beautiful face, Sir Owen."

"There is too much pride and defiance, or rather pride and indifference," he laughed, "in my lady's face. Now this girl, Eve Lester, is as fair and sweet as a dove; she reminded me of a dove, so fair and gentle is she."

"Very sweet people are apt to be very inane," said Miss Hethcote.

"Inane or not, I wish you would invite her to the party, Violet."

"I will do so with pleasure, but I do not think she will come."

"Why not?" he asked impatiently.

"Because, though we were friends once, we are not friends now," said Lady Chevenix.

"Then you must be friends; Violet, I am determined to have her at the gathering. I liked her sweet fair face."

"My dear Owen, I would do anything to oblige you or please you, but I cannot make any overtures of friendship to Eve Lester."

"But I say you must, Violet."

"I am sorry that I cannot. If you are determined that Miss Lester shall come, you must go yourself and invite her."

"It is the usual way if I want anything," he said angrily. "I can have everything except the one thing most desired. I only wish that I had had the sense to make such a girl as that Lady Chevenix: there would have been no opposition to my wishes then."

"I am quite sure that I wish the same thing," rejoined Violet quietly.

"Do you? I might have expected such a confession from you," he exclaimed.

All that was disagreeable seemed to be forgotten when the day of the *fete* arrived. The party was likely to be a wonderful success. All the *elite* of the neighborhood had assembled. The sun was bright, the trees were in luxuriant leaf. Had there been no other attraction, the beauty of the grounds alone would have been one.

Sir Owen looked proudly around; it pleased him to see such great and noble persons his guests. The one whom he cared most to honor was Major Rawson, the great Victoria Cross hero of whom all England and even all France had been talking—Major Rawson, who was heir to a Baronetcy, and one of the most popular men in England. Sir Owen was very anxious to impress him in every possible way. He was visiting at one of the houses in the neighborhood, and was received by Sir Owen with great *empressement*.

"I do not see Lady Chevenix," said the Major; "I am unfortunate in arriving so late."

"We shall find Lady Chevenix somewhere in the grounds," said Sir Owen; and he proudly introduced him to the county magnates.

Suddenly the Major touched his arm.

"Who is that beautiful woman yonder?" he asked in wonder.

"Which?" said Sir Owen.

"The one in blue and white there, talking to that dark, handsome man."

Sir Owen's face brightened with pleasure.

"That is my wife, Lady Chevenix," he said. "Come, and I will introduce you."

"I had heard that Lady Chevenix was beautiful," he replied, "but I had not expected to see such perfection. And the gentleman—who is he? His face is a striking one."

"He is my lawyer and agent; his name is Felix Lonsdale. It is strange that on the first occasion of meeting them you should see them together. He was a great admirer of my wife years ago."

Major Rawson was not surprised to hear it; such a woman as that might have any number of admirers. He looked from the handsome face of the young lawyer to the dark, evil, dissipated countenance of the Baronet by his side, and wondered in silence how any woman could have chosen between the two men, and have chosen so badly.

Later on in the afternoon he stood by Lady Maude, and they were both watching Lady Chevenix. The brave soldier who had won his cross by acts of valor worthy of a hero was wonderfully impressed by Lady Chevenix.

"I shall never forget that face," he said, "although I may never see it again. How beautiful it is! And yet there is a shadow over it. It is not the face of a happy woman, is it, Lady Maude?"

"No, not quite," she replied hesitatingly.

"Is Lady Chevenix happy?" he asked

She looked up at him.

"My dear Major, what a question to ask me!" she replied. "Who shall say which of us is happy? I think Lady Chevenix loves wealth and position better than anything in the world—and she has both."

"Is it well for us to have our heart's desire?" he asked gravely. "I have often wondered about that."

"I cannot tell," replied Lady Maude—"I have not mine."

"Nor I," said the Major; "but this beautiful lady, you say, has hers?"

He thought Lady Maude singularly reticent on the subject, the fact being that she never liked to hear Lady Chevenix mentioned. She could not forgive her for all she had made Felix suffer; she could not bear to think of so worthy a young fellow having been made wretched through the caprice of a woman. She never liked to remember the day and the hour in which she had found him stricken like one dead by the treachery of a false woman.

She said as little as possible about Lady Chevenix at all times. She was half vexed that Major Rawson should admire her, for, if Lady Maude had in her heart any weakness, it was a great admiration for the hero of the Victoria Cross. She would have liked to think that he was above the weakness of admiring a face merely because it was beautiful; she would have felt better pleased if he had praised it for being noble. Lady Maude admired nobility more than beauty, and could not understand any man being a slave to beauty.

She liked Major Rawson, and she said to herself now, in her exalted fashion, that he was the kind of hero she approved of. Her noble face brightened with happiness when he was by her side; she liked to hear him speak; his presence was a source of unwonted pleasure to her. She was too proud and stately to say to herself that she cared for him in any way, though she had a great admiration for him. But the day of the garden-party at Garswood was to be one to be remembered with pleasure by both of them, for it was the day on which they first began to understand that each had conceived a friendship for the other.

The brave and simple-hearted soldier could not comprehend why Lady Chevenix had given up Felix Lonsdale for Sir Owen. Some one gave him an explanation of it, and he came back to ask Lady Maude if it were correct.

"I wish you would not ask me," she said, "for it is a story I do not like to hear or to speak of."

"Your wishes are my law on every subject," replied the Major. "If you tell me that I must not ask you, I will not; but I am deeply interested—and I do not often interest myself in other persons' affairs."

"I can only tell you what happened," she replied—for to no creature living had Lady Maude ever betrayed one word of the confidence Felix had reposed in her. "The occurrence," she continued, "is unfortunately very common. Lady Chevenix, then Miss Violet Haye—'beautiful Violet Haye,' she was called—was engaged to marry Felix Lonsdale. I believe that if Sir Owen had delayed his coming for three months longer they would have been married. He came, and with his vast wealth and title soon became the lion of this county. How she broke her troth-plight, and why she broke it, what excuses she made to herself or others made for her, I cannot tell you; but it is quite certain that she went to London, and that Sir Owen followed and married her there."

"There can be but one explanation—she must have given up her lover for the Baronet," said the Major; "but I cannot imagine any woman preferring Sir Owen Chevenix to Felix Lonsdale."

"You forget that Sir Owen had, as the old song says, houses and lands, while Mr. Felix Lonsdale has nothing but his brains."

The Major was silent for some minutes, and then he asked——

"Is the world very hard on these sins, Lady Maude?"

"I do not know. I know that society receives Lady Chevenix with open arms."

"And what do women call such sins?" he asked again. "What is the name they go by in this curious world called society?"

"People give them different names—some call them prudence, some faithlessness."

"What do you call such behavior?" he asked.

"Mine is a plain unfashionable term," said Lady Maude. "I call the woman who breaks her word to her lover a jilt, and I call the wrong she does by its right name perfidy."

Major Rawson admired the speaker all the more for frankness.

And so Sir Owen's garden-party passed off well, every one praising the graceful beautiful hostess—but no one saw her standing later on in the evening with tears in her eyes watching the sunset.

CHAPTER XXXVIII.

Sir Owen had a novel idea—it was, when the June quarter day came round, to invite the principal tenants to dine at Garswood. Such things were done by the great landed proprietors of the county, and he was desirous of imitating them. This reminded him that there were several other matters that required attention—some of the tenants' leases had fallen in, and to renew them would require a long and patient search in the iron room, where all deeds and documents of value were preserved. There was another important piece of business on hand. One of the farmers in the neighborhood had sold some land to Sir Owen Chevenix; but soon after the sale he died, and his successors disputed his right to sell. Most of the old title-deeds of the Garswood estate required careful perusing; so Sir Owen invited Darcy Lonsdale to stay for a few days at Garswood. It would be much easier, he thought, for him to read the various papers there than to have them taken to his office.

Mr. Lonsdale thought so too, and promised to ride over to the Hall; but shortly before the appointed time some important law-business called for his presence in London.

"I must go," he said to Felix; "and you will have to take my place at Garswood—no one else can do it. What do you say, Felix? If you dislike it, I will give up my London engagement; but I do not think it can make any difference to you. What do you say?" And the elder man looked anxiously into the face of his son.

Felix was silent for a few minutes, and then he said, with a frank smile—

"It can't matter, father; I go as a man of business, not as a friend. I will do it with pleasure. It would be as well for you just to write and hint to Sir Owen that he might prefer you."

"I do not think he would," returned Darcy Lonsdale; "you are decidedly his favorite, Felix."

Mr. Lonsdale was right. Sir Owen was much pleased at the change. He passed the lawyer's letter over to his wife, and she read it.

"I am very pleased," he said. "Felix is cleverer than his father—and I like him. See that he has a nice room, and that his comforts are well attended to."

She made some vague reply—it seemed to her that heaven and earth were about to meet. That Felix should ever be under her roof as her guest seemed to her a most wonderful thing. How should she receive him? Would he soften a little in his manner to her? How fervently she hoped that Sir Owen would treat her, if not kindly, at least with some outward semblance of respect before her old lover! She was glad that Marian Hethcote was still with her—it would have been awkward to have met him alone.

When Sir Owen had quitted the room, Marian placed her hands upon Lady Chevenix's shoulders and looked into her face.

"Tell me," she said—"do you like this arrangement? Does it please or vex you?"

Lady Chevenix met her gaze with a calm smile.

"It does neither," she replied; and then Miss Hethcote understood that the subject of Felix Lonsdale was not to be reopened between them.

Lady Chevenix never forgot the evening when Felix came. It seemed to her that everything looked the brighter and the better for his coming. Sir Owen had given orders that the dinner should be delayed until he arrived.

Felix Lonsdale and Lady Chevenix met with seeming indifference. She looked very beautiful. She wore a dinner-dress of white lace, with lilies of the valley in her hair. She held out her hand in greeting to him.

"I'm very glad to see you, Mr. Lonsdale," she said. "I hope you will have a few pleasant days with us."

Miss Hethcote next had something to say to him, and then Sir Owen entered the room. He was most effusive in his greeting. He was delighted to see his guest; he hoped he would make himself quite at home, and enjoy himself as much as possible.

Violet could not help contrasting the two men as they stood side by side—Sir Owen's awkward figure and coarse face with the grand beauty of Felix Lonsdale, the nobility of the untitled man with the commonplacedness of the titled one. The contrast was both sharp and strong; she felt it keenly.

Then they went in to dinner. Sir Owen was in one of his best humors, and everything went off well. For so much Lady Chevenix was thankful; every hour spent without an outbreak was a gain to her.

"You will give us this one evening, Mr. Lonsdale," said Sir Owen. "Enjoy yourself a little before you begin to work."

It was a matter of perfect indifference to him. If he had consulted his own inclination, he would have preferred to begin work at once; but he could hardly be impolite enough to say so.

Sir Owen liked to sleep after he had dined. Felix declined to take more wine; and the Baronet, thinking in his heart that the young lawyer was a simpleton for it, went into the drawing-room with him, and then fell asleep. Before he closed his eyes he said——

"Lady Chevenix, Mr. Lonsdale will like to see the grounds, I am sure. You and Miss Hethcote will both enjoy a stroll."

He never once thought that he was submitting his young wife to a most deadly peril—the peril of a great temptation. He never thought of Felix Lonsdale as of one who had been his wife's lover. He had been engaged to her—that was a well-known fact; but, so soon as he, the victorious knight, had appeared, he had retired from the contest defeated, and there was an end of it all. He considered that he had raised his wife so completely above all her past life, that he had taken her so completely out of her old sphere, that nothing which had interested her then could interest her now—he never pondered the fact that Felix Lonsdale, the rising lawyer, the man of promise, the most clever and skillful practitioner in the county, was his wife's old lover. So he lay down in perfect content while he sent his young wife out into the lovely summer gloaming with her old lover.

They walked on all three together, saying little, but thinking perhaps all the more. They passed through the pleasure-grounds; they lingered amongst the roses and the lily-blooms; they watched the gold-fish in the fountain. The air was balmy, sweet, and fragrant with the odor of flowers.

"Let us go on to the park," said Marian Hethcote; "it will be very pleasant there."

They passed through the shrubbery and entered the park. The beautiful fragrant gloaming had set in; the water of the lake was tinged with crimson and gold; a lovely light lay over the trees; there was a faint murmur as the wind swayed the branches of the trees and stirred the leaves. The peace and beauty, the loveliness and repose touched them.

"Shall we sit down here," said Lady Chevenix, "by the lake side, and watch the light die out over the water?"

They sat down, the two ladies side by side, Felix, nearest to Miss Hethcote, at their feet. Marian was talking gayly to him; Lady Chevenix said but little. He who once loved her with such a passionate love looked at her. No dream of poet or painter could ever have been more fair. The evening light fell full upon her face, which was raised to the sky as she watched the crimson clouds; it touched her golden hair and was reflected by the rich jewels that she wore. She had thrown a white lace shawl over her white neck and bare arms; a corner of it was over her head, and the shadow of it softened her features. She listened to the lively sallies of her girl-friend, wondering if she should ever again be so happy, so light of heart.

Then Marian sang a quaint little song—a ballad telling the story of a knight who had ridden away to the Holy Land, leaving a girl-bride who died while he was away—a sweet sad song, just suited the hour and the gloaming.

"Now, Lady Chevenix," she said, "you must sing for us too; sing that beautiful song you were practising this morning."

"I was not practising," returned Lady Chevenix. "I was trying to put some words to an air I think very sad and sweet. If you would like to hear it, I will sing it. Would you care to hear it, Mr. Lonsdale?"

He murmured some commonplace words about his having always liked good music. She smiled bitterly to herself; and then, in a low, sad, sweet voice, she sang these words—

"'Yes, dear, our love is slain—
In the cold grave for evermore it lies,
Never to wake again
Or light our sorrows with its starry eyes;
And so regret is vain.

"'We should have seen it shine
Long years beside us, Time and Death might try
To touch that love divine,
Whose strength could ev'ry stroke defy
Save—only mine!

"'No longing can restore
Our dead again. Vain are the tears we weep;
And vainly we deplore
Our buried love. Its grave lies dark and deep
Between us evermore.'"

Her voice died away in a low sweet murmur that was like the love-plaint of a bird, and they were silent for some minutes, none caring to break the spell. Then Felix looked at her.

"I remember those words," he said; "they are taken from a poem called 'Lost Alice,' by Adelaide Ann Proctor. I gave you the book, I think, Lady Chevenix?"

That was the first time he had ever alluded to the past; he had until now always treated her as a stranger—as a Lady to whom he had been introduced for the first time by Sir Owen Chevenix.

Her face brightened when she heard it; it seemed to her that the broken chain had been taken up in those simple words.

"Yes, you gave it to me," she acknowledged; "and I know every word of the poem by heart—I have read it so often."

He looked up in surprise.

"Indeed!" he said. "I thought that you did not care for poetry at all, Lady Chevenix?"

"I fancied I did not, but I was mistaken. During these later years I have learned to value and understand many things that were once like so many dead letters to me."

"I wish," said Marian Hethcote, "that we could understand everything at once. As it is, we learn little quickly; it takes long years to teach us the simplest lessons, and by the time they are learned we must die. As my favorite poet says—

"'We live—we love; and then
Stone dead we lie.
O Life, is all thy song
Endure and die?'

How much more pleasant it would be if we could master everything at once! What mistakes and blunders we make! I read the other day of a great and wise man who, when he came to die, said, 'My life has been all a mistake.' Mr. Lonsdale, I am growing quite sad; it is your turn to sing for us."

"I cannot sing; but I will repeat some verses that I think very beautiful, if you would like to hear them."

"Whose are they?" asked Lady Chevenix.

"They are Miss Proctor's," he replied; and he turned his face away from her while he recited them.

It seemed to Lady Chevenix as though the wind fell and all nature were hushed to listen. There was no passion, no regret, in the low, rich tones—the were clear and sweet and eloquent—but each word as it fell in the fragrant gloaming seemed to burn itself on her heart and brain.

"The poem is called 'Parting,'" said Felix, "and is so beautiful in itself that it cannot fail to please;

"'Without one bitter feeling let us part;
And for the years in which your love has shed
A radiance like a glory round my head
I thank you—yes, I thank you from my heart.

"'I thank you—and no grief is in these tears;
I thank you, not in bitterness, but truth,
For the fair vision that adorned my youth
And glorified so many happy years.

"'Yet how much more I thank you that you tore,
At length, the veil, your hand had woven, away,
Which hid my idol—a thing of clay,
And false the altar I had knelt before!

"'I thank you that you taught me the stern truth
None other could have told and I believed—
That vain had been my love and I deceived,
And wasted all the purpose of my youth.

"'I thank you that your hand dashed down the shrine
Wherein my idol worship I had paid;
Else had I never known a soul was made
To serve and worship only the Divine.

"'I thank you for a terrible awakening—
And, if reproach seemed hidden in my pain,
And sorrow seemed to cry on your disdain,
Know that my blessing lay in your forsaking.

"'Farewell for ever now—in peace we part;
And should an idle vision of my tears
Arise before your soul in after-years,
Remember that I thank you from my heart.'"

So clearly, one by one, with cruel distinctness, the words sounded in Violet's ears. She knew, she understood that that was what he would say to her; in his mind there could never be even the faintest renewal of their past friendship, and in his heart he thanked her that his unhappy love, his great abiding sorrow, had taught him many noble lessons. She understood—he had said it delicately and kindly, but he had meant it—that the whole past was buried for him; he thanked her that she had taught him to suffer, and suffer in silent strength.

She was quite silent for many minutes after he had finished; it was Marian who talked to him and made him recite for them again and again.

The sun had set, the crimson and gold had faded from the water, a gray shade had fallen over it—all was quiet, calm, peaceful. Lady Chevenix rested her head against the gnarled trunk of an old tree; the peace and repose were novel to her. Presently a slight sound in the distance startled her.

"What is that?" she said.

"'It was only the deer that were feeding
In a herd on the clover grass,'"

sang Marian; and Felix looked up with a smile.

"I know that," he said. "You are quoting from a ballad called 'Hush.' Strange to say, I was thinking of it a short time since. The words were running through my brain."

"They have run through my heart," remarked Marian, "often and often. I am matter-of-fact myself, but that song always brings tears to my eyes. Repeat it for us, Mr. Lonsdale."

"I will. There is something in the time that suits the words. The light is dying in the sky, the sun has set, the flowers are sleeping, the wood-pigeons are silent, the air is full of dreams.

"'I can scarcely hear,'" she murmured,
"'For my heart beats loud and fast;
But surely in the far, far distance,
I can hear a sound at last?'"
"It is only the reapers singing
As they carry home their sheaves,
And the evening breeze has risen,
And rustles the dying leaves."

"'Listen there are voices talking!'"
Calmly still she strove to speak,
Yet her voice grew faint and trembling,
And the red flushed in her cheek
"'It is only the children playing,
Below, now their work is done,
And they laugh that their eyes are dazzled
By the rays of the setting sun.'"

"'Fainter grew her voice, and weaker,
As with anxious eyes she cried—
'Down the avenue of chestnuts
I can hear a horseman ride'"
"'It was only the deer that were feeding
In a herd on the clover grass;
They were startled and fled to the thicket
As they saw the reapers pass.'"

"'Now the night arose in silence,
Birds lay in their leafy nest,
And the deer couched in the forest,
And the children were at rest.
There was only a sound of weeping
From watchers around a bed—
But rest to the weary spirit,
Peace to the quiet dead.'"

There was silence as the last words fell, and Lady Chevenix bowed her head, so as to hide her tears. The gray shadows fell darker.

A loud voice roused them.

"Where are you? Where have you hidden yourselves? Surely a ramble amongst the flowers does not mean an encampment by the lake."

Through the clear fragrant air came the odor of a cigar, and Sir Owen, looking very cross, suddenly appeared before them.

"I could not find you anywhere," he said in a sullen tone "You must have hidden yourselves on purpose."

Lady Chevenix did not answer him, because she knew that it was needless to do so. Miss Hethcote was equal to the occasion.

"If we had wanted to hide," she said, "we would have hidden. As we did not, we remained here. If you are going to be cross, Sir Owen, do not spoil an agreeable party by joining it."

He laughed then, and sat down with them; but the beauty, the poetry and peace were all gone. He began to tell of a fight he had seen between a King Charles's spaniel and a toy terrier, laughing heartily at it, and wondering they did not laugh also. It was an exquisite joke to him to tell how the little King Charles lay dying—and even in dying tried to lick his hand.

"Do you enjoy seeing anything suffer, Sir Owen," said Miss Hethcote.

"I think a dog-fight, or anything of that kind, capital sport," he answered.

"But the unfortunate creatures must feel!"

"Feel!" sneered Sir Owen. "What nonsense! Foxes were made to be hunted, rats to be worried, dogs to fight. Why should they feel?"

With a shrug of her shoulders she turned away from him. Sir Owen laughed again; he rather enjoyed a dispute with a pretty girl.

"I am not one of your sentimentalists," he said. "Now Mr. Lonsdale could give you poems by the yard, I am sure."

"I should be very sorry to do so," remarked Felix; "at the same time I give the preference to poetry rather than to dog-fights."

Sir Owen laughed again; in his own opinion he was a most manly man, and Felix most insignificant. Felix rose from his seat and strolled away; he felt disgust almost amounting to hatred for this coarse, vulgar, repulsive man.

"Do not leave us, Mr. Lonsdale," said Sir Owen. "I will take Miss Hethcote indoors, and you can escort her ladyship—though she looks decidedly sullen."

It was useless for Lady Chevenix to say that she had no thought of being sullen; when Sir Owen had once asserted a thing, he maintained it. She looked up into the face of Felix Lonsdale, with a smile that made his heart beat faster than usual.

"That is not one of my faults," she said. "I do not remember ever having been sullen in my life; I have seldom been out of temper."

He remembered the sweet sunny temper that had never known cloud or variableness, but offered no remark—he had resolved to himself so often that nothing should induce him to talk to her about the past. They walked towards the house through the deepening shadows, and said but little to each other.

When they reached the Hall, Lady Chevenix was grieved to find a telegram from Mrs. Hethcote. Some friends had arrived quite unexpectedly, and she wished Marian to return at once. Felix wondered why the mistress of Garswood should turn so white when she had read the telegram—why she should place her hands upon the girl's shoulders and say to her so sadly—

"What shall I do without you, Marian?"

"I will come back to you as soon I can, dear Lady Chevenix," replied the girl, "and in the meantime Mr. Lonsdale will be here."

(To be continued.)

WHAT OTHERS SAY.

The Rural's First Seed Distribution for 1879.

A FEW COMMENTS OF THE PRESS.

THE Scientific Farmer (Boston, Mass.) says:—"The Rural New Yorker, 78 Duane St., New York, is giving its subscribers a series of "Free Distributions" of seeds and plants. When the high character and real value of this paper to the farmer is considered, this additional service to its subscribers must clinch many friendships, and form many new ones."

THE New-Orleans Picayune says:—"Thanks to that enterprising and model agricultural journal, the Rural New-Yorker, for a sample package of choice seeds, such as the Rural Publishing Company distributes gratuitously among its numerous subscribers. But this is, only a specimen of the first of a series of free distributions for the year. They are among the finest of hardy plants in cultivation. It is an ingenious and effectual method of securing the cultivation of these useful and beautiful products and plants in all parts of the country, and of extending their cultivation. The Rural Publishing Company bestows a great favor on their subscribers, and a still greater favor on the whole country."

THE Farm and Fireside, (Springfield, Ohio), says:—"The publishers of the Rural New-Yorker, 78 Duane St., New York City, are conducting a series of Free Seed Distributions among their subscribers. We have received a sample of the first distribution, and are free to say it is all the publishers claim for it. Ten of the varieties they offer cannot be purchased here or in Europe. They are among the finest hardy plants in cultivation. The Rural is a wide-awake, progressive journal, and merits a hearty support."

THE Buffalo (N. Y.,) Christian Advocate says:—"The Rural New-Yorker Publication Co., is making a free distribution of very rare and choice seeds to its subscribers. We have received from the company a sample package of the "Beauty of Hebron" potato. The cost to the company must be considerable, as some of the seeds which they give to their subscribers cannot be purchased either in this country or in Europe."

THE Michigan Farmer says:—"We have been sent by the publishers of the Rural New-Yorker, one of the packages of seeds which they are distributing among the subscribers to the Rural. Some of the varieties are only obtainable by means of this distribution as they cannot be purchased. The package contained ten packages, consisting of plant, vegetable and flower seeds, all of desirable varieties. It is certainly a very extensive and costly experiment the Rural is trying, and we hope their enterprise will be rewarded."

THE Observer, (Ont., Canada,) says:—"As our readers are aware, the Rural New-Yorker is this winter sending out several varieties of choice and valuable seeds, grown on its own experimental farm, free to all its subscribers who apply for them. Samples of these seeds have been sent to this office, and we find them to be all that they were represented. Some of them will be very valuable to farmers, especially the new fodder plant, Pearl Millet. We have also received a sample of the new potato, the "Beauty of Hebron," which it claims to be earlier and superior to the Early Rose."

THE Monongahela (Pa.,) Republican says:—"Subscribers to the Rural New-Yorker are being delighted with packages of valuable seed sent out free to each one, from the Rural experimental farm. The plan is simply this: Each subscriber may select from the list what is desired, and on enclosing a postage stamp naming the kinds desired, they are duly forwarded as a gift. No other proposal at once so valuable and so generous has been offered. In order to better understand this matter, address Rural Publishing Company, 78 Duane St., New York City, for a sample paper. A postal card request will be duly honored."

THE Harrisburg, (Iowa) Courier says:—"Our readers have probably noticed in the Courier the advertisement of the Rural New-Yorker. This is one of the very best publications in the country, and one of the foremost in advancing scientific agriculture. The publishers are now sending about a dozen different packages of seeds—ornamental and useful—to their subscribers free of charge, nearly all of which cannot be obtained from any other source, as they have been originated and grown on their own experimental farm. They have our thanks for samples."

THE Unionist, (N. J.,) says:—"That standard agricultural paper, the Rural New-Yorker, 78 Duane St., New York City, in addition to giving their subscribers their money's worth in reading matter are sending to each one packages of seeds, from the finest plants in cultivation. Some of the varieties are specialties of their own which cannot be purchased here or in Europe. They also send a "Beauty of Hebron" potato. This is but a foretaste of other good things that are to follow, for, as they assure us they intend to send other gifts to their patrons during the year."

THE Cincinnati (O.) Gazette says:—"The Rural New Yorker Company, 78 Duane street, New York, is distributing to its subscribers *free* generous packages of flower and vegetable seeds, hardy plants—ten varieties of which cannot be purchased in America or Europe."

News of the Week.

MISCELLANEOUS.

A Congressional delegation called on the President and urged him to sign the anti-Chinese bill. The National Workingmen's Assembly of Washington have adopted resolutions appealing to the President to sign the bill as the only means of preventing bloodshed on the Pacific coast. A mass meeting of politicians and merchants held at San Francisco telegraphed petitions to the Executive urging him to sign. Mass meetings have been held at Washington, Sacramento and Chicago for the same purpose. It is contended on the other hand, that great benefits have accrued to California from the immigration of the Chinese and that the passage of the bill would be a gross violation of treaty obligations and national honor.

The New York Chamber of Commerce at a special meeting held Feb. 27 discussed the question and protested that by every consideration of duty and interests the President should veto the bill. They also appointed a committee of three members of the Chamber to confer with the President upon whom great pressure has been brought to bear, from all sides.

Gen. Patrick and Prof. Law have issued the following: "In view of the existence of contagious pleuro-pneumonia on Long Island and vicinity, the owners of cattle in adjacent counties are earnestly requested to co-operate with the State authorities in their efforts to stamp out the disease. Attention to the following suggestions will greatly facilitate the work of the cattle disease staff, and is strongly urged for general adoption:

"*First*—Purchase all new cattle from neighbors only whose stock is known to be sound. Avoid purchasing from dealers, and refuse even Western cattle that have been kept for a day in common cattle-yards or dealers' stables.

"*Second*—In the case of all new purchases, even from neighbors, when the stock has passed over a public highway, place such animals in a separate building at a distance from the home herd, and keep them thus secluded for one month after purchase.

"*Third*—Should any such quarantined animals become sick, report the same at once to Gen. Patrick, Board of Health, Brooklyn, together with the place they were brought from, the name of the former owner, and the mode of conveyance.

"*Fourth*—Notify Gen. Patrick at once of all suspicious cases occurring among cattle, even independently of the purchase of new stock.

"*Fifth*—Exclude all cattle-dealers, butchers, and visitors, under all circumstances, from yards and buildings in which store cattle are kept.

"In view of the importance of the speedy extinction of the disease, the hearty co-operation of the owners of cattle is confidently expected."

Attorney General Devens has given an official opinion to the Postmaster General overruling a decision of the Assistant Attorney General for the Post Office Department with relation to the right of members of Congress elect to the next Congress to the franking privilege. The Attorney General decides that members of Congress are entitled to the franking privilege from the commencement of the term for which they are elected, although no session is actually called, and they are therefore not able to take the oath of office. Under this decision members of the Forty-sixth Congress will be entitled to the franking privilege after the 4th of March next, whether sworn in or not.

The President has signed the commissions of Horatio C. Burchard to be Director of the Mint and A. L. Snowden to be Superintendent of the Philadelphia Mint.

The House Committee on Expenditures in the State Department held a secret session last week, and although the injunction of secrecy has not been removed from the members attending as to what transpired, it is stated on good authority that the majority will report to the House articles of impeachment against Minister George F. Seward. The minority of the committee will oppose the report.

The Senate Committee on Commerce have reported the River and Harbor Appropriation bill to the Senate, with amendments proposing numerous changes. The net total added to the bill by the Senate Committee is about $1,100,000.

The Geneva Award bill has received its quietus for another session in the Senate. A gallant struggle was made by two Senators from Maine to get it before the Senate, but without avail.

The Senate has reduced the tax on tobacco and snuff to 16 cents a pound. Chewers and snuffers get all the favor that is granted, while smokers are left unrelieved.

The Bureau of Engraving and Printing is running at its full capacity on Sundays in order to supply the demand for four per cent. bonds.

The Ohio Republican State Convention is to be held at Cincinnati, May 28, not March 20.

A terrific explosion occurred at Stockton, California, the other day. A crowd of more than 200 people had assembled to witness the trial of a new propeller pump, set in the slough, and run by a thrashing engine. Those who stood near the engine, where the explosion occurred, were prostrated. The body of the engine was blown a distance of 150 feet through the crowd. The dead lay prostrate in every direction, some falling into the slough from the bridge. Ten or twelve dead bodies lay in one heap at the northwest corner of the bridge. People lay dead and dying on the street, blown from 50 to 100 feet. Some were blown to the ground with such force as to break every bone in their bodies. Faces, hands, and whole persons were scalded. The wounded were promptly cared for, and the dead were left undisturbed until the excitement of the moment had subsided, when they were removed to the Coroner's office. The explosion was the result of recklessness on the part of the engineer. The steam-gauge refused to work, and after the engineer had attempted to fix it and failed, he screwed down the safety-valve, and went on with his work. The explosion occurred about 15 minutes afterward. The killed numbered 16, the wounded 26, three or four of whom are not likely to recover. Many were blown a considerable distance, and escaped uninjured.

The demand for back pensions has begun. During the first six months of the fiscal year, the number of persons who presented claims for invalid pensions was 6,247. Since the passage of the new bill, a month ago, there have been presented 2,301 claims, and the applications for blank forms have been ten times as great as in any corresponding time during the past year.

Charles W. Angell, the defaulting Secretary of the Pullman Palace Car Company, pleaded guilty, in the Criminal Court, to two indictments against him, for larceny as bailee and embezzlement, and was sentenced to ten years in the Penitentiary—the full extent of the law. He made no remark, manifested no emotion, and simply bowed as the sentence was hained. Judge Williams, in reviewing the case, spoke of the high social position occupied by Angell, the enormity of his offense and the confidence reposed in him by the company, and expressed his belief that the full penalty at least was deserved.

A span, 110 feet long, of the iron bridge of the Chicago and Alton Railroad at Wilmington, Ills., gave way on the morning of the 27th February, as a train of empty coal cars was passing over it, and three cars were precipitated into the Kankakee River, a distance of over thirty feet. The bridge is of the Howe truss pattern. Other sections of it were injured, the total loss amounting to several thousand dollars. Nobody was injured. It is supposed that the keen frosts had affected the ponderous castings. Trains will temporarily run over another branch of the road, and no delay will occur.

Frey's stables, built by Mr. Maturin Livingston, next to Mrs. Reed's boarding-school in Fifty-third street, near Fifth avenue, this city, took fire between 2 and 4 o'clock on the morning of 27th February and forty-three horses boarded there were burned. The loss is some $130,000.

A shipper of cattle writes that the stock that goes to an Eastern market is carried much too fast. He thinks that in no case should it be kept on the cars longer than twenty-four hours, and that when taken off it should be rested at least seven hours and given plenty of food and water.

The report that yellow fever still prevails in certain sections and that several deaths recently occurred in New Orleans has been officially denied by the Board of Health of that city, the mayor and the president of the cotton exchange who declare that the health of the city was never better.

A religious warfare against the infamous Oneida Community has been inaugurated. It is a sort of Crusade, with Bishop Huntington, of the Diocese of Central New York, in the part of Peter the Hermit.

It is thought by some that Florida is the only State that grows oranges for market, yet the orange crop of Louisiana for 1876 was estimated at 32,000,000 oranges.

Oregon State and Washington Territory have been snowed-up, and much mischief has been done by the storm, which was very heavy.

By a more accurate estimate, the deficiency for the next fiscal year, instead of being $27,000,000, will not exceed $15,000,000.

The New York Assembly has passed a measure making it a Penitentiary offense for a person to fail to pay a hotel bill.

Grain rates from St. Louis to the East have been cut mercilessly by the pool lines.

THE PRESIDENT'S VETO.

As we go to press the news reaches us that the President has vetoed the bill restricting Chinese immigration, and its friends in the House failed to secure the requisite majority to pass it over the veto.

FOREIGN.

An avalanche fell near Marburg, Austria, killing twenty-one persons and destroying nine houses.

It is rumored that efforts have been made by English agents to bribe one of the Ameer's ambassadors to prevent Russia from intervening, offering the sum of 100,000 roubles ($80,000), as the wage of treason to his master.

It is stated that the Ameer was received with acclamations by the people during his late progress, through Eastern Asia, and that he firmly reiterated his intention of continuing the war. His death has just been announced. He will probably be succeeded by his son.

It is also asserted that the Afghans have 200 cannon and splendid cavalry, with which they could destroy the invaders of their country if they were properly commanded.

The King of Burmah has been doing a little old-school orientalism of the royal kind, he having murdered, with circumstances of peculiar horror, eighty-six members of the royal family.

A dispatch from Dunkirk about the breaking up of the British ship Adriatic, which stranded near that place on February 18, while on the passage from Pabellon de Pica, says there were 49 persons on the ship at the time she broke up, only seven of whom are known to be saved.

A petition to Parliament praying that no duty be imposed on American grain imported into the Dominion is being extensively signed at Montreal by shippers of grain, inland and ocean carriers and dealers, as they maintain that the export trade of that city would otherwise be seriously interfered with, as well as trade generally.

The resignation of Archbishop Purcell was prompted by his financial embarassments, though he has long contemplated the step. In fact, he tendered his resignation in person to Pope Pius IX, twenty years ago, but the Pope declined accepting it, saying, "They only who persevere to the end are worthy of the crown." The Catholic community at Cincinnati is greatly excited over the Archbishop's failure, especially the German portion of it, and the venerable prelate is worried almost to death by the calamity that has overtaken him.

For an Irritated Throat, Cough or Cold, "*Brown's Bronchial Troches*" are offered with the fullest confidence in their efficacy. They maintain the good reputation they have justly acquired. **25c. a box.**

THE MARKETS.

PRODUCE AND PROVISIONS

NEW YORK, Saturday, March 1, 1879.

BEANS AND PEAS.—The demand for beans has revived with strength enough to advance prices for mediums and marrows. Exports for the week, 1,350 bbls. Other sorts show a shade better of firmness, but the call is limited. There do not appear to be many long lines of fine quality stock in any variety this season. Green peas have advanced to $1,37½@1.40. Southern S. E. steady at $2.65 per 2-bush. bag. Canadian peas moderately saleable at 73@75c. Beans, Medium, prime, $1.30@1.32½; fair to good, $1.15@1.25; poor, 90c.@$1; beans, marrow, prime, del., on ship, $1.40; fair to good, $1.15@1.35; pea, choice, $1.35@1.40; fair to good, $1.20@1.30; white kidney, choice, $1.70@1.75; fair to good, $1.50@1.60; red kidney, prime, $2.35@2.40; fair to good, $2.10@2.25; black beans turtle-soup, $2.15@2.25; Limas, $1@5.

BEESWAX—Is in freer supply and offered at easy prices; quoted at 24@25c. for Western and Southern. Exports for week, 1,500 lbs.

BUTTER.—The first of March finds the market rather heavily stocked. Exporters have not filled up the part that was expected of them, while the local demand has dragged for an unusually long period for cold weather. Receipts fortunately are light, and a possible late spring is one of the consoling chances left sellers. Eastern buyers are out in better force but they, and in fact all buyers, seldom respond to extreme figures. Welsh tubs are moving at the moment as well as anything in market. There is more low priced useful Western in market than of the upper scale. A good many lots of factory show injury of grain through jobbing of store rolls or pats. English reports indicate that common lots of butter have been too liberally forwarded during the past two months. Iowa is shipping butter to California.

Single extra State half tubs, 25c.; choice lines, 21@22c.. State, full dairies, special, 19c.; other, 15@18c.; firkin dairies, fair to prime, 15@17c.; Welsh dairies, fine full, 16@17c.; fair to prime do., 16@21c.; choice Welsh, 19@21c.; fair to prime, 12@17c.; choice creamery 25c.; best western creamery, 26c.; other, 19@24c.; early packed creamery, 17@20c.; poor State, 8@11c.; Western dairy, fine fresh, 18@19c.; fair to good, 10@15c.; factory, ladle packed, 16@18c.; good, 14@15c.; other, 7@9c.; rolls, 10@15c.; grease 4@5c.

Receipts for week, 23,050 pkgs.

Exports for week, 7,000 firkins.

BROOM CORN.—There is but little being done and prices are a little unsettled.

Brush and short broom, choice, ₱ lb., 5@5½c.; do. common to good, 3½@4½c.; hurl, good to choice, 3½@4½c.; do. common to fair, 2@3½c.; and crooked, 2@3c.

CHEESE.—Shipments for the week, 47,420 boxes. The market has not varied. A good steady call has been noted for extreme low and high grades, but the medium qualities, of which the stocks are largest, move slow.

Quotations at 9@9½c. for fancy; 8½@8½c. for fine lots; 7½@8c. for good; 3@5c. for skimmed; State, farm dairy at 8@8½c. for fine; 7@7½c. for good to prime. Wisconsin factory, fine and fancy, at 8½@9c.; do. good to prime, at 7½@8½c. Western factory, fine 8c.; good and prime, 6½@7½c.; do. full skimmed, 3@5c.

Liverpool cable, 49s.

Steam to Liverpool, 42s. 6d.

COTTON—Has been very dull through the week and varying slightly. Closing prices are for March at 9.78@9.79c.; April at 9.93c.; May at 10.06@10.07c.; June at 10.20@10.21c.; July at 10.30@10.31c.; August at 10.39@10.41c.; September at 10.20@10.24c.; October at 10@10.01c.; November at 9.86@9.90c.

Quotations for spot cotton are based on American standard of classification, and on cotton in store running in quality not more than half a grade above or below the grade quoted:

DRIED FRUITS.—In apples the best of the Ohio and State quarters continue in favor with exporters, and they are strong in price. Peaches show firmness and a fair jobbing trade. Small fruits quiet generally.

State pluma, 14c.; blackberries are quoted at 5c. Peaches—Peeled Georgia, 6@7c. for poor; 8@9c. for fair to good; 10@10½c. for prime; choice North Carolina, 12@13c.; good do., 9@10c.; unpeeled halves, 3½c.; quarters, 3@3½c. Pitted cherries, 20@21c. Apples—New, 2@2½c. for southern quarters in bags.; 3½@4c. for prime sliced; do., fair at 3@3½c.; State at 3½@4c. for new sliced; and 3@3½c. for quarters; Western at 2½@3½c. for new quarters. Raspberries, 28c. Apples, evaporated, fancy at 10@11½c.; other processes at 6@7½c.

Exports, 550 lbs. dried apples.

EGGS.—Receipts for week, 9,552 bbls.; do. last week, 7,710 do. Lent is here and sellers look for a steadier demand. Receipts are increasing and prices have dropped to a point that leads to business. Stock from remote points are more or less frozen.

Near points, ₱ doz., 17c.; State, and Penn., 16@16½c.; Western, and Southern, 15c.; poor, 14@15c.

FLOUR.—The arrivals have been large and they have been freely offered, and with easier values or at slight decline.

Latest prices are $3.10@3.75 for very inferior to strictly fancy superfine State; $3.70@4.00 for very poor to good extra do., odd lots and lines; $4.00@4.25 for good to very choice do., and fancy lots above this; $3.40@3.75 for inferior to very choice superfine Indiana, Iowa, Michigan, &c.; $3.70@4.00 for inferior to good shipping extra do. and $4.00@4.25 for good to choice extra do.; common to about choice white wheat extras, $4.25@5.35; choice to fancy do. at $5.35@6.15; red and amber winter wheat, very inferior to very choice trade and family, at $4.10@5.85 (fancy held higher); round hoop Ohio at $4.10@$4.35, and trade and family brands of do. at $4.50@4.85, the latter rate for very choice (a few fancy lots held higher); St. Louis, $4.25@6.10 for very inferior to good extra; $5.10@6.00 for good to very choice (with a few very fancy brands in high favor with the jobbing trade), quoted up to $6.50@6.75. Minnesota clear, very inferior to strictly fancy, at $3.75@5.00; few brands going above $4.65@4.75; Minnesota "straight," inferior to fancy at $4.50@6.00; and patent poor to strictly fancy at $5.25@8.25, few brands going above $7.50@7.75; unsound stock at from $2.25@5.25; city mill extra at $4.35@5.25 for West Indies (the latter rate for fancy in new packages); do. for England $3.75@3.90; do. trade and family extras, $5.25@6.25; do. for South America, $5.15@6.65 for fair to very choice; No. ' at $2.40@3.55 for poor to very fancy, the latter an extreme.

CORN MEAL.—Sales at $2.75 for Brandywine and $2.25@2.40 for Western Yellow.

FRESH FRUITS.—Late business in apples is paying owners some profit. Fine greenings free from scald are the leading sort; very little extra red fruit remains. Russets are opened to the market, and shippers are including prime marks in their exports. Exports for week, 6,224 bbls. Spitz., $2@2.50; Baldwins, $1.75@2; Greenings, $2.12@2.50; Russets, $1.75@2; extra, $2.25; poor lots, $1.25@1.50.; Eastern apples, $1.50@2, truck price. The best reserve of cranberries is about used up; few lots good enough to rate at the extreme; good to choice, bbls., $7@8.50; N. J. crates, $2.25@3. Florida oranges have merely a chance sale, as quality is not generally attractive; best half bbl. boxes, $2.50@3.50; poor, $1@1.50; bbls., $4@6. Peanuts in fair demand; sellers' views more easily met. Va. hand-picked, choice, $1.10@1.15; other, 85@97½c. Hickory nuts in a small way, $2@2.25; pecans, small, 6@6½c; large, 7½@8c.; Hot-house strawberries, $5@5.50.

FURS AND SKINS.—There have been no special changes in price; shippers will operate moderately until the Hudson Bay Co.'s London sale is reported.

Badger, 50@$1; bear, black, N., $8@12; do. S., $3@5; cub, N., $5@8; brown, $3@7; beaver, Cal. W., $1@1.40; S. and W., 80c.@$1.10; N. W., $1.50@1.75; N. and Ca., $1.75@2.30; cat, wild, N., 25@50c.; S. and W., 10@20c.; house, 10@15c.; deer, W., summer, 20@25c.; winter, 10@15c.; elk and moose, 12@15c.;

fisher, S. and W., $3@6; N. and Ca., $7@10; fox, silver, $25@75; cross, $2@5; blue, $3.07; white, $1.50@2; red, N. and E., $1.50@1.75; N. and N. W., 50c.@$1; gray, N. and N. W., $1@1.25; S. and W., 40@70c.; kitt, 25@35c; lynx Minn, $1.50@2; Can., $2@2.50; marten, large dark, $5@8; small and pale, 75c.@$1.25; mink, S. and S. W., 30@35c.; W., 50@60c; Middle States, $1@1.25; N. W., $1@1.50; Eastern, $1.50@1.75; Can. and N. S., $1.75@2; muskrat, S. and W., fall, 8@10c.; S. and W., winter, 10@14c.; S. and W., spring, 14@16c.; N. and E., fall, 10@12c; N. and E., winter, 14@18c.; N. and E., spring, 15@20c.; kitts, 3@5c; opossum, N. and W., 25@30c.; S., 8@10c.; otter, S., 3@4c.; N., 5@7c; rabbit, 3@3½c.; coon, S. and S. W., 3@40c.; W. and N., 50@55c.; Mich. and N. W., 75c.@$1; seal, Atlantic, 40@60c.; Pacific, $10@15; skunk, black-cased, $1.50@1.70; half-striped, 30@40c.; full, 40@50c.; white, 10@20c.; wolf, large, forest, $1.75@2.50; prairie, 75c.@$1; wolverine, 2@3c.

GRAIN.—Wheat has tended a little lower on larger supplies and a decline West leading to a more active business, sales of choice Canada spring, in bond, at $1.03; No. 3 spring at 93@94c.; rejected spring at 82@83c.; ungraded spring at 93c.@$1.02; ungraded amber at $1.09@1.13; No. 2 red, steamer grade, at $1.11; No. 3 red at $1.09½; No. 2 amber at $1.12@1.12½; ungraded red at $@1.12; extra white at $1.13@1.13½; white State at $1.14½@1.15, No. 1 white at $1.11@1.11½; do., steamer quality, at $1.09; No. 2 white at $1.08@1.09½; ungraded white at $1.09@1.12; No. 1 red at $1.13@1.13½. No. 2 red at $1.13@1.13½; No. 2 amber, March option, at $1.12½; do., April option, at $1.13; do., May option, at $1.13½; No. 1 white, March option, at $1.11½; do., delivery by March 20th, at $1.12½; do., April option, at $1.13@1.13½; do., May option, at $1.14@1.14½; No. 2 red, March option, at $1.13@1.13½; do., April option, at $1.14½; do., May option, at $1.15. Rye is quiet at 61@62½c. for Western. Corn has been active and fairly sustained in price; latest sales are of New York steamer mixed, at 45@45½c.; New York No. 2 old at 46½@46½c.; New York No. 2 at 46c.; No. 3 at 44c.; ungraded mixed Western at 46@46½c. for old and 45c. for new New York yellow at 45½c.; New York steamer yellow at 45@45½c.; New York No. 2 white at 52@53c. for old; yellow Western at 47@47½c.; New York low mixed at 46c. for a car lot; Jersey yellow at 45@46½c.; yellow southern at 45c.; round yellow at 46c for new; New York No. 2, March option, at 46c.; do., April option, at 47c.; do., May option, at 47½@47½c.; New York steamer mixed, March option, at 44½c.; do., May option, at 45½c. Oats are offered freely and are easy in price; latest sales of New York No. 1 white at 36c.; New York No. 2 white at 34@34½c.; New York extra white quoted at 33½@33c.; York No. 3 white at 32½c.; New York No. 1 at 31½@32c.; New York No. 2 at 31@31½c.; New York 3 at 30c.; white Western at 34@35½c., mixed do. at 33@34½c.; white State at 34@34½c., the latter for strictly choice; mixed State 31c.; No. 2 Chicago, afloat, at 34½c.; do. in store at 33c. Barley steady but quiet; State, 6-rowed, 75@82½c.; do. 2-rowed, 65@72½c.; Canadian, 80c.@$1.05; Mal, Western, 60c.@$1.15; State, 75c.@$1.05, Canadian, $1@1.25.

HONEY.—We repeat old quotations to show the weakness that has prevailed the entire season. Single comb white clover, 10@11c.; two comb do., 8@9c.; buckwheat and other dark, 7@8c.; strained, 6@9c.

HAY AND STRAW.—Prime hay has not been over plenty and rules firm in price; other qualities are in full receipt and favor buyers.

Sales at 40@45c. for shipping, and 70@75c. for retail qualities. Straw quoted at 50@60c. for long rye, and 40@45c. for short rye, and oat at 40@45c.

HOPS.—About 1,500 bales have been taken by exporters this week, which, added to those bought by brewers has given us a pretty active market. Prices remain as quoted last week, though our extreme quotations of 16c. for choice State and 15c. for the the best Californias are more or less nominal. Most of the transactions have been on a basis of 7@11c. A good many of our large brewers are still working on old hops and only buy new ones when offered low.

Quotations are for New Yorks, new crop, choice, 10@14; New Yorks, new crop, medium, 7@9; New Yorks, new crop, low to fair, 5@6; Eastern, 8@10; Western, 8@10; Yearlings, 3@5; Olds, all growths, 2@3; Pacific coast, 10@15.

POULTRY AND GAME.—Live poultry still brings good prices but have sold higher during the week.

Fowls, N. J., 12@12½c.; Western, 11@12c.; Chickens and fowls, mixed, 10@11c.; roosters, old, 6@7c.; Turkeys, 13@15c.; Ducks, Jersey, N. Y. and Pa., ₱ pair, 75c.@$1; Western and Southern, 60@75c.; Geese, Jersey, $1.75@2; N. Y. and Pa., $1.50@1.75; Western, $1.25@1.62; Pigeons, 35@44c.

Dressed poultry is higher than for any time since fall, with fair receipts handled at full prices. Near points have best sale. Extra State and Western lots all chickens, would sell at 14c. by the package, but there are few such, and for mixed fowls and chickens of nice quality 13c. is a full figure, while some fair lots have sold at 11@12c.

Turkeys, best, 16@18c., the latter for Pa. dry-picked; other, 13@15c.; chickens, best, 16@17c.; other, 11@13c.; fowls, choice, 14@15c.; capons, 20@21c; slips, 17@18c; ducks, best: 17@18c.; other, 13@15c.; geese, 9@14c.

Quail, grouse, rabbits and hares are outlawed after to-day and are dropped from the list. A few quail sold to-day at the close at $1.25 and grouse at 50c. A few Missouri wild pigeons are here; they are acorn birds and shots they sold at $1@1.25. Choice pigeons are wanted. Canvas-back and Red-head ducks are plentier and lower; Norfolk Red-heads do not exceed 75c. ₱ pair. Southern Mallards sold at 75c., but they are inferior; choice Western Mallards would sell well up towards $1 ₱ pair. Southern Black ducks sell slowly. Teal in fair demand. Common ducks dull.

Wild ducks, Canvas-back, Havre de Grace, ₱ pair, $2.25@2.50; do. Western, $2; Red-head, 75c.@$1.25; Mallard, 75@90c.; Black, 60c.; Teal, 40@50c.; common, 25@30c.

PROVISIONS—Have not shown much activity, but held rather firm. Mess pork quoted at $9.50 bid and $9.60 asked for old for March, and $10.65 bid and $10.75 asked for new for March, and $10.75 bid and $10.80 asked for new for April, and May at $10.85@10.95, and June at $11 bid and $11.05 asked. Bacon at 5 5-16c. for long clear and 5½@5¾c. for short clear. Lard—Western steam at $6.97½@7 for spot; $6.97½ for March; $7.02½@7.05 for for April, and $7.12½ for May. Stearine at 7c. for prime. Tallow at 6 9-16@6¾c. for prime. Beef Hams at $18.25@18.75. Beef at for extra India mess, $18@21, as to quality; packet, $11@11.50, plain mess, $9.50@10.25; extra mess at $10.50@11.50.

SEEDS.—Clover is fairly active at 6¼c. for prime and 6¾@6¾c. for choice. Timothy in demand and ranging from $1.35@1.50, as to quality.

TOBACCO.—Exporters have been doing but little business the past week and the home trade moderate, but prices generally steady. Kentucky leaf quoted at

VEGETABLES.—There is a fair demand for potatoes, but the market does not work upward for any variety. Cabbages have advanced; onions very firm. Bermuda produce begins to arrive regularly Norfolk kale has sold at $1.75 bbl. Bermuda potatoes, $6.50@7 per bbl; Early Rose, Nova Scotia, bulk, $2.75@3; Eastern, $2.75@3; State, choice, at $2.50@2.62; fair to good, $2@2.25; Peach Blow, white, in bulk, $2.50@3; red, $2.25@2.75; Prolific, $2.25@2.75; Peerless, State, $2@2.25; in bulk, $2@2.12; Jackson white, $2@2.37; Mercer, $2.12@2.25; (outside rate per double heads). Sweet potatoes, Md. & Del., $2@2.37 Bermuda tomatoes, 50@60c. box. Onions, Eastern, white, ₱ bbl., $4@6, yellow, $3.50@3.75; red, $3.50@3.75; Chester, $3@3.50. Squash, Hubbard, $2.50@3; marrow, $2@2.25. Cabbages per 100, $6@8; R. turnips, per bbl., 75c.@$1; beets, 75c.@$1; carrots, 75c @$1; celery, per doz. bunches, 50c.@$1. Hot-house rhubarb, per 100 bunches, $7@9; radishes, do., $3@3.50; cucumbers, choice large, per doz., $3@3.50; mushrooms, per lb., 50@60c.; lettuce, choice large heads, per doz., 50@87c.; po., poor to fair, per bbl., $1.50@3.

Exports of potatoes, for week, 7,650 bbls; onions, 120 do.

WOOL.—There has been more activity the past week on demands from manufacturers, and prices generally well maintained.

Ohio, Pennsylvania and Virginia—XXX and picklock, 35@37½c.; XX, 33@35c.; X, 33@34c.; No. 1, 32@35c.; No. 2, 32@33c; common, 29@30c.; combing, 34@36c.

New York, Michigan, Indiana and Wisconsin—XX, 28@32c.; X, 28@31c.; No. 1, 31@33c.; No. 2, 27@30c.; common, 25@28c.; combing and delaine, 33@35c.

Iowa, Vermont and Illinois—X and XX, 28@30c.; No. 1, 30@33c.; No. 2, 27@28c.; combing, 33@36c.

Missouri, Kentucky and Tennessee—Washed fleece, 30@33c.; unwashed fleece, 18@24c.; unwashed combing, 22@25c.

LIVE STOCK MARKETS

Saturday, Mar. 1, 1879.

BEEVES.—Receipts for the week, 9,087 head; do., last week, 11,222 do. Market slow and unsatisfactory, particularly to the buying interest. Sellers forced an advance of ¼c. per ℔, and hoped to clear the yards. Some Texas cattle (33 head), 1,042 ℔, average, were sold at 2c. per ℔., to dress 55 ℔. to the gross cwt.; a car-load of extra Illinois steers, 1,551 ℔ average, at 10¾c. to dress 57 ℔., with $1 per head added; and common to prime native steers ranged fr m 8¼c. to 10¾c. per ℔., to dress 55 ℔.@57 ℔.—the highest mark for smooth Illinois steers, 1,341 ℔ average. None taken by exporters. Missouri is sending dressed beef; not wanted.

COWS AND CALVES.—Demand very limited; light arrivals more than supply wants here. Nominal range, $35@65.

VEAL CALVES.—Live are steady and bring good prices with the large supply of dressed offering. Choice milk, N. J. and Bucks Co., 7¼@7¾c.; heavy weight, 5½@7c.; fed, 4¼@5¾c. Dressed calves, extra, 9¾c.; good to prime, 8@9c.; common, 6¼@7½c.; many frozen which sell at irregular figures.

SHEEP AND LAMBS.—Market not active but firm for prime stock. Sheep, $4.80@5.80 per 100 in late sales; lambs, 5¾@6¼c. A car load of premium State lambs brought $6.60 per 100 lbs.

SWINE.—Receipts for week, 24,373 head; do. last week, 33,355 do. Good Western hogs, $4 40; rough sold at 3.85; N. J. pork, light, 6@6¼c.; medium, 5¾@6c.; heavy, 5¼@5½c.; Western hogs, dressed, 4¾@5c.; city, 5¼@5¾c.

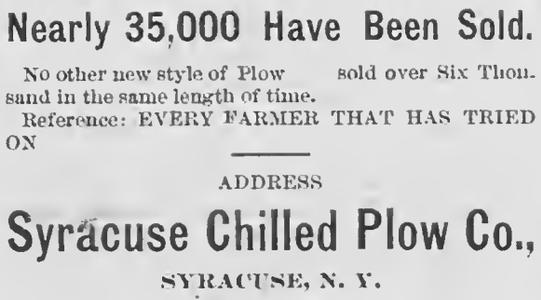
SYRACUSE CHILLED PLOW.

PRICE, FULL RIGGED, $16.

SAMPLE PLOWS DELIVERED FREE OF FREIGHT ON RECEIPT OF PRICE.



The Syracuse Chilled Plow Co.

have enlarged the capacity of their works *three-fold*, in order to supply the demand for the year 1879.

THEY MAKE THE

BEST CHILLED PLOW

THE WORLD HAS EVER SEEN.

IT IS LIGHTER OF DRAFT.
IT IS MORE PERFECT IN SHAPE.
IT IS MORE DURABLE.
IT CLEANS IN EVERY SOIL WHERE OTHER PLOWS FAIL.
NO PLOW SO WELL PREPARES THE SOIL FOR A CROP.
THE PECULIAR WAY IT PULVERIZES THE SOIL IS ONE OF ITS GREAT EXCELLENCIES OVER ANY OTHER PLOW.
IT IS MADE IN DIFFERENT STYLES—ONE HORSE, TWO-HORSE, OR THREE-HORSE.

Every Plow is Guaranteed under the Seal of the Company.

BEWARE OF COUNTERFEITS.

The reputation of the Syracuse Chilled Plow has induced unprincipled manufacturers to palm off on the farmers plows that they call *chilled*, which are, in fact, nothing but common plows, with the word "chilled" painted or branded thereon.

The SYRACUSE CHILLED PLOW has been made but two years and a half, and in that time

Nearly 35,000 Have Been Sold.

No other new style of Plow sold over Six Thousand in the same length of time.

HORSFORD'S Bread Preparation

UNSURPASSED FOR MAKING

LIGHT BREAD

Biscuit, Rolls, Cake and Pastry.

It is Better and Healthier than ordinary Baking Powder, Cream Tartar or Yeast.

The cost of raising Bread, Biscuit, &c., with it is only about half as much as by ordinary Baking Powder, and the result is much better.

It restores the nutritious elements which are taken from the flour in bolting. No ordinary Baking Powder or anything else used for raising bread does this.

Universally used and recommended by prominent Physicians.

If you cannot get it of your Grocer send a three-cent stamp to the manufacturers for a sample.

Manufactured according to the directions of Prof. E. N. Horsford, by the Rumford Chemical Works Providence R. I.

Halladay Standard.

The only Wind Mill awarded

TWO MEDALS

and

TWO DIPLOMAS

by the

CENTENNIAL JUDGES.

Every machine warranted to be well made of good material; to do good work in any kind of wind; to be perfectly self regulating; to possess more power and to be more reliable than any other Wind Mill made.

Each piece is fitted and numbered so that a stranger can put the Mill up, using our drawings and printed instructions for a guide.

Send for Catalogue "B" and Price List.

Domestic Economy.

CONDUCTED BY EMILY MAPLE.

ONE OF THE FOOLISH WOMEN.

ADELINE E. STORY.

"WHATEVER is worth doing at all, is worth doing well," is a proverb which many housewives improve upon after this fashion: "If it's worth while to do a thing, do it, and be quick about it."

"Now for it!" says Mrs. Dash, as she gets up from the table before the others are half done their breakfasts. "I've got to 'pitch in' to-day, if ever I did. I never should get anything done if I was as slow as some folks."

There is a scattering from the table. Ding-ding-dingle. Swi-i-sh! Clat-clat-clat-ter! the dishes are done. Next, Mrs. Dash flies over the floors in a sort of frenzy that would be alarming, were it not so *domestic*. The dust flies—chairs dance around and against one another. The cat scampers out at the door, and the dog goes after her. The broom swings on its nail in the corner, and the house is swept.

What next? The beds!—the chambers to be put to rights! Mrs. Dash goes up stairs as though an evil spirit were chasing her, and before you have had time to more than wonder how many beds there are to make, and how many rooms to be righted, down she comes again, two steps at a time, you verily believe. Finding the dust settled she seizes the duster, and whisk!—the furniture is as bright as new. Now with a plunge she is out of sight again. This time it is down stairs, instead of up. You speculate for a few minutes as to what she is doing in the cellar, and she is before you. She has skimmed the milk, worked over and packed yesterday's butter, and given the cellar a thorough straightening up. She looks tired and a bit flurried, you think. Well, perhaps she does, but you little know the woman, or her way of "pitching in," if you imagine she is going to flag in the least. You take an easy chair "to think her over," and while you are undecided whether this is one of the "smartest" women in the world, or the "biggest fool," she bounds into the room, throws herself into the nearest chair for just one-half minute, and as she fans her flushed and sweat-covered face with whatever she can first lay hands on, a hat, a newspaper, or her apron, she tells you that she has "mopped the kitchen floor, blacked the stove, swept the back yard, made a cake for tea and a pie for dinner, canned several quarts of fruit, and washed the windows." Her hair needs combing, but she hasn't time for that now; so by way of compromise she takes out the pins and *shakes it out*. Then twisting it into a knot again, she looks at the clock and exclaims:—"A whole half-a-day's work done in two hours and a-half! That's what I call 'pitching in.'" And before you have time to utter a word of protest against what you regard as a most wicked waste of the vital forces, she is off like a flash to attend to other things.

Mrs. Dash's clothes are always clean and whole; beyond that, she pays very little attention to her personal appearance. Collars and cuffs she wears only on Sundays or when she "fixes up" to go with Mr. Dash to town to "do her trading." She has no time to bother with collars, and as for the cuffs, she couldn't wear them if she would, for her sleeves, even when she sits down to her meals, are always rolled elbow high.

Mrs. Dash's children go to school with faces shining with soap-suds and dresses starched uncomfortably stiff. If their hair is braided so tight it hurts them to wink, so much the better; they will be less likely to go to sleep over their lessons. At noon they eat mince pie and cakes soggy with richness till not an idea, original or otherwise, can enter their heads, for Mrs. Dash is determined that *her* children shall have enough to eat. At night the little wretches go home to a hot supper, after which they romp outside "out of the mother's way" till bed-time, when they are pitched into bed two at a time, and left to their slumbers or the nightmare.

When Mrs. Dash has worn herself out and dies—which will be before she is forty—her successor will find the house "chock full," from garret to cellar, of things for her comfort, and that is the only comforting thought to be had in connection with her.

LOG-CABIN SKETCHES; OR, JESSIE SEABRIGHT'S DIARY.—No. 2.

MAY MAPLE.

Nov. 20, 18—. I have at last persuaded John to saw out the logs and set the window sashes lower; so I can look out upon the really beautiful scenery about our cabin home, while seated at my work. The upper part of the window he boarded up with some elm "shake." A couple of sheets, ripped apart half way, make long curtains, and when looped back each side of the tiny window, hide the place of the vacant sash and yet admit all the light. The grimy old walls I have covered with fresh clean newspaper; also the ceiling overhead; it was hard work, but now it is done, it pays well. The room looks clean and cheerful. And I can't help feeling that I have walked out of a prison cell into a sanctuary. I had almost forgotten to say that my light wall paper is bordered with evergreens. The little cedar swamp north of the house is a mine of wealth for beautiful borderings. I basted the little twigs on strips of coarse brown paper and then tacked the strips firmly to the wall; not forgetting to nail a strip over the top o each window curtain and another over the door They will keep bright a long time; and one who has not seen a room trimmed in this way can scarcely imagine how beautiful it appears.

There were shelves for the dishes in one corner near the stove, put up, I suppose, by our predecessor. But I did not like the arrangement very well, and tried to have John either make a cupboard or partition off a pantry. But he had no boards. And he is like most other men—he has but little time, and is still less disposed to fix up house conveniences. "Mrs. L. got along with those shelves; why can't you?"

I am silenced, for there is no use of having a war of words. "But 'where there's a will there's a way,' and I'll manage some way to have a different arrangement for my dishes and victuals," was what I observed to myself, as I spread papers here and cloths there to keep out the dust that is always flying about.

The other day I called on Mrs. Gordon; while there I noticed a couple of dry goods boxes in the yard, which had the appearance of standing empty a long time. At once I "struck up" a bargain for them. Mrs. Gordon had a large family of children, and of course plenty of work to do, but not much means to hire work done. Now we could both be accommodated. I would sew for her, and receive those boxes for pay. As Mr. Gordon was going by our house that day he would take them along and leave them in the yard. After cutting and fitting some work I turned my steps homeward, determined to surprise John when he came home from his work at night.

The first thing to be done was to thoroughly cleanse the boxes; and then hammer, nails and saw were sought and easily found, for John likes to keep his tools where he can find them readily. Fortune favored me, for there was a pile of "shake" (short boards, riven from elm logs, about two and a half feet in length, used for roofing instead of shingle, and sometimes it is used for siding by pioneers,) out by the fence, just long enough for shelves to put into my boxes; so I had only to nail in a few cleats for the shelves to rest upon. The old shelf boards were taken down and used for casings and doors; some bits of leather answered for hinges; the little box was put upon the larger one, for they were not of the same width, though as they stood now they were alike in length; some papers put upon the deep shelves, the dishes placed in clusters upon them, and behold a snug cupboard, which reached almost from floor to ceiling; and when the doors were all closed, but little if any dust would find its way inside. In the absence of paint, newspapers were pasted on the outside, corresponding with the walls of the room.

"Pretty well done," said John, as he examined my handiwork, when he came in for supper. "What a pity it is I'm not able to get you a set of carpenter's tools."

DOMESTIC RECIPES.

Corn Meal Gruel.

Take a pint of meal, pour over a quart of water, stir up, settle a moment and pour off; repeat three times; then pour over the washed meal about three quarts of cold water and let boil very slowly for two or three hours; thin with milk or cream and season with a little salt.

Johnny Cake.

One cup of sweet milk; one egg; six tablespoonfuls of corn meal; three tablespoonfuls of flour; three tablespoonfuls of sugar; a little salt and two-thirds of a teaspoonful of soda and one of cream-of-tartar. MRS. J. H. S.

Corn Meal Pudding.

Scald one quart of sweet milk, and while boiling stir in corn meal until of the consistency of pan-cake batter; take from the fire and stir in four well beaten eggs; one cup of sugar, and nutmeg to suit the taste; pour into a pudding dish and bake in a moderate oven two hours; serve with a hard or liquid sauce.

Cracked Corn or Samp.

This is a dish which my family relish with meat and gravy, and one which ought to be found oftener upon the farmers' table. Wash, and put to boil with five or six times its measure of water, and let cook slowly for several hours until perfectly tender; season with butter, pepper and salt. MRS. W. H. Y.

Corn Meal Pancakes.

Sift one pint of corn meal and pour over boiling milk until a little thinner than mush. When cool add the beaten yelks of four eggs, half a cup of flour and a little salt; add milk enough to make the batter suitable to bake, and last stir in the beaten whites and three teaspoonfuls of baking powder mixed with a trifle of flour. MRS. O. M.
Auburn.

Corn Meal Pudding with Fruit.

Three pints of new milk; one heaping cup of corn meal, and one even cup of flour; four beaten eggs; one cup of white sugar; two tablespoonfuls of melted butter; one-half pound of raisins cut and seeded; one teaspoonful each of salt and cinnamon; three teaspoonfuls of baking powder sifted with the flour. Scald the milk and stir in the meal then add the sugar, beaten eggs, butter, spice and fruit, well dredged with flour. When well mixed sift in the flour and beat fast for two minutes. Bake in a buttered dish in a well-heated oven. It will be done in from forty-five minutes to an hour. Should it brown too fast cover with paper. Eat as soon as done with creamed butter and sugar.

Corn Muffins.

Sift together one cup of corn meal and two of flour; cream; one-half teacupful of broken butter; beat three eggs, yelks and whites separately; turn the butter, eggs and one teacupful of sugar into the center of the flour and meal; beat to a batter in the center and then add two cups of rich, sour milk, into which 1½ teaspoonful of soda has just been dissolved; add a teaspoonful of salt and beat quickly until smooth and light. Bake in hot muffin-rings or gem-pans in a quick oven. MARY B.

Hominy Cakes.

Take one pint, after it has been cooked; add two eggs, the yelks and whites beaten separately and salt to taste; drop in spoonfuls on well buttered in plates and bake to a nice brown.

Fried Mush.

Cold mush sliced thin and fried in a little hot lard makes a delicious breakfast relish, and when eaten with molasses, or, better still, maple sirup, it makes a most palatable desert. MRS. W.
Iowa.

Corn Bread.

Three beaten eggs; one quart of good sour milk; two tablespoonfuls of melted butter; one tablespoonful of sugar; one teaspoonful of salt; a handful of flour and enough sifted corn-meal to make a thick batter; the last thing stir in a heaping teaspoonful of soda dissolved in a little water. Stir briskly and bake in a dripping-pan.
Ohio. MRS. L. M. W.

The Puzzler.

SYNCOPATIONS.

1. SYNCOPATE a place on the Great Desert, and leave a verb in the imperfect tense.
2. A city of Morocco, and leave a French negative.

NEW WORKS by Conrad Wilson.

1. CHEMICAL FARMING (already published), mailed at 25 cts.; in cloth, 50 cts.
2. *A New and Original* CHART, adapted to Corn-Culture, mailed at 25 cts.
3. *A New and Original* CHART, adapted to the Wheat crop, mailed at 25 cts.
4. *A New and Original* CHART, adapted to Potato Culture, mailed at 25 cts.

These Charts will enable the farmer to determine the elements needed by his soil, and to apply the RIGHT plant-food, whether manures or fertilizers, or both. With these the farmer can test the actual value of any fertilizing theory, and discover the true way to get nitrogen at a cost that is always safe and sure to pay.

These Charts are nearly ready for delivery, and with each we will mail one or more BLANK FORMS, to aid in varying the method, at 10 cts. each.

☞ EXTRA INDUCEMENTS.—We will send the 3 *Charts* to one order for 60 cts. The same, with a *Blank Form* to each, 80 cts. The whole, with Chemical Farming, for $1. FARMERS PUBLISHING CO.,
[Box 2695.] 104 Duane St., New York.

Trees, Seeds, Plants, &c.

Waushakum Seed Corn.

A medium-sized, eight-rowed, yellow field corn, of good habit of growth, and prolific. Average crop, 70-80 bushels; exceptional acre, 128 bushels shelled corn. The fields from which our Seed Corn is selected are those wherein the barren stalks have been removed before blossoming. Thus this seed is thoroughbred. $1 a peck; $3 a bushel; delivered at station in strong bags. Also, Pure and Genuine Christiana Melon Seed, 25 cents a packet, by mail. STURTEVANT BROS.,
So. Framingham, Mass.

PERSONAL ITEMS.

Mrs. Livermore is lecturing on "The Other Side of the Water" on this side of the water.

The Rev. Woo-Hoong-Niok-Bau-Tsih-Dzae is one of the pastors residing in Shanghai China.

John W. Young, Brigham's son, has just taken his fifth wife. This in spite of the anti-polygamy decision of the Supreme Court.

The smallest pianist in the world, Signor Luigi Gustavo Fazio di Plinto da Campo Basso, is now in Rome. He is only two feet high—about as long as his name. He is said to be extremely clever.

Miss Hadie Heller, with the co-operation of Mrs. Stephen Fiske, is preparing a life of the late Robert Heller, Mrs. Fiske was formerly Mrs. M. H. Burnham, well known as a New York correspondent.

Bertha von Hillern is the pioneer of female pedestrianism. She laid away for a rainy day between $6,000 and $7,000 during the time she gave exhibitions before the present mania for walking broke out.

Princess Matilda, the niece of the King of Saxony, is one of the few marriageable daughters of Roman Catholic reigning houses, and has been for some time spoken of as the future Crown Princess of Austria.

Mrs. J. J. Astor, within the past ten years, has provided homes in the country for four hundred and fifty boys from six to eighteen years of age, at an expense of $6,700. These boys are self-supporting and doing well.

Jay Gould made $7,000,000 by his recent "failure." The Washington Post thinks if Mr. Gould would consent to give lessons in this art of "failing," he would, in all probability, earn as much more within a very short period.

David Bailey, who died at Cambridge, Me., several days ago, at the age of 80 years, was probably one of the oldest postmasters in the United States. He was appointed by Adams in 1828, and held the place continuously until his death, over half a century.

Fred. W. Vanderbilt, a son of W. H. Vanderbilt, and heir to $2,000,000 from his grandfather's estate, has been getting married on the sly. The deed was done on the 17th of December last, and was kept a secret until last week. The bride was formerly Miss Louisa Holmes Anthony, and is the divorced wife of Daniel Torrence, a cousin of the young husband.

President Grevy's salary will be $120,000 with an addition of $10,000 for table money and $20,000 for office expenses. He is a man of composed and well-balanced mind, whose pulse beat no quicker after his elevation than before. "Monsieur Gambetta, my bed will not be altogether one of roses," he said with demure good humor to the great tribune who called to congratulate him.

A monument of granite, in a niche of which is a well-finished bust of the late Barney Williams, has recently been reared in Greenwood cemetery, Brooklyn, in the family plot of the deceased famous Irish comedian, on Battle avenue, near Verdant path. The bust, which is an excellent likeness, is the work of the sculptor John McNamee of Florence, Italy. On the surbase of the monument is the following inscription: "Bernard Flaherty, 'Barney Williams.' Born June 10, 1824. Died April 28, 1876. Williams."

THE head of a mule is too heavy for the other portion of his body. It makes his hind legs fly up too easy.—*N. O. Picayune.*

"I SAY, Jack, which would you rather, that a lion tore you to pieces or a tiger?" "Why, you goose, of course I'd rather a lion tore a tiger in pieces."

A Visage Rivaling in Yellowness

That of a "heathen Chinee," if belonging to one of our race, can scarcely be described as attractive. But worse than this, it is the index of a disordered liver, or a liver that needs arousing and regulating. The remedy is at hand, prompt, efficacious. A course of Hostetter's Stomach Bitters will expel the misdirected bile from the blood and divert it into the proper channel, open the bowels, remove the dyspeptic symptoms which invariably accompany biliousness and counteracts the rapidly developing tendency to dangerous congestion of the liver, which must always exist when the skin and whites of the eyes assume this yellow hue. The pains through the right lower ribs, side and shoulder blade, the nausea, furred state of the tongue, and unpleasant breath which indicate liver complaint, in short all its disagreeable concomitants are soon remedied by this sovereign corrective, which in addition to its regulating properties is a superb invigorant, and a pure and agreeable medicinal stimulant, appetizer and nervine.

Rural Architecture.

A FEW AXIOMS IN BARN-BUILDING.—4.

W. I. CHAMBERLAIN.

The Water Supply.

THE axiom already referred to, that we should make the force of gravitation *help and not hinder us*, has one of its most important applications in the water supply for the barn. If there is a spring near, the force of gravity can usually be made to send it into the barn for the use of the stock, either with or without the help of the hydraulic ram. Where there is unfailing water in a well near by, the force of the wind can be made to overcome the force of gravity, and pump the water for the stock. Both these methods are good when applicable, and are usually well understood.

But in most dairy regions the soil is clayey, springs are few, and water in sufficient quantity often cannot be obtained even by deep digging. In that case what shall we do?

A barn that stables stock and stores their hay, grain and straw, will catch water enough on its roof to water the animals at least nine months in the year. If it is a bank barn, with stock in a part of the basement, as it should always be for a stock barn, the cistern can be a long brick arch, above in the bank, next to the front wall of the barn, and the water will come down into the basement through a pipe laid below the front wall, for the use of stock. A long, arched cistern, seven feet wide and seven feet high, will hold over ten barrels to every foot of length. If it is 50 feet long, as it may easily be for a large bank barn, it will hold 500 barrels which will store the average rainfall of six weeks on a barn of 45x90 feet, and water the stock likely to be kept in such a barn, say 30 or 40 head of cattle, for as long a time in case of dry or frozen weather. By that time the roof will probably replenish it.

Fig. 1 represents the water-tank, and connection with cistern in use in the writer's barn. The distance from cistern to tank is shortened, and the cistern made lower and smaller than the reality, so as to bring it into one figure. The tank should be placed in that part of the basement where it will be most convenient for the watering of all the stock. It may be, by hose and stop-cock, put in direct communication with a system of iron sinks, one in front of each cow, connected by iron tubing so that all the cows can be watered at once, by simply turning the stop-cock. Such an arrangement is found in some of the more expensive barns at the East, and was fully described and explained by engravings in the RURAL NEW-YORKER, a few weeks ago. In my own case—and the same would be true of most Western farmers — the expense and the waste of surplus water after watering, prevented the introduction of this system of sinks or basins. The horses drink from the tank, and the cows are watered in their feed-tubs, by dipping from the tank with a six-gallon pail, the tank being immediately in front of the row of cows. Thirty cows can be watered in fifteen minutes or so; more quickly than they could drink from the tank one at a time.

The water in the cistern when full, is some four feet above the level of the top of the tank (See Fig. 1), and, of course, would overflow till it fell to that level if not hindered by some device. Such a device is represented in the figure. In short, it is this: a float rising and falling with the water, opens and shuts the stop-cock that admits the water from the cistern. The tank, k, is sunk two feet below the basement stable floor. One foot from its bottom enters the iron supply pipe a, a, from the *bottom* of the *cistern*. At 3 is a stopcock, lying horizontally and worked by the lever, c, s. The iron rod, c d, joins the end of this lever to another lever, f e, at the point d, which is about one-fourth the distance from the pivot e to the float, f. This is a light, hollow, copper globe, about five inches in diameter, and by the aid of the double lever, it opens and shuts the stop-cock easily.

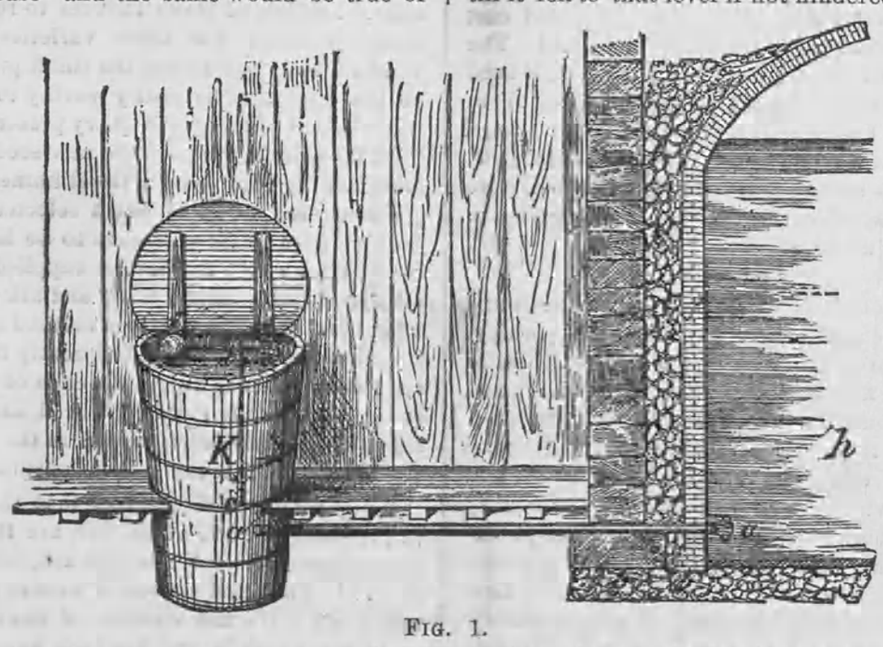

FIG. 1.

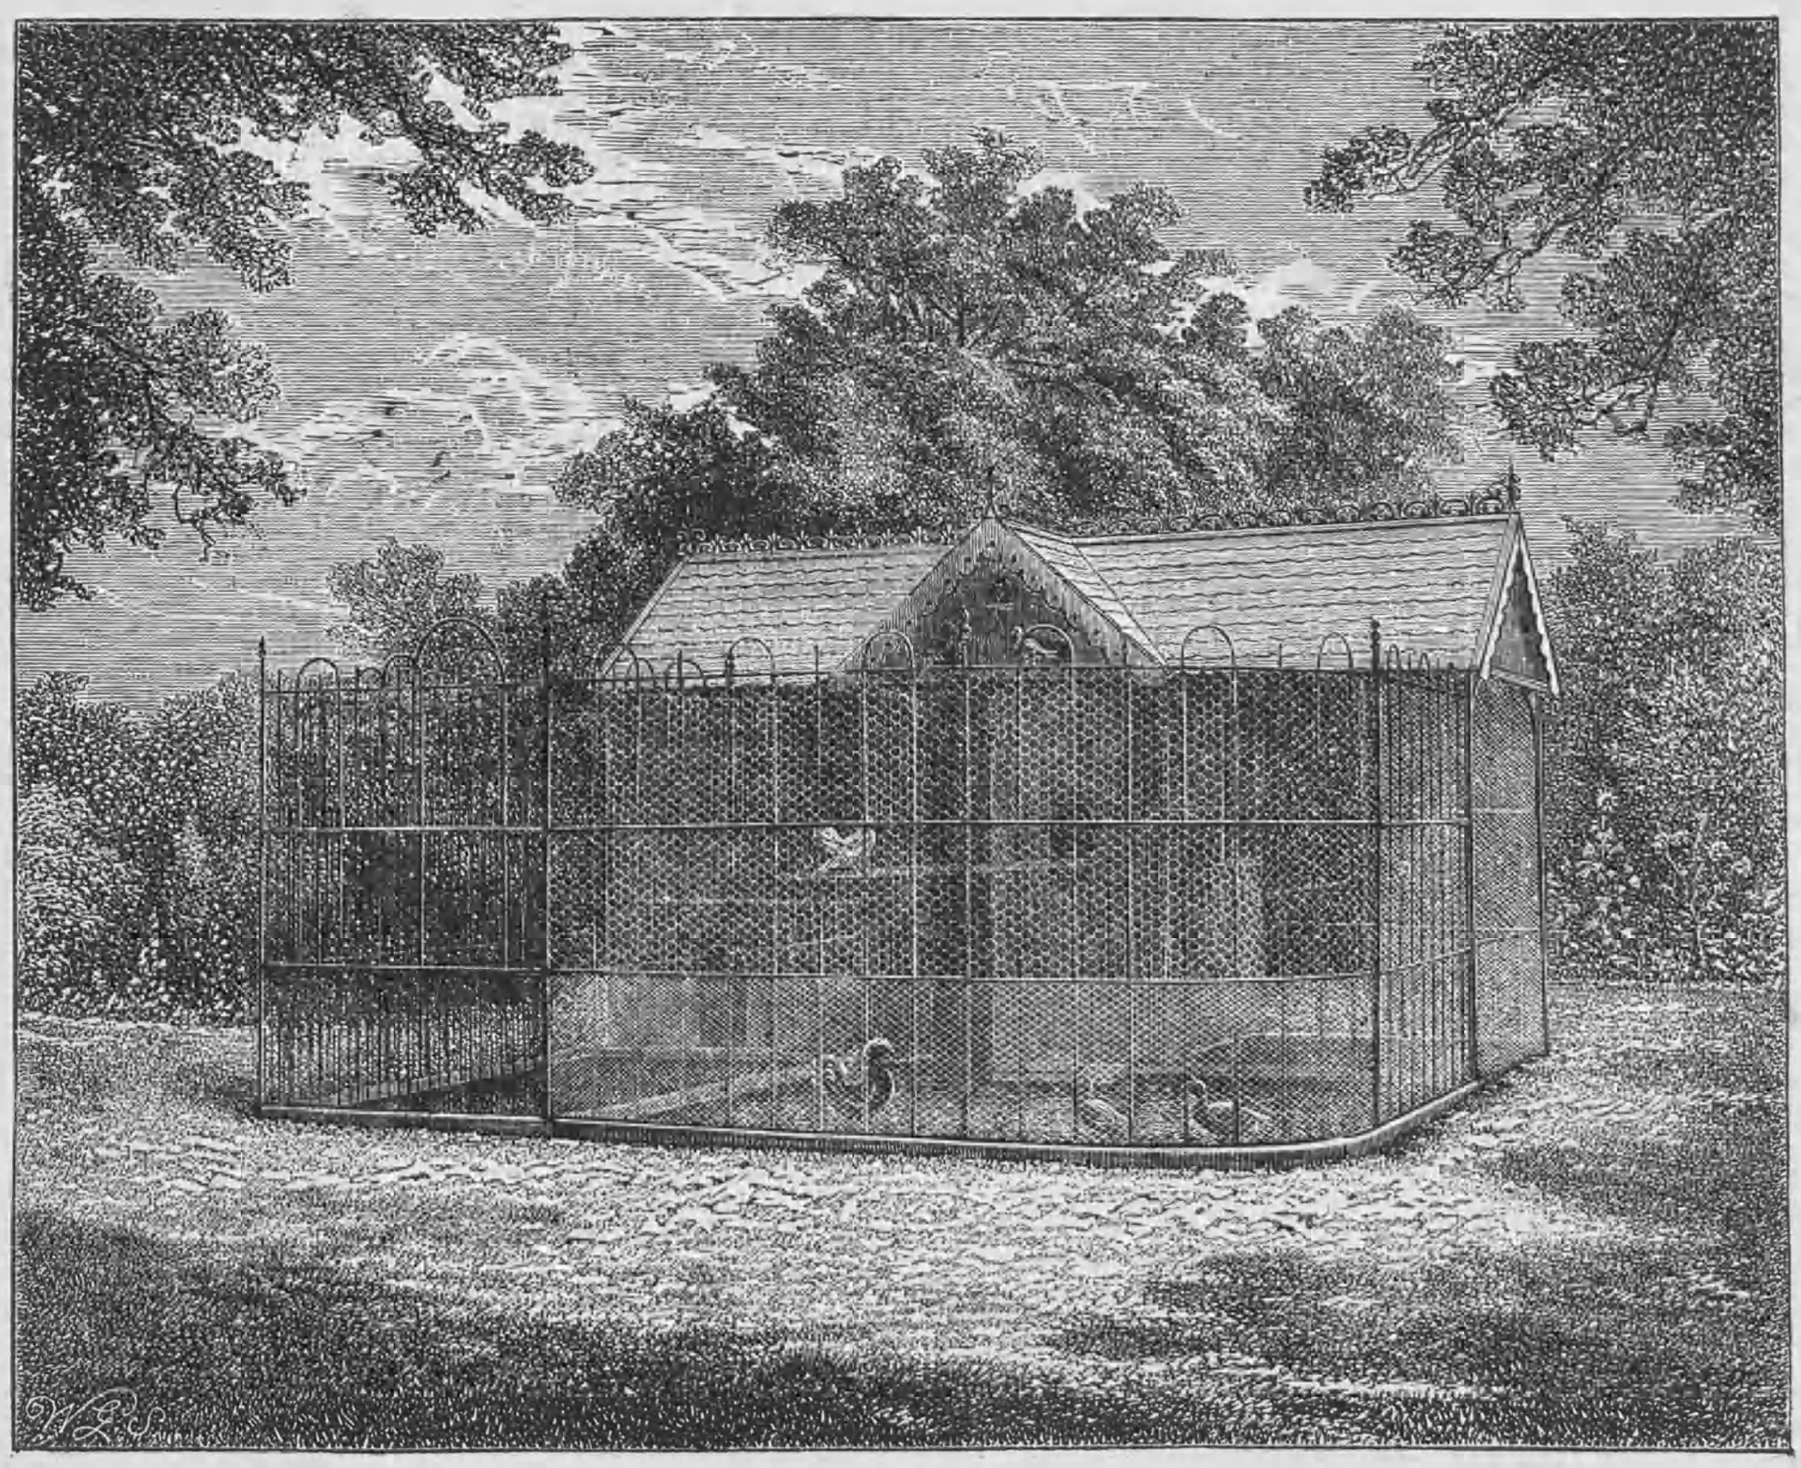
The apparatus works as follows: suppose the cistern full and the tank empty. The globe or float, f, drops by its own weight about a foot to a rest. This lowers the rod d c, and of course, also the lever c s, and turns the stop-cock, s, wide open. The water rushes in from the cistern, gradually fills the tank, lifts the float, f, and slowly closes the stop-cock. When the tank is full, lacking four inches, the float-lever, f e, is horizontal, the float just hits the cover and the stop-cock is shut perfectly tight. When the water is drank or dipped out, the float sinks and opens the stop-cock and admits the water again; and so on day after day and year after year. Mine has been in daily use for almost five years now, and in all the time has never required the slightest attention or repairs, and has never once failed to do its work exactly right. My Irishman says, "Be jabers, it's the hondiest pump in Amiriky!" There is no patent on it, and the more it is copied, the better I shall be pleased. Some dig a deep cistern in the hard-pan of the basement, or just out-of-doors, and then laboriously pump up the water. But it is far easier to dig a long cistern in the bank above, for half the digging is done by the grading of the bank. And when the cistern is there, it needs no pump. The cost of tank, pipe and fixtures was $12.

In these articles I have given a few only of the self-evident truths which have a bearing on the planning and construction of barns, and have suggested a few of the most obvious and useful of their applications. If any of my brother farmers who are about to build, shall be led by these hints to think out, and plan for themselves, rather than simply to copy the barns most common in their vicinity—good, bad or indifferent,—my object will have been fully gained.

Summit Co., O.

USEFUL POULTRY-HOUSE.

THE highest point of excellence is supposed to be reached whenever the eminently useful and ornamental can be combined in any one object. The engraving portrays a poultry-house, which was exhibited last fall in the



COMBINED POULTRY-HOUSE, DOVE-COTE, AVIARY AND DOG-KENNEL.

Crystal Palace, London, for which such excellence can be claimed. This structure is especially suitable for those of our readers whose premises are of limited extent, and who will not allow the chickens to run over and scratch up the few petted flowers and choice vegetables they raise, yet cannot forego the luxury of fresh-laid eggs and roast chicken.

All kinds of poultry can be kept in such a house, and by providing it with movable partitions for the roomy yard, each variety, or particular individual, can be kept separately, if desired. There is also a dove-cote in the top, a dog-kennel in one end, and at the other an aviary, in which may be confined sweet songsters and birds valued for their beautiful plumage.

Ordinary poultry-houses, though they may be very serviceable, are generally built of rough materials and present anything but an agreeable appearance; but this, besides being useful, can be placed on the lawn as an ornament that will add much to the attractions of the place.

Farm Economy.

THE EFFECTS OF PLASTER.

HENRY STEWART.

UNDER certain circumstances plaster is a very effective fertilizer; sometimes, however, no effect whatever is noticed from its application. It is not strange, therefore, that many mistaken ideas as to its properties should be current, not only among farmers, but also with some well-informed scientific men. One of these errors is that plaster acts favorably by absorbing water and conveying it to plants. This is a remarkably palpable error, as can be shown by a simple statement of the properties of plaster.

This substance is sometimes said to consist of sulphate of lime in combination with water, in the proportions of sulpheric acid, 46½ per cent.; lime, 32½ per cent., and water, 21 per cent. But this is gypsum, and not plaster at all. Gypsum becomes plaster when it is burned and the combined water is driven off. In the process of burning or "boiling" ground gypsum, the water escapes in steam as bubbles, as when water is boiled. This is known to many who have prepared the gypsum for uses as plaster. When water is added to the plaster, it again enters into combination with it, and the soft paste speedily sets and becomes hard and solid. Herein lies the basis of the popular error. Gypsum already contains all the water it can hold and can take up no more, so that it can in no way furnish any to plants excepting when it is decomposed chemically and the water contained in it is set free. But this is so insignificant a quantity, being only 21 pounds in 100 pounds of plaster—which is a large amount to apply to one acre—that it is of no practical account and may as well be passed over without further consideration.

Again, the gypsum—plaster, so-called—is supposed to absorb ammonia from the atmosphere, and so bring it within the reach of plants. But this is quite a gratuitous assumption, because water, which is abundantly present in the air at the driest seasons, has a much greater affinity for ammonia than the gypsum has. Cold water will absorb 700 times its volume of ammonia, while the gypsum can only act by parting with its sulphuric acid, which then combines with whatever ammonia may be present, in equal parts; thus one part of ammonia with one part of water combines with one part of sulphuric acid and one part of water, forming sulphate of ammonia. The chemical formula may be given, so as to be readily understood, as follows:

Ammonia is H3 N	Sulphate of Ammonia	
Water is H2 O	is	
Sulph. acid is H2 S O1		
Water is H2 O	2 N H3 plus	H2 S O4

H stands for hydrogen; N, for nitrogen; O, for oxygen; and S, for sulphur; the small figures denote the number of the equivalents of each element. Thus the power of absorbing ammonia from the atmosphere, exerted by gypsum, is of little account as compared with the enormous capacity of water for the same gas.

Here may be mentioned a mistake sometimes made by persons who really know more than many about chemistry. This is, that gypsum will absorb ammonia, when it is dry. To test this question, let one take a bottle of common ammonia water of the drug stores, remove the cork and tie over the mouth of the bottle a piece of fine muslin. The vapor of the ammonia will be found to escape in a pungent stream. If the muslin is covered with a quantity of finely-ground, dry gypsum, there will be perceived no diminution of the pungent smell. Then after exposure in this way, if the gypsum be heated in a capsule, there will be no scent of ammonia perceived. It is true this is a rough experiment, but it shows enough to prove the fact.

One valuable use for gypsum is to take up the odor of stables or manure heaps by scattering it on the floors or in the yards. This is effective in absorbing the ammonia, and probably also in decomposing the sulphuretted hydrogen—which really causes the most disagreeable smell from manure—as a reaction consequent on the freeing of the lime of the gypsum from its acid. But this effect only occurs, so far as moisture is present; and, of course, can be helped greatly by the occasional dashing of a few pails of water upon the stable floors.

The truth is, *probably*, that gypsum acts as a fertilizer directly, just as lime or potash does, and when dissolved in water may enter the plant in its perfect state: or otherwise in its elements, as lime or sulphuric acid when decomposed, and also in combination of these with ammonia or nitric acid or other substances. This is *probable*; for as to its real action, no one seems to know the precise truth of it.

MORE ABOUT PEAT MUCK.

GEN. W. H. NOBLE, BRIDGEPORT, CONN.

IN the RURAL of February 8th, it is said: "Raw muck is totally inert until decomposed by time or a fermenting compost, or by lime, wood-ashes or potash salts."

The best results with peat muck are doubtless reached by the above method. But excellent manurial value can be had out of it, pure and simple, by shorter ways. If farmers, for some crops and for some lands, are hard driven for a full supply of enrichment, I would cast on and spread right out of the muck bed. The average of these deposits will not harm, if used raw, on grass or grain, on plowed land or in orchard. I confess it is best to have the lumps spread and mashed down by roller and harrow. But at this season Nature's agencies will save us the delay of such work on the compost heap. Ahead of all these, stands

"Jack Frost."

Muck comes from its bed in unctuous and clay-like chunks that dry hard and lumpy. Peat is lifted from its layers in great clods of interlaced fibers, taking in moisture quickly and giving it out slowly. These keep in the summer's sun their shape and substance; but dump or spread either to face the open freeze and thaw of winter, and somehow all the acidity and the fibrous toughness of the lumps decamps. The whole mass breaks down into a fine muck-powder as light as ashes. Raw muck or peat that has stood the frost and thaw and leach of one winter in the open field, either broadcast or dumped in loads, looses its acid and inertness.

Varieties of Mucks and Peats.

It should be noted that there are different traits in both. Some of their deposits are so full of iron-rust and copperas, washed in from iron rocks and ore beds, that their harm is a great deal more than inertness. A little acid, or a little copperas, will not hurt our soils or crops. But, unlike learning, a good deal is sadly unwholesome. From the excess, peat has gotten, with some, a hard name.

Don't Wait for the Compost.

But if with good muck and peat you need to hurry up your crop food, and cannot wait for the compost-ferment, and have not the cash for the manure or salts to sweeten and unloosen its acid, or rouse its inertness, fear not, but right off in this freezing weather, cast it bountifully over any land you have. It's better to spread, but if just now you lack time and means, dump the loads—the frost will rend them into powder. The rain will drench out their acids. [? EDS.] In spring, with a heavy-loaded cedar brush, spread it, wholesale, in every direction.

Winter is the Time.

It is the time to drain, as well as to cart out muck. Labor is cheaper. Your work does not crowd, as in the seed-time, tilling or harvest. But, above all, the help of the elements should be sought for such winter work. I know some low lands are so drenched with floods and so water-logged, that you can hardly struggle against the flowage. Yet there are ways to do all needful work in spite of such hindrance. But I only started out to introduce some practical talk of some practical men on this topic of swamp drainage and muck.

NOW LISTEN TO THEIR WORDS.

Field Crops.

CORN IS KING.

E. WILLIAMS.

THE crop of 1877, according to the Report of the Department of Agriculture, was:

			Valued at
Corn	1,342,558,000	bush.	$480,643,400
Wheat	364,194,146	"	391,676,779
Rye	21,170,100	"	12,542,895
Oats	406,384,000	"	115,661,550
Barley	34,411,400	"	32,028,644
Hay	31,629,300	tons,	271,931,950
Cotton	4,500,000	bales, which, at 200 lbs. each, would be 900,000,000 lbs., which, at 10 cts. per lb.—about the average price now—would be	90,000,000

[An average bale of cotton is nearer to 400 than to 200 pounds.—EDS.]

Taking the preceding as the leading staples of the country, and assuming that the figures of the Statistician are approximately correct, corn can with propriety be crowned the King of all our agricultural products. For the production of maximum crops of this cereal, just as for others, the best seed is one of the most important requisites. In fact, it is held by some that it is only by careful selection of the seed, for a long series of years, that any great increase of productiveness can be obtained. It is claimed for several kinds of recent introduction that they have been brought to a degree of perfection superior to older sorts, through a careful and judicious selection of seed alone.

When the Judson branching corn was introduced, a few years ago, and illustrated and highly indorsed by the then editor of the RURAL, I thought a decided progress had been made, and I ventured to invest in seed enough to plant nearly an acre, only to find at harvest time that the whole crop was hardly worth the cost of the seed. Instead of the three, four and five ears to the stalk, I found at the most but two, and they were few and far between. A neighbor who has grown the White Prolific, of Tenn., for two seasons past, has, I learn, been disappointed, and will abandon it. [Of a great number of reports which we have received from widely separated parts of the country, with regard to this variety, this is the only instance in which its great merits are not acknowledged.—EDS.] Another has tried the Chester Co, Mammoth, of Pa., with like results. In view of these failures to realize the results claimed for these varieties, by the venders, and considering the small proportion of the crop that is really worthy to rank as the *very best* for seed, the query presents itself: "Do the purchasers of these new seeds get the cream of the seed or only the skimmed milk?"

But as the stock of extra selected seed of these new varieties will have to be largely increased before the masses are supplied, we will return to our common stock and ask: "What is the *best* seed and the best method of selecting such as we have?" I frequently find farmers who invariably reject the ends of the ears, reserving only the middle for seed, and I have seen this practice commended in the press, so that I suppose it is the general custom.

When we consider the fact that the kernels at the base, or butt, of the ear, are the first to set and mature. "We would ask, why reject them?" The chief reason or excuse generally given is: "It's the custom of the country," and I suppose it is, and has been handed down for generations past. My own custom is to select the best ear, from stalks bearing two ears if I can, and to reject only the top end, say one-third of its length, believing that by this course the productiveness and earliness are fully maintained, with a tendency to an increase in both directions, which could hardly be expected by pursuing the "custom of the country" in this matter.

A few years ago, after the close of the war, a newly-enfranchised citizen from Virginia entered our employ and, at corn-planting time, he insisted on discarding the butt kernels of the ear as well as the top, asserting that the middle of the ear only was fit for seed. On being asked his reason for this belief, he replied that he had always been taught to do so, and he knew the butt kernels were no good, 'cause they would grow so crooked on the ear you could not shell them; had done tried it, and knew. "Well, Sam," I replied, "we'll try it again," and I directed him to pick out enough of the crookedest and most irregular butt kernels he could find, so that with them I might plant five rows across the field, while it was agreed that he should plant the adjoining five rows with his choice of kernels from the middle of the ears. This was done, very much to his satisfaction, for he was certain that would give me a lesson at harvest time.

The rows were marked and treated alike in every respect. At maturity, the corn from each of the plots of five rows was cut and stacked by itself. At husking, each row of stacks was hauled at the same time, and each of us husked his own lot, the corn being thrown in heaps contiguous to each other. On completing the husking, I asked Sam which heap was the best: he unhesitatingly pronounced mine the best; and when told that was the result of his crooked kernels, he could hardly believe it. It is so long since that I have forgotten the measured results, but the most remarkable feature about it was the round and very uniform size of the ears and the entire absence of any nubbins. But Sam was most surprised to see the rows of corn on the ears as straight as any.

WHEAT GROWING IN SENECA CO., N. Y.

I HAVE lately purchased for shipment to New York a portion of a wheat crop so remarkable that it seems to me worth mention in the RURAL. This crop was grown the past season by that progressive and successful farmer, Martin L. Allen, who harvested 5,028 bushels from 140 acres—a fraction over 40 bushels per acre. When we consider that this crop was grown on land that gave a large yield of hay, wheat, barley and potatoes in 1877—not an acre having been fallow, a condition that so many think essential to success in growing wheat—it certainly is a very remarkable yield. The soil is a friable loam underlaid by limestone, well underdrained by nature, and has been under cultivation 60 years or more. The culture and preparation of the soil for this crop were thorough and complete, as will be evident to all from the results obtained.

The varieties grown were the Michigan White and Clawson, about equal areas of each, with very little if any difference in yield per acre; but the Clawson was the whiter and of more value for the New York market. The amount of seed sown was one and a half bushel, with 180 to 200 pounds of phosphate per acre drilled in with the seed. Time of sowing, after the middle of September to October 1st.

The above large average on so large an area, I think, can hardly be surpassed in the State; and, taken with the large yields of many others of our farms of less extent, it goes to show that we have among us some good farmers, and that Seneca Co. is coming back to its old-time fame of being one of the best, if not *the* best, wheat-producing county in the Union.

Seneca Falls, N. Y. L. F. C.

The Herdsman.

CRITICISING DAIRY COWS.

JONATHAN TALCOT.

IN the RURAL NEW-YORKER of January 4th, page 10, T. H. Hoskins, M.D., has given what I consider a very fair statement of the value of the Short-horns for the dairy, and it seems to me that if his statements are correct—and I have no doubt but that they are—it is too late for any writer to deny that they have any value as dairy cows, or to assert that they should not be found in any dairy farmer's herd. Yet it seems that there is at least one such writer who is writing a series of articles for the RURAL NEW-YORKER and who says in regard to Short-horns—"If I had my way I would no more consider the Short-horn a dairy cow than I would the Hereford, Polled Angus or Texas cow"—and in reference to Short-horns, if one may judge by his letters already published, he means the English, or Short-horn Durhams, but does not include the Dutch in their various short-horned branches, though these, too, are certainly entitled to that name. As a breeder of Short-horns, I am certainly willing that Mr. L. S. Hardin should have his own way about this matter; yet as he owns no cows and, so far as I have ever been able to learn from any of his published letters, never has owned or bred the different breeds with regard to whose milking qualities he proposes to enlighten the dairy farmer, I should like to know how he can judge of the dairy capabilities of the different breeds he discusses so freely, better than the practical dairyman who raises his own cows from either of the different breeds with which he may be familiar.

The fact is that Mr. Hardin, in his character of "Free Lance," which he assumes in his first letter, gets unduly excited and cuts and cleaves something he hardly knows what, till he exhausts himself; then sits down to see the results, and, frequently, if one may judge by his own letter, these results are not very satisfactory even to himself. If Mr. Hardin can take the letter of Dr. Hoskins in regard to the value of the Short-horn for the dairy, and prove that the statements contained therein are not correct, he will have done something towards sustaining his own "way," as he is pleased to write in his second letter, as published in the RURAL NEW-YORKER for Dec 21, page 809. In that letter Mr. Hardin says: "In this State—"Kentucky, I suppose Mr. H. means —" where Short-horn breeding is at the hight of its glory, the Short-horn cow has been weeded from the dairy. Her tendency, when fed rich food, to fatten and dry up rapidly, coupled with the waste of food in carrying several hundred pounds of useless flesh, has caused her most enthusiastic friends to desert her"—as a dairy cow Mr. Hardin means, no doubt. In the same letter Mr. Hardin says: "At the same time, it will not do to entirely pass over that ever-recurring argument for the Short-horn for the dairy, to the effect that when her milk gives out, she can be turned to a profitable beef animal." In the same letter also he says, "I am satisfied that no man on earth can make money fattening old dairy cows," also, "In fattening cattle, deliver me from old, pot-bellied cows, no matter what their blood."

Can Mr. Hardin reconcile these statements, although he has made them all in one short letter respecting Short-horns as one of the breeds of dairy cattle? If he can, he certainly will enlighten the writer, and no doubt a good many other readers of the RURAL NEW-YORKER. How a cow can be carrying several hundred pounds of useless flesh being dry, and at the same time be an old pot-bellied dairy cow that will

cost more to fatten than she would be worth when fattened, is a mystery to me that I should like to have explained if any person can do it satisfactorily.

In the course of my breeding I had a very fine dairy cow, as I thought, a high-grade Short-horn that was farrow, as I supposed. She was milked during the season and dried up, expecting to calve in the spring. She did not, neither did she ever have a turn of heat. She was sold in May, 1857, for $100, to the butcher, which I thought then paid me remarkably well, as she was not fed for the purpose of seeing what could be done with her; neither was it a time of inflation in prices. In the letter of Dr. Hoskins, mentioned above, where he alluded to my herd, he said well, that I was no speculator in Short-horns. That I began with them to raise cows for the dairy, is true; that I have succeeded as well as most farmers under like circumstances, I have no doubt. Had I had a better knowledge of the business, and more funds at my command, I think I would have done much better. My prices have always been so moderate as to place it within the reach of common farmers to purchase of me, if they desired to do so. I have never kept a record of any cow for the entire year. I have, however, tested them singly and have made from 10 to 14 pounds of butter per week, from various cows that I have bred. For two years our milk was sent to the cheese factory and our dairy was fully equal to any other in the factory where the milk of 600 cows was manufactured into cheese. One of the patrons of the factory, a neighbor, had a cow sired by a Short-horn bull owned by the writer, that would put more milk daily into the factory than any other cow whose milk was sent there. It has been an established fact that those dairies that were well graded by the use of Short-horn bulls, have been the most productive in milk for factory purposes. We have had numerous cows that would give 40 to 50 pounds of milk per day on grass in the best of the season, and one we sold, that went into a better pasture than she was wont to have on our farm, and the purchaser wrote me that she averaged 30 quarts of milk a day, measured free of froth, during the month of June, on grass alone. I thought then and still think she was a good dairy cow. Her purchaser wrote me that she was worth two cows for the dairy, and he was a breeder of Jerseys, but bought a Short-horn of the writer to test them together, and was highly pleased with the result.

In conclusion, there is room for all, and if one dairyman prefers one breed, and another a different breed, let it be so, and let each try to improve his favorite breed and not condemn those of his neighbor. In so doing he will be of greater benefit to the community than all the tournaments of "Free Lances" that can be gotten together, especially if the knights are to be taken from those "who own no cows," and, so far as we know, have never bred any, so as to test the different breeds whose merits they propose to discuss. In order to state the merits of the different dairy breeds correctly, they should be raised and fed by those persons who propose to give instruction to others, and the differences carefully noted in each breed, as well as their advantages and disadvantages. In that way some correct information could be gained of value to the community at large, that would be worth the publication.

Rome, N. Y.

STOCK NOTES.

EXPORTS OF SHEEP.—The shipment of 4,000 sheep in two flocks, in one week, by a Canadian railroad for transport to England for a market, is a significant fact. These sheep were raised in Western Canada and were chiefly grade Cotswolds. There is no more profitable farm animal than a sheep, if the right kind is in the right place. These Canadian sheep are raised in small flocks, generally of less than 50, and rarely greater than 100. The average value at the farmer's door, is $6 per head. There is abundant room in the United States for keeping flocks of this kind, and fortunately there is sufficient profit in it to make it remunerative and desirable.

JOTTINGS.—An order of the British Privy Council has lately prohibited the importation of cattle from Belgium or Germany....Australia and New Zealand are close competitors of this country in the canned meat trade of England. The colonial trade in goods of this kind has vastly increased within the last decade, and the prejudice of the British workman against such meats is fast disappearing. Just now Australia boasts of having invented machinery which packs 24 tins in Melbourne as quickly as one tin is filled by hand in Chicago....England has frequently accused Ireland of having been the source from which has come a great deal of the contagious diseases that have thinned her herds, and now, although all Irish cattle for the English market are closely inspected at the port of shipment, English farmers are insisting that they should be again examined on landing, on the ground that the first inspection is not sufficiently trustworthy....The Dublin Farmers' Gazette protests against a common prejudice against all-white Short-horns, and says that out of a lot of fairly-bred cattle tied up for stall-feeding, those that are white will, every time, be first ready for the butcher....The English Agricultural papers say that the Contagious Diseases Act was almost the only boon which agriculture in that country received from legislation in 1878; but they complain that the bill, as originally introduced into the House of Lords, was greatly modified. They claim that by it both foot-and-mouth disease and pleuropneumonia have been steadily isolated and stamped out, while the precautions taken at the various ports against the introduction of foreign contagious diseases, are giving native stock-owners a fair show.....The Victoria (Australia) Government has issued orders that 60 days' notice must be given of all intended importations of live-stock into that colony, and all animals are subjected to a rigid quarantine of 90 days after their arrival, while, if any disease has appeared among the shipment, the entire lot must be slaughtered on landing. English stock-owners are loud in their complaints at the severity of these regulations....Since Germany lately prohibited the importation of cattle from Russia, the latter country has been glutting the German markets with dressed beef. Asiatic Russia is considered the source of cattle plagues.

Dairy Husbandry.

FEEDING FOR BUTTER.

T. H. HOSKINS, M. D.

THERE is so little positive knowledge of anything in relation to agriculture, that it becomes no one to treat agricultural topics dogmatically. Yet no one who has observed the matter closely, can have failed to notice that positive treatment of a question is most acceptable to readers of agricultural literature. "Men," says a shrewd writer, "Men, in general, dislike uncertain and qualified statements." They prefer decisive opinions, distinct formulas. It is this manifest preference among readers, coupled with that limited comprehension which makes many minds so "cock sure" of everything, which gives us so much dogmatism, and leads to so much quackery in every branch of applied science.

I think the large majority of men interested in dairying believe that it is possible to feed for butter with success—that is, to increase the proportion of butter in the milk of a cow, by a special ration designed for that purpose. It is my belief that this is a mistaken idea, and I wish in this article to give the reason why.

But to clear the ground and properly circumscribe the question, I will first explain that I by no means doubt that good feeding may increase a cow's yield of butter. Nor do I doubt that when a cow is being actually starved, the proportion of butter to the other constituents of her milk may be somewhat lessened. What I mean to put forward is that by higher feeding we only increase the butter in proportion as we increase the other solids of the milk; and that when, by improved feeding, we have driven a cow to her best in milk, we cannot, by any change or modification of her feed, cause an increase in the butter element. I state this as an experimental fact, and I believe that there are physiological reasons why it should be so.

What is butter? It is simply fat, obtained from the food and secreted with the other constituents of the milk in the cow's udder. We all know that under the same feed the proportion of butter to milk varies greatly in different cows. This is the same whether the herd is fed on grass or hay alone, or whether they receive extra feed, with the view of pushing their yield of milk to the highest profitable point. Under this point of view it is quite customary to divide cows into two classes—butter cows and cheese cows, the latter being large yielders of milk not rich in fat. Now, the question under discussion may be simplified to the practical mind by putting it in this form: "Can a cheese cow be made a butter cow by any special manner of feeding?"

That it has been proposed and attempted to do this is testified to by much past and current writing in the agricultural journals; and great confusion exists, so that writers do not distinguish between increasing the butter *with* increase of milk, and increasing the butter *without* increasing the milk. Each individual cow comes into the world as a calf with a special constitution of her own, inherited from ancestry on both sides in varying degrees, but fixed from the start, so that the ability to take on fat or to secrete fat in the udder, cannot in that individual be increased.

How then can we produce an improved race of butter cows? How have our existing butter cows come into existence, being the progeny of inferior animals in this respect? The correct explanation of this problem seems to be that while we cannot improve the individual capacity of a cow as a butter yielder, we can, by proper care and feeding, cause her to bear progeny productive of richer milk. This progeny will not be uniform. Some will be better than the mother, some no better, and, possibly, with all care in feeding and tending, some may not even be so good. Much depends upon the male parent, and at this point we introduce skill in mating or breeding as an important element of progress. If we use the son of a rich milker as sire upon a cow whose progeny we desire to be butter cows, we have increased the probability of success by having the law of inheritance in our favor. And as soon as we have thus made a start on the path of improvement, we can, by judicious selection and careful in-breeding to fix valuable qualities (still keeping up the care in feeding, housing and handling), gain more and more completely and uniformly, with each succeeding generation, the quality, or qualities, in our herd which we desire.

As far as America is concerned, we may take advantage of the progress already made in other countries. In this specialty of butter-production, for instance, we have the Jersey and Guernsey cattle, to begin with. But I believe we make a great mistake in thinking that our best results with these breeds are to come from breeding them pure. It is the using of them as aids in improving the native stock of each particular dairy district, for the purposes of that district and its market, that we have need of, and we may gain advantage in the use of foreign strains of blood. The Jerseys are what they are in consequence of the way in which they have been bred and managed for many generations. By like management an equally useful breed may be in time produced in any region of country naturally fit for dairying. The use of imported Jerseys is to shorten the time of effecting this desirable object. But without that proper management and care, the importation of foreign stock, however good, will produce only slight and temporary advantage. The skill and care that made the Jerseys, must go with them wherever they go, or in a little time they will sink to the level of their "environment."

When skill and care become general in any district, there will spring up there a new breed of dairy cattle, for cheese or butter as the demand and purpose may be. They will not be Jerseys, Guernseys, Ayrshires, Short-horns or Dutch cattle. They will be local in their character as in their origin. As Great Britain, hardly larger than New York, has some twenty different breeds of "thoroughbred" cattle, so New York, New England, Pennsylvania, Ohio, will each have, perhaps, its twenty breeds or more. With the knowledge and skill at hand and in full exercise, the production of useful "breeds" will become but a slight and lessening difficulty. Good cattle for each required purpose will be the rule instead of, as now, the exception. Fifty years hence we may believe America will possess better breeds for every purpose than any which now exist, at home or abroad.

Meantime, we ought all to understand what can and what cannot be done—in what direction and through what means improvement must be sought, and what are the conditions of development in any required direction. Our cattle and other live stock will become better as our farmers and breeders become more and more masters of their business. Money to buy with, is not the sole condition of possessing a good herd of cattle. The wretched condition and rapid deterioration of many costly thoroughbred herds, are standing proofs of this fact. Good cattle are the concomitants of skill in the business. That produces them, and that alone will perpetuate them.

Veterinary.

ABORTION IN COWS.

R. GOODMAN.

THIS scourge, the cause of which has so far eluded the prying endeavors of dairymen and scientists, has elicited an apparently new theory which, perhaps, is sounder than those heretofore broached. An Illinois correspondent of a contemporary paper some time since advanced the idea that abortion in milch cows was owing to deficient nutrition—poverty of the pastures or the grain and hay feed, one or the other, or both, in some of the elements which are essential to health and strength. This opinion is now supported by the decision of U. S. District Judge Blodgett, of Chicago, himself a breeder. He has taken the testimony of experts—of the dairy farmers of the vicinity, where abortion is sometimes an epidemic, and the information obtained from the agricultural press—and comes to the same conclusion. And yet this theory can hardly be called new except in this latitude, for nearly half a century ago Mr. Lindsay, an English authority, said: "That improper or too little food is a prominent cause of abortion is strongly indicated by facts," and he instances cases where, the summer being unfavorable, the pasture and hay crop were poor and the cattle were fed on poor hay of the preceding year's growth, and the consequence was that half of the cows aborted. "The most common cause of abortion in cows," says White, another English authority, "is improper feeding during winter and spring before they are turned to pasture. The filthy pond water they are compelled to drink, and feeding on the rank fog grass of October and November, especially when covered with hoar frost, are likewise frequent causes of miscarriage." Any one who remembers the description in Charles Reade's last novel, "The Woman Hater," of the pond in the English town owned by a noble lord, whence all the people obtained their drinking and washing fluid, and of the *boneless* condition of the children of the place, can easily realize how the use of such water by cows would produce abortion and other disorders. On English farms where wells have been sunk, and the cattle supplied with good food and pure water from such wells, instead of the filthy mixture they had been compelled to drink, the effect was almost instaneous—the cattle began to thrive, became healthy, the quality of the butter and cheese improved, and abortion ceased.

Nearly a century ago all the cows of a farm in France miscarried about the fourth or fifth month. The accident was attributed to the excessive heat of the preceding summer, but as the water they were in the habit of drinking was extremely bad, and they had been kept upon oat, wheat and rye straw, it has been surmised that the great quantity of straw they had to eat in order to obtain sufficient nourishment, and the injury sustained by the third stomach in expressing the fluid parts of the masticated mass, together with the large quantity of impure water they drank while kept upon this dry food, formed the real cause of their miscarrying. In several other cases in France, where cows had been pastured upon land which had been flooded and the grass had become sour and rank, a majority of the animals prematurely slipped their calves.

At the present time, when we are tracing, with almost mathematical precision, the causes of many human disorders—such, for instance, as diphtheria, typhus fever and malaria of various kinds—to impure water and improper diet, like pork in excess, we cannot overlook the fact that our four-footed friends are subject to correlative diseases and other ailments from similar causes, and the reasoning is naturally sound, which ascribes the "accident of warping" to a vitiated state of the digestive organs, occasioned by bad food and impure water. Let the cows, then, be regularly fed on good food and proper quantities; let them have pure water as often as they need it; avoid exposing them to sudden changes; let the cow-houses be well ventilated; prohibit all manner of rough usage, and watch particular animals which may need an increase or reduction of food, and then, if disease occurs, the farmer will be able to have a clear conscience. But the probabilities are ten to one that cows thus tended will be free from disease of every kind, and pass a long and profitable life in the bestowal of bountiful gifts to their owners.

In England, where goats are favorites in the stable, it is said that their presence, or strong odor, has a favorable effect upon cows, and I read recently, in some agricultural paper, a communication from a farmer in this country, whose cows aborted several seasons, until at last he placed a "strong" goat among them, when they began to calf properly and he got out of the trouble—for he fed and watered well besides. As abortion does take place occasionally, even among animals fed on good hay and supplied with pure water, there is probably, in such cases, some deficiency—perhaps a lack of phosphates, which can be furnished by adding wheat bran to the feed or dressing the pastures with bone-dust, which last course will aid the land in production and supply to the grass and hay the element they lack. I find seeding to grass with bone-dust produces a great growth, and ascribe the health of my herd of Jersey cows to that and the constant mixture of wheat feed with their other provender—early cut hay, corn stalks, a little Indian meal—and to their easy access to good, clean water.

Miscellaneous.

JOTTINGS AT KIRBY HOMESTEAD.

COL. F. D. CURTIS.

Hot Water for Hens.

MR. L. D. SHERWOOD seems to have struck the key-note in the care of hens. His experience coincides with Esquire Davidson's, that poultry require water in winter—eating snow does not answer the purpose to make them lay well. Mr. Sherwood has partitioned off the second story of his pig-house for a hennery. It

is not lined on the inside, and is no warmer than matched siding will make it. The building, however, is situated in a warm and sheltered place. The grain fed is corn and oats. Hot water is furnished to the fowls twice a day. Mr. Sherwood says they gather around the water as soon as it is taken to them, and drink it greedily when quite hot. He feeds them apples every day or two, and they also have meat scraps, lime, coal-ashes and broken oyster-shells. The result of this attention to his hens is, eggs enough in winter to buy all the groceries and to supply his family with all they require. Mr. Sherwood says hens will not lay well without some sort of green feed.

Jersey Butter Will Keep.

We are now eating butter from a four-gallon crock, which was made in August, exhibited at the Schenectady Co. fair in September, where it won the first prize, and now it has all the aroma and excellence of fresh-made. This goes to show that Jersey butter has superior keeping qualities, and this is because of its natural hardness, on which account it can be so tightly and firmly packed as to be almost proof against hot weather and impervious to the action of the atmosphere.

Separating Breeding Animals.

We are now separating the breeding sows, putting each one in a pen by herself. They will begin to farrow in a month, and they should not be allowed to run together any longer. Much damage is done by leaving them together until near pigging time. They knock each other about and injure themselves. When pigs are born dead, it is always caused by a strain or bruise. Sometimes the injury is so slight as to kill but one pig, but this will often cause fever and inflammation which may destroy them all, or so affect the others as to make them puny and weak. On no account should a sow with pig be struck or roughly treated, because a slight blow or jam in the right place will surely destroy pigs. Their pens should be kept dry and clean, to prevent rheumatism, to which hogs are subject. They must also have, at least a month before farrowing, green or laxative food, such as roots, apples or bran—milk will do very well, but it ought to be mixed with bran. It does not make so much difference what sort of bran it is, if it is only coarse enough to produce freedom from constipation, which is the cause of sows being "crazy" and eating their pigs. Clean corn is the worst kind of feed for a sow with pig. This has been often repeated, but the warning is so often unheeded that its repetition is necessary. Sows in pig do not want fat-producing foods like corn, but lighter and less stimulating, such as we have mentioned. Strong feed will make too much milk before the pigs come, and this will cause fever and dry up the udders. Keep the strong feed until the pigs are at least a week or ten days old, before giving it to the sows.

Watching the Trees.

We have had so much snow and such big drifts that we shall lose scores of trees unless we dig them out before a thaw. Where the trees are not banked up in the fall, it is not too late to tread the snow down around them firmly, and thereby prevent them from being destroyed by the mice. This precaution is not necessary unless the trees are situated near a fence or plat of grass, as the field-mice are not often found in a clean field. For this reason we did not bank our pear orchard last year.

NOTES ON CURRENT EVENTS.

THE BUSHEL MEASURE.—There are bushels and bushels. What is a bushel to one man is often quite another thing to another. There are few things more delusive and intricate than the bushel measure. Between the bushel of five pounds of meadow foxtail-grass up to that of 80 pounds of lime or coal, there are as many other bushels as there are figures, and to make the matter worse, even a bushel of any particular thing differs in weight in many localities. Instead of being a help, this measure is a hindrance, and the man remembers in the confusion of modern instances the trouble of his school-boy days from the uncertainties of our common measures. And now it has been found that a bushel may be made less or more, by easy manipulation of the measurer. If a flat strike will leave a bushel weighing 57 lbs 2 oz, a round strike will cause it to weigh 57 lbs. 9 oz, and if a shock be given to the measure or it be shaken before being struck with a round ruler, the weight of the bushel will be about 63 pounds. Why should not all measures be abolished, and all commodities that are now measured be sold and bought by weight? If this were done the present confusion would be changed for a satisfactory certainty, and the endless succession of disputes would be avoided.

RYE AND WHEAT BREAD.—There is scarcely any well established custom in existence but what some one with a hobby would have us believe that it would be better for us to abandom that custom. Occasionally we are advised to eat nothing but the coarsest flour, and the disciples of Dr. Graham would make bran-chests of our stomachs. Others would have us change our wheat bread for that made from rye; others, again, try to induce the public to believe that there is virtue in nothing but oatmeal. It is a curious fact that as civilization advances among people, the consumption of wheaten flour increases *pari passu*. As the poorer and uneducated classes become better off and more cultivated, oats, barley, rye, buckwheat and corn are discarded as the staple foods, and wheat is practically the breadstuff and the staff of life. Yet the coarser grains are not without their valuable uses. Those who have habitually used the finest wheat flour, are glad to exchange—now and then—their "new process" for a little rye flour, oatmeal or buckwheat. This is in fact a healthful change which would become more popular if the effort to make it popular were free from misleading errors. It never pays to overdo anything, as a writer in the Weekly N. Y. Tribune, recently has overdone the subject of substituting rye flour in place of wheat for bread, by giving the following very inaccurate analyses of the two grains, viz:

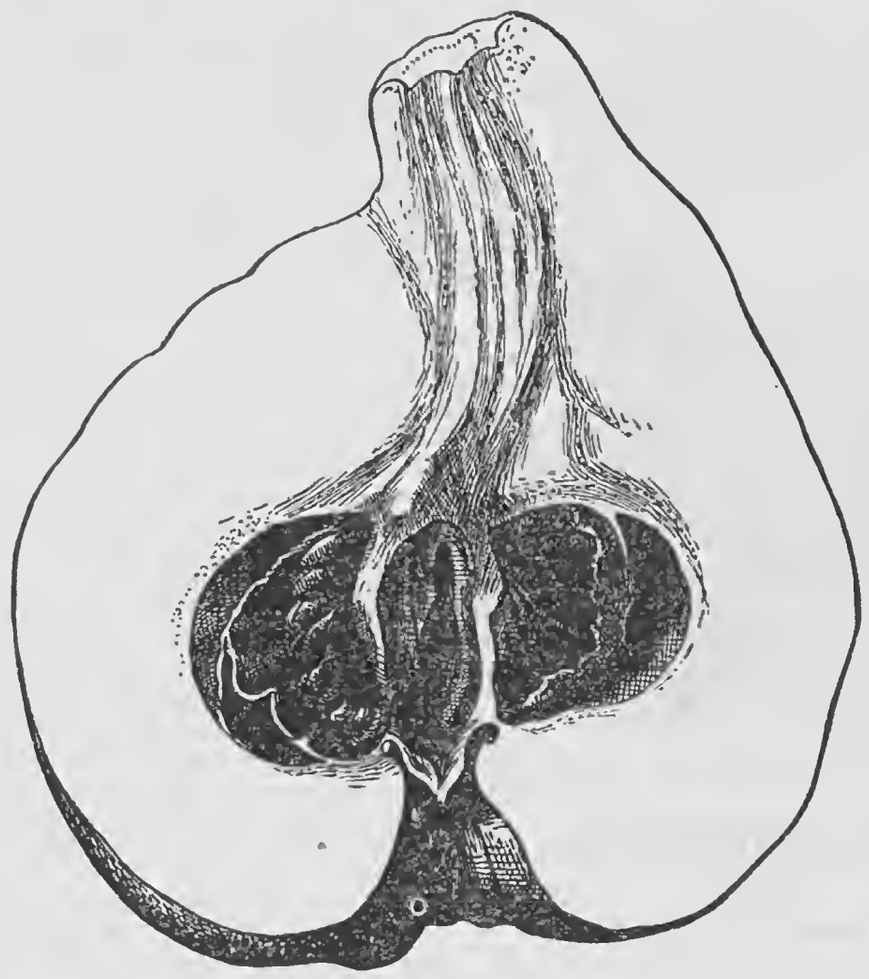
WHEAT.		RYE.	
Starch	71.2	Starch	61.07
Gluten	10.3	Gum	11.09
Sugar	4.8	Gluten	9.48
Gum	3.6	Albumen	3.28
Bran (?)	—	Saccharine matter	3.28
Water	8.0	Husk	6.38
		Acid and loss	5.42
Total	97.9	Total	100.00

Now where are the phosphates that are so much talked about, that build up the brain and the bone and for which we are advised to eat the whole flour, including the brans, both outer and inner? Has rye no water in it while wheat has eight per cent? Of what kind of acid has rye five per cent, or what sort of an analysis is it that finds a loss of even a small portion of 5.42 per cent? The analyses of wheat and rye and the flours from these grains, as given by the best authorities, Wolff & Knop, are as follows viz:

	Water.	Ash.	Albuminoids, Gluten, &c.	Carbohydrates Starch, Sugar, &c	Fiber.
Wheat	14.4	2.0	13.00	67.6	3.0
Rye	14.3	2.0	11.00	69.2	3.5
Wheat flour	12.6	0.7	11.80	74.1	0.7
Rye flour	14.0	1.6	10.50	72.5	1.5

The fact is that rye flour is less nutritious in flesh-forming matters and more nutritious in those which support respiration and the animal heat than wheat flour; therefore rye is better suited to laboring men or those whose circulation is quickened by exercise, while wheat is better for those who exercise their mental, rather than their muscular power, and for this very reason the more civilized a man becomes the more he hankers after wheat bread.

CANNED PROVISIONS.—The business in canned fruits, vegetables, meats, soups and fish, has grown to enormous proportions. In one meat-canning establishment in Chicago, 700 persons are employed and in the whole industry there are not less than 250,000 people interested as laborers or proprietors. The list of canned goods now includes not only plain meats, fish, fruits &c., but such made dishes as baked beans, clam-chowder, fish-balls and plum-pudding. The great convenience of provisions thus packed, for what is known as "light house-keeping," together with the use of gas and oil cooking-stoves, has vastly increased the business of supplying them; and perhaps the larger proportion of them is used for army supplies all over the world where the active business of manslaughter is in progress. As a curious instance of the effect of a convenient food supply upon social habits may be noted the fact that since canned goods have been put upon the market, the system of living in "flats" in the cities, has come greatly into vogue, and is constantly spreading. This is not without interest to those who supply the raw materials.



CHAMPION QUINCE.

Pomological.

THE QUINCE AND ITS CULTURE.

There is hardly a fruit in the country the cultivation of which is more generally neglected than that of the Quince; yet, there is perhaps no other fruit more grateful for the care and culture bestowed upon it, more susceptible of improvements, or that commands a better price in the market than this. If inquiry is made in the market for this fruit, some poor, knotty, inferior specimens are presented with the remark that they are the best that can be obtained. While the visitor at agricultural and horticultural fairs may see large and varied collections of the best apples, pears, peaches, grapes and other fruits, the collections of quinces are, in the majority of instances, confined to a few plates stored away on the back shelf, or in some out-of-the-way corner, where they are seen by but few others than the judges, and sometimes hardly by them. This indicates that fruit growers and owners of orchards generally, give but little attention to its cultivation, and that people at large do not appreciate it to the degree it deserves.

In part, this apparent lack of appreciation may be due to the fact that while other fruits admit of being eaten raw as soon as taken from the tree, the quince requires the manipulation of the cook before it is made palatable. But skillfully prepared, it is as healthy and delicious as any fruit, and as a preserve is an excellent variation for the table in winter when fresh fruits become scarce.

Aside from the usefulness of the fruit, the tree is very ornamental, and deserves attention for this purpose alone. The leaves are large, the flowers large and showy, and in the fall, the yellow fruit has a very presentable appearance. While we do not claim for it the same prominence given to apples and pears, yet we do insist that its qualities as a table fruit, entitle it both in country and city to more consideration than it is now receiving; and the price it commands in the market, one should think, would stimulate its cultivation.

But little effort has been made to improve the Quince. Apparently but few have thought it worth the trouble to select seed and raise seedlings with a view to improve the old varieties. The consequence is, that we are still growing the same varieties that were known centuries ago. In Europe quince seedlings are raised extensively in the nurseries, and used as a stock on which to graft the Pear. For trees that are to be trained in dwarf form, it is preferred to pear stocks, because it has more fine roots, will grow in places too wet and cold for the Pear, keep the tree small and bring it to bear earlier.

There are three methods by which the Quince may be propagated: by seeds, cuttings and layers. The propagation by seed is the most natural and perhaps the simplest method, and is the only way in which new varieties can be produced. Select the seed from the best varieties and only from the largest and best-formed fruits. Though this does not *insure* that the seedlings will be better than, or even as good as, the mother tree, yet there is a greater probability of more of them being of superior quality than if seed were taken from fruit without reference to its quality. Sow it in rows in rich and well-prepared soil as early in the spring as the weather will permit. It is somewhat slow to germinate, and for this reason some prefer to sow it in the fall and protect the rows with spent tan bark or manure during the winter. During the first summer, nothing further is required than to keep the plants clean by hand-weeding and the vigorous use of the hoe. The following spring, they should be classified and transplanted, all the strongest plants being set out by themselves. To increase their vigor, as well as to procure a straight stock, about half of the previous year's growth should be cut off over a bud that points directly upward. Plant them about one and a half feet apart in the nursery row, leaving space enough between the rows to use the horse cultivator. If there are only a few hundred plants, it is advisable to set a stake to each, to which they should be tied.

Cuttings of the Quince should be taken from one- or two-year-old twigs in the fall or early winter, made about eight inches long, tied in bunches and either buried in a dry spot of ground or kept in moist sand in a cellar during the winter. By April they will have a good callous formation—the fleshy outgrowth at the lower end from which the roots proceed. Set them in rows five or six inches deep as early as the soil is fit to plant in. Stretch a line and, if the soil is very loose, stick them into the ground to the required depth. If the soil is too hard and lumpy for this, open a trench with a spade, in which place the cuttings, always taking care to tread the soil firmly about them. If well taken care of, a large proportion will take root.

Layering consists in bending the lower branches to the ground. Make an incision on the under side, and partially cover them with soil. When they have taken root they are cut loose from the mother tree and each is treated as a separate individual. Both cuttings and seedlings should be treated alike after the first season. If desired, they can be used as stocks for Pear (as stated above) or for another Quince.

When the plants are three or four years old, according to size and vigor, they may be planted in the orchard, where they should be set twelve feet apart each way. A moist, but well-drained soil is preferable, and the Quince should never be planted on very dry, sandy or gravelly land. With the Quince, as with all other fruits, the better the land and the more manure, care and culture are bestowed upon it, the better will be the result.

Being half shrub and half tree, the Quince has naturally a crooked and dwarfed growth, and, if left to itself, will send out several branches from below the ground. This should never be permitted; the handsomest and in every way the most satisfactory trees, are those with a single stock twelve to eighteen inches high to the first branch, and trained in the form of a pyramid. In Europe where labor is cheaper than here, and where much more time and care are expended on both field and garden, the pyramidal form is a favorite one. One leading branch is trained straight upward, from which radiate, at regular intervals, all the main branches—a well-formed Norway Spruce is a good example of the pyramidal form. By reason of the tendency of the Quince to grow crooked, it requires a little ingenuity on the part of the husbandman to give it the pyramidal form, but by always pruning each branch over a bud that points in the direction in which it is designed that the tree should grow, and, by means of a string or stake, bringing this or that one into the right position, the desired form may be attained without difficulty. What is termed the dwarf form is also used for the Quince. It is nothing more than a well spread and equally balanced crown, on a miniature scale.

In localities where insect pests are numerous, the Quince is liable to suffer from these pests, particularly from the borers, though no more so than other fruit trees. To prevent their ravages, it is advisable to apply a strong solution of soap-suds to the trunk and larger branches, early in spring and several times during the summer. But the borer may attack the trees in spite of this, and the Quince-grower should therefore watch for the appearance of sawdust on the ground near the trunk, and if found, immediately proceed to destroy the offender, by punching wire into its hole or else carefully cutting it out. In the month of September when the young borers have begun to work, all the trees should be carefully examined and the borer's life cut short.

Of the few older varieties that are generally known, the Orange Quince is considered most prolific, while the Portugal Quince has the best flavor.

A correspondent to the RURAL from South Glastonbury, Conn., speaks highly in favor of a new variety, named the Champion Quince, a section of which is represented in the engraving. Of this he says:—

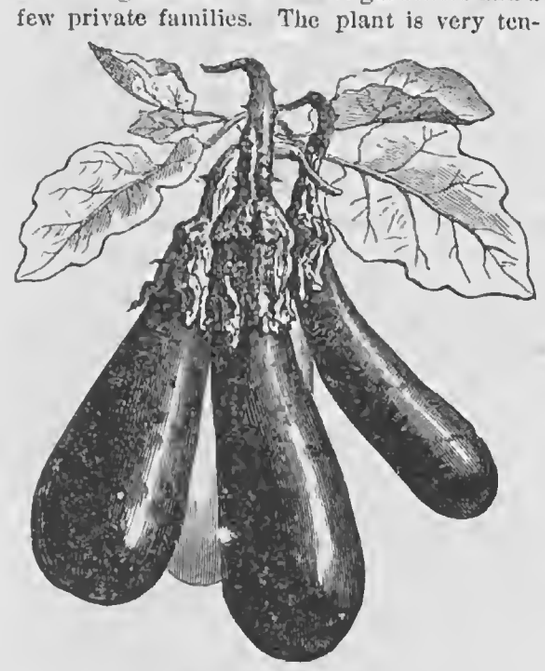
"The Champion is a chance seedling that originated on the grounds of Mr. George Perry, in Fairfield Co., Conn., in 1865, fruited for the first time in 1869, and the original tree has fruited every year since. The tree is a strong, free grower, and usually comes in bearing the second or third year. One tree, only three years from bud, produced half a bushel of fruit the past season. The variety is a regular and profuse bearer, never having failed to produce a crop during the past nine years. The fruit is of large size, and in shape much like a well-formed Duchesse Pear. Color, a pale yellow, not as bright and attractive-looking as the well-known Orange variety, although I think it fully equal, if not superior, to that variety, in flavor. It has been tested on a variety of soils, including some quite dry, gravelly land, and was found to do well wherever planted. This spring, we shall plant several acres of the Champion on a sandy loam, and by deep plowing and heavy enriching, we expect, in three years, to begin to gather the rich, golden harvest.

"The strong, vigorous habit of the tree, and its disposition to early bearing, together with the large size, perfect form and excellent quality of fruit, make it the most valuable acquisition to the quince family yet introduced. Had it only the color of the "Orange," we should say that "Perfection" would be a more appropriate name than "Champion." The entire crop of fifty bushels this year, sold for five dollars per bushel, showing that it is appreciated in market."

Horticultural.

EGG PLANT (Solanum Melongena.)

The Egg Plant is a tender annual, related to the potato and the tomato. It is a native of Africa and tropical America. It is not grown in the country and among farmers generally, nearly so extensively as it merits, its cultivation being confined to market-gardeners and a few private families. The plant is very ten-



EARLY LONG PURPLE.

der, and the seed should not be sown in the open ground until about the first of June; if wanted earlier, it must be sown in a hot-bed. Set the plants about two feet apart each way; hoe the ground frequently to stir it, and to keep it clear of weeds. Each plant, if well grown, will produce seven to nine eggs which are cooked in several ways, according to the skill of the cook. Twenty-five to thirty plants are sufficient for a family of six or eight persons. The engraving shows Early Long Purple; this and New York Improved are considered the best varieties.

SQUASHES.

The several varieties of squashes are all members of the gourd family, Cucurbitaceæ, and, as such, closely related to melons, cucumbers and pumpkins.

This class of vegetables finds a ready market in all large cities and is raised extensively by market-gardeners, though it is not among the most profitable crops. Large quantities

TURK'S TURBAN.

are shipped North from Southern ports in the early summer before the crop in the North is ready. The squash plant is very tender, and should be among the last vegetables planted. It will do well on any good garden soil, but a sandy loam is best adapted to supply its wants.

The early varieties are planted in hills, three or four feet apart each way; while those that run, or spread over more ground, require intervals of seven or eight feet. Pulverize the soil thoroughly by the plow or spade, and prepare the hills by incorporating two or three shovelfuls of well rotted stable or barn-yard manure in each. Plant eight or ten seeds in a hill, and when the young plants have three or four rough leaves, remove all but the three strongest. The seed may be planted two to

HUBBARD SQUASH.

three weeks earlier than usual, by giving the young plants some protection. For this purpose lay a box, ten or twelve inches square, on the prepared hill; heap the soil up around it six inches high, and pack it well so it can keep its form; remove the box and plant the seed in the hole thus formed, and cover it with a pane of glass which may be removed on mild days, and replaced at night. We have planted both melons and squashes fully three weeks earlier than would otherwise be advisable, by adopting this method of protection.

It is a very common, though questionable custom, to plant squashes among the corn, and in the same hills. This interferes with the cultivation of the corn, and is detrimental to the yield of both. It is well-known that in the whole family, the stamens and pistils grow in different flowers—which therefore depend upon insects or the wind for fertilization. The staminate, or male flowers appear first, and the pistillate, or female flowers, later. They are sometimes situated so far from one another that artificial fertilization, or the transfer of pollen from the male flower to the pistil of the female, becomes necessary. Especially is this the case if it is the intention to raise seed from a certain variety, as the varieties are very liable to "mix" one with another, and with melons, cucumbers and other plants of the same family. The pollen may be transferred with a camel's-hair brush, or by removing the whole male flower and bringing it in contact with the female flower when the latter is fully expanded and ready for the reception of the pollen.

There are many varieties of squashes; we enumerate a few of the best: For summer use, Turk's Turban, Early White Bush, Early Golden Bush, Boston Marrow. For winter use, Hubbard, Winter Crookneck, Marblehead and Yokohama. Our engravings show Turk's Turban and Hubbard.

Floricultural.

EUROPEAN CORRESPONDENCE.

The St. Petersburg Botanical Gardens.

St. Petersburg, Russia, January 29, 1879.

This being a rather mild morning, the thermometer on my outside parlor window indicating 19 deg. below zero only, and having for the day no other engagements affording me the enjoyment of fresh air, I instructed my "izvoshtshik" to prepare himself for a drive to the Imperial Botanical Gardens, situated about three English miles from the celebrated Winter Palace of the Emperor, the most marvelous specimen of architecture in the whole of Europe.

A brisk drive of some twenty minutes, upon the Neva, brought us to the grand entrance of this magnificent institution. On entering the grounds, which cover an area of over 200 acres, laid out in the English style of landscape gardening and adorned with every variety of deciduous and evergreen trees and shrubs hardy in this severe climate, we were met by two officials who conducted us to the grand Rotunda, the place for the safe-keeping of the Imperial Herbarium. Here a servant, in showy livery, became our guide through the rows of immense glass structures rich in treasures from every part of the globe. The greenhouses, which are connected with each other, afford a promenade of over a mile in length, through groups of plants of every description and style of beauty.

On leaving the grand saloon, one passes first into a house of low temperature, containing the large and choice collections of Ericas, Pimeleas and other floricultural treasures belonging to that beautiful and delicate tribe. From this you enter the "New Holland House" in which may be seen every variety of plants found in Australia, and at the Cape of Good Hope. Among these we noticed some very large and fine specimens of Banksias, Metrosideros, Melaleucas and some remarkably handsome specimens of Araucaria excelsa, about fifty feet in hight. Next we stepped into the "Acacia House" filled with the choicest specimens of this numerous and beautiful genus of plants from the temperate zone. Many of the trees have attained a hight of over thirty feet, and are covered with a mass of golden-yellow flowers perfuming the atmosphere most delightfully.

On leaving this, we were led into the "Camellia House," 600 feet in length, which with its trees of from 20 to 25 feet in hight, reminded us of the Magnolia groves in Florida. The collection is very large, embracing all the newest varieties produced from time to time in France and Belgium. Unfortunately for us, but few varieties had opened the luxurious-looking buds with which they were covered. From this we entered the glory of the institution, the "Palm House." In this immense structure we enjoyed all the tropics afford. The collection of Palms and Cycadaceæ embraces all the rarest and choicest varieties from every part of South America. Many of the specimens are from 20 to 30 feet high, and of beautiful form and proportion. Next we come to the "Orchid House," to us the most interesting and charming of all. Here you find all the curiosities of Nature—insignificant-looking plants adorned with the most peculiarly-shaped flowers of the most brilliant colors and exquisite perfume. The collection of Orchidaceæ is rare and large. Here we found also our favorites, the Nepenthes family, well represented; but the specimens, so far as regards vigor, size and beauty, cannot be compared with those I have seen in New York, exhibited by Mr. Such of Amboy, to which I have seen no equal in all of Europe.

On leaving the "Orchid House," which we did most reluctantly, we came to the "Fern House," which presents to the lover of this most delicate and graceful family of plants a charming appearance. The collection is a rare one, and embraces every variety in cultivation, from the most dainty-looking specimen to the grand and majestic-looking Tree Fern of from 10 to 15 feet in hight. Next we came to the "Stove House," filled with the choicest specimens of foliage plants from every part of the tropics. From this we enter the house for coniferous plants, which contains a valuable and fine collection of evergreens, some very large specimens of Araucarias, Cryptomerias, Libocedrus, Thujas, etc. Thence we pass into the "Azalea House," containing an immense variety of Chinese Azaleas and Rhododendrons, well cultivated specimens. From this we wandered through several other houses filled with collections of Pelargoniums, Fuchsias, Cactuses, Cape bulbous plants, Tea Roses, Cinerarias, Primulas, etc., etc.

All the structures, built of iron and glass, are of some architectural pretentions, heated by steam, and handsomely furnished throughout; and the plants, instead of being arranged in long and stiff, straight lines on shelves, as generally met with, are beautifully grouped, with gracefully curved walks leading between them, giving to the whole a natural and charming appearance. W. R. Bergholz.

Everywhere.

RURAL SPECIAL REPORTS.

Kansas, Everett, March 4, 1879.—Woodson County, Kan., is situated between 37.40 and 38 degrees of north latitude. It was settled in 1855 and organized in 1857. It contains 322,670 acres of which only 28,677 are under cultivation. The population, on the 1st of March 1877, was 5,041 and it will now probably number nearly 6,000. The value of assessable property, is $4,049,700. The county has not a dollar of bonded or floating indebtedness, and there is a respectable balance in the treasury. The face of the country is rolling prairie and bottom-land, interspersed with water-courses of which there are two rivers—the Neosho and Verdigris—and fifteen creeks. The wells are from 15 to 50 feet deep, and usually give good water. In some localities the water is hard; in others, soft. In some places some difficulty is found in digging wells on account of soap-stone, but those who have dug through this have always got water.

There is considerable timber in the county, more than in many of the western counties. The varieties are: Oak, Hickory, Black-walnut, Hack-berry, Pecan, Honey-locust, Sycamore, Elm, Red-bud, Box-alder, Soft Maple, Coffee-bean and Mulberry. The wild fruits are: Plums, Grapes, Cherries, Gooseberries, running Blackberries or Dew-berries, Paw-paw, Persimmons etc, all in abundance. Coal is found in considerable quantities and is said to underlie the surface of the whole county. It is of good quality. Building stone of good quality is abundant. Lead is found in some localities, but not in paying quantities. There are 56 school buildings, nearly all of which are supplied with maps, charts, etc. In 1877 the average number of months taught, was 5½. The average number of mills levied for teachers' wages, was five. The county receives about $2,500 annually from the interest on the sale of school lands, being more than twice the amount paid by the county to the State fund, and this amount is divided among the districts in the proportion to the children of school age residing therein. The railroad company owns about 60,000 acres of land in the county, which they are selling at from $1 to $4.00 per acre.

Of the productions corn yields from 30 to 80 bushels per acre on old land; oats, about 40 bushels. The average yield of wheat one year with another, is 20 bushels per acre.

Fruit, with the exception of Currants, do remarkably well, and Kansas is confessedly one of the best fruit States in the Union. The apple crop for 1877, was estimated at 2,408,548 bushels at an average price of 60c. per bushel, amounting to $1,445,128.80. Yates Center, the county seat, is situated in the center of the county. The situation is an elevated one and gives a good view of the surrounding country.

I think it would be far better for those now coming to Kansas to settle in the eastern and southern counties, instead of going farther west. The land is better, and is about the same price; markets are nearer and better, coal, wood and water are more plentiful. Lumber, too, is cheaper. I would also advise those coming West to come in the spring rather than in the fall, as by so doing they are able to raise some sod corn and vegetables, put up hay, and prepare ground for winter wheat; while by waiting until fall, everything has to be bought and the ready cash is soon spent.

The prices now are as follows: Wheat, 70c. per bushel; oats, 25c.; corn, 25c.; potatoes, 75c.; cows, $20 to $30 apiece; wood, $2 to $2 50 per cord. The reason grain is so high here is because it is about all used for home consumption, there being over 8,000 head of cattle and 5,000 head of sheep in the county, beside the milch cows and horses. What Kansas needs is more practical working farmers, who come here to *stay* and work. There are enough of the shiftless and visionary sort here now. J. J. D.

Missouri, Wellsville, Montgomery Co., March 1.—The writer lives about 90 miles from St. Louis and about midway between the Mississippi and Missouri Rivers. The land is high-rolling prairie interseeted here and there by belts of timber. Soil is not so rich as the bottom lands of Illinois, but better adapted to mixed farming, this being also a good fruit country. Though not so favored as our sister State, Kansas, by immigration, yet we get some new-comers and are slowly but steadily settling up. Where ten years ago, when I first trod these prairies, one could look for miles in every direction and see only three or four homes with stretches of prairie between, I can now stand in my door and count thirty houses within range of vision. The curse of slavery rested here and left a sort of shiftlessness among the early settlers, but the indomitable Yankee found his way here and things are fast improving, though there is room for greater improvement. Another curse still rests upon this place, which is, I believe, common to the West, that is; the dissatisfaction and restlessness of many people, causing them to be constantly seeking some better place, some garden of Eden, generally further West, which I fear many never find.

To show what can be done *here* by a contented person, I will cite an instance of a neighbor, which comes to my mind. In ten years he has transformed 120 acres of raw prairie into as beautiful a homestead as one will find further East among ordinary farmers. Broad meadows stretch here and there, skirted on one side by a row of tall Maples, as a windbreak to the entire length of farm, while a grove of them may be seen not far off, and the house is surrounded by shrubbery and a thriving orchard. So much for energy and perseverance with but little capital. Our crops last season were a fair average. Corn, a fair yield; oats, 30 bushels to acre; hay, good, worth now $4 per ton, delivered. Wheat has been somewhat neglected for several years back, but a larger area was sown last fall than the previous, and it looks well at present date. Potatoes scarce. Produce brings very good prices for the times, and will compare favorably with places east of us, where land is double the price of ours. Quotations for last week: corn, 27 cts.; wheat, 90 cts.; oats, 20 cts.; hogs, 3½ cts. per pound; butter, 12½ cts.; eggs, 12½ cts.; apples, 40 to 60 cts. These are prices where land is worth from $6 to $20 per acre; raw prairie, $6 to $10. M. A. E.

Texas, Corsicana, March 4—This winter has been so cold and wet that farmers have done nothing till within the last two weeks, when all good farmers have been busy planting corn. I finished 25 acres yesterday and expect to put in 25 more next week. The ground is getting hard, and will be too hard to break in one week more, unless it rains. Farmers here, as a class, are making but a sorry living. At least one-half of them are in debt and pay one to two and a half per cent. interest per month, and money scarce at that. The law does not allow over twelve per cent. per annum, but bankers and money-holders exact more and get it; a bad crop would bankrupt many. Good farm hands (negroes) get from $8 to $12, and (whites) from $12 to $16 per month, and board. Tramps numerous; petty thieving a common occurrence, and so is an occasional murder. Nothing but a strenuous tramp law will rid the State of white vagabonds, and nothing but the old-time whipping-post will teach the negro that he must not steal; as to being jailed, he cares nothing for that. G. A. L.

Virginia, Thoroughfare Station, Prince William Co.; March 6.—Thus far we have had an even winter, mostly dry and cold—fine weather for young lambs. Cattle are doing well, and have plenty of feed as yet. E. K.

The Querist.

ANSWERS TO CORRESPONDENTS.

Ungrateful, Peculiar and Naughty Poultry.

D. L. R., Fredonia, Chautauqua Co., N. Y., has a flock of 25 fowls. They have warm quarters, plenty of lime, coal ashes, oats, corn and corn meal, yet from August to November they gave him not a single egg, and since then only two or three a day, and he sorrowfully asks the probable cause of such gallinaceous ingratitude. He slaughtered a couple of roosters the other day, and on opening them, found one without a bit of gall, and he wants to know the reason why, and also why some of his hens eat the few eggs they drop.

ANS.—Probably his fowls are too fat. Overfeeding often gives such results. Another *possible* reason may be their age. Old fowls very rarely lay during the molting season; especially is this the case with the Asiatics and the sitting breeds. The non-sitters usually do better. As to the lack of gall—why should they have any? With such a fowl paradise—plenty and variety to eat and drink—there is nothing to create any "bitterness." That rooster was too happy to live: we'll warrant he never quarreled with his fellows, but moved along with a quiet cackle of contentment whenever a comrade trod upon his toes or his tail. And yet 'twere a pity to kill the noble bird: he might have founded a race of Quaker-doodles and doodlesses which—beg pardon, we're moralizing, which we were not asked to do. But those egg-eaters! When once this habit gets confirmed, the only way to break it is to cut off the bird's head. If the nests are so darkened that hens cannot see the eggs, they can't very well eat them, if they lay in the nests, but if they drop their eggs carelessly about, that precaution is of no avail. Blowing an egg and filling the shell with strong mustard mixed with vinegar, and placing it where she can get it, are said to sometimes give an egg-eating hen so bitter a lesson that she will not risk a repetition of it.

Treatment of Old Meadow Plowed Land.

The Rural's Friend, Chenango Co., N. Y., has a piece of ground which was old meadow, plowed a year ago last fall, and heavily top-manured last spring, planted to corn and the manure plowed in last fall. Wishing to seed it this spring, he asks whether it should be seeded just as it lies, or plowed again, so bringing the manure once more to the top. 2. He wants to know what would be the effect of dropping cow manure in the hill on old meadow land plowed this spring, a handful of gypsum or plaster having been placed on top, before covering it. 3. Will it pay to buy any of the fertilizers so extensively advertised at $40 per ton, to be used on corn when the farmer has plenty of cow manure which can be mixed with that of the horse stable, pig-pen and hennery.

ANS.—1. We would plow this ground by all means; that will mix the manure more intimately with the soil, which is what is wanted for grass; and it would also produce a fine, mellow, fresh surface, without which grass seed will not "take" very well. 2. As regards the manuring of the corn, it would certainly be better to spread the manure broadcast upon the plowed ground and harrow it in thoroughly; then plant the corn, dropping an ounce of Peruvian guano and gypsum mixed, in the hill, to give a start to the young plant. By manuring in the hill only the crop gets a good start, but is short of food when in its greatest vigor and at its greatest need, because the roots, spreading past the hill, find no nourishment there. But if the ground is full of manure, the spreading roots can find food as they reach here and there for it. 3. If there is plenty of good cow manure, it will still be found that it will pay to buy some artificial fertilizer for spreading purposes, unless the cows have been fed very highly on extra feed.

Raising Bedding Plants.

Practical, Delaware, O., desires a few directions for raising tomatoes and annual flowers, such as Petunias, Primulas, Verbenas, Zinnias, Pansies, etc., from seeds in the greenhouse. So far he has met with but little success, the plants usually growing up tall, spindling things that finally rotted off near the surface.

ANS.—The trouble probably is that the house is kept too warm for some of the varieties here mentioned, and the plants are too far from the glass. Sow the seed of all the varieties used for bedding plants, in boxes filled with light soil, about the latter part of March, and place the boxes near the glass, so that the young plants shall not be obliged to reach out after the light. When the first leaf appears, place the plants a couple of inches apart in other boxes, and by careful watering, shading if the sun becomes too hot, etc., our friend will have fine plants to put on his flower beds by the middle of May. Tomatoes thrive best in a hot-bed or hot-house, but the others require a comparatively cool temperature (about 50° F). Pansies, which are not annuals, by the way, are most frequently sown in a cold-frame in the fall, and kept there with a slight covering during the winter. The Primulas, from their willingness to flower during the winter and early spring, are used for winter decoration, and for this purpose should be sown in the greenhouse in the fall.

Dr. Hoskins's Answer to Ex-Gov. Furnas.

IN the RURAL of February 22d Ex-Gov. Furnas of Nebraska inquires: "What does Dr. Hoskins, your fruit correspondent, mean by 'the climatic belt just below us,' 'the cold belt,' and his intimation that the Red Astrachan, Maiden's Blush, Talman's Sweet, Ben Davis, Bailey's Sweet and other varieties he names, are 'almost hardy!' To what locality does he refer? The varieties I name are among the very hardiest in Nebraska—we class them 'iron-clads'—and most profitable."

To these queries Dr. Hoskins replies: "Well, my dear Governor, I mean that the people of northern Iowa, Minnesota, Wisconsin, the Province of Quebec, northeastern Vermont, northern New Hampshire and Maine, and the Province of New Brunswick, are not favored with as comfortable a winter climate for fruit trees as Nebraska, and other portions of 'the climatic belt just below us.' I mean that even the varieties named above, frequently winter-kill in our orchards, and are not safe for extensive orchard planting with a view to profit. But I am happy to say that persevering experiment in this 'cold belt,' is revealing and producing varieties of Apples, and possibly of Pears, Plums and Cherries, that resist the hard winters, and are of a quality by no means inferior to the fruit grown in Nebraska or New York. Thus the area of successful orcharding is being pushed from 100 to 200 miles northward."

Growing Tobacco.

E. T. T., Oxford, Sumner Co., Kan., asks where can he get tobacco seed; and what kind of tobacco sells the best in the market.

ANS.—Most of the varieties of tobacco seed grown in this country, can be obtained of any of the seedsmen in this city. Tobacco has been grown in Kansas by some few of the farmers for a number of years, but not enough to determine whether seed-leaf does the best, or cutting or ping leaf. If seed-leaf is grown, cultivate on soil that has been planted to other crops. In fact, select land that was the first plowed and planted on the farm. If dark soil is chosen, the leaf will be darker than if a lighter-colored soil is selected. It will be well to try various kinds of seeds, such as Connecticut seed, Havana seed and White Burley seed. The last is for chewing tobacco and the others for cigars. The farmers of Wisconsin raise Havana tobacco, and doubtless as good, if not better, leaf can be grown in Kansas, especially in the southern part of the State. The fine grades of Virginia and North Carolina leaf, known as Bright Wrapper, bring the highest price of any tobacco grown in this country.

About Hog Cholera.

R. S., Sycamore, Wyandot Co., Ohio, having a considerable number of hogs and being apprehensive of hog cholera during the next season, asks the RURAL to tabulate briefly a set of practical rules with regard to the best precautions against it and remedies for it. He intends to have the rules plainly copied and pasted up in a conspicuous part of his premises in order to promote their strict observance.

ANS.—As hog cholera is a strictly contagious disease on which food, surroundings or medicines have but little effect, we believe one of the most important things to do is to have petitions signed and sent to Congress asking for such legislation as is needed to control and exterminate it. It is best to keep hogs at a distance from public roads and streams of running water, which come from infected localities. Not much in the way of medical treatment can be done: a purgative (2 to 5 ounces Glauber salts), followed by half-drachm to drachm doses of nitrate of potassa (saltpeter), has given good results.

Flesh of Hogs Recovered from Cholera.

R. Saunders, Dunnville, Va., mentions pathological changes in the kidneys and liver, seen in hogs which had recovered from cholera and been fattened for use. He asks if in these cases the animals are diseased so as to be unfit for human food.

ANS.—There is a great variety of opinion in regard to the effect of disease on the healthfulness of the flesh as food. In case the animal has entirely recovered from the fever and fattens well, the presence of these changes would not be prejudicial to the meat. Some forms of anthrax, which closely resemble hog cholera, are liable to be mistaken for it, and unless the animal has thoroughly recovered from these, its flesh is a deadly poison. It is also to be understood that dangerous parasitic diseases may co-exist with hog cholera, and cause changes which may be attributed to the latter. The flesh of animals which are plainly affected with the so-called cholera, is not considered a dangerous article of food, though it is one which most people would prefer not to use.

Lameness in a Horse.

H. T. W., Burlington, N. J., says: "Can you tell me what will cure my horse? She has a habit of interfering, from the effect of which a bunch appeared between the hoof and the first joint over a year ago. A liniment was applied which drove it to the knee, and last fall more was applied which seemed to scatter it altogether; but now she seems to have a lameness of some kind in the shoulder. The flesh has shrunk and the animal does not stand squarely, but rests her foot upon the toe. She will not allow me to raise her foot and appears in pain if it is done.

ANS.—The mare is probably not lame in the shoulder but in some of the joints below. A careful examination should be made at the knee and elbow joints (the trouble is probably in the knee joint) for heat and tenderness. When the affected part is found, apply cold water for a week and then blister with cantharides ointment (one of cantharides to four of lard). The blisters may be repeated several times if not successful sooner,

An Over-sensitive Inquirer.

An Old Subscriber, Tecumseh, Mich., referring to our full-page cut of various kinds of farmers in RURAL for February 8th, asks whether the space might not have been better employed, if occupied with good reading matter; 2, whether we can afford to ridicule the supporters of the paper by publishing such insulting caricatures of farmers.

ANS.—No. Some things can be expressed by just such sketches, that cannot be told in words. The cost to the RURAL of such illustrations is at least thrice that of "good reading matter." We are as much farmers ourselves as any of our readers, and saw no reason to feel insulted by anything in that engraving. 2. We can "afford to ridicule" anything or anybody—whether a supporter of our paper or not—that merits ridicule.

A Sore Pastern.

L. M. H., Manor Dale, Pa., asks to be informed how to heal a stubborn wound above the heel on the pastern joint of a horse. It was cut by the horse hanging his hind foot in a long hitching rein nearly four months ago.

ANS.—A competent person examining the wound, could probably tell at a glance why it does not heal, but it is impossible for us to judge by this description. If either the joint capsule or the sheath of any of the tendons has been opened, it requires careful treatment. If there is "proud flesh," this should be touched with lunar caustic and a solution of half a drachm each of sugar of lead and sulphate of zinc in eight ounces of water, should be applied two or three times a day. This solution could probably be applied with advantage whatever the condition of the wound.

Tanning a Bull's Hide.

S. L., Sharon Center, N. Y., asks for a recipe for tanning a bull's hide with the hair taken off, so that it will be soft and pliable, as he wants it for halters and traces. All he has seen tanned for this purpose have the hair on, and are hard.

ANS.—Manufacturers decline to make public their recipes for tanning leather, as upon them they depend for their success in business. For the uses spoken of by our correspondent, we should prefer a bull's hide tanned in the regular way, as it would no doubt last longer and could be kept soft and pliable with oil. Our correspondent is not far from Gloversville, N. Y., where leather is tanned extensively in the manner he desires. By sending the hide there, he could, doubtless, have it tanned in a satisfactory manner.

Making Artificial Mothers.

A. S. N., asks, 1, what is the best way of making artificial mothers; 2, where can incubators be bought.

ANS.—Much depends on the use to which the "Mother" or "Brooder" is put, and where it is to be used. If in the house, a simple box, with a stone jug filled and refilled with hot water, over which a piece of old woolen blanket is thrown, will answer every purpose. If for out-door use, a tight coop or box should be used, with some more constant source of heat. If one is needed for open-air use, it is better to purchase one of some manufacturer of these articles. For these as well as for an answer to the second query, see the advertising columns of this paper.

Sheep for Sale or to Rent?

M. L. Pennell, Washington, Kan., asks where sheep can be bought or rented in considerable numbers.

ANS.—Sheep can be purchased by the flock at Denver, Colorado, at Wichita, Kansas, or of owners of flocks in the western part of your State between Hutchinson, in Reno Co., and Great Bend, 100 miles farther west. Sometimes some of the owners who cannot sell, will rent their flocks, but this is not often done from the uncertain nature of the business when in the hands of inexperienced persons. We give our correspondent's address in full, so that those who have sheep for sale may correspond with him. Such queries, however, should be made through our advertising columns.

Cows for Cheese and Butter.

N. E. P., Fillmore, Allegany, N. Y., asks, 1, what breed of cows is best adapted for milk and cheese; 2, what breed for cream and butter.

ANS.—1. Holsteins and Ayreshires are both well adapted for milk and cheese. It is a question which of the two breeds is the best, some preferring one and some the other. The Holsteins are the largest, give the most milk, and consume the most food. 2. For the richness of their cream and butter, the Jerseys take the first rank, though they are inferior to either of the above breeds in the quantity of milk produced.

Infantado Merino Sheep.

S. T., Onawa City, Monona Co., Ia., asks where he can buy a car-load of pure-bred Infantado merino sheep.

ANS.—Pure-bred Infantado merino sheep can be bought in many places East and West. E. Townsend, Pavillion Center, N. Y.; Samuel Archer, Kansas City, Mo.; A. M. Tyler, Alexander, Ohio; E. Peck & Sons, Geneva, Ill.; and S. B. Lusk, Batavia, N. Y., are all extensive and responsible breeders who have been successful prize-takers at exhibitions.

Spring Treatment of the Grapes.

J. R., Roselle, N. J., asks for a few hints as to the treatment of Grapes in early spring.

ANS.—As the spring season advances, gradually remove the covering. Rather than remove the covering too soon, it would be better not to cover at all. March and April are sometimes more trying to plants than the winter months. There will no harm result from rubbing off any buds that are not needed.

Miscellaneous.

Mrs. M. C., Memphis, Mo., asks, 1, for a recipe for coloring cotton a bright red; 2, does an orange tree need to be grafted or budded. Those in the nurseries, she has been informed, are merely ornamental and do not bear edible fruit. If they bear as seedlings, how old must they be before doing so, and what must be their treatment. Her's is six years old and has been treated like an Oleander. 3. She asks for some information about fig trees, and, 4, where can she obtain Muscatel Grapes.

ANS.—Leaman's Aniline Dyes—Wells, Richardson & Co., Burlington, Vt. 2. Seedling orange and lemon trees do not bear fruit in many years. Occasionally, however, they bear early. Root-prune the tree and replant it in rich, loose soil. It is always better to bud, unless a new variety is desired. Good varieties can be found probably among her friends and neighbors, and certainly at florists' establishments. 3. Brown Ischia, Brown Turkey, Violette, Pregussata, White Genoa are among the hardiest varieties. The fig will not be hardy enough for northern Missouri. It might be grown in large pots or tubs by storing in the cellar during the winter. Fig trees are propagated by layers or cuttings. 4. Muscatel, or Muscadel, is merely a general name for certain tender varieties.

F. Bros., Burlington, Kansas, ask 1, what is our opinion of the Peabody Sweet potato, and where can seed be obtained; 2, what is the best way of propagating Honeysuckles. 3. They intend to plant a row of White Elms around their farm, fifty feet apart, and ten feet inside the Osage-Orange hedge, to alternate with some kind of evergreen, and they inquire what sort we would recommend. 4. Those who are supposed to be competent judges on the matter, advise them to cut the Elms—which are to be two inches in diameter at the base—down to the ground, and our opinion as to the advisability of doing so, is asked; 5, will peas, tomatoes, potatoes, etc., of different varieties "mix" to any extent.

ANS.—1. It is a good variety. From Peter Henderson, we believe. 2. They grow readily from seeds or cuttings. 3. The American Arbor-vitæ or Hemlock. The first will grow faster, but the latter is handsomer. 4. We should advise it for your purpose. 5. They will mix;—that is, the flower of one variety of peas will mix with those of another variety of peas—those of tomatoes, with other varieties of tomatoes, etc. The *fruits* can not mix—neither can the potatoes mix, as they are merely fleshy, underground stems.

D. H. Scranton, Pa., asks, 1, what are the best varieties of Strawberries; 2, the best varieties of Blackberries; 3, of black Raspberries; 4, of Gooseberries; 5, of Grapes; 6, of Pears for culture in northeastern Penn.; 7, what is the best method of exterminating the bugs that destroy the Cucumber vines; 8, he has an apple orchard planted for nearly fifteen years on rather thin soil, and which produces now but little fruit, and he asks what is the trouble with it; 9, at what price can we furnish him certain specified books.

ANS.—1. It is not possible for us to specify what fruit or plant is best for any particular situation and soil; for Strawberries, try Wilson and Borden 30. 2. Kittatinny and Lawton. 3. McCormick or Mammoth Cluster and Doolittle. 4. Downing and Houghton. 5. Concord, Lady, Delaware. 6. Seckel, Bartlett, Buerre

d'Anjou. 7. Sprinkle over them fine, sifted coal ashes or plaster, in which a little sulphur has been thoroughly intermixed. 8. Give it a heavy dressing of barn-yard manure. 9. R. F. & L. F. Allen's New American Book, $2.50; Barry's Fruit Garden, $2.50; Wright's Practical Poultry-Keeper, $2; Harris's Talks on Manure, $2; Henderson's Gardening for Profit, $1.50.

T. H. T., Hillsborough, Washington Co., Oregon, asks, 1, whether Ayrshire cattle are now "out of fashion," and whether they are not as good as Short-horns or Holsteins for a cheese dairy; 2, how to cultivate Pearl Millet.

ANS.—1. Ayrshire cattle have never been widely "in fashion" in this country, and at present they seem to be as strong favorites with those who are well acquainted with them as they have been at any time. They are excellent cows for cheese dairies, fully as good as deep milkers among Short-horns. Holstein cows, on luxuriant pasturage, such as they have in Holland, are very deep milkers of milk suitable for either cheese or butter production, and under such conditions it is very doubtful whether any pure breed can equal them for cheese dairies; but the Ayrshire is much readier to accommodate herself to circumstances, and will give a satisfactory yield on scanty feed on which the larger and less active Holstein would be half-starved.

2. Prepare the land the same as for wheat, and plant TWO seeds four feet apart each way over the plat to be planted. As soon as the plants appear, pull up one. *Each plant*, under good cultivation, will need 16 square feet.

W. H., Norwich, asks what is the matter with his fowls. He has Partridge Cochins and White Leghorns and they don't lay. He feeds them bran and meal scalded, in morning; buckwheat, at noon, and occasionally meat and scraps. He is now feeding them burnt corn. He also wishes to know can hens be too fat to lay.

ANS.—We take the last question first, as that is probably the whole cause of his trouble. They are too fat. Over-fat has the same effect on hens as on milch cows—a very fat cow is rarely a good milker. An over-fat hog is never a good breeder. Just so with poultry: they should be generously fed, but no more than they will run after. Feed should never lie by them. Give them only what they will eat up clean, and always have them looking for a little more. W. H.'s course of food is good; cut the fowls to *half* rations; leave them almost without any for a day or two, and we think eggs will soon come.

W. H. B., Andover, N. Y., asks, 1, whether the juice of Liberian sugar-cane can be pressed out by means of a common cider mill; if not, can a farmer get a cheap machine suitable for the purpose; 2, would it be advisable for him to buy a seed drill on six months' time, having quite a number of acres to sow, and if so, which is the better, Farmer's Favorite or Buckeye.

ANS.—Yes, a cider mill can be made to answer. See RURAL, Feb. 8, p. 93 and Feb. 15, p. 109. 2. As to buying implements on time, our friend must be guided by his own circumstances and prospects. Both are excellent drills, and we would suggest that our correspondent procure descriptive circulars of both, and judge for himself which is best adapted to his needs.

M. M., Bloomville, Ohio, asks, 1, for information concerning the effect of spreading an inch or two of lime under the roosts in the poultry-house, and also, 2, what flowers will bloom and do well as a border around a bed of Ferns on the north side of a building, where the sun shines only a few hours in the morning.

ANS.—1. It will set free the ammonia in the poultry droppings—and as ammonia is a most important ingredient of the manure, it will depreciate the quality of the fertilizer. Plaster or gypsum will do no harm.

2. Alternanthera, Cerastium, Æschyranthes, Violets, Saponaria and Pansies will do as a border, and Fuchsias, Pelargoniums, Petunias, Godetias and various Pinks will bloom tolerably well in a shaded place.

J. C. K., Fredericksburg, Va., asks, 1, the name of a new work treating on the subject of Sheep Husbandry in all its branches and details; 2, also where Norfolk polled cattle can be obtained.

ANS.—1. The only modern work on Sheep Husbandry is Stewart's Shepherds' Manual, price $1.50, which can be procured through this office or of any bookseller who has a correspondent in New York. This book describes all the new breeds and their management; the rearing of lambs for market, and the treatment of the diseases usual in flocks. 2. Norfolk polled cattle are bred by Mr. F. W. Taber of Patterson, Putnam Co., N. Y. This is the only herd in this country.

H. J., Penville, N. J., asks for our opinion of Golden Millet as a forage plant; he has a rich meadow in which he wants to sow some variety of Millet.

ANS.—Golden Millet, also called German Millet, is a variety of the common or Italian Millet (Setaria Italica). It is a heavy cropper on rich land, but makes a very coarse hay, which, however, is greedily eaten by all kinds of stock. Procure a quantity of seed of the Pearl Millet, and try that on a portion of your meadow. We think it will be most likely to give satisfaction.

S. C., South Vernon, Vt., asks, 1, how can he get E. P. Roe's Catalogue of Small Fruits; 2, whether Black-cap Raspberries, set two feet apart in the row and properly pinched back in the growing season, will support themselves without stakes or other fixtures; 3, where can he get figroots, or slips for planting, at reasonable prices.

ANS.—1. Send for it to Cornwall-on-the-Hudson, Orange Co., N. Y. 2. Yes, if *properly* pinched back, they will support themselves; but they must not be permitted to grow over three or four feet in hight. 3, Of C. H. Hovey & Co., 22 Tremont street, Boston, and of most nurserymen.

H. R. M., Philadelphia, Pa, wants to learn where he can get a complete work on Poultry-keeping, treating of many specified branches of the business, and its price.

ANS.—THE RURAL NEW-YORKER has, within fifteen months, treated very fully upon all the topics mentioned. The best works upon poultry are Burnham's Poultry Book, $2; Felch's Amateur's Manual of Poultry, 75c.; Geyelin's Poultry Breeding, $1.25; Miner's Domestic Poultry Book, $1; Wright's Practical Poultry Keeper, $2; Lewis's Practical Poultry Book, $1.50. They can all be had through this office.

C. M., Colinville, Ont., wants to know if the sawing machine advertised in the RURAL of January 11th, is reliable.

ANS.—We presume reference is made to the one advertised by a dealer in Cincinnati, O., and can only say, that we make it a point never to accept any advertisement known to be fraudulent, and, so far as we can find out, the machine referred to, is reliable. If any of our readers know anything to the contrary, he will do us a favor by informing us of the fact.

A. A. C., Hardinsburgh, Indiana, asks for a good plan for a stock and grain barn, in which convenience and cheapness shall be essential points.

ANS.—During the past year we have published several illustrated descriptions of barns just of this kind, and are now giving to our readers a series of well-considered articles on the subject. We must refer our friend, therefore, to back and current numbers of the RURAL.

J. D. J., Love's Station, De Soto Co., Miss. says that a Brooklyn firm have sent him a circular offering a dictionary of 700 pages for 54c., and asks whether it is worth it.

ANS.—The dictionary referred to is probably the "Diamond," which sells at retail in New York for 50c. It is a very fairly abridged work that is worth from fifty to seventy-five cents, we should think. See publisher's notices in a late issue.

F. W. W., Jonesville, N. Y., asks where can he get Red-top and Orchard-grass seed, and the price of each, and how much per acre should be sown of each for pasturing purposes.

ANS.—Of any good seedsman. Red-top, $1.50 per bushel; Orchard-grass, $2.25. Of the first, about three bushels per acre; of the second, two and a half bushels.

S. G. B., Jamestown, Chautauqua Co., N. Y., asks where can he get seeds of the Chinese yam.

ANS.—Of Alfred Bridgeman, 876 Broadway, N. Y.; W. H. Carson, 125 Chambers Street; R. H. Allen & Co., 189 Water Street; B. K. Bliss, 34 Barclay Street, N. Y.

M. C., South Bend, Ind., asks which kind of Incubator, or Artificial Hatcher, do we recommend as the best.

ANS.—We have had no experience with them, and we are unwilling to recommend any. Write to A. M. Halstead, Rye, N. Y., and to A. Corbett, 7 Warren street, N. Y.

Mrs. E. Lewis, Prattsville, Green Co., N. Y., asks for directions for dissolving India rubber and gutta-percha.

ANS.—They are slightly soluble in coal naptha, oil of turpentine, and chloroform; but their best solvents are sulphide of carbon, and the liquid hydrocarbon called caoutchoucine.

A. P., St. Mary's, Ont., Canada, asks the best time to sow Pearl Millet and how thickly should it be sown.

ANS.—For the above section, not before June 1st. Each plant will need 16 square feet of land.

R. G., Lewisville, O., wants to know where he can obtain labels for sheeps' ears.

ANS.—Of C. H. Dana, West Lebanon, N. H. Some dealers may, perhaps, be found nearer home, by inquiring of some sheep-owner who uses labels.

W. C. L., Gainsville, Ala., asks, 1, which would give the better chance of success—raising tea from plants or seed; 2, and where either can be procured.

ANS.—1, From plants. 2, Of the Department of Agriculture, Washington, D. C.

I. R. W., Taylor's Center, Cortland Co., N. Y., asks: "Will a half-blood Pekin Drake breed in with the common ducks, and the eggs hatch?"

ANS.—Yes. It is only the Muscovy cross that results in a *mule*—a hybrid that will not breed.

J. A. M., Edge Hill, Pa., asks where would he be likely to get White-crested Black Polish fowls.

ANS.—Write to G. S. Josselyn, Fredonia, N. Y.—J. T. Lovett, Cornwall-on-the-Hudson, N. Y.

J. O. S., from some one of the 16 Bridgeports in the U. S., asks which is the best time to prune fruit trees, such as the Apple and Pear.

ANS.—Fall, winter or early spring. If in winter, choose a mild spell.

N. E. P., Fillmore, Alleghany Co., N. Y., asks whether we have tested the Fultz wheat, and if we think it a desirable variety.

ANS.—We have not, but have read many favorable reports of it.

J. R. Hartsgrove, Astabula Co., O., asks where can he get Alfalfa seed.

ANS.—Of any large seedsman who deals in farm seeds.

MANY inquiries regarding the plants mentioned under "Catalogues received," are referred to the Catalogues themselves. We praise or condemn only such plants as we have tried and found meritorious or of little account. We purchase and test *all* new plants that seem to be worth testing—except those which require tropical heat during the winter.

WE refer many inquirers about White-crested Black Polish fowls to our poultry number. Also to current numbers.

SATURDAY, MARCH. 15, 1879.

PLEURO-PNEUMONIA AND SWILL MILK.

It is a misfortune of our free government that abuses are permitted to exist until they become intolerable. Preventive measures are supposed to interfere too much with the liberty of the citizen, and abuses exist until they become crimes. This is the case with the swill milk dairies which are so numerous in the large cities, but notably so in New York, Brooklyn and Jersey City. These foul establishments, pestiferous plague spots, dens of filth, cruelty, iniquity and disease, exist and flourish, in spite of Boards of Health and Societies for the prevention of Cruelty to Animals—human beings not included. So long as thousands of infants die annually from the effects of the diseased milk, we hear nothing, except the occasional spasmodic and perfunctory effort of a Board of Health which gives, now and then, a *raison d'etre*, or excuse for its existence, in a foolish and ineffective raid upon one of these pest-dens. But when a business becomes threatened; when the loss of a few thousands of dollars is risked, then a convulsion occurs; and, not to put too fine a point upon it, a row is made. Such a row is now in progress. "Our craft is in danger" exclaim the shippers of live stock, and something must be done about it, at once, or sooner.

There is a good reason for this commotion too; but it is not that the English ports have been closed against our cattle; but it is,—and we say this deliberately and knowingly,—that this danger is the least of the ill effects of the utterly abominable practice of feeding cows upon hot distillery slop, in filthy stables, in the outskirts of the cities mentioned. It has been denied that there is pleuro-pneumonia existing in this country. Yet the fact is not to be controverted. To our knowledge it has flitted about Long Island for two or three years past, and we could mention names and places of farmers and farms who have lost cattle by this disease, or who have saved their stock by vigorous quarantine. It exists now to our knowledge in Hoboken, among other places, and it has spread from a stable in that locality to the farms of an adjoining county, through the introduction of one cow brought from there to a country dairy. This knowledge has not come from any inquiry but through ordinary contact with farmers. Scores of people have the same knowledge, and any one might have learned it by simply visiting the neighborhood of the swill dairies. A most serious bill of indictment may be brought against these foul institutions:

They are dens of cruelty; the cows exist in them in all stages of disease engendered by the unwholesome food and the horrible filth and foulness in which they are kept. *They are destructive of human life;* the diseased milk coming from diseased blood, carries poison into thousands of unsuspected places, and tender children are slain by this concealed enemy. *They are destructive of honest trade;* they compete with the pure, fresh milk of the country dairies, and so lower the value of it in the city markets, as to drive it out of competition. By the use of a waste and worthless product, fit only for the sewers—cheap and nasty—this swill milk can be produced at a nominal price, as compared with pure milk from hay and grain. *They destroy the property of others;* they create disease and spread it by every "air of heaven" to distant places, where it poisons healthy cattle and causes ruinous loss to poor but honest farmers. *They disturb business,* and create uneasiness over one-half the globe; for as from an insignificant spark a wide conflagration may occur, so from this obscure corner of a great city, hidden from sight by dingy sheds and squalor and heaps of dirt and filth, pestiferous breath may go forth and carry the germs of death to the center of a wide field, from which other centers may be stricken, until whole continents may be infected.

The truth of these charges is easily proven. In fact, it is admitted. It has been repeated by a thousand lips and the tongues of rumor have spread it abroad, long time since. Now that the evil has come in such unquestionable shape, something may be done. Now that a few millions of dollars are at stake and a growing business is threatened, the public health may indirectly be benefited and the poor, suffering, patient cows may be spared intolerable cruelties.

Fortunately the high sanitary condition of farm herds has prevented the spread of this disease in this country. Wherever it has appeared, it has soon died out and has affected only a few cattle in the immediate neighborhoods. In Long Island it has been only here and there that a herd has been diseased, and by care to exclude danger, other herds have been saved. In fact, there is nothing at present to give occasion for the fears of the Canadians and the English people. But the latter have been seriously crippled by the dreaded disease in an epizootic form, and it is reasonable that they should fear a fresh danger from a new source. The disease is not epizootic here; it appears sporadically and dies out, each attack being easily traced to the sources we point out. But there are people who live, eat and sleep on the sides of volcanoes, and who hear the rumblings and tremblings beneath them without any fear until an eruption suddenly sweeps them away. Just so with this disease. What unknown conditions might arise suddenly that will prepare the way for its spread from Maine to Texas, we cannot tell. Some meteorological changes may take place at any time, favorable to the spread of infection and thousands of farmers may be ruined. The plague should be stamped out without delay. We approve of the proposal to authorize the Agricultural Department to take cognizance of this matter, and hope it may do so with such energy as to destroy the shameful business and prevent its resurrection ever again. A business that carries such possible disaster in its train, should be declared a public danger and an enemy.

WANTED—OLD SONGS.

"Let me make the songs of a nation and I care not who may make its laws," was the remark of one who knew how deeply old songs affect the minds and actions of the average public. It seems to us, however, that the influence of songs is on the wane; that we have none now so generally popular as in the olden time. In the Presidential campaign when "Tippecanoe and Tyler too" were the candidates, song singing was a prominent feature in every political gathering, whether large or small, and had doubtless much to do with the enthusiasm that eventuated in the election of Harrison.

But it was of the older times we were thinking, when matters of general and even local importance were woven into rhyme—which, however far from poetry it may have been, served to fix the incidents it commemorated firmly in the memory. Of the many songs of this kind we used to hear in our childhood, bits of several occur to us as we write. There was one reciting in detail Commodore Perry's victory on Lake Erie, commencing—

"On the tenth of September, let us all remember,
So long as the world on its axis rolls round,
Our tars and marines on Lake Erie were seen,
To make the proud flag of Great Britain come down."

After describing in detail the manœuvering of the contesting forces, it relates how—

"The whole British fleet was brought up complete,
When our signal was given to break through the line,
Then from larboard and starboard and from every quarter,
The lumps of Columbia most glorious did shine."

There were many stanzas of the same general style, which together served as a very good narrative of the event.

The capture of the British frigate Guerriere by the Constitution, was recited in a song of many stanzas, the first of which we remember was as follows—

"It oftimes has been told
How the British sailors bold
Could flog the tars of France so neat and handy, O—
And they never found their match
Till the Yankees did them catch—
The Yankee lads for fighting are the dandy, O.

Then followed a circumstantial account of the action, capture and surrender.

Of a more local character is the song relating to the death of a young man in consequence of the bite of a snake.

"On Springfield mountain there did dwell
A lovely youth, and known full well—
. . . . . .
Early one morn this youth did go
Out in the meadow for to mow;
He mowed and mowed all round the field
With a poisoned serpent at his heels."

The concluding stanzas portray in mournful cadence the sufferings and death of this lovely youth; and so popular was this song in New England half a century ago, that his fate was known and lamented by the whole community.

We should be glad to have some of these Epics rescued from oblivion. There are doubtless some among the readers of the RURAL who have copies or memories of them, that they would gladly see in print, and many of our young friends would be amused, if not instructed, by reading the songs their grandsires sung in the olden time. Why will not some of our enterprising publishers favor the public and profit themselves by issuing a volume of The Songs of our Fathers?

TIMBER PLANTING FOR PROFIT.

There are too many waste acres. Everywhere are seen plots of land that are uneven and rough, and not adapted for the plow. To bring them into profitable use and prevent them from becoming nuisances and nurseries for weeds, something should be done with these waste places. Planting them with trees seems to be not only a proper but also a profitable use for them. Fruit trees may be planted upon some of them, but the largest part of this useless acreage can be made a source of profit by planting timber trees upon it. What kinds of timber then should be planted? There is a steady demand for all sorts of ornamental and useful woods, such as walnut, cherry, white ash, sycamore and others used in building and cabinet-making. Chesnut, hickory and oak "go without saying" because there are abundant uses for them on the farm. But who thinks of trees that are useful for their bark? A few days ago the writer sold hemlock bark at $15 per cord; rock oak bark for $8, and white oak for $6, and the timber was left "to the good," in addition. Tanneries abound on every hand and they are rapidly using up the bark timber. Scores of tanneries which have cost many thousands of dollars are now abandoned, and hundreds more will go to ruins soon because the supply of bark is or soon will be exhausted. What farmer near these ever thinks of planting bark timber to supply the future demand. He skins his land of its bark, and leaves the ground to grow up with rubbish and useless trash.

Suppose he were to join hands with the tanners and go to planting his waste land with hemlock and oak? Clear up the denuded ground and plant some old fields with young trees. A coming supply would render the existence of the tannery profitable to him as furnishing a market for his farm produce and in time a customer for his growing bark. The mountain ranges can thus be made to secure a permanent industry for farmers who are now in danger of starving upon their hill sides as nearly barren as may be.

Let us consider the following figures. We import every year 4,000,000 hides and produce annually 9,000,000. These thirteen million hides require for their tanning 1,225,000 tons or cords of bark; half of this is hemlock and half of oak. Our stock of bark timber is disappearing from sight with amazing rapidity. Thousands of square miles of land in New York and Pennsylvania, the seat of the bulk of the tanning industry, are reduced to the condition of a howling wilderness by reason of this waste. By replanting this land it may be all restored to beauty and use. Otherwise, as soon as our present supply of bark is exhausted, this great industry must gradually collapse and leather must be imported from abroad, instead of, as now, being largely exported. Want of foresight is a human failing; but surely so plain a need as this, so sure a remedy, and so certain a resource, should be apparent to the most careless man whose interests are involved. When trees are planted, let it not be forgotten that there are some valuable for their bark and some localities where the bark is worth more than the wood.

Interest on Money.—The earnings of capital now become a subject of greater interest than for many years. We see that it is agitating both the mercantile and the agricultural classes. The bill before the Legislature of New York to make the legal interest on money six per cent. is taking a very conservative view of the question. Four per cent. is over the average earnings of real estate in New York, and probably in most States; and there is no reason why the interest paid for the use of money should be so disproportionate to its real earnings. The farmer, above all, feels the hardship of excessive interest. A farm encumbered to half its value is worked solely for the benefit of the mortgagee, as the legitimate income will only pay seven per cent. on half its value. The legal interest in several of the States has been only six per cent. for many years, and the New York movement may be considered very modest, since at present there is more money than business. Yet the money interest is combined, and vigilant in protecting its exactions; while the farmers, practically uncombined and looking for some miraculous intervention in their behalf, will probably find that the members elected by their votes will represent the small money class and forget their constituents.

Farmers—How to Lift the Load.—There is no disguising the fact that a large fraction of the farms are under heavy incumbrances. Many are no doubt on the point of giving up the struggle. But we say, renew your courage. Prices are low, but low prices are not the worst obstacles to comfort. Easy spending often makes high prices come to nothing at the debt-paying point. Look the whole field over carefully; lop off everything that can be properly dispensed with; save good food for body and mind; let the whole list be carefully scanned.

Now pay up your back interest, at whatever sacrifice; then say to your creditor, "The times are changed; money must bear its share of the inevitable losses of the reaction; you should be willing to reduce this interest to six per cent.; much of the money of the country cannot be loaned at that; give me a chance and I will return you the last farthing."

If he is not willing to be just, your promptness in paying interest will command the money at the reduced rate, and you can pay off your hard creditor and substitute the new one.

Spend less, produce more, and your load will soon be lifted.

BREVITIES.

The corn distribution is now in order. It may be worth repeating that the other distribution has ceased.

Though one of the stanchest temperance journals, the RURAL NEW-YORKER may be said to have been a little "corned" last week.

A newly-discovered process by which sugar can be profitably made from Indian corn and sorghum will soon be made public, so officially reports Mr. Victor Drummond, Secretary of the English Legation at Washington. He says that sorghum will yield 1,000 pounds of sugar from each cultivated acre and Indian corn about 800 pounds. If the discovery equals what is claimed for it, its importance to our farmers, especially in the West, can hardly be overestimated.

Mr. W. I. Chamberlain, writes us, too late for its insertion in the appropriate place, that the engraving and description of the water tank and cistern, given by him in connection with his article on barn-building in this issue, were first prepared for the Country Gentleman, in which they will appear nearly simultaneously with their appearance in these columns, and that permission has been courteously given him by the editor of our esteemed contemporary, to send them to the RURAL also.

The New Jersey Legislature is culpably dilatory in passing laws for the suppression of pleuro-pneumonia. Not only are the herd of that State thus kept exposed to contagion, but the existence of the malady widely among them in some sections, is a source of danger to cattle in the neighboring States. Prompt action, gentleman, is imperative in this case, and let the laws provide for the slaughter of infected animals as well as for the quarantine of exposed herds.

The warm days of spring are evidently at hand, but do not think it therefore necessary to immediately remove the covering of straw or boughs from plants thus protected for the winter. No more dangerous period exists for plants than during the freezing and thawing ordeal of early spring when the sun is powerful and the nights are cold. The chief endeavor at such times should be, to retain frost in the ground about the plants as late as possible, and at the same time to keep the leaves sheltered from the warm sun while the cold nights last. Better retain the covering far into April than remove it too soon.

We wish all persons interested in ornamental plants would report to us, as spring advances, concerning the condition of their trees and shrubs after the past somewhat severe winter. There is great need of exact information or data as to the hardiness of trees and shrubs, and as a natural result scarcely any one can undertake to give sound advice as to what trees to plant in various sections. In making such reports, moreover, care should be taken to state the character of soil, exposure, age of the plant in question, as well as period of time since last transplanted. On a knowledge of the peculiarities of such conditions largely depends the ability to form correct estimates of the hardiness of plants in any given locality.

The farmer's busy season is now near at hand, and with the opening of spring scores of little jobs will demand his attention. One that is by no means of inferior importance, though generally so considered, is the planting of ornamental trees and shrubbery around the house. If you feel that you cannot spare the time and the little sum it would cost to have your place regularly laid out, though we would advise such a course, then plant, at least, some trees. Procure a few Norway Spruces, hard Maples, American Linden, and other trees of rapid growth and handsome form, and plant them around your home. In after years, when you leisurely enjoy the seclusion and shade they afford, you will feel richly repaid for the trouble.

A "forage parsnip" of remarkable excellence has lately been raised in Brittany, France, through the tireless labors of M. La Baln, who has gratuitously been distributing seeds of it to all applicants. It produces from 20 to 27 tons per acre, according to soil and culture, and, while analyses show that in the common parsnip the proportion of dry material is only about 11 per cent., the *panais fourrager* is proved to contain from 17.28 to 21 per cent. of solids. These are rich in sugar, starch and aromatic constituents, a fact which accounts for the high opinion formed of its merits by French farmers who have tested it. They are unanimous in stating that cows are very fond of it, and that it increases the quantity and improves the quality of their milk. It is also excellent for fattening pigs and keeping horses in fine condition.

Literary Miscellany.

Our request for the words of "The Sexton" has brought us many replies from subscribers who have kindly been at the trouble of sending us a copy of the poem. One correspondent writes that "the poem was made familiar to Ohio people by the charming manner in which it was sung by J. M. Bouiard, when with the Alleghanians several years ago."

THE SEXTON.

AS SUNG BY MR. RUSSELL.

Nigh to a grave that was newly made,
Leaned a sexton old, on his earth-worn spade;
His work was done, and he paused to wait
The funeral train through the open gate;
A relic of by-gone days was he,
And his locks were as white as the foamy sea—
And these words came from his lips so thin,
"I gather them in! I gather them in!"

"I gather them in! for man and boy,
Year after year of grief and joy,
I've builded the houses that lie around
In every nook of this burial ground.
Mother and daughter, father and son,
Come to my solitude, one by one—
But come they strangers, or come they kin,
I gather them in! I gather them in!

"Many are with me, but still I'm alone!
I am king of the dead and I make my throne
On a monument slab of marble cold,
And my sceptre of rule is the spade I hold.
Come they from cottage, or come they from hall
Mankind are my subjects—all, all, all!
Let them loiter in pleasure, or toilfully spin,
I gather them in! I gather them in!

"I gather them in, and their final rest,
Is here, down here, in the Earth's dark breast!"
And the Sexton ceased—for the funeral train
Wound mutely over that solemn plain;
And I said to my heart—when time is told,
A mightier voice than the Sexton's old
Will sound o'er the last trump's dreadful din
"I gather them in! I gather them in!"

WEAKER THAN A WOMAN.

CHAPTER XXXVIII.

(Continued from page 159.)

Afterwards, when Lady Chevenix had gone to give orders about her journey, Miss Hethcote said suddenly to Felix—

"I shall go away much happier for leaving you here."

"I shall be here for a few days only," returned Felix. "Why should you be happy about my being here? I do not understand."

"I may speak freely to you," said Miss Hethcote; "you know them, and you belong in some measure to them. I may tell you that Lady Chevenix lives in mortal fear of her husband."

"Why?" asked Felix.

"He has been very violent to her many times. It is not long since she had to send for Mrs. Haye, being afraid of losing her life. She has refused to be left alone since then. That is why I am glad you are here.

"But," said Felix, "he loves her—he must love her."

"I say nothing about that. He may love her, or he may not; but, when he is half mad with drink, she has reason to be alarmed."

"I cannot think that even then he would hurt her," said Felix.

"Well, it is very pleasant to have such cheerful views of things. I should be glad if I could share your faith, but unfortunately I have seen bruises on her arms and marks on her face, such as, if I had been a man, would have made me feel inclined to call Sir Owen out."

She saw the handsome face of the man before her grow pale with emotion. She saw his strong hands tremble and his fingers clench tightly. She talked until the storm of passion had passed over him.

"I cannot bear to think of any woman being ill-used," he said; "it is one of the things that irritates me and makes me angry with an anger that frightens me. But Lady Chevenix is so gentle, so amiable, I cannot understand any man being unkind to her."

"I can understand anything Sir Owen does," rejoined Miss Hethcote. "Mr. Lonsdale, you will be kind to her?" she pleaded. "Believe me that a peasant-woman working in the fields, or a factory girl in a mill, is happier than Lady Chevenix of Garswood."

"I am grieved to hear it," he said; and then Miss Hethcote left him.

She went away early the next morning, never dreaming of what would happen before she saw Garswood and its mistress again.

CHAPTER XXXIX.

On the morning after Miss Hethcote's departure Sir Owen did not come down to breakfast; but Felix met his valet with some soda-water and brandy. The young lawyer descended to the breakfast-room, where Lady Chevenix awaited him. She looked very fair and young in her pretty morning-dress. She was so pleased to see him; her face brightened, her eyes met his with such a glad light; she could not be cold and formal to him.

"How true you are to your colors, Lady Chevenix!" he said. "Blue and white—I hardly remember to have seen you wear anything else."

"You will own that they are pretty colors, will you not?" she asked, with a smile—one of those charming smiles that stir a man's heart and pulse.

He sat down at the breakfast-table with her, and he asked himself had fate ever placed another man in such a predicament before.

"See," she said—"I remember your tastes. You like tea better than coffee, and you like fruit. These strawberries have just been gathered; they have the dew on them."

She talked to him during breakfast, so gaily, so kindly; but, when he looked at her, there was something almost pathetic in her eyes—something that, in spite of her brilliant beauty, was half sad. Then, when they had finished breakfast, a servant came in to say that Sir Owen would join them in a few minutes, and would take Mr. Lonsdale to the strong-room.

The long French windows were open, and great heavy red roses came peeping in. Lady Chevenix went to them; Felix followed her, and they stood talking together. In some vague way the years seemed to have fallen from them, the terrible past for a few moments was forgotten. He was like the Felix of old, she like beautiful Violet Haye. They had just a few happy minutes, during which they spoke only of the roses before them and the pleasant prospect. Then Sir Owen came in, and it was as though the whole face of the heavens had changed.

The Baronet and his legal adviser went away together, and Felix spent the whole of the day in the strong-room, reading documents and papers of all kinds. He did not see Sir Owen and his wife again until dinner, and thus the first day of his visit passed quietly enough.

On the second the tenants came to dine at the Hall, and the grand banqueting-room in the western wing was thrown open. The dinner passed off well, and the tenants drank Sir Owen's health with noisy cheers. Nor were they much less enthusiastic about Felix, when his health was proposed. After a pleasant day they left Garswood early in the evening.

Lady Chevenix had been alone all day; the servants were in attendance on the numerous guests, and in the evening she asked for tea, thinking that Sir Owen and Felix would like to join her. Sir Owen, who had drunk more brandy in a few hours than another man would have drunk in a week, made some observation about her ladyship's tea which, when repeated by the footman in the servants' hall, caused great amusement. Felix was sorry to decline, but he had some hours of hard work yet in the strong-room; the leases were all to be signed on the morrow.

When the visitors were all gone, he returned to the strong-room and resumed his work. Lady Chevenix went to him to persuade him to let her send some tea there, and he consented. He looked at her, as she stood in that darkened room, in her evening-dress of white silk and trailing lace. She wore a superb suite of opals, which shone with the "fire that lives in gems." She looked like a dream of beauty in that dull, gloomy room.

She sent him some tea, and asked him to come to the drawing-room when he had finished, and he promised to do so. When she returned, Sir Owen lay on one of the couches, fast asleep.

She was thankful to see him asleep, and hoped that he might wake up quite himself. She drew down the blinds and darkened the room. Who could tell what she suffered in her heart, this fair, stately woman, who shrank so keenly from all stigma of disgrace, her daily, hourly dread lest her husband should do something that would entail everlasting shame upon them, lest any one should see him in those moments when he was quite unfit to be seen? What a double life she lived, this brilliant and beautiful woman—before the world all gaiety, smiles and animation, in her own heart always a terrible weight of anxiety.

For this evening at least she was safe. She thought he would wake up himself, and then they would spend a happy hour with Felix; so she watched lest sound or light should disturb him until Mr. Lonsdale joined them.

He awoke at last, but the sun had long set, and the fragrant silence of night lay over the earth. She had cooling fruit that was pleasant to eye and taste ready for him, she had everything that was refreshing, but no stimulant. He pushed aside the purple grapes and the crimson strawberries.

"Where is the brandy?" he asked her. "The idea of offering a man such things as those!" he exclaimed. "Ring for the brandy!"

She dared not refuse—moreover, refusal would have been of no use. She rang the bell and gave the message, but, before the brandy came, with sweet womanly tact she had lured him from the room, hoping that he would forget it. She walked through the long corridors for some minutes, talking to him; then he suddenly remembered Felix, and said that nothing would satisfy him unless he left his work and joined them. He went to persuade him, while Lady Chevenix ordered the lamps in the drawing-room to be lighted.

The two gentlemen returned together, and they played for some time at cribbage, a game for which Sir Owen had a great liking. Suddenly he remembered the brandy, and asked for it. Lady Chevenix dreaded its coming; she said the evening was warm, and begged of him to take some iced cup instead. He laughed at her.

"Listen to her ladyship!" he cried. "Iced cup! The very name of it makes me shudder. I want brandy—nothing else."

She remonstrated again, but very mildly. She felt she could bear anything better than this, that the man she had forsaken should see in his true colors the man she had married.

These last words proved too much for Sir Owen. He swore roundly at her. What business of hers was it, he asked, if he wanted a sea of brandy? Let her remember herself—remember from what position he had taken her, and not attempt to dictate to him; he would not endure it. She tried to soothe and conciliate him; she might as well have tried to soothe a panther.

The brandy was brought, but even then he did not recover his good-humor. Felix was miserable. He longed to put down his cards and say good-night, but he saw the face of Lady Chevenix growing white, and he was afraid to leave her. Miss Hethcote had told him of Sir Owen's violence. He would not leave her to the mercy of that violent man; yet every moment he remained with them was a torture to him. Sir Owen had no moderation. In vain his wife and Felix engaged him with cards and in conversation. Despite everything, he filled and replenished his tumbler. At length the alcohol began to take such an effect upon him that Lady Chevenix deemed it prudent to rise.

"It is growing late," she said, "we had better put aside the cards."

"Yes," agreed Felix; "I am tired."

He had no time to finish his speech. Sir Owen did not seem to hear it. He merely turned with a scowl to his wife, and cried in a voice of thunder—

"Sit down and go on with the game!"

Felix saw that she trembled in every limb, yet she kept all sign of emotion from her face; nothing but its pallor betrayed her fear. She sat down, but the young lawyer's spirit was roused. He threw the cards upon the table.

"Lady Chevenix is very amiable to go on playing," he said; "I shall not. It is late, and quite time to leave off."

Without a word, and so suddenly that there was no time to prevent it, Sir Owen turned and struck his wife on the face.

"Take that," he said, "and mind that you do not interfere with me again!"

The next moment a pair of strong arms had seized him and had literally thrown him across the room. His face white, his whole body trembling with passion, Felix stood over him.

"If you touch her ladyship again, if you lay your cowardly hands upon her," he cried, "I will kill you!"

Then he turned to Violet. She stood trembling, with a great red mark across her lovely pale face—a mark that burned like a hot iron.

"Oh, Lady Chevenix," he said, "I am sorry! I ought to have been quicker, more on my guard. Are you much hurt?"

She raised her face with that terrible bruise on it to his, and he saw great tears in her eyes. For a moment the old impulse of love was strong upon him, and he longed to shelter the golden head, every hair of which was dear to him, on his breast; then he recollected himself and said gently—

"I shall never forgive myself that this has happened. If I had been quicker——" He broke off abruptly, for his wrath was rising again. "I shall kill him," he cried, "if he touches you!"

She looked up at him; the bruised face touched his heart, and he turned away. Sir Owen was lying just where he had thrown him. He went over to him; the Baronet had most composedly fallen asleep.

"Thank Heaven," he said, "that I did not kill him—that I did not do him some deadly harm. Shall I ring for the servants?" he asked Lady Chevenix; and he never forgot her answer.

"If you would not mind it," she said, "I should be so thankful if you would place him in a chair; I do not like the servants to see all that happens."

He raised Sir Owen, who made some violent plunges the while, and placed him in a chair. The Baronet fell placidly asleep again, and Felix went back to Lady Chevenix.

"You must apply something to your face," he said, "or it will be black to-morrow."

She smiled and raised the white lace that fell over her arm. He saw a long dark bruise, the mark of a cruel grasp that had held the delicate arm as in an iron vice.

"I am seldom without a mark," she told him; "but I do not often find them on my face."

He looked sorrowfully at the graceful woman who had preferred money to love, and had suffered so terribly for her choice; he longed to say something kind to her, but prudence forbade him. She held out her hand to him, and he saw how it trembled. She smiled, and he never forgot the smile.

"Some day," she said, "he will most probably kill me. If he does, you will always remember that I—I was sorry I had grieved you, Felix."

"I will remember," he returned gravely. He held her hand for one moment while he bade her good-night, and then she went away.

CHAPTER XLI.

Felix thought long and anxiously after his return from Garswood. He was glad that he had treated Sir Owen as he did; he said to himself that he should have been less than a man had he not acted as he did. Yet it was not likely that after what had passed he could remain under Sir Owen's roof; neither did he desire to do so. It was torture to him to see Violet ill-treated; he could not bear it—nor could he interfere to prevent it.

Moreover, he believed it to be quite impossible that after the *fracas* Sir Owen could continue his business relations with himself and his father; a man might forgive much, but knocking a person down was a serious matter. So, when the sunshine came peeping into his room, Felix had quite made up his mind that that would be his last day at the Hall.

His ideas were confirmed when a servant, tapping at his door, said that Sir Owen would be glad to see Mr. Lonsdale in his own room. That, he believed, was the prelude to his dismissal.

"Never mind," said Felix to himself; "if I were placed in such circumstances again, I should do the same, and perhaps more."

He went immediately to the Baronet's room. As he passed from one room to another, he could not help admiring the magnificence and luxury of the house; it was simply superb, and, the morning sun shining through the windows, made it more beautiful still. He little guessed what that same sun would see before it set.

He entered Sir Owen's room quite anticipating, and indeed half hoping for, his dismissal; but his heart was touched when he saw the trembling figure before him. Sir Owen, flushed and excited with drink, was bad enough; Sir Owen in the morning light, trembling, weak and haggard, was worse. Felix quietly awaited the beginning of the storm; but, to his surprise, Sir Owen held out his hand. The young lawyer would not see it; he felt that he could never touch a hand that had been raised against a woman.

"I am really very sorry, Lonsdale," Sir Owen began. "I am afraid I was too much excited over the tenants' dinner, and forgot myself. I am very sorry. I hope that I was not offensive to you?"

"He has forgotten what happened," thought Felix to himself. "I must tell him."

"You were not offensive to me, Sir Owen," he said, "but you behaved with the greatest brutality to Lady Chevenix. You struck her with such violence that I was compelled to interfere."

There was something ruefully comic about the Baronet's face.

"I ought to be much obliged to you, I am sure," he said. "I love my wife very much, and cannot understand how I could have so forgotten myself. But I am very unfortunate when I exceed my usual allowance of wine, Lonsdale. You will shake hands and be friends?"

"I am willing to forget my share in the business Sir Owen. But excuse my shaking hands with you."

The Baronet laughed uneasily.

"You are very particular," he said, and then turned the conversation.

Felix despite his disgust, felt a great pity for him; it was not lessened when he saw his valet come to him with a bottle and a glass.

"Take less of that, Sir Owen," he said, "or you will kill yourself."

"Well I have to die; and I may just as well die taking what I like as taking medicine. Some men have more to live for than I have. I am very fond of my wife, but she does not care much about me; and I have no child. I really believe, Lonsdale, that I should be quite a different man if I had a child."

"You have plenty to live for, Sir Owen. You have your duty to do on earth; yet more, you must think of a future life," said Felix.

"I can pay other men to do my duty; and as to a future life—well, I have not been able to decide about that yet."

"It is high time you did so," said Felix gravely; and Sir Owen laughed.

"I have no thought of dying yet, Lonsdale; indeed I dare not die if all that the parsons say is true. Let us talk about something more sensible. Are you going to work again to-day?"

"The work has to be done, and I suppose I must do it. The leases have to be signed this morning."

"I will sign them before I go," said Sir Owen. "I am going out this morning, because I do not feel like myself. I am out of spirits; a cloud is hanging over me. I shall have a good gallop, and see if I cannot clear away the heaviness."

Felix went to his work, which on this morning was in the library; and before he had been there very long Lady Chevenix entered.

"I did not know that you were here," she said. "Shall I be in the way? I have some letters to write."

He placed a chair for her, and then looked at her face. Across the soft cheek was the mark of a violent blow.

Presently Sir Owen came in to sign the papers. He seemed very much ashamed of himself when he saw the bruise on his wife's face. He took her to the great oriel window, and they stood there for some time talking; then Lady Chevenix came back to her place, and Sir Owen went out of the room.

Violet and Felix went on writing in silence, when there came a tap at the door. Sir Owen's groom wanted to know if he might speak to her ladyship for a few minutes.

Lady Chevenix bade him come in. The man stood before her cap in hand.

"My Lady," he said, "I beg pardon; I must make bold to ask you to interfere. Sir Owen, he will go out riding this morning. That is all good and fair, my lady; but he will ride the new hunter Plantagenet, and he is no more fit for it than a child."

"You had better tell him so, Martin," returned Lady Chevenix.

"My lady, I have told him, over and over again. The more I tell him, the more he will go."

Lady Chevenix looked helplessly at Felix.

"Mr. Lonsdale," she said, "will you go and try to persuade Sir Owen not to ride that horse? It is a highly mettled animal, and he has never ridden it yet."

Martin touched his forehead to Felix.

"If you could persuade the master to stay at home this morning, you would do him a service, sir," he said. "Indeed, my lady," he continued, turning to Lady Chevenix, "Sir Owen could hardly manage Bonnie Bess this morning, his hands are so shaky."

"Thank you, Martin," she responded; "it was very thoughtful of you to come to me. Mr. Lonsdale will follow you."

When the groom had retired she went up to Felix and laid her hand upon his arm.

"I know that you will do your best for me," she said pleadingly.

"You may be sure that I will," returned Felix and then he went away.

He might as well have appealed to a rock. All that he said, Sir Owen laughed to scorn.

"Something happen to me?" he cried. "Yes, I know what it will be. I shall come home cured of the 'blues!' I am going to gallop dull care away, and Plantagenet shall help me."

Felix looked attentively at the horse.

"I was never afraid of a horse yet," he said, "but I would not ride that one."

Lady Chevenix, finding that Felix did not return, came to see how matters were progressing. She gave a little cry of alarm when she saw the great powerful hunter, and her husband preparing to mount him.

"Owen," she cried, "do not attempt it! Pray, pray do not!"

He felt rather flattered by her evident anxiety, and touched her face with his lips.

"Good-bye, Violet. Do not make a scene. I have said that I will ride Plantagenet, and I mean to do so; nothing on earth shall prevent me."

Felix interposed.

"I should enjoy a gallop this fine morning, Sir Owen," he said. "Shall I go with you?"

"As my head-nurse, eh, Lonsdale? No, thank you. I can take care of myself very well indeed."

For more than half an hour they reasoned in vain. They could never reproach themselves in after-days that they had not done their best; but

their words were as vain as the beating of tiny wavelets against a sturdy rock. Sir Owen would ride Plantagenet; and there was an end of it. The only compromise that Lady Chevenix could effect was that he should take the groom with him.

"If it will please you, Violet," he said, "I will do so." He thought himself very good-natured in giving way so far.

"I shall be back to dinner all right," he told her "I may be rather late, for I shall ride round by Parkerly Copse."

"Martin," said Lady Chevenix to the groom. "do not leave your master for one moment. Do what you can."

"I will, my lady," he replied; "but I misdoubt me it will end badly."

Lady Chevenix re-entered the house, and Felix went back to his writing. Violet retired to her own room, to while the time away with a book.

The sunny hours of the beautiful day wore on; no cloud came over the smiling heavens; yet there was a faint wail in the summer wind which to the weather-wise heralded a storm. The shadows lengthened, and Felix had not left the library; he had partaken of a biscuit and a glass of sherry there, as he was anxious to get this work done. He had completely finished by six o'clock, and on going in search of Sir Owen was told that he had not yet returned. Lady Chevenix was in her room. He would have been glad if he could have gone home then; he did not care to remain for the long formal evening. Still he was unwilling to leave Lady Chevenix until her husband returned.

The first bell rang, and he went to his room. Sir Owen, he was told, had not returned, and her ladyship seemed anxious about him. After a little while Felix went into the drawing-room, where Lady Chevenix sat, dressed for dinner, superbly beautiful in a dinner dress of blue velvet and a suit of pearls. She turned to him anxiously.

"Sir Owen has not returned," she said. "I have told them to keep back the dinner until he comes."

He saw that she was anxious, and did his best to cheer her. He went to the balcony, where roses and jessamine grew in wild profusion.

"Come and look at these flowers, Lady Chevenix," he said. "I read a beautiful legend about the jessamine the other day." And while she stood by his side he related it to her.

The anxious look fell from her face, and her eyes lost their strained, intent expression. He thought if he could keep her attention engaged until Sir Owen returned, how well it would be—how much pain it would spare her. She turned to him suddenly—

"Do you think anything can have happened?" she asked. "Ought I to send servants out to look for Sir Owen?"

"Martin is with him," said Felix.

He left her for a few minutes, under the pretext of finding something that he had missed. In reality he gave directions for four of the men-servants to mount at once, and ride off in search of their master; and then he returned to Lady Chevenix.

"I am growing frightened, Felix," she said.

In this hour of supreme anxiety all barriers seemed to have fallen between them. She forgot that he was the man she had forsaken and deceived. She thought of him only as one in whom she put infinite trust—in whom she had infinite faith. He was once more the Felix in whom she had relied from her childhood upwards.

"I do not think you need be alarmed, Lady Chevenix, and for this reason—Martin is with him. If anything had happened to Sir Owen, the groom would have hastened back; of that you may be quite sure."

The thought was reassuring, and Lady Chevenix was relieved.

(To be continued.)

NEEDFUL EDUCATION.

A CONGRESS met at Manchester, England, last summer to consider the subject of teaching Domestic Economy in common schools; the Duke of Westminster presiding. Among the subjects proposed as part of the general elementary school training, in addition to letters, words and numbers, or measures, were order, method, punctuality, cleanliness, health, temperance, shelter, warmth, fresh air, clothing, food, cookery, thrift, penny banks, etc.

No one will be inclined to question the importance of all these subjects. It is often the case that a whole family suffers disease or exposure or want because the father or the mother has never had an opportunity of learning some of these lessons. And it can safely be said, on the other hand, that no family *need* want or suffer if all parents were early trained to a knowledge and observance of even only a part of them. Mr. E. Jones of Amberley street, Liverpool, who is one of the most indefatigable and also one of the most sagacious and discreet of philanthropists, presented a memorial to the congress, in which he asks the truly pertinent question, "How *time* is to be found for these confessedly important lessons?" He answers the question himself, by suggesting that there is a great deal of time wasted in all the schools on mere verbiage, and especially in oral spelling. Words are tossed from teacher to class and their letter-names are chattered over and over and over again, until the jingle makes a durable impression on the ear; but this does not enable the scholar to spell, for it is the hand, not the ear, that must do all actual spelling; and the eye, not the ear, is the natural guide of the hand—quick to show the proper form, and equally quick to detect any error in copying it.

Neither is oral spelling any aid in teaching reading. On the contrary it is a great hindrance and obstruction; so great, as of itself to delay progress for months, to say nothing of the far greater waste of time and trouble and tears that is caused by the unphilosophic, but inherited custom, of trying to teach spelling orally instead of through writing. Besides the *time* that may be gained in this line, there is the important condition of willingness to learn—*desire*—which is worn away by the weary round of parrot-like repetition without thought, which makes the spelling-book so hateful to the tired and disgusted little learner. The child wants to hear something that can be pictured in the mind, and called up and ruminated over. In this connection there is pertinency in the saying that one man can take a horse to water, but ten men can't make him drink.

Mr. Evans shows that by the present mode about one-third of the school time, throughout the entire elementary course of six grades, is given to spelling, and yet the results as given by her Majesty's inspectors in the blue-book for '76-'77, show that 60 children out of 100 pass the limit of public school age (13) without gaining anything but a mere ability to read, write, count, and do some rudimentary exercises in grammar and composition. But with a portion saved of the one-third of the entire time for school attendance, the children might be instructed, to their great pleasure and delight, as well as future advantage, in some such lines of actual and useful knowledge as, say:

One hour per week—Order, method, punctuality.
One hour per week—Health, cleanliness.
One hour per week—Temperance.
One hour per week—Fresh air, ventilation.
One hour per week—Food, cookery.
One hour per week—Thrift, penny banks.

(I should want to add or change so as to give one hour per week to soil and plant culture; one hour per week to a voter's duties; one hour per week to imparting a taste for studies of nature or natural philosophy.)

That it is practicable both to find time for such lessons and to give them, is proved by the experience of schools in this country. Among many others, the schools of Tyrone, Pa. dispense entirely with spelling as a step to reading, finding it really a great impediment. The little ones learn to read much sooner and with more pleasing tones since they have been taught to distinguish words by their sounds instead of by the letter-names. Spelling is taught later by an ingenious and speedy method, which exercises the eye and the hand upon it, and uses the phrases and sentences of the readers, in which the meaning and uses and changes of words appear, instead of the spelling-book, in which they are dead and laid out in rows. The teachers give daily talks and illustrations on the morals and virtues that tend to secure health, comfort, competence, usefulness and enjoyment of life. W.

GENTLEMEN WHO LACE.

Devices for Securing a Fine Figure—Claims of Benefits to be Derived.

[Forney's Progress, Feb 20.]

IN this country a few men wear corsets, and seem to like them. Gottschalk, the pianist, and equally celebrated as a beau, always had on a corset. The male corset wearers are those who take their coats to the up-town tailor, whose advertisement may be found almost any morning in the ledger. This ingenious fellow has an arrangement which he puts into coats, by which one's shoulders, are made to look as broad as a prize-fighter's. With one of his inventions, and, a perfectly constructed corset, the figure of a man becomes irresistible. It is a secret, that the ladies know as well as ourselves, that the shoulders of all our coats are more or less padded, that frequently our vests are ditto, so that with the exception of the hair of our heads, which is usually our own, there is about the full-dressed man, almost as much sham as surrounds the full-dressed woman. But our male corset-wearers, will not talk. They hide their corsets figuratively as well as actually, and would deny the whole thing, if they were asked about it. A daily newspaper reporter is the authority for saying, that the tailor who makes heavy shoulders out of slim ones, keeps quiet on the subject. Many attempts have been made, but all in vain, to interview him. One must turn to England, to discover how a man feels to be tightly laced. Here is a gentleman who wears ladies' shoes because he thinks them more comfortable, and goes for his corsets to a store where there are lady attendants, as "I find them much more obliging than male assistants usually are." He is a connoisseur in corsets for gentlemen. Listen to him:

"I strongly advise to have the corset made to open up the back only, as I find it is much more comfortable to wear and lighter, than when made to open in front, in the now common mode. I can truly affirm, from my own experience, that moderately tight lacing (say three to four inches less waist measure than the natural size) is not only not prejudicial, but, on the contrary, is very beneficial to the health. My occupation is of a sedentary nature, and I used to suffer much from pains in my side and back, and from indigestion; but about a year and a half ago my sister persuaded me to try and wear a corset, and she altered one of her own to suit me. I found it rather irksome for the first few days, but that feeling soon passed, and on my next visit to London I had a corset properly made to my own measurement. Since then I have had another one made, smaller in the waist and wider at the chest, which I am now wearing. The pains have quite left me and my health is generally much better than it used to be. Besides this, the feeling of being tolerably well laced is very comfortable. From my own observation and inquiries I find the practice of corset-wearing by young gentlemen is becoming much more usual, but we don't make any display of the fact."

In France and Germany many more gentlemen affect corsets than in England or America.

TO CLEAN OLD ENGRAVINGS.

THERE are many ways suggested for accomplishing this object, but the following plan, if carefully attended to, gives good results. Place the prints, one or two at a time, in a shallow dish, and pour water over them until they are completely soaked or saturated with it; then carefully pour off the water, and pour on them a solution of chloride of lime (one part liquor calcis chloratæ to 39 parts of water). As a general rule, the stains disappear as if by magic, but occasionally they are obstinate. When that is the case, pour on the spots pure liquor calcis chloratæ, and if that does not succeed, add a little dilute nitro-muriatic acid. There is no print that will not succumb to this treatment; in fact, as a rule, they become too white. As soon as they are clean they must be carefully washed with successive portions of water until the whole of the chlorine is got rid of. They should then be placed in a solution of isinglass or glue. Many collectors color this solution with coffee grounds, etc., to give a yellow tint to the engraving.

They should then be dried between white blotting paper, either in a press or under a heavy book, and finally ironed with an ordinary flat-iron to restore the gloss, placing clean paper between the iron and the print. Grease stains are much more difficult to remove. Benzine is the best for this purpose. Small grease spots may be removed by powdered French chalk being put over them, a piece of blotting paper over the chalk, and a hot iron over that. To clean manuscripts the chloride of lime will not do, as the writing will not stand its action as will the carbon printing ink. There is another kind of stain in the form of brown spots, which is often caused in framed engravings by the absorption of the coloring matter from knots in the wood behind. Only clear stuff should be used for backing, and to preclude the possibility of stains, thick paper or pasteboard should be placed between the engraving and the wood. To remove surface dirt from engravings and mezzotints the most effectual plan is to use common bookbinder's paste, which is to be applied with a paste-brush both to the back and front of the print. The paste will take up the whole of the dirt, which will come away with the paste when it is removed with water. A bath of plain water completes the operation, from which the print will emerge as fresh as when first issued.—*Monthly Magazine of Pharmacy.*

THE CHARMS OF ROYALTY.

SIR CHARLES DILKES'S objection to the proposed extra grant to the Duke of Connaught on his marriage is based on the belief that the business of royal grants is very considerably overdone. The Budget of the current year (1878) bore the following charges of this nature; The Queen, £1,925,000, to which must be added the revenue derived from the Royal Duchy of Lancaster, about £200,000 more; the Prince of Wales, £200,000 and the revenue of the Duchy of Cornwall, which is about £350,000; the Princess of Wales, £50,000; the Duke of Edinburgh, £125,000; the Duke of Connaught, £75,000; Prince Leopold, £40,000; the Crown Princess of Prussia, £40,000; Princess Ludwig, of Hesse, £30,000; Princess Christian, of Schleswig-Holstein, £30,000; Princess Louise, Marchioness of Lorne, £30,000; Duchess of Cambridge, £30,000; Grand Duchess of Mecklenburg-Strelitz, £15,000; Princess Teck, £25,000, and the Duke of Cambridge, £60,000. It does seem that Sir Charles Dilkes's objection is tolerably well founded.

It will be seen to make the modest little sum of £3,225,000 of the earnings of the poor, pouring into the laps of one woman and her children. Words are quite inadequate to express one's astonishment, not to say indignation, at such injustice.

WINE FROM ORANGES.—Experiments have recently been in progress in countries ravaged by the phylloxera, in regard to the substitution of orange juice for grape juice in wine making. The first wine made from oranges, in Spain, has just made its appearance in the market of Valencia. Four kinds have been produced, one of them a sparkling wine. They are all said to be of an attractive color, perfectly clear, of an agreeable, sweet, slightly acid flavor, and of an alcoholic strength of about 15 per cent.—*Druggists' Circular.*

FURNITURE POLISH.—Alcohol, 21 ounces; gum shellac, 2 ounces; linseed oil, 14 ounces; gum benzoin, 2 ounces; oxalic acid, 1 ounce; white resin, 2 ounces. Dissolve the gums and acid in the alcohol, let it remain 24 hours and then add the oil. This polish has been in use in the writer's family for fully 50 years, in a damp climate, and has been found to keep the furniture in good condition.—*Druggists' Circular.*

RECENT LITERATURE.

Philomene's Marriage. By HENRY GREVILLE, Phila.: T. B. Peterson & Bros. Price 75c.

A WELCOME preface to American readers introduces this novel, designed to correct many false impressions relative to the supposed mysteries attached to this famous author's early life and nationality. As a writer of the present day, we have none whose works have afforded so distinct an insight into Russian home life as Henry Greville's novels, Dosia and Sonia. To these popular and powerful works, perhaps may be attributed the false impressions now circulated that the author must necessarily be of Russian origin. We now learn that Henry Greville is a French lady—born in Paris, educated in France, and essentially French. Through rare ability she has risen from obscurity to the foremost ranks of French novelists, and she merits the great fame her writings have brought her.

The chief elements of interest in Philomene's Marriage lie in its simplicity. Totally devoid of the immorality usually pervading French novels, a thorough knowledge of rural life is evidenced, combined with a keen observation of human nature, and the whole is given to us with a real though quiet humor. The work is to be commended as an admirable photograph of the very small talk of a country village and the very small schemes of designing widows and pseudo fortune-hunters. It possesses also one higher element of interest in effectively tracing the influence of a pure and noble nature on a frivolous one. The plot is light and the incidents, though neither numerous nor startling, are admirably adapted to the subject. We regret to notice much of the author's brilliant style is lost in translation, but sufficient of the original piquancy remains to recommend the book to our readers.

The Shadow of Hampton Mead. By Mrs ELIZABETH VAN LOON. T. B. Peterson & Bros. $1.50

This is the story of three families, (two of which are American,) and the varying fortunes of each. Hampton Mead is a plantation in North Carolina, where the story opens, and when well developed it is transferred to England. We can mention the book only with "faint praise." It is not above the average of American novels of recent publication.

Roderick Hume. By C. W. BARDEEN. Syracuse N. Y.: Davis, Bardeen & Co.

UNDER the guise of an entertaining narrative of the adventures of a young school teacher, the author gets in some very good hits on the system of the modern Union school. He claims that the book is in no sense a satire, but in depicting certain phases of the institution directs attention to evils which it is to be hoped future legislation will remedy.

Carmen. By PROSPER MERIMEE of the French Academy. Philadelphia: T. B. Peterson & Bros. 50 cents.

THE outlines of the story of Carmen are doubtless well known from the libretto of the Opera of which it is the foundation. It is a powerful and picturesque story of brigand and gypsy life, of passion and jealousy, with capabilities of intensely dramatic situations which the librettist has seized and elaborated. The volume closes with a chapter on "Gypsies and Gypsy Character," which will be found interesting.

MAGAZINES FOR MARCH.

A School-Master as a Ring-Master.

IN Edward Eggleston's paper on "Some Western School-masters," published in the March SCRIBNER occurs this anecdote of School discipline in Indiana in the old times:

To a nervous child the old discipline was, indeed, very terrible. The long beech switches hanging on hooks against the wall haunted me night and day, from the time I entered one of the old schools. And whenever there came an outburst between master and pupils, the thoughtless child often got the beating that should have fallen upon the malicious mischief-maker. As the master was always quick to fly into a passion, the fun-loving boys were always happy to stir him up. It was an exciting sport, like bull-baiting, or like poking sticks through a fence at a cross dog. Sometimes a ferocious master showed an ability on his own part to get some fun out of the conflict, as when on one occasion in a school in Ohio, the boys were forbidden to attend a circus. Five or six of them went, in spite of the prohibition. The next morning the school-master called them out in the floor and addressed them:

"So you went to the circus, did you?"

"Yes, sir."

"Well, the others did not get a chance to see the circus. I want you boys to show them what it looked like, and how the horses galloped around the ring. You will join your hands in a circle about the stove. Now start!"

With that he began whipping them, as they trotted around and around the stove. This story is told, I believe, in a little volume of "Sketches," by Erwin House, now long forgotten, like many other good books of the Western literature of a generation ago. I think the author was one of the boys who "played horse" in the master's circus

Color in Lawn-Planting.

MR. SAMUEL PARSONS makes the following suggestions in a paper on "Lawn-Planting for Small Places," in Scribner for March:

As a rule, also, never plant a large, dark evergreen in front of, and very near, a brilliant, light-colored, deciduous tree, for thus planted it will dwarf and weaken the effect of the latter. On some lawns, however, a few massive dark evergreens may be used with effect in the extreme, and, if possible, north-west corner of the lot. They will protect and give character to the place, and heighten the effect of the deciduous trees. A striking contrast may be obtained by interspersing a few white birches among, and in front of, these evergreens. They will serve, in this case, to brighten the picture both winter and summer—though usually we prefer not to mix evergreen and deciduous trees. This harmonious and contrasting disposition of color requires careful study and even perhaps a natural gift. For instance, it is better to introduce gay, bright colors in well-judged proportions. A few bright flowers of deep red, blue or yellow, will have a better effect dispersed here and there about the lawns than in one great mass. Introduce them, so that by means of their different natures there will be always during the season a few gay points in the picture.

LIPPINCOTT'S FOR MARCH contains A Day with Hudson's Bay Dog-sledges, Illustrated, H. M. Robinson; Hungarian Types and Austrian Pictures, concluding paper, Illustrated, Edward King; Richard Realf, Illustrated, Rossiter Johnson; Women's Husbands—I. Narcissus—Chaps. V. and VI. (concluded); Pottery and Porcelain at the Paris Exposition, Illustrated, Jennie F. Young; Monsieur Pampelon's Repentance, Anna Eichberg; Yesterday, Edgar Fawcett; My Village in the South, Part I., Annie Porter; Through Winding Ways, Chaps. XXV.-XXVII., Ellen W. Olney; Live Wood in our Whipping-post, Howard M. Jenkins; "If this be Love," G. S.; Joseph's Adventure, D. C. Macdonald; Our Monthly Gossip; Literature of the Day.

HARPERS' FOR MARCH contains Present Tendencies of American Art, S. G. W. Benjamin, with twenty illustrations; A Few Sea-Birds, H. W. El-

llot, with nine illustrations; Along the Shore, a poem, A. T. L.; The Coast Survey, Martha J. Lamb, with twenty illustrations; the English Home of the Washington's, A. T. Story, with seven illustrations; Old Dutch Masters—I. Rembrandt Van Ryn, E. Mason, with four illustrations; The Pine-Tree, a poem, Harriet P. Spofford; A Ceremony upon Candlemas-Eve, a poem, Robert Herrick, with an illustration by Abbey; Berg and Thal—Sketches Tyrol (I.), George E. Waring, Jun., with fourteen illustrations; English and American Locomotives, Charles Barnard, with three illustrations; A Summer Story, Alice Perry, with one illustration; The English in India, Thomas Knox; Young Mrs. Jardine, a novel, Dinah Mulock-Craik; Climates for Invalids, Dr. T. M. Coan, with one illustration; Miss Vedder, a story, C. F. Woolson; Gary's Magnetic Motor, E. M. Bacon, with four illustrations; The "Tom" Side of Macauley, D. D. Lloyd; Miss Merler's Nerves, a story, Miss Thackeray; Afghanistan, Z. B. Gustafson.

Editor's Easy Chair: Major Andre and Nathan Hale; Semi-Royalty in Canada; The late Bayard Taylor; The new Capitol at Albany; Painting the Lily; Dr. Holmes on Interviews.

Editor's Literary Record: Macauley's History of England, Library Edition; Johnson's The Normans in Europe; Eggleston's Red Eagle; Hardy's The Return of the Native; Notley's Love's Crosses; Macquoid's Elinor Dryden; Bulwer's Last Days of Pompeii; Sandeau's Madeline; Hay's The Sorrow of a Secret; Besant and Rice's 'Twas in Trafalgar's Bay; Linton's Our Professor; Lady Carmichael's Will, and other Christmas Stories; Kip's Hannibal's Man, and Other Tales; Ruueberg's Nadeschda; Gilder's The Poet and his Master, and Other Poems; Schaff's Popular Commentary on the New Testament; Warner's Bible Narratives; O'Flanagan's The Irish Bar; Sport and Work on the Nepaul Frontier; Towle's Pizarro; Shaw's Castle Blair.

Editor's Scientific Record: Astronomy; Physics; Chemistry; Anthropology; Zoology; Engineering and Mechanics.

Editor's Historical Record: Political Intelligence; Disasters; Obituary.

Editor's Drawer: Concerning Laughter; Liquor Bills; Good English; A Warning; New York Men abroad; A Juvenile Bit from Illinois; Raising Money "in Meeting;" An Epitaph; Humors from the Irish Bar; Classic Gems; Another Epitaph; A Slow Railroad in New Jersey; Another Arrow from a long Bow; St. Valentine's Day—Hawking in Central Park (illustration).

CONTENTS OF ST. NICHOLAS FOR MARCH, 1879: Frontispiece—"They instinctively raised their guns and fired;" An Adventure on an Iceberg, Dr. Isaac I. Hayes, two illustrations; A Wonderful Candle, Aunt Fanny, illustrated title by R. Sayre; The Obstinate Weather-cock, Horace E. Scudder, two illustrations by Alfred Kappes; Red Riding-Hood and the Wolf, picture drawn by Gustave Dore; The Renaissance, art-paper, Mary Lloyd; The Wasp and the Bee, verses, Palmer Cox, illustration by the Author; Eyebright, Chapter III., Susan Coolidge, two illustrations by Frederick Dellman; Bloom, poem, Bessie Hill, two illustrations by R. Riordan; Wanted, Sarah Winter Kellogg; Oriental Bottles and Wells, and How they are Made, Fanny Roger Feudge, six illustrations; Dick's Supper, verses, Mrs. E. T. Corbett, three illustrations by L. Hopkins; Nanule's Little Muff, Mary Bolles Branch, two illustrations; Calling the Flowers, poem, Mary Mapes Dodge, illustration by Kate Greenaway; Rumpty-Dudget's Tower, concluded, Julian Hawthorne, three illustrations by Alfred Fredericks; The American Mardi-Gras, Mary Hartwell Catherwood, ten illustrations by J. Wells Champney; Waiting for Spring, picture; Pets from Persia, Kate Foote, two illustrations by Miss E. Foote; Elizabeth's Roses, translation of German Legend, printed in December number, Annie B. Parker; The Plaything Sky, verses, J. W. De Forest, two illustrations; A Jolly Fellowship, Chaps. IX. and X., Frank R. Stockton, three illustrations, two by James E. Kelly; The Mechanical Pigeon, Charles Barnard, two illustrations.

For Very Little Folk. Pinkety-Winkety-Wee, verses, Mrs. E. T. Alden, two illustrations; Joe and the Seal, C. M. Drake, illustration by J. C. Beard; Eleven Little Pussy-Cats, Jingle, Joel Stacy; Slate Pictures, drawn by L. Hopkins.

Jack-in-the-Pulpit (Illustration).

The Letter-Box (Illustration).

The Riddle-Box (Two illustrations).

AMERICAN NATURALIST FOR MARCH.—Remarks on Fossil Shells from the Colorado Desert, Robert E. C. Stearns; The Distribution of the North American Flora, Sir Joseph Dalton Hooker; The Origin of the Specialized Teeth of the Carnivora, E. D. Cope; Grief in the Chimpanzee, Arthur E. Brown; Experiments with Pyrethreum roseum in Killing Insects, W. L. Carpenter; Valentine, F. E. W.; Recent Literature: Comstock's Outline of General Geology; Gegenbaur's Elements of Comparative Anatomy; Schmarda's Zoology; Congressional Record, Feb. 12; Gen. Garfield on Government Surveys; Recent Books and Pamphlets.

Botany.—On Nomenclature.—*Aspidium boottii* Tuckerman—Botanical News.

Zoology.—Note on the Hairy-tailed Mole, *Scalops breweriі* of authors; The Clover-seed Fly, a new Insect Pest; The English Sparrow and our Native Song-Birds.

Anthropology.—Habel's Account of Ancient Guatemalan Sculptures.—Anthropological News.

Geology and Palæontology.—Mineral Wax in Utah; Merycopater and Hoplophoneus; The Nature of Eozoon; The Age of the Laramie; On the Occurrence of a Solid Hydrocarbon in the Eruptive Rocks of New Jersey; The Hudson River Group at Poughkeepsie.

Geography and Travels.—American Geographical Society; President's Annual Address.—Obituary.

Microscopy.—New Microscopical Societies.—American Quarterly Microscopical Journal.—Sale of a Microscopical Library.—Spring Clips.

Scientific News; Proceedings of Scientific Societies; Selected Articles in Scientific Serials.

For Women,

CONDUCTED BY MISS FAITH RIPLEY.

THAT PARLOR OF MINE.

ALICE M. THORNTON.

WHAT to do with that parlor I didn't know. It was the dismalest, dolefulest apartment I ever saw. You could fling open the blinds and let in a deluge of sunshine, but still the room had a "Hark! from the tombs" sort of air. You see the house, furniture and farm fell to Charlie from his mother, and he had spent all his money on tools and improved stock for the farm, and there was little left for house furnishing. We were married in the spring, and all the summer I planned and planned how to brighten that room. The carpet was a dark brown and black ingrain, the walls were whitewashed, there were green paper blinds at the windows, and besides there were a badly-worn sofa and rocker of black hair-cloth, four cane-seat chairs and rocker, with the bottoms partly broken through, and an old-fashioned stand. On the walls hung an ancient sampler, a battle-piece and a colored print of a tall man, in a swallow-tailed coat, standing under a very weeping willow and gazing at a tombstone, on which was the inscription "Sacred to the Memory," and there had been added in ink "John Thornton, aged 60; Mary Thornton, aged 10; James Thornton, age 30."

Charlie told me I could have all the money from the poultry, and I decided to spend what money I could make on that room. But the hens would set for a week very quietly, then a change would come over the spirit of their dreams, and they "set a standing," like the Dutchman's. A stray cat waged persistent warfare against the chickens and destroyed several broods, and those that escaped the cat fell victims to the "gapes." My ducklings stuffed themselves into apoplexy. When Thanksgiving came I had $25 worth of poultry to send to the market, instead of $75 or $100, which my imagination had pictured as the net proceeds in the spring. Twenty-five dollars wouldn't do much, but I resolved to make the most of what I had.

On turning the carpet, I found the other side was lighter and prettier than the right side. For the walls I made a whitewash by dissolving chrome in alcohol and adding enough to the wash to give it a yellow tint. This gave a sunshiny look to the room quite different from the glare of whitewash. A border of scarlet and gold finished the wall. The paint was very grimy and yellow, so I scraped off all I could of it. The doors I painted over with black-walnut stain (made by dissolving burnt umber in scalding hot vinegar). The panels of the doors I painted a buff-shade (made by adding chrome to common white-lead paint). On these panels I arranged a wreath of autumn leaves and tiny pressed vines. I then gave the whole door a coat of varnish. My doors were as handsome as I could wish and looked, with the glowing tints of the autumn leaves on the soft buff back-ground, like a picture. For window shades I used common bleached muslin; over this I placed curtains of lace, to be sure they were the cheapest of Nottingham, but the patterns were pretty fern-leaves and grasses, and they gave a light, airy look to the room. Over these I hung lambrequins of turkey-red, and they were beauties! The width of the cloth made the depth of the lambrequins; the pattern I cut from "presume," (as the little girl said when reproved for saying "guess,") a deep scallop on each side and a shallow one in the middle. The edge was trimmed with coarse red fringe, and above this was a ruffle, pinked on each edge and gathered in the middle. The cornices were smooth pine sticks, painted buff, with walnut-stained edges, and a tiny pressed vine was fastened onto the middle of the cornices.

The hair-cloth covers to the sofa and rocker I ripped off and used as a pattern to cut fresh covers by. I bought a quantity of red flannel and covered them with it. The worn cane-seat chairs and rocker had cloth tacked over the broken seats, and the scratched woodwork given a coat of walnut stain, and then varnished. The rocker had old blankets tacked all over it, the back and seat padded, and over this a cover of flannel. The cane chairs had a cushion tacked on with scarlet gimp, to the seat over the broken bottom. A keg, sawn in two, furnished the foundation for two footstools, which were padded and covered with flannel. The tops were worked on canvas; the design being a bouquet of purple foxgloves and their green leaves, on a dull red ground. My center-table was an old affair I found in the attic. This was sand-papered, stained and varnished. For a cover I took a coarse brown linen table cloth, and ornamented it with shaded red Germantown yarn. A strip of brown velveteen, about four inches wide, was sewed in the edge, about five inches from the bottom. This strip was worked with red yarn in coral pattern. A friend gave me a remnant of Brussels carpet—a medallion of flowers on a pearl ground, the back-ground being a dull red color. Of this I made a handsome mat, finishing the edge with a fringe of red.

The mantel was yellow and ill-shapen. This was covered with a scalloped lambrequin of red flannel, the edge trimmed with oak-leaves, of brown velveteen, veined with yellow silk. On the mantel were a pair of scarlet and gold vases, a Parian bust, a pair of photograph easels, and a clock—all wedding presents.

Charlie and I had a great number of books,—poetry, travels, history—and a quantity of bound magazines and periodicals. We had no bookcase; buying one was out of the question. I studied for some time how I should make one. At last I thought of the recess, at the side of the fire-place. The latter projected out towards the center of the room, leaving a deep recess at each side. Charlie was called in, and he nailed cleats to the sides and back of the recess; these being secured into the studding, held the shelves firmly, the shelves themselves being of pine, sand-papered, stained black-walnut and varnished. This gave me ample room for my books and papers, and one shelf for some old china, which had been Charlie's great-grandmother's.

I next took the pictures from their frames, and sent the mourning pieces and battle-scene into exile. I had a lovely chromo—a wedding present—and the two Demorest chromos, "The Oaken Bucket" and "The Captive Child," all in gilt frames. One of the old frames I used for a chromo of autumn leaves and flowers, on a white ground; the frame I covered with black velvet, glued on smoothly, then over the edge, near the picture, I fastened a strip of gilt paper, pinked on one edge, the straight side near the picture and the pinked side turned out. This made a charming frame. The other two frames were covered with gray moss, and a cluster of sumac berries on each corner. These frames held steel engravings. Bunches of leaves and vines were fastened over each picture.

We burn coal—Charlie exchanges wood for it at the coal-yard—so I have some of my prettiest plants here. Shelves are fitted to the windows, and here bloom spicy carnations, the modest primroses, the coral begonias, and the torch-like geraniums. The room is full of the odor of the scented geraniums, and Pet, the canary, fairly screams with delight, as he swings back and forth on his perch, mid the ivies and cobea-vines.

I made a wall-pocket from a couple of pieces of bristol-board, these pieces were oblong, the top corners then rounded off, the back being a trifle higher than the front, an embossed picture filled the center of the front. The two pieces were joined at the bottom, by a bias strip of red velveteen, glued on the edges of both pieces, the sides laced together with scarlet cord, being slightly spread apart, and then hung with red cord and tassels, and I have a handsome and serviceable pocket. My sofa pillow was a half-yard-square, of canvas, worked with a shaded wreath of green leaves, and red verbenas, with my monogram in the center. My tidies were white canvas, worked with red worsted. I made a letter case out of perforated board—both back and front cut shield-shape, the edges trimmed with pleated ribbon, and an embossed picture on the front. My work-basket was an old-fashioned round affair. I covered the edge with a scalloped drape, and lined the inside with turkey red, with a ruffled edge. A table covered with a red-felt cover, held the stereoscopes and views, and the latest magazines.

My room was more lovely when finished than I can tell you. In the darkest days, it is full of rosy tints and shades, and better yet, cost me less than $25. Charlie says—but you know what he says and how he says it. Every evening, he and I forget we are farmers, and leave the care and worries of our work with our work-clothes. Charlie brushes his yellow curls, sticks his feet into slippers, puts on clean collar and cuffs, with his blue and gray dressing gown. I have a princess dress of gray alpaca—costing 25 cents per yard—trimmed with scarlet bows, with pleated illusion in the sleeves and neck. It takes us about ten minutes to dress, but how much better we look and feel! Charlie reads aloud, and I listen and sew. The storms may rage without, but our "Eden," as Charlie calls the room, is full of bright tints and aglow with happy hearts. Our unmarried friends are fond of dropping in of an evening, and sighing, "How cosy you look. I've a good mind to get a home of my own!" I do believe our room has been the means of turning several old bachelor's heads and hearts towards matrimony, and altogether our room is a great success.

COUSIN KATE'S OPINION OF WOMEN'S RIGHTS.

B. C. D.

"How did you like the lecture, Cousin Kate?" said I to a bright-eyed relative, who had the evening before heard one of the noted women's-rights-women, deliver one of her spicy tirades, on women's wages, suffrage and the like.

"It was very entertaining," said Kate, "but I don't see, after all, if women get all they claim, that they will be any better off; married women at least. The rights which make women happy, they can never have as long as human nature remains coarse, selfish, exacting or ignorant.

"The right to be individuals in their opinions, their tastes, and even their whims, is what seems to be lacking. I know a man who calls himself respectable, who refused to get his invalid wife a lemon, she asked for, because *he* did not think she needed it. And there is Aunt Margaret Owen, as good and capable a woman as the world affords, who weaves carpets to get what she needs to wear, and Uncle Abram is good as men go, and yet he often gets her bill for weaving turned on account at the blacksmith's, without saying a word to her about it, or making it up in some other way to her, and if any one should tell him he was a tyrant, he would want to fight. He is able to pay his own bills, and hers too, but he seems to think that if she has the least liberty even with the money she earns after keeping his house and children, that she will commit some fearful extravagance with it.

"She has an old-fashioned, tall bureau, a very useful article of furniture to her, and the brass handles of the drawers had either fallen off or become loose, with twenty year's constant use; and one day when I was there, a traveling tinker came along who offered to put on some wooden knobs, for a small sum, and she decided to have it done without asking leave of her "proprietor." He came in while the work was in progress, and you should have seen the angry look he gave her, and heard the lecture he treated her to afterwards, on the crime of *squandering* money. A few dozen eggs had paid the bill!

"I have often seen her leave her loom and fly around the house, almost holding her breath, to find the last paper, which he happened to want and had mislaid himself, while he stood grumbling and wondering why "she never had a place for any thing." What good would the right to vote do her? If Uncle Abram couldn't give her the ticket he wanted to, and scratch it according to his own ideas, he would be a misused community." Kate paused for breath.

"He is only one of many," I suggested.

"I know it," said she; "he is better than a great many of them, but the same feeling of proprietorship in their wives crops out somewhere in nearly all cases. Matrimony to women seems to me like taking a long walk after a heavy shower and being obliged to step exactly in the footprints, of some other person who had gone before us. I think suffrage would add slightly to the hardship of such a trip."

"You've hit the nail on the head this time," said quiet grandmother, from her arm-chair. "If women were not called on so generally to sacrifice their rights in the household where they ought to be the best judges of affairs, we should hear less demand for legal rights which, although they may be unjustly withheld, it might not be expedient for us to exercise if we could."

ITEMS FOR CORRESPONDENTS.

WILL some of the RURAL readers please give a recipe for making *good* cologne, and oblige,

CELIA A. HOBBY, Stamford, Conn.

EAU DE COLOGNE.—Mix essence of bergamot, lemon, lavender and orange flower, of each one drachm; essence of cinnamon, half a drachm; spirit of rosemary and honey-water, each two ounces; spirits of wine, one pint; let the mixture stand two weeks, then put in a glass retort; the body of which immerse in boiling water contained in a vessel placed over a lamp, while the beak of the retort is introduced into a large reservoir (a decanter for example). Keep the water boiling, while the mixture will distil into the receiver, which should be covered with cold, wet cloths. In this manner the best quality of cologne-water may be obtained at one-fourth the price asked for it at drug stores. A lamp will answer best to boil the water. The foregoing is the most simple method of *distilling* without the regular *still*.

TO MAKE EAU DE COLOGNE.—Rectified spirits of wine, four pints; oil of bergamot, one ounce; oil of lemon, half an ounce; oil of rosemary, half a drachm; oil of Neroli, three-quarters of a drachm; oil of English lavender, one drachm; oil of oranges, one drachm. Mix well and then filter. If these proportions are too large, use smaller ones.

Some of our readers may have formulas for making cologne, which they know from experience to be good ones; if they will send them to me, I will take pleasure in publishing them for the benefit of Miss Hobby or any others who may wish to experiment in perfume making. F. R.

I want to "fix up" nicely a 12x12 bedroom, opening into my parlor. Especially do I want to know about window drapery, what kind of shades shall I have? what about lambrequins? I have a piece of velvet, would that do for lambrequins? Will some one give me full instructions?

A FARMER'S WIFE.

A young, married lady, in a late number of the Woman's Journal, has the following to say of her prospective bedroom, and perhaps what she says may furnish a hint or so to "Farmer's Wife."

"I will have a bedroom in gray and blue, a deep rich blue, not navy, and a very light shade of the same color. The curtains will be of wide, all-wool cream-white bunting, at twenty five cents a yard, with stripes at top and bottom of combined shades. The carpet will be a very large gray rug with a whole width of brussels for a border. I want a woven wire mattress on the bed, and white or pale blue blankets, pale blue cambric under swiss pillow-shams, and a chamber set of old-fashioned two shades of blue. I wish I had that old bowl and pitcher of grandmother's. I tell my husband that if ever he asks me to make a toilet-table out of barrel heads and cambric, tied in the middle like an hour-glass, or to make a chair out of a barrel sawed out, I will get a divorce on the ground of violent insanity. He says all right, and that I'm never to allow any hair-cloth stuffed furniture in in the house."

As "Farmer's Wife" says nothing about the style in which her parlor is furnished or her means, I cannot give explicit directions in answer to her question. I should advise that the room have a leading color, pink, blue, buff, or gray. The carpet should be light, with small figures. So small a room can contain only a bedstead, a chair or two, and a wash-stand or dressing-table, which should be of the new light woods. At the windows, a plain shade the same color as the prevailing tint of the room, and white swiss curtains, trimmed with lace, will make a charming finish. I hardly think that velvet lambrequins would be suitable, in fact, I would consider a pretty cornice a more artistic finish than lambrequins for a window in a room of that size.

DEAR MISS RIPLEY:—I am now twenty-five years of age; I come of a long-lived family who retain their youthful looks way into middle life (an uncle who is forty-three, is always supposed by strangers to be about twenty-seven). There is really no reason why I should look old, and in fact, the expression of my face is young, but my skin is full of fine lines, not deep wrinkles, but lines which cross each other at all angles. Will you please recommend some wash which will smooth out my skin? I have tried court-plaster, egg, alum and rose-water, tar, and a host of other things, but without success. L. D. V.

Judging from what you write, I think the trouble is that your skin needs to be stimulated, and that your general health is poor. Are you not always weary? Possibly you do not properly assimilate your food, and your skin needs nourishment. It certainly is not a natural condition for a woman of twenty-five to have a "lined" skin. What you need is a physician and not a "wash." Some doctors make a specialty of skin diseases and disfigurements, and I would strongly recommend you to seek good medical advice without delay, and not waste time and money on cosmetics. I can give you the addresses of two physicians in this city, who treat all disorders of the skin successfully.

News of the Week.

MISCELLANEOUS.

Monday, March 10th, 1879.

The liabilites of Archbishop Purcell, of Cincinnati are reported to reach the enormous sum of $6,000,000. This heavy load of indebtedness is due mainly to poor, or comparatively poor, Roman Catholics in Ohio, who, for 17 years or more, have been intrusting their earnings to his care and receiving interest from him. In other words, the prelate has been doing a heavy banking business and has failed disastrously. His creditors number 11,000, of whom seventeen-twentieths are said to be Germans and the remainder chiefly Irish. Various plans—some of them of a questionable nature and others wildly unbusinesslike—are being discussed for paying these debts. Very many of the depositors would be utterly ruined by the loss of their hoarded savings, and not a few are already suffering severely from the present collapse. No one ventures to accuse the aged Archbishop of having himself profited by the great sums that have disappeared. The business was chiefly in the hands of his brother, Father Purcell, and the latter turns out to have been a poor and careless financier. By this and similar troubles connected with various church organizations and clergymen, one is apt to be persuaded that it was not without reason that money-changers were driven out of the Temple.

The forty-fifth Congress came to an end last Tuesday, and straightway the President convened an extra session of the next Congress, for the 18th inst. This was necessitated by the failure of the last Congress to make the appropriations necessary for meeting expenses, on account of a deadlock between the Republican Senate and the Democratic House on three points. In each, the House attached new laws to appropriation bills, and refused to grant the money unless the laws were passed. The Senate insisted that new legislation should not be tacked on to money bills; but that the proposed laws should be discussed and passed or rejected as all other laws usually are. To the bill making appropriations for the army was added a law prohibiting the presence of troops at polling places during elections; while to that giving money to meet the expenses of Judges, Courts, etc.,—the Legislative Bill—were attached two new laws; one repealing the test oath demanded from jurors in the South, and the other repealing the present law which authorizes the appointment of United States supervisors of electors whenever United States officers are to be chosen. The Republicans might have yielded with regard to the first and second issues, but they were stubborn on the last point, on the ground that such supervisors are necessary as a safeguard to honest suffrage. As the next Senate will be Democratic as well as the House, the Democrats refused to yield a jot, and hence the need of the extra session at which some lively work, or rather talk, is probable. The vote in the House on the Anti-Chinese Bill after the President's veto was 109 for it to 92 against it; but as a two-third vote is needed to overrule a veto, the veto was in this case sustained.

Arrangements are completed at Gilmore's Garden, in this city, for a grand walking match for the championship of the world, between three citizens of this country headed by O'Leary, the Corko-Chicagoan, who at present holds the champions' belt, and an Englishman named Rowell, whom Sir John Astley, the original donor of the trophy, has sent across the Atlantic, to recover it. At 1 o'clock this morning the struggle began, and the men are now tramping around the arena. There is a great deal of betting strongly in favor of O'Leary. Meanwhile the mania for exhibitions of women walkers continues all over the country, a dozen or so now tramping in this and the neighboring cities of Brooklyn and Jersey City. That Court of Inquiry that investigated Reno's conduct during the Custer massacre, has reported that there is no proof that the major's action on that occasion was blameworthy, and that the defense made by his small band against the victorious Indians, was heroic.

The republicans have 128 members in the new House; the greenbackers claim 21 and hold the balance of power. The Potter Committee has finally made its report, or rather three of them—one by the democratic majority declaring that Hayes was given the Presidency fraudulently; a second, by the republican minority, saying that he was justly elected, and denouncing the bulldozing and fraud alleged to have been practiced in some of the Southern States during the last Presidential election; while Gen. Butler makes a third report agreeing with the democrats as regards the Presidency, and with the republicans as regards terrorism. The Roach subsidy for two lines of steamers to Brazil has been overwhelmingly defeated in the House. More than 25,000 applications for arrears of pensions have been made, varying in amount from $50 to $5,000 each. Last Thursday the name of Jim Keene, the millionaire speculator in grain, was forged to a telegram sent from this city to his agents in Chicago, ordering them to sell 3,000,000 bushels of wheat on his account. This caused a decline in the price of wheat from 96 to 93 cents a bushel next day, owing to the market being flooded. Towards evening, however, the forgery was detected, and the prices for wheat have since gone up. It is said that the fraud was due to a Chicago clique who have made contracts to deliver large amounts of provisions, and who hoped to be able to buy them cheaply, if a panic occurred in the market. U. S. Judge Rives has had five State judges indicted in Va. for not permitting colored men on juries in their courts. The State authorities are highly indignant at this action, and a collision is not improbable between the Federal and State authorities. Owing to a run on the New Orleans Saving Institution, it has suspended payment for 90 days; deposits, $2,050,000; bank said to be solvent. The Louisiana Lottery has been suppressed by the Legislature. Gov. Nichols of Louisiana, is said to be about to resign, on account of the failure of the Legislature to give due heed to his messages and recommendations, and because he finds himself unable to check lawlessness in some parts of the State.

The Vanderbilt will contest which has been off and on before the surrogate of this city for months back, finally came to a close during the week. The struggle was maintained with extreme bitterness, especially by Cornelius's lawyers, who flung vituperation, innuendoes and moral mud generally upon all opposing witnesses and everybody connected with the dead Commodore. Cornelius will have to be satisfied with the $200,000 the old man left him. This has been invested by W. H. Vanderbilt in government bonds, and yields $10,000. W. H. retains his $100,000,000, and comes out a head on every point. It has long been evident that the dead millionaire was quite shrewd and sensible when he made his will, but it was thought that the disposition he had made of his vast property was the result of a late decision. Several old wills, however, were produced in court, and from these it was evident that years before any suspicion could have rested on his sanity, he had decided to settle his property substantially as done by his latest will.

FOREIGN.

There is report and a contradiction of it, that Turkey has ceded Rhodes to France. The Pope is about to create a batch of new Cardinals next month and among them will be Dr. J. H. Newman. Of all those who have joined the Roman Catholic Church within the last century, he is conceded on all hands to be the most eminent, both on account of the high place he held in public estimation as a Protestant clergyman before his conversion, and also on account of his acknowledged intellectual force and the superlative beauty of his style as a writer. Nearly the whole of Europe has been visited during the week by storms of extraordinary severity.

Gen. Martinez Campos, of Cuban celebrity, has been made Prime Minister of Spain, where a change of Cabinet has just taken place. In France the red-hot republicans are gaining the ascendency. Two changes in their favor have just been made in the Ministry, and already rumors have attributed to Grevy an intention of resigning. This, however, is denied by another report. The imprisoned communists are to be set at liberty, with a few exceptions. Passamente, the would-be regicide, is on trial in Italy. A large band of Greeks lately invaded Turkish territory, but were utterly routed. Russia seems resolved to evacuate the country in strict accordance with her agreement. The Turks are reoccupying the territory as it is abandoned by the Muscovites, and already there are serious reports of outrages committed by them. Shere Ali is at last dead, and Yakoob Khan is negotiating with the British for peace. Weston has failed, of course, in that walking match against time.

The Zulu massacre is attributed by the London papers to the incapacity of Lord Chelmsford, the general in command, and another officer will probably replace him. An army of 10,000 will soon be in the field, and even this handful seems to tax great Britain's military resources. Young Prince Napoleon has started to take part in the war and will probably be made aid-de-camp to Lord Chelmsford. Strikes and distress are still rampant all over England. Agricultural laborers have struck in Yorkshire against a reduction of 24c. a week in their wages. The plague is reported to be under complete control in Russia, and being rapidly stamped out. The Czar and his heir are reported to be at variance, and the latter has been ordered to confine himself to his palace. Bismarck's gag-law has been defeated in the Reichstag. The quarrel between Prussia and the Duke of Cumberland whose Kingdom of Hanover Bismarck annexed, is likely to be patched up by giving him the slip of territory about which there is a dispute with Denmark. As he has just married the King of Denmark's daughter, such an arrangement might be satisfactory all around.

This morning's cablegrams announce that the English in Afghanistan have suffered several minor reverses. Yakoob Khan has succeeded his father in authority over most of the country unoccupied by the English. In South Africa the British have routed 15,000 Zulus after a severe conflict, and all danger of the invasion of Natal is now considered over. In France the impeachment of the De Broglie Ministry is considered pretty certain. It will be remembered that about a year ago that Cabinet was forced to resign owing to its reactionary tendency. It seems that pretty clear proofs have been discovered that before its fall it contemplated the overthrow of the Republic, by a *coup-d'etat*, and the restoration of the Empire or the Orleans family.

The moderate Republicans and all the Imperialists and monarchists are opposed to the movement as certain to awaken much party bitterness and possible danger to the government; but the extremists are likely to be triumphant according to this morning's news. McMahon, however, is reported to have just demanded to be tried with his former Cabinet, should the measure be finally adopted, and as he is still very popular with Frenchmen generally, and especially with the army, this action may serve as a check or stop to the intended impeachment. HERMAN.

In Russia taxes are collected in this way: A peasant, representative of a district, comprising several villages, is charged with the duty of collecting a certain amount of money, and it is the business of the people to distribute the taxes among themselves as they like the best. For the prompt collection, in the first place, the representative is responsible, and in case of tardiness he is imprisoned for a week with common criminals, and furnished with food at the cost of three cents a day. A district is obliged to pay for all its members, whether they are actual residents, or have gone elsewhere, or are in the army. In case a tax collector is unable to do his duty, he reports to the authorities; then the police appear armed with rods, and if the rods do not secure the desired result, the property of delinquents is sold at auction.

Domestic Economy.

CONDUCTED BY EMILY MAPLE.

COOKING UTENSILS.

MARY BEAL M'LOUTH.

"EUREKA! Eureka!" Not the Philosopher's Stone but a knife-sharpener, and no "Patent Right." Of any one who keeps shoemakers' supplies, you can get for fifteen cents a whetstone, which is coarse and soft, and which will put on a knife with a few strokes an edge that excels everything but the grindstone. Those who have used this convenience, could never keep house again without one. But take care never to get it wet or greasy.

To keep your knives and forks from rusting, make a bag of flannel, and stitch from top to bottom an inch and a half apart, a dozen times, making a little bag for each. Roll and keep in a dry place. I like this much better than paper. I have used it four years, and rust has never troubled my cutlery. And now if any of the handles dissolve partnership with their better halves, get some kind blacksmith to save you a few iron filings. Take two spoonfuls of pulverized rosin; one spoonful of sulphur, and one and a half spoonful of the filings. Fill the cavities with the mixture; heat the stem of the knife or fork, and insert it slowly, and put it carefully away to cool. The directions said fine sand or brick-dust would answer, in place of the iron, but I never tried those. The filings I can warrant, unless you cut or pry hard with the knife. Hot water will not injure them after they are thoroughly set. I have one that I know has been in use for five years.

I find many people who still use poisonous German-silver spoons, which corrode every time they are used, especially in grease. I always try and persuade such people to get half a dozen of those small, stout and cheap, iron spoons. They are so convenient for use and cooking, and never need scouring. When new, they do nicely for the table. The bowl of an old one with the handle broken off, is just the article for scraping kettles.

Common baking soda with a moistened piece of flannel will clean silver nicely, then polish with a dry piece. But I prefer to wash off the soda if the silver is not going to be used for a long time, for fear it might injure it.

Croup Remedy Corrected

The cure for croup in Jan., number, should read: A cloth wet in ice-cold water, put on the throat and covered with flannel. Change often but keep the flannel snug every moment, to exclude the air. The patient will breath more easily at once, but when you cease the treatment, do not leave the throat bare.

DOMESTIC RECIPES.

Turkey Soup and Salad.

It is not surprising that foreigners comment upon the extravagant habits of Americans. Look at the waste of the kitchen! For example, a turkey is roasted and placed on the table *once*. Only half of it is eaten, but the fowl was carved in so careless a manner, that it is not presentable for another meal. Perhaps a few slices are cut from it, for the next morning's breakfast; then the bones and fragments of meat are thrown out. The bits of meat might have been chopped with celery for a salad, and the bones made into soup. The French excel us greatly in utilizing "odds and ends" in cookery. They use parts of fowls—for instance, the comb of the rooster—that we would never think of eating. Turkey soup is too rich for persons of weak digestion, but will be relished by healthy people and children.

Soup of Turkey Bones.

Break the bones, place in a kettle and add two quarts of cold water. Cover closely and set on the back of the stove to simmer for an hour. Season with pepper and salt, and add one large spoonful of rice. Let the soup boil until the rice is done; then pour into an earthen dish and put away in a cold place until the next day. When wanted for dinner, remove the layer of fat, and heat the soup. Serve very hot with crackers and pickles.

Turkey Salad.

One teacupful each of chopped turkey and celery. Mix, and then turn over it a dressing made after the following recipe: One raw egg—beaten; one hard-boiled egg—mashed fine; one-half teaspoonful of salt; one teaspoonful of prepared mustard; one teaspoonful of melted butter; a large spoonful of vinegar.

Bread and Yeast.

However capable our domestic, I always make the bread myself. The yeast is prepared according to the following rule: A pint of flour is scalded with hop water to form a thin batter; thickened with boiled mashed potatoes, and passed through a colander. When cool, a teaspoonful of salt is added; the same quantity of ground ginger; a large spoonful of sugar, and one-half teacup of best yeast. Keep the mixture in a warm room to rise, stirring it down two or three times. We keep yeast in glass cans—Mason's—and in a dark place. Many think that the chemical action of light is as injurious to yeast, as to fruits canned in glass. A teacupful of yeast is sufficient for two large loaves of bread. The sponge is made with warm water and quite stiff, and is kept warm over night. In the morning, more flour is added to the sponge and it is kneaded for a half hour, or as long as there is time to spare. Bread is more tender, if melted butter — a large spoonful to each loaf — is worked into the dough. Let the mass rise until very light, when it may be molded into loaves and set to rise again. Top heat is best for raising bread, as it is apt to get scalded if placed on any heated surface. Experience teaches one, better than rules, how to bake bread. Some housekeepers set the sponge in the morning, thus making a hard, disagreeable day. If set at night, time is gained, and the bread-baking, can be gotten entirely out of the way long before noon.

Bread Cakes.

The waste of bread is in many houses a heavy item. Slices that might have been toasted, are allowed to become hard and dry, or even moldy. Broken pieces and crumbs that would have answered for griddle cakes, puddings, or dressing for fowls, have been overlooked until too old to be fit for use. Such negligence does not speak well for the housekeeper.

The careful housewife will look through the pantry every day, if possible, to see that nothing be lost. Our favorite breakfast cakes are made of bread crumbs according to the receipe given herewith.

Bread Griddle Cakes.

One pint of bread crumbs soaked in as much thin, sour milk, as they will absorb. Leave over night. In the morning, stir in one beaten egg, a small teaspoon of salt, and flour to make a batter of the right consistency to bake. More milk may be needed. One teaspoonful of bicarbonate of soda, dissolved in very little hot water, should be stirred in just before baking. If in the least sour, use more soda. Bake on a hot, well-greased griddle. The cakes are better if a half teacup of cold boiled rice be soaked with the crumbs. M. G. B.

Canned Apples.

There are several good ways of preparing apples to fill the fruit cans which are fast becoming empty at this season of the year; and there is no danger but the sauce will be relished by the farmer's family in the spring, when vegetables and fruit are scarce, and fresh air and hard work bring increased appetites. The most economical way, if one has sweet apples and boiled cider, is to make cider apple-sauce, as that requires very little, if any, sugar; and it is excellent, too, if well made. To do this it should be cooked slowly two or three hours, and not stirred at all, as that breaks the pieces and gives it such a mussy look. Instead of stirring, push the top pieces under carefully when partly done, and put in water as it boils away, to prevent its burning.

To make apple-butter, the sauce, when done, may be stirred or mashed fine, and seasoned with cinnamon, allspice and cloves. If one does not have sweet apples, sour ones will do nearly as well for apple-butter, if plenty of sugar is used; but they do not make good cider apple-sauce, as they fall to pieces in cooking. Pickles are good, made of sweet apples pared and cut in halves or thirds according to size, and prepared the same as sweetened pickled, pears or peaches, and if liquor is left from these it may be used for the apples. Sour apples may be stewed in the usual way and canned, sweetening when used. But to make *nice* sauce, use sound, fine-flavored apples, cut into quite large pieces. With a quantity sufficient for a quart of sauce, put a cupful or more of sugar, and half of a lemon, with a very little of the peel; stew quickly, and only enough for one can at a time.

Doughnuts.

One cup of soft yeast; one cup of warm sweet milk; one cup of shortening—half butter and half lard; one cup of sugar; two well-beaten eggs; one-half teaspoonful of salt; flavor with nutmeg, allspice or cinnamon. Knead all together; set in a warm place at night; in the morning, if light, knead again; roll about two-thirds of an inch thick; cut out in cakes a little larger than a silver dollar; let them rise; then fry in lard and roll in pulverized sugar.

Ginger Snaps.

Three cups of molasses; one cup of shortening; three teaspoonfuls of ginger; three teaspoonfuls of salaratus; two tablespoonfuls of water; one-half teaspoonful of salt. Roll rather thin and bake in a quick oven.

A Correction.

I hope no RURAL sister has been so unfortunate as to follow exactly my recipe for bread making, as it appeared in the RURAL of January 11, for by some mistake I was made to say as much "water"—instead of flour—as can be easily stirred in. MRS. S. C.

Fritters.

One quart of milk, one pound of flour, add

seven well-beaten eggs and a teaspoonful of salt. Drop by the spoonful into hot lard, and fry them a light brown. A friend of mine was telling me, the other day, that beets chopped fine and covered with sweetened vinegar, were very nice. I have not had time to try it, but mean to soon. They are not cooked but taken raw, and she said they could be kept in that way all winter. A nice dish and an economical one when we have bits of chicken or fresh meat left over, is made by cutting them from the bone, and with them making a nice gravy, adding butter, if desired. Line a pie-dish with biscuit crust, and put the meat and gravy in it. Cover with more crust, leaving an opening in the center for the escape of steam. Bake.

Lemon Jelly.

This is by some people pronounced to taste very much like port-wine jelly, for which I wish some one would contribute a recipe. Slice the lemons fine in water enough to cover them. Stew rapidly for half an hour. Strain, and add two-thirds as much sugar as there is juice. Boil until it jells.

North Fairfield, O. LORETTA E. TURNER.

NOTICE is given that the Free Seed Distribution that was announced in the RURAL of Nov. 9th, 1878, and which included field, garden and flower seeds, *is now ended.*

THE STEAM THRASHER that is advertised by the Blymyer Manufacturing Company this week, is a good bargain, and it would probably be to the interest of thrashermen to inquire into it.

SUBSCRIBERS are again requested to make their applications for the corn on separate sheets, with name and address, and distinct from any other subject they may wish to write about.

An Article of True Merit.—"**Brown's Bronchial Troches**" are the most popular article in this country or Europe for Throat Diseases and Coughs, and this popularity is based upon real merit. **25c. a box.**

THE MARKETS.

PRODUCE AND PROVISIONS.

NEW YORK, Saturday, March 8th, 1879.

BEANS AND PEAS.—The bean market shows some recovery, not so much in prices as in a steadier demand for home and export use. Best grades are cheapest at present ranges, and sellers do not hold back offerings as possible free receipts may turn matters less favorable. Green peas scarce and firm; $1.40@1.45; Southern B. E. peas weak at $2.00 per 2 bush. bag. Canadian peas, in bulk and bond, quiet at 7-@74c.

Comparative movement in beans for past three years:

	Receipts, bush.	Exports, bbls.
Sept. 1, '78 to March 1, '79	224,934	28,024
" 1, '77 " " 1, '78	228,154	25,363
" 1, '76 " " 1, '78	235,914	23,401

Receipts for week, 3,016 bush. Exports, 1,675 bbls.

BUTTER.—There is an improved action in business, a fair export demand and more general local and eastward call telling upon stocks, especially as receipts are moderate. The current impression is that all of the old crop will be out by the advent of new, but low prices will have to be accepted for a good portion of it. This latter point, however, has been discounted. Fine and fancy State is scarce, but the fact does not give prices any particular buoyancy. We have missed a good deal of New Jersey trade this season. Nearly all of the principal towns, with any agricultural outskirts, have been considerably supplied by home dairies; cheap hay and abundant grain permitting the production. Western butter has an easy time, as a whole: few lines of dairy or factory make the extremes.

Comparative receipts and exports, for past three years:

	Receipts, pkgs.	Exports, firkins.
June 1, '78, to March 1, '79	1,180,047	233,919
June 1, '77, to March 1, '78	1,016,077	148,721
June 1, '76, to March 1, '77	1,008,414	117,644

Single extra State half tubs, 25c.; choice lines, 21@23c.; State, full dairies, special, 19c.; other, 16@18c.; firkin dairies, fair to prime, 15@18c.; Welsh dairies, fine full, 16@17c.; fair to prime do., 10@21c.; choice Welsh, 18@19c.; fair to prime, 12@17c.; choice creamery 25c.; best western creamery, 28c.; other, 19@24c.; early packed creamery, 17@19c.; poor State, 8@11c.; Western dairy, fine fresh, 17@18c.; fair to good, 10@15c.; factory, ladle packed, 15@16c.; good, 13@14c.; other, 7@9c.; rolls, 10@15c.; grease 4@5c.

Receipts for week, 24,6 3 pkgs.

Exports for week, 5,586 firkins.

BEESWAX.—The market is having a moderate degree of activity, and is quoted at 24@25c. for Western and Southern.

BROOM CORN.—There are full supplies and demand slack.

Brush and short broom, choice, ₩ lb., 5@5½c.; do. common to good, 3½@4½c.; hurl, good to choice, 3½@4½c.; do. common to fair, 3@3½c.; and crooked, 2@3c.

COTTON—There has been a very dull market through the week and prices showing only slight change. Closing prices are for March at 9.71@9.72c.; April at 9.86c.; May at 9.98c.; June at 10.12@10.13c.; July at 10.23@10.24c.; August at 10 31@10,32c.; September at 10.13@10.15c.; October at 9.92@9.95.

Quotations for spot cotton are based on American standard of classification, and on cotton in store running in quality not more than half a grade above or below the grade quoted:

	Uplands.	*N. Orleans.*	*Texas,*
Ordinary	7¾	8	8
Strict ordinary	8 5-16	8 7-16	8 7-16
Good ordinary	8 13-16	8 15-16	8 15-16
Strict good do.	9¼	9¼	9¼
Low middling	9¾	9¾	9¾
Strict low middling	9 9-16	9 11-16	9 11-16
Middling	9¾	9¾	9¾
Good middling	10¼	10¼	10¼
Strict good middling	10¾	10¾	10¾
Middling Fair	11 3-16	11 5-16	11 5-16
Fair	12	12⅛	12¼

STAINED.

Good ordinary....8	Low Middling....9
Strict good ordinary... 8⅝	Middling....9⅝

CHEESE.—Exports for the week, 47,891 boxes; showing a very steady, fair movement. There has been nothing new, holders views as to prices generally steady, with most demand for the low and fine grades.

Quotations at 9@9¾c. for fancy; 8¼@8¾c. for fine lots; 7¾@8c. for good; 3@5c. for skimmed; 5¼@6¾c. for half skimmed: State, farm dairy at 8@8¾c. for fine; 7@7¾c. for good to prime. Wisconsin factory, fine and fancy, at 8¾@9c.; do. good to prime, at 7¾@8¾c. Western factory, fine 8c.; good and prime, 6¾@7¾c.; do. full skimmed, 3@5c.

Cable rate, 48s.

Steam to Liverpool, 40@42s. 6d.

Estimated stock in this city, 130,000 boxes.

Comparative receipts and exports past three years:

	Receipts, pkgs.	Exports, lbs.
June 1, '78 to March 1, '79	2,813,048	121,222,989
" 1, '77 " " 1, '78	2,270,386	93,334,133
" 1, '76 " " 1, '77	1,908,871	80,970,675

DRIED FRUITS.—In apples the exporters have been free buyers and have paid up to 3⅞@4c. for the best of the quarters; evaporated and choice sliced stock are having a fair local trade, and rule steady in price. Peeled peaches have a good jobbing demand. Small fruits are quiet.

State pinms, 14c.; Blackberries are quoted at 5c. Peaches—Peeled Georgia, @7c. for poor; 8@9c. for fair to good; 10c. for prime; choice North Carolina, 12@13c.; good do., @10c.; unpeeled halves, 3½c. quarters, 3c. Pitted cherries, 20c. Apples—New, 2@2½c. for southern quarters in bags; 3½@4c. for prime sliced; do., fair at 3@3½c.; State at 3½@4c. for new sliced; and 3½@4c. for new quarters; Western at 3@4c. for new quarters. Raspberries, 26c. Apples, evaporated, fancy at 10@11½c.; do. fair lots, 7½@8½c.

EGGS.—Receipts for week, 12,033 bbls.; do. last week, 9,552 do. Supplies are steadily increasing. There is a fair business; buyers, however, regardless of the Lenten season, dispute all attempts at stronger prices. Rates at the close extreme.

Near points, 18c.; State, Penn., Western and Southern, fresh, 17@17½c.; poor, 15@16c.

FURS AND SKINS.—Market here not materially varied under the late report of London sales, as shippers have been kept well advised of the foreign situations. At the Hudson Bay Co.'s sale, since our last, otter advanced 30@50 ₩ cent.; red fox, 25 do.; cross do., 40 do.; silver do., 20 do.; white, 100 do.; skunk, 40 do.; bear, 20 do.; marten and lynx, 10 do.; Wolf declined 10 per cent., all compared with last March. Mink equalled last September. Beaver sold 10 per cent. lower than in January.

FLOUR.—The market does not show much vitality, the supplies being liberal and full offerings to sell while trade drags.

Latest prices are $3.40@3.75 for inferior to strictly fancy superfine State; $3.70@4.00 for very poor to good extra do., odd lots and lines; $4.00@4.25 for good to choice do., and fancy lots above this; $3.40@3.75 for inferior to fancy superfine Indiana, Iowa, Michigan, &c.; $3.70@4.00 for inferior to good shipping extra do. and $4.00@4.25 for good to choice extra do.; common to about choice white wheat extras, $4.25@5.35; choice to fancy do. at $5.35@5.15; red and amber winter wheat, very inferior to very choice trade and family, at $4.10@5.85 (fancy held higher); round hoop Ohio at $4.00@4.35, and trade and family brands of do. at $4.50@4.85, the latter rate for very choice (a few fancy lots held higher); St. Louis, $4.25@5.10 for very inferior to good extra; $5.10@6.00 for good to very choice (with a few very fancy brands in high favor with the jobbing trade), quoted up to $6.50@6.75; Minnesota clear, very inferior to strictly fancy, at $3.75@5.00; few brands going above $4.65@4.75; Minnesota "straight," inferior to very fancy at $4.10@6.00; and patent poor to strictly fancy at $5.25@5.25, few brands going above $7.50@7.75; unsound stock at from $2.25@5.25; city mill extra at $4,95@5.25 for West Indies (the latter rate for fancy in new packages); do. for England $5.35@6; do. trade and family extras, $5.25@6.25; do. for South America, $5.15@5.65 for fair to very choice; No. 2 at $2.40@3.25 for poor to very fancy, the latter an extreme.

FRESH FRUITS.—The market for apples continues strong, a good exportation helping to keep stock in limits. Exports for week, 6,200 bbls. Eastern apples range at $1 50@2 25, the latter rate for extra. Stored stock, Spitzenburg and Greenings, $2 25@2 62 bbl.; Russets, $2@2 25; Baldwins, $1 87@2 12; Tallman Sweets, $2@2 25. Cranberries hold late rates with a moderate supply and demand: made bbls., $7@8 50; crates, $2 25@3. Florida oranges sell when in good order; others drag: best, $3@4 half-barrel box; other, $1@2. Peanuts firm for choice; spring generally brings business. Va. hand-picked, $1 10@1 15; other, 85c.@$1; shelled, $4@5. Pecans, 6c.@8c. Hickory nuts out of date. Hot-house strawberries, $5 quart.

MAPLE SUGAR.—New Ohio sugar quoted 15@17c. as a novelty. These prices would not follow fair receipts.

GRAIN.—Wheat has been subjected to sharp speculative manipulation, and with a good deal of irregularity finally was firm. Sales of ungraded Nebraska spring at $1 02; rejected spring at 83½@84c.; No. 3 spring at 97c.; ungraded amber at $1 12@1 14; No. 2 amber at $1 15@1 15½; ungraded red at $1 02@1 13½; No. 2 red at $1 15½@1 17; No. 3 red at $1 11½; extra white at $1 14½; white State at $1 14½@1 15; No. 1 white at $1 13½@1 14½; ungraded white at $1 13@1 14; No. 2 March option, at $1 15@1 15½; do., April option, at $1 15½@1 15¾; No. 2 red March option, at $1 16@1 17; do., April option, $1 16¾@1 17¾; do., May option, at $1 17; No. 1 white, March option, at $1 14½; do., April option, at $1 15¼@1 15¾; do., May option, at $1 1?. There has been considerable excitement, owing to forged telegrams authorizing heavy sales of wheat at Chicago. The fraud was discovered timely enough to prevent serious interruption in New York transactions. Corn has been fairly active, closing at for New York No. 2 at 45¾@46c.; New York No. 2 old afloat at 46@46¾c.; steamer mixed, at 45¾@45¾c.; ungraded mixed at 45@45c.; New York No. 3 at 45@45¼c.; No. 2 white at 50@52c. for old; Jersey yellow at 46c.; Southern yellow, on dock, at 45¾c.; round yellow at 46@47c.; New York yellow at 47c.; steamer yellow at 44¾@45¾c.; New York old No. 2, March, at 46¾c.; New York No. 2, March, at 45¾c.; New York No. 2, April, at 46¾c.; New York No. 2, May, at 47¾@47¾c.; steamer mixed, March, at 45@45¾c.; do., April, at 45¾c.; do., May, at 45¾c. Oats have been active and well sustained in price; No. 2 Chicago, afloat, quoted at 34¾@35c.; New York No. 1 white at 35¾@37¾c.; New York No. 2 white at 34¾@35¾c.; York No. 3 white at 33¾c.; New York No. 1 at 34@35c.; New York No. 2 at 34¼@34¾c.; New York 3 at 33¾c.; rejected at 32¾c.; white Western at 34¼@35¾c.; mixed do. at 33¾c.; white State at 34¾@36c. Barley, state, 6-rowed, 75@82c.; do. 2-rowed, 65@72¾c.; Canadian, 80c.@$1.15.

HAY AND STRAW.—There are very fair receipts, but demand good and prices sustained.

Sales at 40@45c. for shipping, and 70@75c. for retail qualities. Straw quoted at 50@60c. for long rye, and 40@45c. for short rye, and oat at 40@45c.

Exports for week, 2,564 bales.

HOPS.—The most marked feature of the trade this week is the large falling off in the export demand, only 390 bales having cleared since our last report. This is the smallest week's business in this line since the last week in October. The arrivals from the interior, however, continue quite liberal, the same reaching nearly 1,400 this week. With the exception of a decline of ½c. per lb. in the price of low grades of Eastern and Western hops, our quotations remain unchanged.

Quotations are for New Yorks, new crop, choice, 10@14; New Yorks, new crop, medium, 7@9; New Yorks, new crop, low to fair, 5@6; Eastern, 6@10; Western, 6@10; Yearlings, 3@5; Olds, all growths, 2@3; Pacific coast, 10@15.

Comparative receipts and exports from Sept. 1 to March 1.

	Receipts. Bales.	Exports. Bales.
Sept. 1, '78, to March 1, '79	54 107	21,421
Sept. 1, '77, to March 1, '78	115,088	65,312
Sept. 1, '76, to March 1 '77	43,584	20,898
Sept. 1, '75, to March 1, '76	59,341	29,276
Sept. 1, '74, to Mnrch 1, '75	30,926	13,888
Sept. 1, '73, to March 1, '74	16,424	456

OIL CAKE.—Western is quoted at $27.50@28.

PROVISIONS—Have tended lower, with a slack demand. Mess pork quoted at $10.15 bid and $10.30 asked for new for March, and $10.15 bid and $10.30 asked for new for April, and May at $10.25 bid and 10.35 asked, and June at $10.30 bid and $10.45 asked. Bacon at 5c. for long clear and 5¾c. for short clear. Lard—Western steam at $6.65 for spot lots; $6,62½ for March; $6.65 for April; $6.70@6.72½ for May. Stearine at 6¾@6¾c. for Western. Tallow at 6 9-16c. for prime. Beef Hams at $18.00@18.50. Beef, extra India mess, $18@21, as to quality; packet, $11@11.50; plain mess, $9.50@10.25; extra mess at $10.50@11.50.

SEEDS.—Clover moderiely active at 6¾c. for prime Western and 6¾@6¾c. for choice do. Timothy quoted at $1.75@1.80.

TOBACCO.—There has not been much activity, but prices generally steady.

POULTRY AND GAME.—Supplies of dressed poultry have rather exceeded demand and much Western has sold low. Choice, bright near points bring 17c. Frozen poultry for spring use will not be a feature this season from present information. Heavy turkeys not wanted: eight and eleven pound do best. Ducks and geese quiet.

Turkeys, best, 15@17c., the latter for Pa. dry-picked; other, 13@15c.; chickens, best, 16@17c.; other, 10@12c.; fowls, choice, 14@15c.; capons, 22@23c.; slips, 18@20c.; ducks, best; 17@18c.; other, 13@15c.; geese, 9@12c.

Live poultry has arrived freely and prices are down. N. J. fowls, 10@11c.; Western, 9@10c.; Chicks and fowls, mixed, 8@10c.; roosters, 5@6c. Turkeys, 13@14c.; Ducks, 60c.@$1; N. J. Geese, $1.75@2; other, $1@.50 Pigeons, 35@40c.

Pigeons and wild ducks comprise the game list. Mo. pigeons, $1@1.15 doz.; Canvas back ducks, $1.25@1.75 pair, the latter for Havre de Grace.; Red-head, 75c.@$1; Mallard, 60@75c.; Black, 50c.; Teal, 40@45c.; common, 20@25c.

VEGETABLES.—Exports potatoes, for week, 2,895 bbls; of onions, 255 do. The demand has slackened during the past few days, new and stronger rates causing the lull. Holders, however, quote rates firm for all good stock. Norfolk kale is plenty at $1.50@1.75 ₩ bbl.; do. spinach, $3@3.50. Florida green peas brought $6 ₩ crate. Hot-house rhubarb has a good sale for restaurant use.

Hot-house rhubarb, ₩ 100, $3@8: radishes, $3; cucumbers, $2.50@3 ₩ doz.; mushrooms, ₩ lb., 50c.; lettuce, selected, 50@75c. ₩ doz.; poor, $2@3 ₩ bbl. Bermuda potatoes, $6.50@7 per bbl; Early Rose, Nova Scotia, $3@3.25; Eastern, $3@3.12; State, choice, at $2.50@2,62; fair to good, $2@2.25; Peach Blow, white, in bulk, $2.50@3; red, $2.25@2.75; Prolific, $2.25@2.75; Peerless, State, $2@2.25; in bulk, $2@2.12; Jackson white, $2@2 37; Mercer, $2.12@2.37; (outside rate per double heads). Sweet potatoes, Md. & Del., $2@2.37 Bermuda tomatoes, 25@30c. box. Onions, Eastern, white, ₩ bbl., $3@4. yellow, $3.50@3.75; red, $3.50@3.75; Chester, $3@3.50. Squash, Hubbard, $2.50@3.50; marrow, $2.50@2.75. Cabbages per 100, $6@7; R. turnips, per bbl., $1@1.25; beets, 75c.@$1; carrots, $1@1.12; celery, per doz. bunches, 50c.@$1.

WOOL.—There is a moderately active market only, and holders' views without important change. Quotations are for

Ohio, Pennsylvania and Virginia—XXX and picklock, 35@37½c.; XX, 33@35c.; X, 33@34c.; No. 1, 33@34c.; No. 2, 32@33c.; common, 29@30c.; combing, 34@39c.

New York, Michigan, Indiana and Wisconsin—XX, 28@32c.; X, 28@31c.; No. 1, 31@33c.; No. 2, 27@30c.; common, 25@26c.; combing and delaine, 33@37c.

Iowa, Vermont and Illinois—X and XX, 28@30c.; No. 1, 30@33c.; No. 2, 27@28c.; combing, 33@36c.

Missouri, Kentucky and Tennessee—Washed fleece, 30@33c.; unwashed fleece, 18@24c.; unwashed combing, 22@25c.

LIVE STOCK MARKETS

Saturday, Mar. 8, 1879.

BEEVES.—Receipts for the week, 10,391 head; do., last week, 9,083 do. The market has been in bad condition all the week; prices declined on Wednesday, and were again lower at the close. A number of car-loads were left over at the close. Picked steers only brought 9¾@10c. 56 lbs. dress; choice exporting stock, 9@9½c.; ordinary to decent steers, 7¾@8¾c. 55@56 lbs. dress.; a car-load of Texans, 8¼c., also one at 4¼c. live weight

COWS AND CALVES.—The market is quiet at the old nominal rates of $35@45. In the examination of 700 cows in the vicinity of this city during the week, no case of serious disease was discovered.

VEAL CALVES.—Large arrivals of live have weakened prices, but the demand is good, the police giving early attention to "Pobs" and have already carted several consignments away. N. J. and Bucks Co. milk, 6¾c.; heavy, 5@5¾c.; State, 6c; fed calves, 4@5c.; hog dressed, 8¾@9c.; others, choice, 5@7¾c.

SHEEP AND LAMBS.—Receipts for week, 18,788 head; do. last week, 19,138 do. Spring lambs are dull at $4@6.75 per head; no money for butchers at present rates and sizes; other lambs, 5¾@6¾c. per lb. Sheep quoted, with a light trade, at 5¾@6c. for Western; 5¼@5¾c. for N. J. and near by; ewes, 4¾@5¾c.

SWINE.—Receipts for week, 22,511 head; do. last week, 24,373 do. Demand weak. Late sales fat Western hogs, 197 lbs. average, $4.30 per 100.: country pork, light, 6@6¾c.; medium, 5¾@6c.; heavy, 5¾@5¾c.; Western hogs, 4¾@4¾c.; city, 5¾@5½c.

HORSFORD'S Bread Preparation
UNSURPASSED FOR MAKING
LIGHT BREAD
Biscuit, Rolls, Cake and Pastry.

It is Better and Healthier than ordinary Baking Powder, Cream Tartar or Yeast.

The cost of raising Bread, Biscuit, &c., with it is only about half as much as by ordinary Baking Powder, and the result is much better.

It restores the nutritious elements which are taken from the flour in bolting. No ordinary Baking Powder or anything else used for raising bread does this.

Universally used and recommended by prominent Physicians.

If you cannot get it of your Grocer send a three-cent stamp to the manufacturers for a sample.
Manufactured according to the directions of Prof. E. N. Horsford, by the Rumford Chemical Works Providence R. I.

GREAT OFFER FOR THIS MONTH
We will during THIS MONTH *dispose of* 100 PIANOS & ORGANS, at EXTRAORDINARY LOW prices for cash. PRICE, FULL RIGGED, $16.
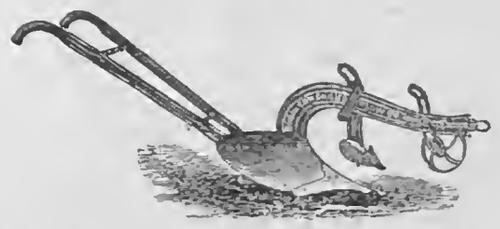
SAMPLE PLOWS DELIVERED FREE OF FREIGHT ON RECEIPT OF PRICE.



The Syracuse Chilled Plow Co.
have enlarged the capacity of their works *three-fold*, in order to supply the demand for the year 1879.
THEY MAKE THE
BEST CHILLED PLOW
THE WORLD HAS EVER SEEN.
IT IS LIGHTER OF DRAFT.
IT IS MORE PERFECT IN SHAPE.
IT IS MORE DURABLE.
IT CLEANS IN EVERY SOIL WHERE OTHER PLOWS FAIL.
NO PLOW SO WELL PREPARES THE SOIL FOR A CROP.
THE PECULIAR WAY IT PULVERIZES THE SOIL IS ONE OF ITS GREAT EXCELLENCIES OVER ANY OTHER PLOW.
IT IS MADE IN DIFFERENT STYLES—ONE HORSE, TWO-HORSE, OR THREE-HORSE.
Every Plow is Guaranteed under the Seal of the Company.

BEWARE OF COUNTERFEITS.
The reputation of the Syracuse Chilled Plow has induced unprincipled manufacturers to palm off on the farmers plows that they call *chilled*, which are, in fact, nothing but common plows, with the word "chilled" painted or branded thereon.
The SYRACUSE CHILLED PLOW has been made but two years and a half, and in that time
Nearly 35,000 Have Been Sold.
No other new style of Plow sold over Six Thousand in the same length of time.

TO THE SONS OF THE FARMER.—No. 3.

REV. A. W. MANGUM.

In justice to you I assume that you realize to some extent, the importance of selecting a special calling in life. Permit me to urge this matter upon you, as one involving your interest in every sense. If you have no definite object in view, your preparation will be uncertain, at the best; much valuable time will probably be lost; your aimless efforts may be misdirected and comparatively wasted; and your energies, without the inspiration of a worthy, commanding aim, will be apt to slumber or languish. Your vocation once calmly, clearly decided, your character immediately begins to put on a more distinct individuality. Your tastes, your habits, your conversation, your plans, your associations, are all influenced continually by your choice. Your mind thus fixed, you will be comparatively free from the danger of moving hither and thither in fitful undertakings and pitiable instability, and you will also be saved from that more disreputable fate of squandering your precious spring-time in fruitless dreams and enfeebling indolence. If you have not a worthy something to do, you are very apt to do nothing—or, rather, worse than nothing. So you must, as soon as you well can, choose your vocation.

Of course I do not advise you to be hasty or in any respect presumptuous in making your choice. In that great work you not only can afford, but duty requires, faithful deliberation. Let your first aim be to obtain all possible information of a useful character. Learn to care for your health. Do the daily duties that demand attention. Cultivate a habit of close observation. Get knowledge of all that you use and all the work you engage in. Strive to acquire skill in your occupation, whatever it may be. Make it your constant aim to be thorough in all that you do. Give careful notice to details—to little things. Do not be content to move along the beaten path, without inquiry and investigation. Ask questions till you learn what fellow-laborers know; and then study and seek till you know more than those around you. Store your mind in every legitimate way. It may be your destiny to remain on the farm; or it may be that some more public field awaits you. In either case, you will need muscle, intellect, stores of learning. Working on, watching ever, you may confidently expect the not distant day when duty, with the authority of the master and the gentle sweetness of the loving maid, will present to your eager mind the ideal of the vocation you should follow.

Though I repeat, I must urge you to consider that the work you do, the knowledge you acquire, while you are undecided as to your life-work, is in no sense, necessarily and absolutely lost to your future calling. Until the ultimate choice is made, be governed by immediate duties and aims. It is shown, by many facts and by most distinguished illustrations, that farm life in youth is peculiarly favorable to success in high literary professions. In both Europe and America, the loftier plane of letters, statesmanship and oratory has often been occupied by those who spent their early years in toil and seclusion on the country-farm. Indeed, is it not a matter of observation that the country excels the town in furnishing men who rise to eminence and maintain great influence through a long life?

Furthermore, in the frequent contact between the practical and the professional American life; in the intimate interdependence of various vocations; and in the accidents which are not uncommon to the most clearly defined and most scrupulously restricted professions; in these there is sufficient proof that a knowledge of those industrial exercises that are familiar to the farmer may not only be made auxiliary, but may become actually indispensable to the highest success in any even literary career. In my youth I worked on the farm and became well acquainted with those peculiarities about horses and harness and implements of labor that are known thoroughly by none but those who learn by such experience. In the immediate pursuit of my profession as a minister, I have had abundant need of the very information I got on the farm. Well do I remember one occasion, when, in discharging my duty as a minister, it became necessary for me to drive a pair of horses, one of which had been bought from a circus company, and had "ways that were dark, and tricks that were vain." My best skill in driving was demanded and expended; my profoundest philosophy as to horse-nature was called into play; my utmost ingenuity and all my means of mending were most studiously appropriated; and, finally, I was forced to what, in military parlance, might be called a *coup de main*, in order to escape without a ducking or a worse disaster from a cold, wide, deep stream. What my final resort was, I will not tell now; but I learned it on the farm, and, in after years, it proved a happy deliverance from my embarrassment.

But apart from the advantage that the practical knowledge obtained on the farm secures to the individual himself, it often renders him of special service to others. This may, and probably will be, the case in the ordinary relations of life and on the most common or the most unexpected occasions. It is a matter of history, how Louis Napoleon alighted from his splendid carriage and went to the relief of a poor market-woman whose cart was overturned in the environs of Paris. I knew a venerable and distinguished bishop of whom the following is told: One day, in traveling professionally, (while a fine-looking young minister) he came to a hill upon whose steep side a lone wagoner was vainly trying to make his team pull the heavy load. He drove his sulky by, and went on his way; but he was so affected by the wagoner's helpless difficulty, that he leaped down, hitched his horse, returned to the hill, and offered to relieve the stranger, if permitted to drive. He was soon in the saddle, with lines and whip in hand; and, talking in gentle and assuring tones to the horses, "gave the word," and easily drove them up the hill. The wagoner walked near him, looked at him with astonishment and admiration, and said: "Sir, you are dressed like a gentleman; you talk like a gentleman; you look like a gentleman; and I know you are a gentleman; but one thing is certain, you've *draw* a wagon before today." Was he not the more of a gentleman because he could drive? Certainly, his knowledge of the wagoner's skill enabled him, doubtless, with pleasure, to show the genuine impulse of the true gentleman.

TRIXIE'S FIRST TOOTH.

Trixie was being dressed for Sunday-school when she made an important discovery; one of her little white teeth was loose.

"Oh! I'm so glad!" she cried. "All the other girls had loose teeth a long time ago, and once Jennie Potter had one, and she was eating an apple, and her tooth came right out in the apple. How soon do you b'lieve I can have mine pulled, mamma? Will I have to go to the dentist?"

Her mother said it was not loose enough yet, but when the time came they would make every effort to find some one fitted to extract the tooth in a skillful manner.

Although she said this very gravely, Trixie had a suspicion that her mother was laughing at her; so when her sash was tied she hurried off to tell Ned. But that young gentleman had been through the tooth-pulling operation so many times that it had ceased to be a novelty, and he did not prove a very agreeable confidant. But Trixie did not mind. She was as proud as if the whole world rejoiced with her.

She felt of the wee tooth every other minute on their way to Sunday-school; but they were late, and in the bustle of getting seated, the pleasant lesson, the singing, and the fact that her teacher had a new hat with a lovely feather on it, Trixie forgot her new dignity, and was only reminded of it when her cousin, the librarian, brought the books to the Infant Class. He was a tall young man who was studying dentistry, and his small kinswoman naturally thought he would be interested in the communication she had to make.

As he was passing by she stood up and said, in a loud whisper, "Oh, Cousin Nelson, do you know I've got a loose tooth?"

"Have you?" asked the youth, blushing, and conscious that the young ladies in the next class had heard the question.

"Yes. This is it—this one right here," and as she spoke she opened her mouth to its widest extent, and moved the tooth backward and forward.

Cousin Nelson's face was scarlet as he heard a suppressed laugh from Miss Montgomery and a faint titter from Miss Carlisle, and he hastily retreated to his library, wishing that he could pull out every tooth Trixie possessed.

"Let's see," said the little girl who sat next her, so she displayed it again, but kept wondering why Cousin Nelson should hurry off so fast, not even giving her time to ask how soon he thought it might be pulled.

Every day of the following week Trixie tormented the family about her tooth, and when her father came home from the store Saturday afternoon she said, "Papa, I just know my tooth is loose enough now. I can't eat with a bit of comfort, and I wish you'd pull it out to-day."

Her father looked at it and said, "Well, puss, I think it is ready to come out;" so she wheeled the big arm-chair nearer the window, climbed into it, and watched him while he twisted some thread into a cord.

"Tell me when you're all ready, papa."

He finished twisting, passed the cord around the little tooth and tied it firmly; then he said, "Now, Miss Beatrice, everything is ready."

"Call in the boys, then," she replied with great dignity.

A few weeks before Ned had had a tooth extracted, and Trixie remembered that she had seen tears in his eyes. The fact that it was a large double tooth made no difference to her. The Starkweather boys were over playing with Ned this afternoon, and she would show them all how brave a girl could be. No tears should be seen in her eyes!

The boys came in, wondering somewhat at the invitation, but when they saw the little figure in the easy-chair they guessed the reason, for everyone in the neighborhood had heard of Trixie's tooth. So with many a chuckle they waited to "see the show." "I know Trix 'll holler!" whispered Ned.

But it wasn't much of a "show" after all; papa gave a jerk, and the little tooth was dangling on the cord.

"Is it truly out?" gasped Trixie.

"Truly"—and her father laughed as he cut the string and gave the tooth to her.

"What a cunning, little thing! I'm going to keep it always. And I didn't cry one bit, did I, papa?" she asked, with an exultant look at Ned.

"Not one bit. Now for the pay."

"How much will it be?"

"Twenty kisses"—which were promptly paid with accompanying hugs, much to the detriment of papa's collar and tie.

Trixie kept her tooth a long time, but one day her box of treasures upset, and the wee bit of ivory must have rolled down a crack, for she never could find it. She regretted this very much, as she "always meant to keep it for her grand children!" Alice P. Adams.

Los Angeles Co., Cal.

LETTERS FROM BOYS AND GIRLS.

Dear Uncle True:—Again I write, from Riverside, to the little cousins of the Rural. I wish this letter to be an early spring-time greeting to you all. The winter is over sooner here than where many of you live, and although, even in the month of April, we may have some cold rains, still all nature gives us tokens of the approach of spring; and we have early flowers in bloom, and are cheered by the songs of birds long before that time. This past week we have had a few bright and balmy days that seemed to whisper of the glad springtime; and I have heard a few bird notes, which sounded so new and sweet, that I concluded the little warbler must have learned them in a sunny clime, where he has been spending the winter and is now just returning to practice for spring mornings. This little bird sang as though he were glad to be back again, and I do not think he has been happier than we all are here, though he may have spent the last few months among the orange trees, and where flowers bloom the whole year round. I like to live where I can watch the seasons come and go; then we can better appreciate each. You know it is said, "spring would be but gloomy weather if we had nothing else but spring." The buds on the trees are swelling now, and ere long the pretty pink and white peach blossoms will beautify the landscape. The air will be sweet with the perfume of the early hyacinths, "the crocuses will put up their little heads, and the pink spires peep from their chilly beds." Even now the violets are looking with their sweet blue eyes from the winter covering of leaves, and seem to say, "We need your protection no longer, for the spring time is coming." Here and there the green grass is covering the bare, brown earth, and making ready a rich feast for the little lambs. Are you, little cousins, getting ready for the spring time? Have you learned anything new during the long, dull winter, when you were housed up by the fires? Like the little birds, have you tuned your throats to sing glad songs, when the spring comes indeed? Songs of praise to Him, who giveth us all our days; whose mercy hath been over us all through the winter, and who hath promised to be with us *always*? Let us not forget that His loving hand sends us the spring; and shall we be less grateful than the birds, which sing for a few months only, while our songs may echo through a long eternity?

I thank you for giving space to my last letter. Sometime I will be glad to write you a letter to fill up a blank that may otherwise occur. Thus, would I ever like to fill up the blank spaces in the lives of those I love, so that, when I am gone, they may note my absence and think a shadow has fallen across their way. With many good wishes for you all, I remain, Cousin Emsie.

"Riverside," N. C.

Dear Editor and Cousins:—I live on a farm in Illinois. We keep four cows, one pig, and one horse, and have two canaries, which sing beautifully while hanging in the window among the flowers. My brother and I do chores, study at home, knit, sew and draw. I am nine years of age. We are now waiting for spring, so we can begin to garden. I noticed a letter from a Swiss boy, in which he told how they farm in Switzerland. His letters are very interesting. I wonder what has become of Young Tom, we have heard nothing from him lately. I would like to know if he takes the Rural. Such letters as those of Barney Blackstone, Solomon Sap and Slayerofconceit used to write are precious, but scarce. Ivy says Rural Lover is entirely wrong about the girls driving the boys from the field. I think Ivy is right and Rural Lover's sympathy uncalled for. I would like to have all of the boys and girls write more; it would be more interesting and would be more like past times. Uncle Mark tells how to catch tigers, that is a pretty good plan, I should think. We have caught quite a number of rabbits this winter, in traps so contrived that they do not hurt the animals. We have had sleighing about all winter, and the snow is still falling fast. Bob White.

Winnebago Co., Ill.

P. S.—Mr. Editor: Will you please inform me, through the Rural, where I can get a few cuttings of the best kinds of basket willows. My grandpa proposes to give me a piece of land to plant them, so I may have some willow cuttings when I become a man and able to use them.

[From any nursery nearest you. Uncle Mark.]

Dear Uncle Mark: I accept the kind offer you made the Rural cousins to write about their pets. For two years past I had a pair of tame raccoons, which I named Jim and Betsy. They were very playful and would not bite. I sold them this winter and with the money bought a Leicester ewe lamb, the profits of which, like Mrs. Purdy's Parquisites of Rural of Nov. 16th, shall be my "Parquisites" with which to take the Rural for myself. My Christmas presents consisted of a set of double-plated spoons and a butter-knife; they take the "shine" all of mamma's real silver. If any of the girls would like to see them, they will please invite me to their wedding, I will then bring them along to grace the table. Our teacher gives me fifty cents for the use of my Cricket clock this winter; it looks well in the school-room and gains many friends by always telling the truth.

Tuscola Co., Mich. Mary E. Wright.

"More Mortar."—Parrots very soon learn to repeat words and sentences that they frequently hear, thereby often giving rise to laughable jokes. The following story is told of a parrot:

Opposite his owner's residence there were some buildings in course of erection, and the men at the top of the scaffold were in the habit of calling to those below for such material as they wanted,—"More brick," "More mortar," and so on.

"In a very short time, Polly had these terms by heart, as well as the gruff tones in which they were uttered. No sooner did the Irish laborer relieve himself of a load, than the everlasting cry, "More mortar!" assailed his ears.

He bore it with exemplary patience till the mortar board at the top of the scaffold was piled up; but once more the order for "Mortar—more mortar!" was given.

Then, to the delight of the parrot's master, who was standing by, the Irishman flung down his hod, and making a speaking-trumpet of his hands, bawled to the bricklayer above, "Is it mor-r-tar-mad that ye are? Sure a man may have as many legs as a centerpig [centipede] to wait on the likes o' yes!"

Sabbath Reading.

EDIFYING PRAYERS.

Preaching is one thing and prayer is quite another. An address in a prayer-meeting is one thing and a prayer there is another. Sermons and addresses are for instruction and exhortation; the soul of prayer is adoration, praise including thankfulness, and petition. Sermons and addresses are addressed to men, prayer to God. A preaching prayer is neither one thing nor the other; is of very doubtful profit to men and not acceptable to God. Men are indeed to pray in public assemblies to the edification of those who listen, but that does not mean that they are to preach to them through the supplications. The listener is edified by the prayer that leads him to adoration, to praise, to pour out his wants before the throne of grace. If the prayer is delivered to men the hearer is led to look to the arm of flesh, and is not lifted out of his worldliness; but if the prayer is addressed to God the hearer is lifted up to communion with the high and holy One, and is inexpressibly benefitted by it.

Very sweet and precious to God is the adoration and praise and petition of His creatures. How He pleads for such offerings! What infinite pathos in the yearning of the great heart of love as expressed in His invitations! When He chides men for neglect to praise Him, to acknowledge His mercies, to cast their care upon Him, what tender, affectionate grief the language seems to convey! God speaks as though His heart had been wounded, as though the expectations of his love had been disappointed. It is not much one can say on such a theme beyond what was said a moment ago, that the praises and petitions of His creatures are very sweet and precious to God. Whoever bears such tribute to His throne receives a blessing words cannot carry, and whoever leads others in the sanctuary or prayer-meeting to bring such offerings leads them to an action, and disposition, and relation, that is heaven begun below. Such prayers edify; open the eyes of the soul to a region of beauty and glory like that of Paradise, a region perhaps never seen and therefore never known before, but never thereafter to be forgotten. May the Holy Spirit help us to pray!—*Christian Intelligencer.*

THE VICE OF COMPARISON,

One of the commonest and worst of the vices is the vice of comparison. There is good authority for saying that those who measure themselves by themselves and compare themselves among themselves are not wise. The Pharisee who went up into the temple to pray fell into this snare, "God, I thank thee that I am not *as other men are.*" That is the language of spiritual pride and of censoriousness. Thinking in this strain he is sure to paint others as black as he can in order that he may show himself to the better advantage on this background. It would have been well to thank God for not being suffered to fall into grievous sin; but the comparison between himself and other men was sure to bring with it many harsh judgments and many hateful passions. Such a comparison, moreover, puts the true standard of character out of sight; for that is the law that demands perfection. God's requirement is not, "Be ye good as other men:" it is, "Be ye perfect, even as your Father in heaven is perfect."

Besides, such a comparison is very likely to be unjust. How do you know that you are better than "this publican," Sir Pharisee? Perhaps his life may outwardly seem worse than yours; but it may be that he, though vicious and unprincipled and degraded in the eyes of men, is a better man than you are in the sight of God. It may be that he has been crippled from infancy with a heritage of bad passions. It may be that he was born with an organization that inclined him to indulgence. It may be that his environment from his earliest life has been evil. And it may be that against all these hindrances he has striven bravely—far more bravely than you have ever striven; and though his achievements, so far as man can see, have not been remarkable, God may credit this man, who has lived a bad life, with more real moral heroism than you have ever shown. You had better not thank God that you are better than other men, for God knows both you and them; and He may know that they are better than you.—*Sunday Afternoon.*

SELF RELIANCE.

Men must be taught self-reliance. They must also be taught to look to God for help, and to rely on his helping them. Both should go together. We think we have discovered a tendency in the prevailing teaching at Reform Club meetings to altogether ignore the gospel of self-reliance, manhood and courageous self-preservation, while properly exalting the gospel of hope in Christ and reliance on God. No person is in the way of overcoming any evil habit, or any sinful practice, so long as he is made to feel that he is wholly given over to the care of another party. In his thought, the other party at once becomes responsible for his conduct. If he fails, it is his misfortune, but the other party's blame. Teaching men that they are weak, only confirms them in weakness. Teach them that they may be strong through the grace of God and the exercise of the faculties that he has given them, and they have already passed the Red Sea walls and are advancing towards the promised land of redemption.—*Morning Star.*

PERSONAL ITEMS.

Miss Chloe Lankton of New Hartford, Conn., has just completed the collection of one million cancelled postage stamps. She began in October last, a gentleman in Philadelphia having offered her $200 if she would get the stamps for him, the money to be used in getting for her a life residence in a home for the friendless.

Frederick Stumpf and Henry Voullaire, St. Louis lawyers, were deformed cripples and their common misfortune led them to close intimacy. Voullaire died, and Stumpf, prostrated by grief, took to his bed, and remained there until his death, a few days ago. Stumpf had heart disease, but the doctors say that he would not probably have died for years if Voullaire's demise had not affected him.

Bonanza Mackay doesn't look 45. He resides at Virginia City eight months in the year, and is in his mine, where the temperature is from 60 to 100 degrees, almost every day. Mrs. Mackay and his two sons—he has no daughter—are in Paris. She likes Paris and France, but her husband prefers London and England. Mr. Mackay is a man of pleasant aspect and genial manners. His mine is the perfection of good order and propriety.

Prince Bismarck is a great eater, but he cannot be called a delicate or scientific diner. Beer, champagne, turtle soup, boar's head, and a mess of mustard and raspberry jelly formed only a part of a repast in a day when he was recovering from a slight illness. He could, at one time, dispose of eleven hard-boiled eggs at a sitting. He is fond of middle-sized trout. Besides his favorite drink—porter mixed with champagne—he strongly recommends another compound, said to be the invention of Field Marshal Moltke, consisting of hot tea, sherry and champagne. He enjoys good mutton, but he has little appetite for fillets of beef or beef in general.

Mr. Thomas C. Doremus, who died in this city, last week, at the age of eighty-three, will be best remembered for the interest and practical help that he extended to many movements of a religious or philanthropic character. For forty years he was a director of the American Tract Society. He was one of the founders of the Sabbath Committee. Together with his wife, who died two years ago, he was especially interested in missions in this city and throughout the world. His home in New York was the stopping-place of missionaries, going or returning from their fields of labor, and few deaths could create deeper regret in religious circles. Among business men here he was widely known and respected.

Lord Beaconsfield to strangers is an amiable old gentleman, who converses with a languid interest about music and painting, with some animation about turnips and cattle, and with no fire at all, but rather a demure composure, about politics and the spread of Roman Catholicism in England. He has a loud, grating voice, which only grows tuneful when he is warmed. He likes flowers, perfumes and fruit. He eats a great deal of champagne jelly, and drinks a great deal of black coffee. He never smokes. He dresses to perfection knowing exactly what style of clothes best suits him. Into newspapers he hardly ever dips. Sometimes when sitting alone he rests his head on his hand and gazes into the fire or out of the window. No man can boast that he has obtained a glimpse of "the Sphinx's" true mind.

Real Estate.

Don't go WEST. 250 Eastern Md. Farms. Low prices; easy terms; convenient to R. R. & Steamers. Catalogues. J. C. PLUMMER, Cambridge, Md.

KANSAS FARMS AND FREE HOMES.

HOW TO GET THEM in the best part of the state. 6,000,000 acres for sale. For free copy of "Kansas Pacific Homestead," address Land Commissioner, Salina, Kansas.

Wit and Humor.

"THE Sioux are not contagious," said an old frontiersman. "What do you mean?" asked a bystander. "I mean that they are hard to catch," was they reply.

"ODER alms!" cried a servant girl, who was being courted by a member of the militia, as she passed out to a begging tramp a dish of fried onions.—*Wheeling Leader.*

THE farmer should sow his P's, keep his U's warm, hive his B's, kill off the J's, remember what he C's, take care of the V's, pay all he O's teach his wife not to T's, and take his E's.

ADOLPHE to Armida, on their way to Church: "How I would I were the prayer-book you clasp so lovingly." Reply—"How I would you were, for then I could shut you up."

IT is said that nine Cheyenne squaws recently captured have arms.—*Exchange.* And legs, too, no doubt—though they couldn't have made good use of them.—*Norr Herald.*

"WHEN I sleep 'neath the daisies" is the title of a new piece of music. It has not become popular yet, as the weather is too cool for so light a covering.—*St. Louis Spirit.*

BISHOP SIMPSON confesses that he used to be so timid that he would walk around the square to avoid meeting a young lady. That's nothing unusual when it isn't the right young lady.

"AND Moses was an austere man," read the minister from the Bible; "Dar now, you dun hear dat, Sam? De Scriptures say Moses was an oysterman, and you dun flung at me dat sellin' oysters wasn't a 'spectable bizziness. If it is good enough for Moses, it's 'spectable enough for me."

IT was a very honest old Dutch judge in Schoharie county who listened for several hours to the arguments of counsel and then said: "Dis case has been ferry ably argued on both sides, and dere have peen some ferry niee points of law brought up. I shall dake dree days to gonsider these points. But I shall eventually decide for de blaintiff."

THE Keokuk *Constitution* has about "sized" the weather in the following: "The gentle snowdrops came eoyly dowu this morning, and felt the damask cheek of the perambulating reporter as softly and tenderly as the toueh of the taper, velvety finger of a fairy—eh—er—ah—er—hitch up the mule and pull us out; stuck, by jingo.

THE reverend gentleman was visiting at the house of one of his lady parishioners, when the little girl said, "Mr. ——, can you see two ways at once, and is you got honey or sugar in one side of your face?" "Why, what do you mean?" asked he. "Why, ma says you've always got the eye in the sweet side of your face on her in church." Later in the day the abomination of desolation seemed to have settled in that child's heart.—*Yonkers Gazette.*

Not Symptoms, but the Disease.

It would seem to be a truth appreciable by all, and especially by professors of the healing art, that to remove the disease, not to alleviate its symptoms, should be the chief aim of medication. Yet in how many instances do we see this truth admitted in theory, ignored in practice. The reason that Hostetter's Stomach Bitters is successful in so many cases, with which remedies previously tried were inadequate to cope, is attributable to the fact that it is a medicine which reaches and removes the causes of the various maladies to which it is adapted. Indigestion, fever and ague, liver complaint, gout, rheumatism, disorders of the bowels, urinary affections and other maladies are not palliated merely, but rooted out by it. It goes to the fountain head. It is really, not nominally, a radical remedy, and it endows the system with an amount of vigor which is its best protection against disease.

MAPLE-SUGAR MAKING.

W. I. CHAMBERLAIN.

Improved Method and Appliances of the Present.

These we shall notice first, briefly, in a historical way, and then more at length by way of description.

It was a stroke of genuine genius that hung the bucket on the spout. Genius discovers obvious things never before discovered; things so obvious that when pointed out, we all say, "Why didn't we think of that before?" So here; we hunted for stones and chunks to block up our buckets or troughs, made long "spiles" to reach to them, saw the wind blow the sap *out*, and leaves and dirt *in*, or tip the bucket over; bent our backs to lift the sap and empty it; and boiled away hundreds of barrels of rain and snow-water colored with dirt and insects; and at last concluded to hang the bucket on the spout and cover it tight. We saw the wooden buckets and spouts sour the sap for years, and then learned to use metal for both.

For years we set our store troughs on a level with our arch; rolled the barrels of sap up long skids to empty, and dipped the sap by hand into the kettles or pans, and from one to the other; and then built on a slope, and let the sap *run down hill* from the gathering cask into vats and boilers, with never a pound to be lifted (See Fig. 5.); and wondered we hadn't thought of that before.

We may proceed at once to a description of apparatus and methods now used by the best sugar makers of Vermont, New York and Ohio. And we shall try to make our descriptions and directions so clear by the aid of engravings that any one may equip and run a "bush" by following them. When opinions differ on details, I simply give my own, based on the careful observation, travel, correspondence, reading, and actual working experience of many years. Some of the appliances are patented. I give my opinions of such exactly and clearly. I have no axe to grind, no pecuniary interest in their introduction.

The Sap Buckets

(See Fig 4.) are of "I. X." or "one cross" tin, cylindrical in form (not flaring) and are of three sizes, so graded as to fit into each other and form a set or "nest" of three, which is as convenient for handling, and as compact for storing as a single bucket of the largest size. The depth of each is nine inches. The circumferences are 34, 32½ and 30 inches respectively, and the capacities are 15, 13½ and 11 quarts. The three buckets require two sheets of 10x10-inch tin, and eight sheets of 10x14-inch. For the sides of each bucket take two whole 10 x 14-inch sheets, and a piece besides. This piece in the largest size is 7½ inches wide, and six inches in the medium bucket. These two pieces are made from the seventh sheet of 10 x 14-inch tin; six sheets having been, as above said, used whole in the sides of the three buckets. The piece in the smallest bucket is 3½ inches wide and is cut from the 8th sheet of 10x14-tin. This leaves a piece 10x10½ inches, and this and the two 10x10-inch sheets form the three bottoms. A ⅝-inch hole is punched just below the rim of each bucket, to slip over the notch in the spout or "spile,' and hang the bucket against the side of the tree (See Fig. 11). Thus hung the bucket can be covered *tight*. The best place for this hole is the middle (horizontally) of the piece (See Fig. 4), as the seams strengthen that part more, and keep it from bending when it hangs full. These buckets are not patented. Any tinner can make patterns from the above description and cuts, and manufacture them. This form of buckets has the following advantages over the conical form: the three sizes adapt them to the different running capacities of large and small trees; if properly distributed, they are worth as much as if all were of the largest size and cost much less and store better. Again, they do not *stick together*, or rust in storing, in "nests" as conical ones will, if packed into one another. They also hang firmer against the tree. There is also much less waste of tin in making them, than in making conical ones. They should be soldered at every seam, inside and out, and never painted *inside*, as that makes them rougher and more liable to sour. After a few years a coat of paint outside will help preserve them. Sap will not rust the inside, and the buckets will last 30 years or more. I still have some my father bought 37 years ago. I consider tin better than wood, as it is lighter, smoother, and hence more easily kept clean and free from sourness, and they do not shrink and require hooping, soaking, or repairing, like wood, when you are in haste to tap. Some excellent Vermont makers, however, use cedar buckets, painted.

FIG. 3.—OLD-FASHIONED SAP-BOILING.

The Spouts.

The best spout I know of is the "Eureka No. 2." (See Fig. 4½). Indeed, except in one point, easily remedied, and which I shall presently mention, I cannot conceive how a more perfect spout can be made. It is of malleable iron, cast and galvanized, and is exceedingly durable. Most of the other spouts are very perishable. It enters the hole in the tree, not like most other spouts, in form of a conical, hollow plug to stop the best running pores for the half inch of wood nearest the bark; but in form of three "flanges" which stop almost no pores, and when driven tight, hold the curved portion of the spout up against the bark (rossed smooth), and prevent leakage. The sap is not dammed back in the hole in the tree to sour, or conveyed through a long, hollow tube with the same result, but all runs out *clean* from the tree through a hole at the bottom side of the spout, and is conducted through a short, smooth, *open* channel into the pail. This channel seldom sours, and then is easily cleaned with a small brush or swab, without removing the spout from the tree. Freeness from souring is to me the most valuable of the many good qualities of this spout, for "strictly prime" sirup can never be made from sap the least soured. For nine years I have used the "Eureka" side by side with every kind of spout, wooden and metallic, home-made or offered for sale, and know it to be in this, and indeed in all respects, decidedly the best.

The Covers.

The buckets should *always be covered*. This, in proportion to the cost, is the greatest improvement of all. Covers exclude rain, snow, dirt, insects, etc., and help to keep the sap from freezing hard on cold nights, and shade it and help to prevent its souring on warm days. Excluding rain and snow is the main point, however. In a "camp" of 1,000 trees, it will save, during an average Ohio season the boiling of about a hundred barrels of rain water, stained dark by trickling down the limbs and bodies of the trees. Sap thus watered will make dark-colored, poor-flavored sirup. Thus the covers not only save much labor, but greatly improve the quality of the sugar or sirup. They are best made of inch lumber a foot wide, planed and painted on both sides while long boards, and then, when dry, cut up into lengths of 12 inches each. It is a great help in gathering to have the covers painted different colors on their opposite sides; for example, all red on one side and all white on the other. Then, in tapping, all are placed, say, red side up, and at each subsequent gathering, each is reversed as its sap is gathered. This saves confusion when two or three men are gathering, prevents missing any

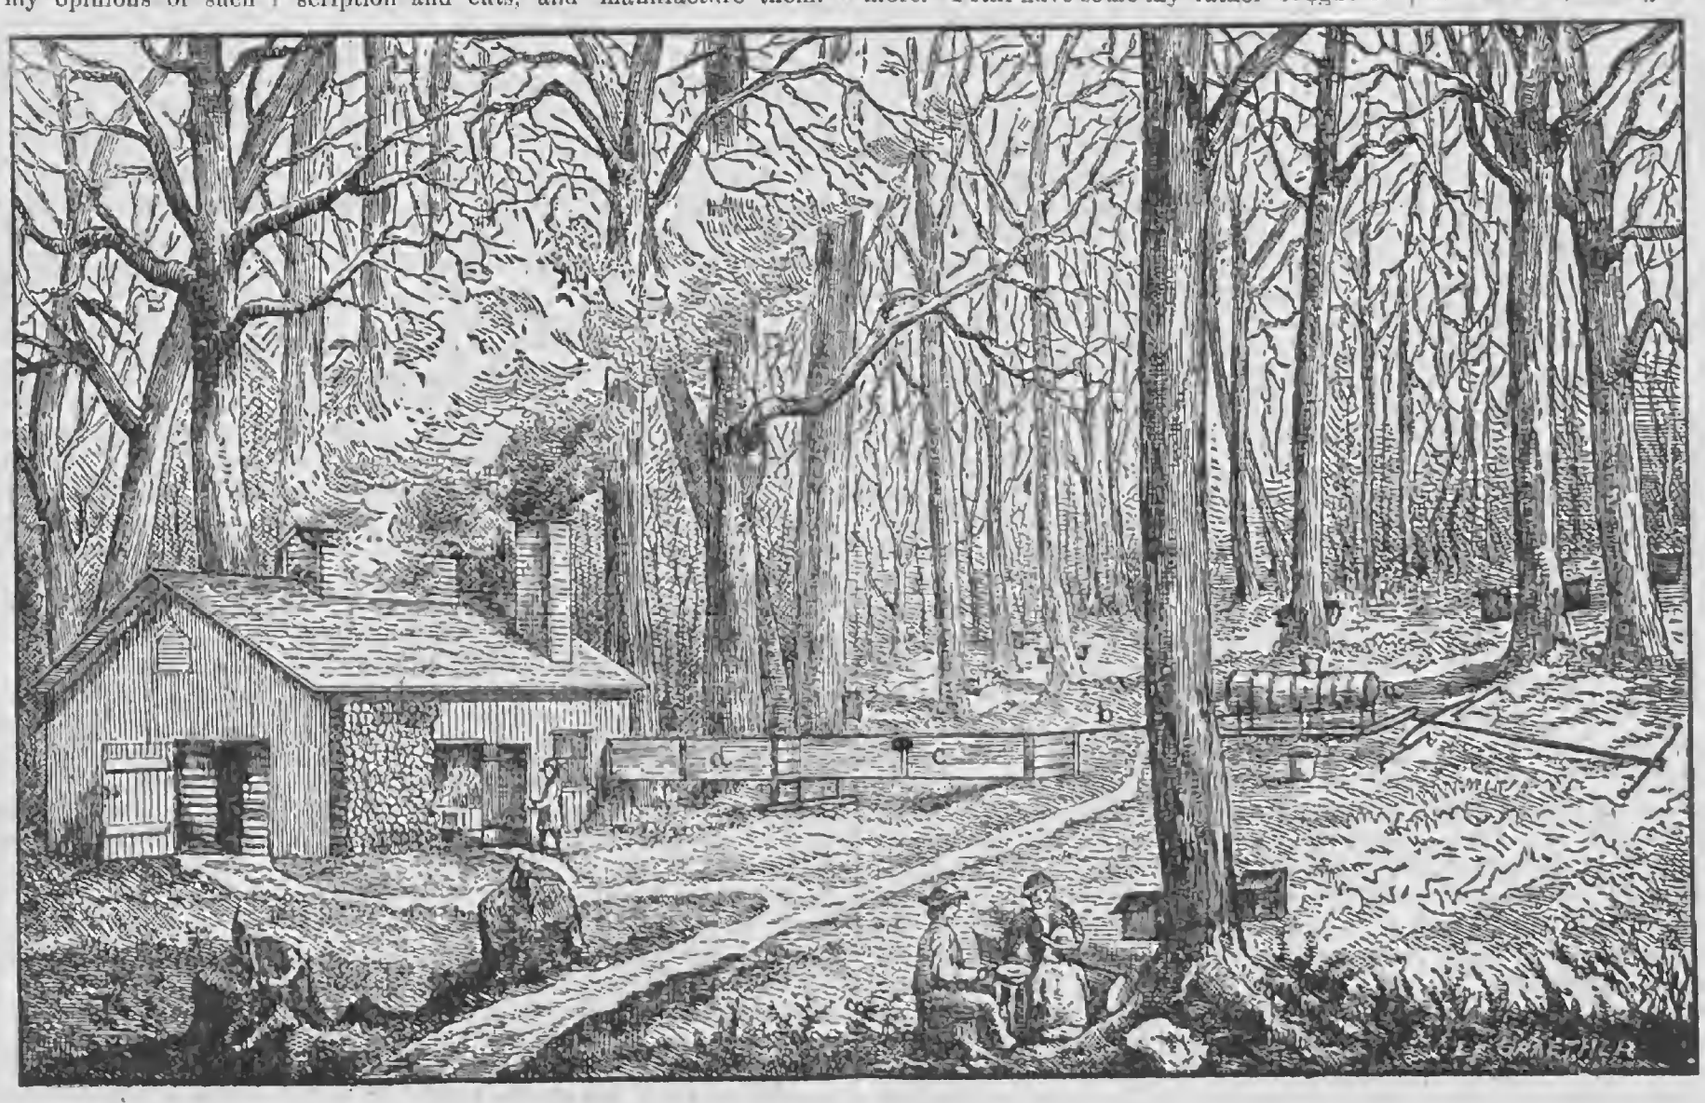

FIGURE 5.

sap, or running to a tree in doubt. You can tell as far as you can see the color of the cover, whether the sap in any bucket has been taken. If you forget to reverse, you make a trip for nothing, and a boy of average laziness will soon quit that business, and remember to reverse. It takes no extra time, and the covers warp less if reversed. This idea or device (different colors) occurred to the writer about eight years ago. He adopted it at once to great advantage in his own large camp, and patented it *by publishing it far and wide!* Many sugar makers now use it with great satisfaction and advantage.

A bit of history here will be instructive. Vermont sugar makers were in the habit of driving a sharp, open, half-cylindrical spout *into the soft bark* just below the bit-hole in the tree. This was not firm enough to hold the pail of sap, and so a *nail* or *spike* was driven into the tree just below the spout, and ears fastened to the buckets to hang them to this nail. Post's Eureka, No. 1 (See Fig. 4½), was a great improvement on this. It entered the hole and was held there by three flanges which did not stop the pores, as said above. It let the sap out through a small hole in the spout and prevented the wind from drying up the pores of the tree. But instead of hanging the bucket *on* the *spout* on notches (See Fig. 4½, No. 2) made to hold it, he attached a wire hook to

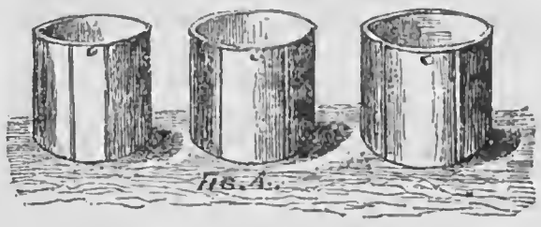

FIG. 4.

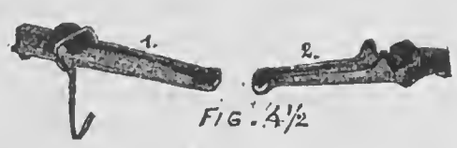

FIG. 4½

FIG. 7.

each spout, (See Fig. 4½, No. 1,) and hung the bucket as if on a nail two inches below. Then a cover could not be laid on the bucket, for that would exclude the sap (See Fig. 13, b), and so he invented a *tin cover* with a hook to fasten above the spout, and slant to the outer edge, as shown in the advertising columns of the RURAL. But this does not exclude insects, flying snow, frost and sun heat, which a two-cent wooden cover laid flat on top of the bucket (the No. 2 spout entering below the bucket rim) would accomplish. With hook and spout and tin cover one cannot revolve the bucket on the spout, as in Fig. 14, and empty it with unbent back, but must laboriously take the bucket from the tree to empty it, into the gathering pail standing on the ground. Of course, the inventor and maker will furnish hooks and patent covers as long as they are called for; but he would doubtless be quite as willing to furnish spouts without the hook at the same price. Most of the best improvements in fixtures and methods originated in Vermont. The patent evaporators (Fig. 6) and the mode of hanging the bucket on a notched spout by a hole punched just below the rim, and then covering the bucket *tight* with a square wooden cover (See Fig. 11), belong to the West. And our Vermont friends will allow us to poke a little good-natured fun at them on this point. We do not claim to "know it all," but their modes of hanging and covering buckets remind us of the well known "wheat in one end of the bag and stone in the other, to balance it on the horse;" or of the Chinese tailor who made the pantaloons for the missionary, as desired, "just like the old pair" sent for a pattern, *not omitting the big patches in the seat!* One of their best sugar-makers lately writes of the "*nails* to hang the buckets on!" We feel like saying: "Throw away your nails and hooks and rings and bucket ears; use No. 2 instead of No. 1 Eureka, and hang and cover your buckets sensibly!" The sugar industry is, on the whole, in a more advanced stage in Vermont than here, but truly in some points they are as slow to learn as we are in others. Having had our laugh at them for following in this "rut," we are ready to take good-naturedly from them a retort on some "rut" we doubtless are unconsciously following.

The Sugar-House; Location, Fixtures, Etc.

It should stand at the foot of a slope (See Fig. 5) so that the sap will run from a faucet in the rear of the gathering cask (a, Fig. 5) through a tin conductor (b, Fig. 5. See also the funnel end of the same enlarged in Fig. 7) into the store-troughs c, and d, (Fig. 5), and thence into the heater and evaporator, as shown in Fig. 6. In Ohio the slopes are usually gradual, and it is better to place the store-troughs as in Fig. 5, to gain hight for the gathering-cask to empty. The weather here, too, is so warm that it is best to store sap out-doors, so that the heat in the house may not sour it. In most parts of Vermont the danger is from freezing at night; and large "store-tubs" usually stand on a platform inside the sugar-house. The hills there are so steep that the sap can be run into these tubs easily. When store-troughs stand out-of-doors, each should have a tight, movable board cover to protect its contents from rain and snow, souring and freezing. The troughs may be connected by siphons.

The sugar-house itself needs little description besides that conveyed by Figs. 5 and 6. It should have doors or windows on all sides if possible, to be open or shut according to wind and temperature; also a good ventilator in the roof (See Fig. 5) to allow the huge volume of steam to escape. Doors and windows to the windward should be kept closed, as a cool or indeed any wind retards evaporation. A good shed adjoining and full of fine, dry wood, is essential. Unsalable wood will do if fine and thoroughly dry. Soft wood is quite as good as hard. Pine, hemlock, white-wood, bass-wood, soft and hard maple, ash, beech, hickory, is about the order of excellence. It is the flame that does the business. It may seem strange, but three-foot wood (*fine and dry* once more!) will keep an evaporator, 4x15 feet in size, in a perfect foam, and heat the sap in the heater, besides. The wood-shed and manner of storage are shown in Fig. 5. A narrow path should be left from the end door to door from shed to boiling room (See Fig. 5.).

The Boiling Apparatus.

for 1200 trees (buckets) is shown in Fig. 6, with open section and a part of the interior of the sugar-house. It consists of a heater, d, and a Cook's evaporator c, c, c, set on brick arch, h, with iron front and doors k, and ash-pit l, with iron grates above it for the wood and coals to rest on. Sap enters by the flexible rubber tube, b, from the store-trough a, through the regulator (the round top of which is seen at c) into the heater, d, and thence by a tin tube (represented by the dotted line g) into the evaporator at n, and flows back and forth through a transverse channel formed by "crimps" or ledges, till it is drawn off at the faucet, m, as sirup finished for market, or sugar ready to cake or grain if desired. Usually, however, a small 3x4 foot pan on a separate arch, is used for "sugaring off."

The Heater,

(d, Fig. 6, shown enlarged in Fig. 10) works on the principle of the tubular boiler. The part b, below the jag (See Fig 10), runs below the bottom of the evaporator, when in position on the arch, and sends the flame through the fifteen 1½-inch tubes on each side of b. (Fig. 10) surrounded with cool sap from the vat a, (Fig 6). This robs the flame of heat which would otherwise escape up chimney, and heats the the sap so that it enters the evaporator ready to boil.

The Evaporators

are patented and are manufactured in Cincinnati O., and in St. Louis, and in Bellows Falls Vt., and I think in a few other places. I give below the form of construction; not to help any one make one, but to show the principle on which they work, and the advantages they possess. Besides being protected by

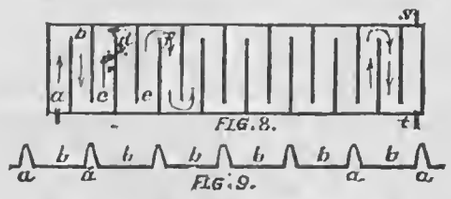

FIG. 8.

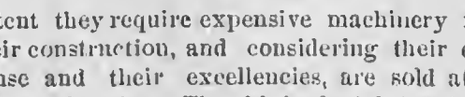

FIG. 9.

patent they require expensive machinery for their construction, and considering their expense and their excellencies, are sold at a reasonable price. The chief principle involved is, that a shallow body of juice or sap moving slowly over alternate hot and cool spaces, will evaporate more rapidly and clarify better than in any other way. The structure of the pan too increases the heating surface exposed to the fire, by the very means used to create the transverse current. The bottom of the pan, or evaporator (Fig. 6), is divided crosswise into spaces or channels six inches wide by a series of "crimps" open at the bottom to the fire. Fig. 9. is a longitudinal section of the bottom, or, in other words, a cross-section of the channels, and "crimps," or ridges. The channels are six inches wide (including the width of "crimps"), and the crimps rise about an inch and a half perpendicularly and are *open* at the bottom, *a, to the fire*, thereby greatly increasing the heating surface. The bottom of the pan is the best heavy galvanized iron, crimped by machinery *clear across* in the form of Fig. 9. Then every second crimp on each side is cut and lapped from the side inward 6 inches towards the middle, (See Figs. 6. and 8.), countersunk, riveted and soldered, and a cap soldered over the exposed end of each, tight; and the bottom—crimps and all—is drawn tight by bolts and nuts into grooves cut in the wooden sides to receive it. Fig. 8. is a simple (not perspective) ground plan of the finished bottom. The sap (or sorghum juice) enters at a (Fig. 8.), flows slowly along the channels past b, c, d, e, etc., as indicated by the direction of the darts, till it comes out at the faucet s, or t, (or m, Fig. 6) *finished sirup*. At first a few pailfuls of sap are drawn off at the faucet and turned back near the middle of the pan, till it comes to sirup in the three back channels, and then it remains so and can be drawn off, a gallon at a time, every twenty minutes or so in a 15-foot pan. There is no checking the fire to "sirup off," which is a great hindrance with kettles or common pans. The man has nothing to do but fire up, skim and draw off sirup all day long.

The "Regulator"

(c, Fig 6) feeds sap just as fast as it boils away. If it ceases to boil, sap ceases to flow. This trusty little monitor will never let the sap burn or overflow the evaporator, if properly "set," no matter how large the fire or how long the absence of the fireman. It works as follows: a float, rising and falling with the sap in the heater, works what for want of a better name I shall call a pair of jaws. As sap rises in the heater (and to the same level in the evaporator) these jaws bite the soft rubber tube (b, Fig. 6.) that supplies the sap, and check or stop the flow. When more sap is

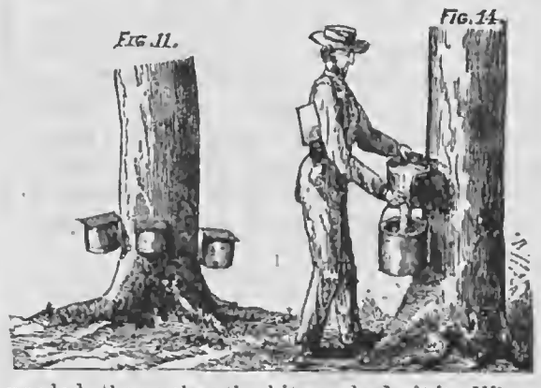

FIG. 11.

FIG. 14.

needed, they relax the bite and admit it. When the boiling is uniform, the feeding of the sap will be uniform. The "regulator" is Guild's patent, made in Bellows Falls, Vt., and usually furnished with the evaporators. It should in all cases go with them. The tin tube (dotted line o, g, n, Fig. 6.) keeps the sap in the heater level with that in the front end of the evaporator, so that the regulator in the former regulates both. The shallower the sap, the faster it will boil. An inch and a quarter in the front end, and ¾ inch in the back end are about as low, however, as it is safe to boil. If the evaporator is set level (as it should be when over 10 feet long) those will be about the depths at the two ends when the gates in the partitions (See Fig. 6.) are open; sometimes the flow needs to be checked by these gates, to allow the sirup to thicken a few moments.

The Arch.

The structure of this, and also its ash-pit, chimney, etc., are clearly and accurately shown in the engraving, and instructions for building them usually accompany the evaporators. A word only is necessary here. The last course of bricks but one should be laid on *crosswise*—masons call them headers. On this a single course should be laid *on edge*, so that the pan will project an inch or more on each side, and leave an air-space to protect the wooden sides. This, with the two inches of the bricks' thickness, gives a space three inches wide, the whole length on each side, not exposed to the flame below. This gives the cool spaces, mentioned above, for the sap to pass over in its transverse flow, and deposit sediment and hold scum till it can be removed, thus perfectly clarifying the sirup before it reaches the faucet, without using milk or eggs or any foreign substance to poison it or injure its flavor.

Such are, on the whole, in my opinion the best arrangements, utensils and apparatus for making sirup and sugar. A few hints will follow in regard to working the "camp" or "bush."

The Tapping

should begin as soon as decided sugar weather comes. In Ohio this is usually any time after the middle of February; in Vermont, usually some time in March. Thawing days and freezing nights make sap run best, but it must really thaw in the shade to amount to much. The Cook (curve-lipped) bit is best for boring—half-inch size, and after three weeks or so the the nine-sixteenth size will freshen the hole nicely. No bit but Cook's will do this last. All hardware men keep them. The best hand should do the boring, and especially the rimming with the nine-sixteenth bit. For this the bit must be held steady, true and firm, so it will not suck in too fast. In tapping at first, care should be taken to select a thrifty spot in the tree, free from former holes, etc., and where the tree will not lean badly from or towards the bucket; otherwise the buckets cannot be hung properly, (See Fig. 12). Large trees may have two buckets, and very large ones three, as in Fig. 11. No bucket has more than one spout; it cannot be covered, and one is enough anyway. With the Eureka spout, the rough bark must be rossed off with a hatchet, but not to the quick. Care is needed to put large-sized buckets to large and thrifty trees. An inch and a half is deep enough to bore for Eureka spouts, and a half-inch deeper in running, three weeks later or so.

Gathering

is done with a team, and a cask on a boat-sled (a, Fig. 5). The cask is about five feet long and two feet in diameter in the middle, and four inches larger (in diameter) behind than before, and holds four barrels. Its front end is raised four inches, so the line of the top of the cask is level or parallel with the runners of the sled. It will then empty dry on level ground, when the faucet is open. Each man has a four-gallon pail with a "lip" like that on a gallon measure, to prevent spilling in emptying into the tunnel. I always laugh to see a green-hand empty sap from the bucket. He sets his pail down (stoop), lays the bucket cover on the ground (stoop), takes off the bucket, spills a little sap and empties the rest into his pail (stoop), replaces the bucket, picks up its cover (stoop), and replaces it with a little dirt on to fall into the bucket, and picks up his pail (stoop) and starts off. I say to him, "stop stooping. Be content to be lazy in this. Your back will be tired enough by night if you gather forty barrels of sap. Try another bucket. Face the tree with the bucket between you and it, (See Fig. 14). Stand erect and hold the pail in your left hand to the left of the bucket and a little lower. Put the cover under your left arm, grasp the bucket firmly with your right hand either by its rim or just below the bottom according to hight, and turn it on its spout for a pivot till the sap is all in your pail; replace the cover (inverted) and you are done, without bending your back, dirtying the cover, spilling the sap or wasting time." All sap should be gathered *the day it runs*, and boiled at once and without stopping, even if it takes all night, otherwise the product is not so good.

Cleanliness

is indispensable. Let no dirt get into the sap. Not much can with buckets covered tight, but it is well to have a strainer in the tunnel and another at the store trough, and another above the rubber feed-pipe. Scald all buckets about once a week, and vats, boilers, etc, oftener, if you would make "gilt-edged" sirup or sugar. The buckets can be scalded at the trees, with hot water drawn about in the gathering cask, and do not require so much work as one would suppose: and there is usually a day or so between the "runs" when it may be done It costs, but it pays in the quality of the sirup. After washing, it is well to invert or "jack" the bucket on the spout as shown in Fig. 13, a.

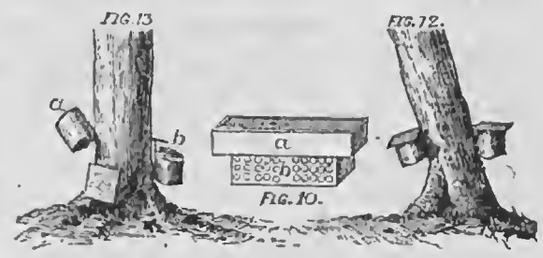

FIG. 13 FIG. 12. FIG. 10.

It dries nicely in that position and may remain so safely till needed again to catch sap. It pays to invert after a run even if we do not wash the buckets. We used to invert on our wooden spouts often, but right here is the one fault I referred to above in the Eureka No. 2. The notches are so near the tree that they hold the inverted bucket too straight up, so that even a light wind will blow many of them down. The notches hold the bucket too close, too, right side up, if the tree slants back at all, as in Fig. 12. The spout needs another pair of notches further out from the tree, and the inventor should put them there, at least for the Ohio market.

Boiling and Straining.

Cleanliness in boiling, too, is important. Shut the shed door when you split wood, and look out for dust and dirt on the wood in firing up, lest they get into the boiling sap. A curved sheet-iron guard over the arch doors in the position shown by the curved dotted lines (Fig. 6), is a great help in this respect. The sap should be skimmed often, and the sides of the evaporator and the bottom of the last three channels at the sirup end should be thoroughly washed for every day's boiling. Sirup for market should weigh plump eleven pounds per gallon when cold, and should be strained through flannel while hot, and permitted to settle to remove a fine, gray, floating substance usually called lime or niter, but which proves on chemical analysis to be nearly all silica. A flannel strainer will arrest most of it and the rest will settle in cooling. Sugar is made by boiling till it "pouts" like hasty-pudding and "hairs" from the end of the spoon. It may then be stirred dry into grained sugar nearly white, or stirred a little and run into cakes, or stirred till pretty stiff and "drained" in a tub or barrel with small holes in the bottom. If a flannel cloth is wet and laid over the top of the cask several times at intervals of a few hours, the sugar will be whiter, and if made from the first, as above described, will be about as white as granulated sugar. And yet it has gone through no poisonous refining process and has no clay, glucose, copperas or sulphuric acid in it. The sap is colorless and perfectly pure, and it has been kept so.

Buds.

By constant care and cleanliness and frequent scalding of utensils the flavor and color may be maintained till the tree buds start and not simply during the "first run," as is commonly supposed. And such a flavor! It is obtained with no other apparatus, unless it be in very small quantities by evaporating rapidly on the stove in a tin pan or porcelain kettle. But when the maple buds begin to swell, this fine flavor is gone, and in its place is a different one, not very strong but rather sickish to most persons. I would willingly give a thousand dollars or more for the exclusive possession of any simple process that would remove this flavor and restore the real sprightly maple flavor to the sirup; for often our best run in Ohio comes after the buds start a little, and the sirup cannot be used except for second quality.

Cost and Profits.

For a bush of 1,000 trees (buckets) the cost of equipment will be about $500, or 50 cents per tree. This includes a decent but not expensive sugar-house and shed. At present prices for "strictly prime" sirup, when sold to consumers *direct*, one year's gross receipts will about pay for the outfit.

The cost of running the bush is not heavy in cash. The work comes at a season when little other work can be done profitably and when help is cheap and abundant; and the usual farm force, with little extra help, will do the work.

When the trees stand thick, so that a thousand buckets can be hung on ten or twelve acres of ground, that piece of ground, if rightly managed, will probably yield more net cash than any other of the same size on the farm. Whatever is made is clear gain. Moderate tapping does not injure the trees or retard their growth perceptibly, unless begun when they are too young. I am astonished to see so many fine maple groves unused. The profits, however, will come chiefly from the best quality of sirup used as a table luxury or delicacy; and the more the supply of this is increased and brought to notice, the greater will be the demand. There is no fear of overstocking the market, as with strawberries. The plants of the latter can be grown in a year; of the former in fifty years.

Finishing Up.

As soon as the buds really swell, the buckets may as well be gathered, washed, scalded, wiped and stored for the next year's use. Every thing about the works should be now put in readiness for next year's use, even to storing the wood. Refuse wood stored now under cover is better than green wood cut next spring. And if any part of this work is deferred till after we begin the regular spring farm-work, it is apt to be crowded out till too late in the fall for the wood to season properly.

Horticultural.

THE RASPBERRY.

GEN. WM. H. NOBLE, OF BRIDGEPORT, CONN

Hardy canes essential; different species; varieties to be crossed—not species; objection to hybrids; native kinds more hopeful than foreign; a hardy cane, and a perfect berry; a hardy cane among the Antwerp tribe: the proper aim of selection and culture.

I OUGHT, in good faith, to have taken part in the RURAL'S raspberry tournament, but I think I have bettered myself by waiting for its record. That interesting array of "many men of many minds," gets us a good way down to hard-pan sense about the Raspberry. It is plain that there are some bottom facts and essentials in the make-up of its perfection, that should guide our choice and vote.

There are, too, no end of whims, interests and opinions about kinds and qualities, and the excellence of favorites. Through their noisy tangle you must work, to reach in each species, the make-up of a perfect fruit and cane. The one is nearly as essential as the other to all but the amateurs, who can bury and protect their little patches. However big and luscious a berry you may raise, it must be borne upon a hardy cane, before it fills the score of a rightful Raspberry standard. Unless it is in wood about as enduring, under rude handling, as a Currant, ere long your big berry must go to the wall. The mass of those who plant for home or for the market, either will not, or cannot, afford the time and toil needed to protect either the little patch or the acres to which the great public look for their supply.

As Downing and the RURAL'S Raspberry Number say, there are at least three species of this fruit: The Rubus Idæus, or the Antwerp tribe, European immigrants and their descendants, which make up a large family. The Rubus occidentalis, which is the old Black-Cap and its improved varieties, the Mammoth Cluster, Gregg, etc. The Rubus strigosus, the old Red-cane family and its progeny, the Philadelphia, Brandywine, etc. Each of these species has distinctive traits of excellence, which I hope will not be lost in crosses, but tasted in its own lineage of larger, firmer and more luscious berries, borne on hardy canes.

I hold to breeding new varieties within each species: no hybrids till in each a perfect berry is reached. The hope of developed excellence lies in mating the choicest of each species with the like of its family, till the progeny register a higher score of the essentials to a perfected fruit. Curb your longing to look upon the outcome of hasty crosses between diverse species, till in each, a perfect berry, borne on a perfect cane, has come to stay.

There is a great rage for hybrids about these days. I have less faith than some in their lasting betterment of fruit. They do well awhile, but after a time, the commingled blood fails to hold the high hopes flushed by its earlier promise. If there is a defect in fruit or leaf, or a tenderness of cane in one of the parents, it is pretty sure to crop out sooner or later in the progeny. It may shift over one generation, but not always. When a thing lives as long as a vine or cane can be renewed, the lurking taint is pretty sure to show itself in some sad mildew, or winter-kill, or other ail.

I would quench no hope of a brighter future out of crosses between the species of this fruit, after each is brought up to a standard of perfection. The wondrous feats of fruit development from rude nodules, began by chance, and, helped by human wit and toil through joyous years, promise yet bolder triumphs. To trials, guided by a close study of the laws which lift vegetable races to higher planes, who can mark the limit of possible glories in the garden? The marvels in pomology seen in this century, especially during the last thirty years, and in our own land above all, warrant the most sanguine hopes. Still I hold that among fruits, as in animal life, the true path to the highest excellence is through mating in each species those which come closest to the essential nature of its kind and the purpose of its growing.

Now as to the Raspberry; shut out no foreign kind of merit. Welcome and perfect it; but before offering wedlock to our natives, let it develop within its own varieties, not only the excellence of a perfect berry, but the stamina of a perfect cane. Until it can boast both these, let it be a little modest about high promise through such mating. When we deal out to our own a patient justice toward their best in cane and berry, keeping close to hardiness and large and firm fruits, our climate will soon make them the peers of any.

Besides, there are unlike tastes and a love of change, which at times prefer the native berries. The luscious Antwerp cloys, and we long for the high, spicy, wildy flavor of our own. These distinctive traits we should foster and refine till they reach a kind, the peer of any Raspberry. Till such grows in each species and repeats its high quality till both mates register all the points of a perfect berry and a perfect cane, take no thought about crossing the species.

Perhaps some one says: "It's the berry we want, the luscious berry; the canes we can protect with earth." Such unheed of tenderness in cane may do for the owner of a little patch, or for him who stints neither time nor money, nor toil, in his grounds and garden. But the mass who own their little or large plantations, either will not, or cannot, afford the luxury of a berry which they must protect. As to the broad acres planted for the market, however large and firm-fleshed the berry, the need and cry are for a hardy cane. No new kind bursts upon the world with loud ado, that does not claim a cane that never winter-kills. That kind of cane, then, is the one thing needful for the Raspberry.

Now what is a hardy cane? It is one that will stand unflinchingly the wind and frost and the freeze and thaw of our variable winters, and the drought and scorch of the summer. Before a Raspberry reaches the highest standard, it will on just such a cane, bear a perfect berry of its class.

And what is a perfect berry in each class. It is a Raspberry the equal in size of any; that holds a pulp, luscious, yet firm and close-knit enough to keep shape upon the table, and to bear the jolt of a journey to market. The home needs a firm berry just as much as the great public who buy. A soft, mushy berry is as much a discomfort on the table, as in the stalls. However large and well-fleshed a berry may be, you like to see and taste its plump and melting form, well held together. You revolt against a fruit that soon melts into an unctuous mass, that will hardly bear dishing and handling, without losing all its fullness and shapeliness of form.

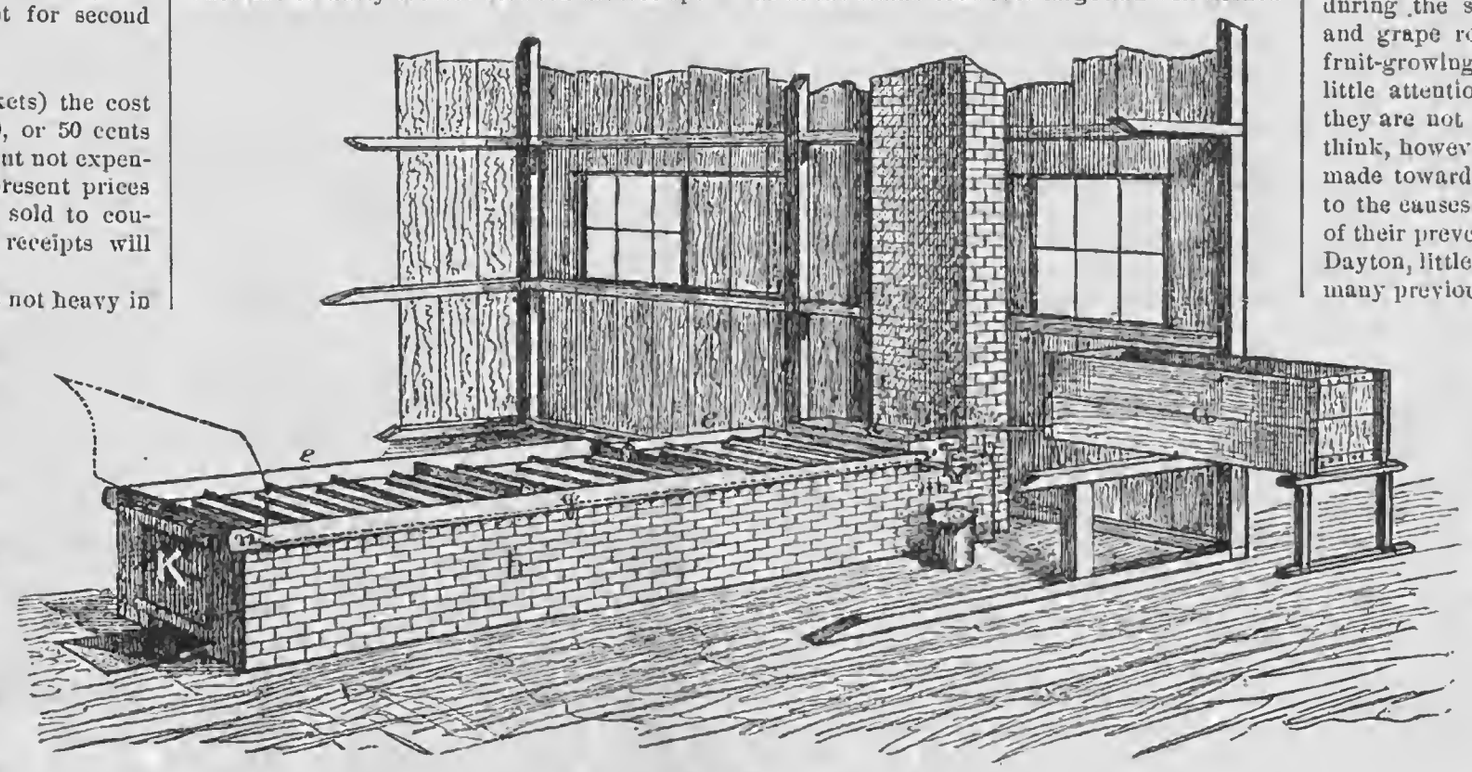

FIGURE 6.

Now the Rubus Idæus, or the Antwerp tribe, has not yet put out a perfect cane. Many of its American descendants have gained in hardiness upon the old type. I have tried a great many but only one of this tribe has with me proved itself a hardy kind. I believe I have a good Antwerp berry upon a perfectly hardy cane. I found it growing in the garden of a very old Connecticut home. Its berries were upon the table of my friend fully ten days before my Antwerps, forty miles South, showed an eatable fruit. I looked at the canes in their garden; they had not been shortened in, and were bearing to the very tips. They never had any protection in winter, though they stood on the north side of a fence or shed.

I transplanted some of these to my home on Long Island Sound. Its exposure is death to any tender thing. It faces the northern blast sweeping down through ten miles of an unbroken drift. Lots of plants, hardy far north of here, will not stand the ordeal on my grounds. In its most unprotected spot, on the brink of a bank facing the northwest, under the full rays of the sun and without a shelter, these berries have never lost a cane or shirked a crop. The fruit is of fair size, about two-thirds that of the largest Antwerp Raspberry, of good firmness, and in shape, color and taste, that of the old Antwerp. Let me add to this notice of my Raspberry, that I have none on sale, and have only raised them for an early family supply.

Now, about the upshot of all this writing is, that in each of these species of the Raspberry, we should strive for the largest and finest fruit, on the hardiest canes. That in this strife for excellence, we should keep them distinct. Only cross-breed, when each has reached about the highest standard of a perfect berry on a hardy cane.

A bright and promising future is before our natives. They have in a very few years of purposed trial or chance-planting, reached near to an excellence which it has taken all these generations to give the Old-World sorts. Each gain from the hard and seedy berry of those old wildings; each better new cane or better new fruit we raise, drifts us further from the aboriginal type, and makes sure an unfailing advance.

But while looking for that good time coming, of hardy canes and splendid fruits, how are the mass to know amid the crowd and noisy heralding of kinds, what they shall choose? Whom shall they trust among all who have on sale, "The biggest and hardiest Raspberry out?" In this berry race and regatta, we want some right and impartial judges whose business and love it is, to try and their verdict give, amid conflicting claims. We have pressing need, not only of such a tribunal, but of a national pomological garden, where not only this, but every fruit, can have a just and fair test of its merits. Without this the many, eager to have the last and best, are stuck with some worthless, tender, suckering torment, proclaimed as in its line, the pride of the world, great acquisition, etc., etc.

Pomological.

THE CAUSES OF PEAR BLIGHT, AND MEANS OF PREVENTION.

M. B. BATEHAM.

AT the annual meeting of our State Horticultural Society, each year, we endeavor to elicit all the new facts that have been observed during the season in relation to pear blight and grape rot—the two worst hindrances to fruit-growing in Ohio. We have paid but little attention to theories, for in most cases they are not fully sustained by the facts. We think, however, that some progress has been made towards the solution of the problems as to the causes of these maladies and the means of their prevention. At our recent meeting, in Dayton, little was said that was really new; but many previous observations were confirmed.

Mr. Ohmer, of Dayton, gave an interesting account of his long experience in pear culture. He is the most extensive and successful pear grower in Ohio. He has several thousand pear trees, standards and dwarfs, many of the former more than twenty years old, and he has lost very few from blight, especially of late years, since he discarded a few varieties that were most liable to the disease, on account of their rapid growth, and since he has adopted the practice of keeping his orchards in clover after a few years of cultivation, to give the trees a good start.

But the main secret of Mr. Ohmer's success, is, undoubtedly, the peculiar excellence of his soil. It is an elevated table of clayey, calcareous loam, the sub-soil of similar nature, pervious to the roots of trees, and several feet in depth, resting on limestone gravel which affords natural drainage. In this soil the pear roots descend so deep as to avoid injury from drought, and consequently the trees are not affected with leaf blight.

It was reported, at our meeting, that much less pear-tree blight than usual had occurred the past season, and this was, no doubt, attributable to the mildness of the preceding winter. In a majority of our pear orchards, the trees, when bearing, are overtaken by drought and more or less of them shed their leaves prematurely—in August. Then, when the fall rains come on, the sap starts anew, and buds swell and sometimes push out new leaves and even blossoms. In such cases the trees are full of watery sap when winter sets in and hard freezing occurs. Then, if the mercury descends below zero, mischief is commonly done to the young shoots and branches, as may be seen by discoloration beneath the bark and in the wood when cut. Trees thus injured often start to grow in the spring, as though no serious damage had been done; but in the hot weather of mid-summer they will be pretty sure to die of blight. This has been called, by some, frozen sap blight; but it only differs from what is termed fire blight in its predisposing cause; the latter occurring in trees that are not seemingly injured by the winter, and such as are of thrifty growth.

CAUSES OF THE MALADY.

Accepting the fact as established, that the blight is of a fungus nature—and in a sense this fungus may be said to be the cause of the blight of the tree, just as a fever may be said to have caused the death of a person—I claim that we ought to go farther back, and inquire what are the causes of this attack of the fungus or of the fever, so that we may learn how to guard against such diseases.

By many years of observation and the general testimony of others, I find that pear blight almost invariably becomes visible soon after rains during hot, sultry and cloudy weather, with low barometer and absence of winds, when fungus growth of all kinds is most active, as may be seen in-doors by mildew on bread and on shoes and gloves in closets. Exactly the same weather brings mildew on grape-vines and rotting of the grapes. The causes of these diseases I believe to be the same; but I do not care to speak of the grape maladies at this time.

My theory on this subject embraces little that is really new, though I believe it has not been distinctly stated before. I put it forth at this time with the request that pear growers will test its correctness by their observations the coming season, and if it shall appear that the facts do not sustain my conclusions, I shall be quite willing to abandon them.

The weather being hot and the ground wet, as above stated, of course the flow of sap is quite active, while at the same time the action

of the leaves in elaborating and evaporating the sap, is checked by the light pressure of the atmosphere and its being saturated with moisture, with a lack of wind and sunshine. This causes a plethora of sap in the branches of the tree, and with such weather as described, this sap speedily becomes vitiated or stagnant, ready to invite fungus action or fermentation. Then the fungus spores—which are abundant in the atmosphere at such times, and are settled on the bark—at once find access through some crevice or puncture, or through the pores of the bark itself, and the work of death goes on rapidly, like the operation of yeast in dough, which is another form of fungus growth. Any one who will peel off the bark from a few branches, as soon as the blight has affected the leaves, will distinctly perceive the smell of fermentation. If the weather speedily becomes cooler and bright, the disease may spread quite slowly, and perhaps not affect the whole tree. In such case, also, it may be stopped, if the affected limbs are cut off as soon as the evil is seen. Trees that were injured by the winter, in the manner I have stated, are the first to be affected with blight, because their sap is already vitiated, and only needs the kind of weather described, to set the fungus at work therein. Hence the reason why the worst seasons of blight follow severe winters.

THE PREVENTIVE MEASURES,

suggested by this theory of blight, are exactly those that have long been found beneficial. First of all, choose such land for a pear orchard as is least liable to be affected by drought—deep, clayey loam, with no hard-pan as a subsoil, where the roots can descend out of the reach of sun-heat, and find moisture. Those who have pear trees on soil not of such depth, should mulch the surface plentifully, to preserve the roots from drought, and thus save the trees from shedding their foliage prematurely. Attention to this would, in my opinion, prevent at least one-half the losses from pear blight in Ohio.

Preventing over-luxuriant growth of trees will also be necessary on rich soils, by seeding the ground to clover or grass for a few years at a time, after the trees have made fair growth and are commencing to bear. Where there are in an orchard some trees that will bear to have their growth stimulated a little, while the rest need clover, give the former surface-mulchings of manure. With such mulching, applied each season, the orchard may be kept perpetually in grass or clover, without injury. Washing the entire surface of the bark with anti-fungus liquids, like carbolic acid soapsuds—two ounces of the crude acid and two quarts of soft soap to two gallons of hot water, wetting all the branches as well as the trunk of the tree—will be found highly useful. So also is the lime and sulphur wash, long used with good effect by Mr. Saunders of Washington. It is made by putting half a bushel of quick-lime and six pounds of sulphur in a tight barrel, and pouring in six gallons of boiling water. Cover and let stand till the lime is slaked, then add enough cold water to bring it to the consistence of thin whitewash. It is important that all the branches should be covered with the wash; and this is most easily done by means of a garden syringe or a hand force pump, of which there are suitable kinds at most city hardware stores. Of course, the best time for the application is in the early part of summer, before the blighting weather occurs. I believe that the carbolic wash will be found as effective as the lime and sulphur, and being cheaper as well as more cleanly in its use, I give it the preference.

Lake Co., O.

THE APPLE ORCHARD.—No. 3.

"CLINTON."

The Twig Blight.

Spread of the disease; uncertainty as to its nature and origin; its difference from frozen sap and pear blight; its first indication; theories as to its cause; objections to them; lopping off diseased branches.

To the fruit-grower anything affecting the health or vigor of his fruit-bearing trees, shrubs, plants or vines, is a matter of direct interest. If the fruit be such as enters largely into consumption by the people, then the subject becomes one of general interest, as affecting the comfort or prosperity of that people. In view of these introductory premises we may readily perceive why a feeling of alarm has so largely pervaded the minds of the French people in consequence of the spread of the Phylloxera through their hitherto flourishing and productive vineyards, threatening their entire destruction, if unchecked.

In considering that peculiar form of blight upon the apple tree, which is the immediate subject of this article, let us be careful to avoid a confusion of terms and the confounding of diseases which are quite dissimilar in character, although they may be productive of similar results—an error into which many pomologists have fallen from lack of sufficient investigation. Let us also carefully avoid the acceptance of theories founded on mere conjecture, if unsupported by reliable and substantial facts.

The twig blight to which I now propose to refer, is not a new disease, although it never had attracted special attention or caused alarm in central New York until within the last five or six years. It was described some forty years ago by A. J. Downing, as "a blight which occasionally kills, suddenly, the ends of the Apple and Quince." The appearance of this blight in this portion of the State was first noticed in 1872, but the indications were so rare during that season that no special attention was given to the matter. The same was true during the succeeding year, although, to the careful observer, the disease was evidently on the increase; but in 1874 the disease became so apparent as to attract the attention of the most casual observer and to excite feelings of alarm, as but few localities in the central portion of the State were found to be exempt from it. Consequently, more attention has been given to it, and various theories have been advanced as to its cause; but as yet it does not appear that any satisfactory conclusion has been reached, or any sure remedy discovered, although investigations have been continued up to the present time. Happily this blight seems to have, in some degree, abated; yet, as it is liable to return at any time, the matter still retains its interest in the mind of the observant fruit-grower, and the question still remains undecided as to what it is and what is its cause.

This much we know, that although it sometimes affects the Pear and the Quince, its main field of operation is the apple orchard, and it may therefore be appropriately termed an apple blight. It differs from the frozen-sap blight in appearing at a different season of the year; and from the pear blight in its being confined mainly to the ends of the twigs and the smaller branches, never attacking the trunk or large branches, and but rarely any matured wood. It is generally confined to the new growth of the season, its appearance being manifested in the latter part of June or early in July, usually somewhat simultaneously with the time for the pear blight proper. Hence the mistake, which many have made, of confounding the two when both chance to appear in the same season. But to the careful observer they will be found to be essentially different in several respects. The blight of which I am speaking, usually commences at the base of the new growth of wood; that is, at the suture joint, or ring which marks the division between the growth of the preceding and the current year, in the slender branches, which are the first to be affected. This new growth begins to wither and die, as is indicated by the wilting of the leaves, which furnishes the first indications of the disease. If the withered branch is permitted to remain, the disease occasionally extends backwards or downwards, killing a portion or the whole of the growth of the preceding year, but rarely extending further.

I have been thus particular in describing this disease, that it may not be confounded with other forms of tree blight, as is too frequently done. And the question very properly arises, in regard to this form of blight, "What is it, and what is its cause?" It is, perhaps, much easier to determine what it is *not* than what it really is. Mr. A. J. Downing was inclined to attribute this and the common pear blight to an insect; and while his explanation of the sap-blight is doubtless correct in part, yet as it involves a still mooted question in regard to the circulation of sap, I should hesitate to accept his entire theory as unquestionable authority. The insect theory has, I think, been pretty generally abandoned by recent investigators. My own careful examination, made in several hundreds of cases with a glass of high magnifying power, have failed to detect the presence of any insect or any indication whatever of the work of insects. I conclude, therefore, that this explanation is merely conjectural. Another theory attributes this form of blight to the effects of electricity. But this theory, although hastily indorsed by some persons of acknowledged scientific attainment, is equally unsatisfactory, inasmuch as it also lacks the evidence to sustain it. The only evidence I have ever known to be presented in its support, is the mere fact that it usually first appears at that season of the year when the atmosphere is most liable to be sur-charged with electricity, as is indicated by frequent thunder storms. But a moment's reflection must satisfy us that this theory is at variance with all our former experience. As already stated, the disease first made its appearance in central New York in 1872, and I am not yet aware that that and the succeeding four or five years when our orchards suffered the most from it, were exceptional years, so far as electricity is concerned, or in any degree essentially different from the years which preceded them for a long time, during which the disease was unknown here. And why is one branch affected, while another, by its side and in an equally exposed situation, escapes unscathed? Why is not one side or portion of the tree-top affected, instead of the injured branches being scattered indiscriminately throughout the entire top, intermingled with the healthy branches? These questions have not as yet been satisfactorily answered.

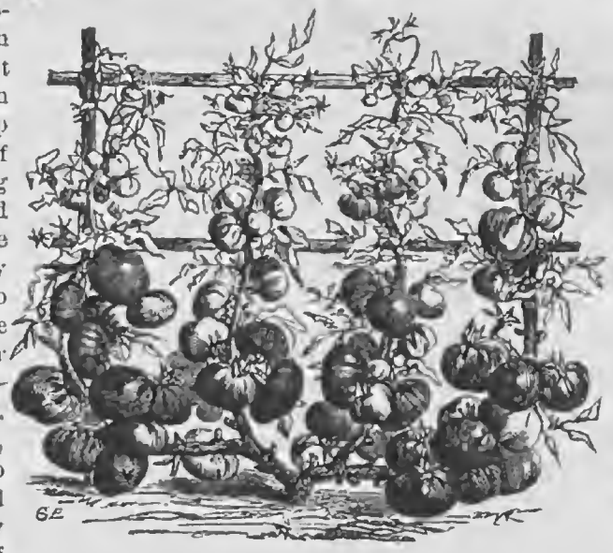
That the disease is distinct from the pear blight is, I think, clearly shown by the fact that no discoloration of the leaves accompanies its appearance; and by its not extending downward and thereby affecting the matured wood. It is only in exceptional cases, that it shows itself lacking in that cancerous character which marks the pear blight. Still, although lacking that cancerous characteristic, yet I would recommend in this, as in all similar cases, the cutting off of every diseased part thoroughly and surely, if for no other reason than to prevent the untidy appearance the affected limbs would give, if allowed to remain. Inattention to such matters always affords evidence of a degree of carelessness and neglect, which will never be found to characterize the successful fruit-grower.

Ontario Co., N. Y.

The Garden.

TOMATO (Lycopersicum esculentum).

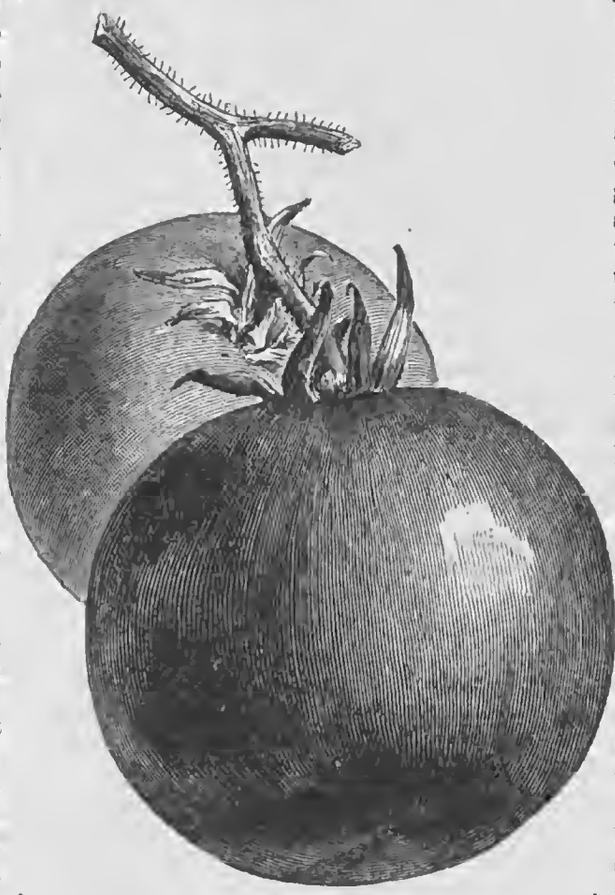
THE Tomato is a favorite vegetable with the American people, and it fully merits all the attention it receives. Near our large cities, hundreds of acres are planted every year for



EARLY RED SMOOTH.

market purposes, and, if we take private gardens into account, hundreds more are planted throughout the country. As an early crop, the Tomato commands a high price in the market, and enterprising gardeners strive to outdo one another in producing the first; but, in this case, like all other early vegetables, large quantities are shipped North from Southern ports, weeks before they ripen in the North. It does not require a rich soil, as it induces too strong a growth of the vines, and, though there will be a proportional increase of fruit, it will ripen later. A sandy loam is to be preferred to a heavier soil. Being a tender plant, the seed cannot be sown in the open ground till all danger of frost is over and warm days set in, which will vary with the latitude from the end of March to the end of May.

For an early crop, the plants must, therefore, be raised in a hot-bed, where the seed should be



ACME RED SMOOTH.

sown in the last half of March. When the plants are about an inch and a half to two inches high, they are transplanted under another sash. Later, to induce the growth of roots, they are again transplanted twice, or at least once more, giving them more space each time as they increase in size. When tough, stout plants are thus produced, they are lifted, with a ball of earth adhering to the roots, and planted in the open ground about three feet apart.

Farmers who have no hot-beds, need not, however, be deprived of tomatoes on that account. The seed may be sown in the beginning of May or even in the latter part of April. For a seed bed, choose a light soil, in a sheltered spot or, better still, in front of a wall facing south. Prepare the bed well and sow the seed either broadcast or in rows a few inches apart, cover it lightly, and when the plants are about two inches high, transplant them to a similar bed. Another transplanting will strengthen them, though it may be dispensed with. In June these plants may be set in the garden, and though the crop will not be an early one, it will be as valuable for home use.

In private gardens, where a comparatively small crop is grown, the plants should never be allowed to lie on the ground. Either support them with brush, like peas, or, better still, erect a trellis by putting down a few posts and drawing wires horizontally through holes in them, or instead of wires use simply some strips of wood, as shown in the engraving, to which the branches should be tied. By this method more fruit will be produced, and as it is more exposed to the sun, it will ripen earlier.

Exhaustive lists of varieties are given in every seed catalogue, and people differ as to which varieties are the best. When the plants are raised in the open ground, early, smooth varieties are to be preferred. The engravings represent Early Red Smooth and Acme Red Smooth, the picture of the latter being about two-thirds of its natural size.

Miscellaneous.

WHAT SHOULD BE TAUGHT IN THE COMMON SCHOOLS?

PROFESSOR W. J. BEAL.

THIS subject has received much attention from all classes of persons; some advocate more time for arithmetic; some, more time for grammar, or spelling, or geography, or writing, or reading. Many have urged that a place be made in the common schools for other topics, each speaking a good word for his favorite. So, almost every study found in our college courses, has had its advocates as *the study* much needed in the common school. Thus we have had advocates for history, agriculture, geometry, botany, zoology, chemistry, physics, astronomy, Latin, French, book-keeping, etc., etc.

The mind of a child is not capable of continued close attention to one subject for a long time. Changes and rest must come often. Our best educators are slowly changing their views as to what is most valuable for girls and boys to be taught in school. Some twenty-five years ago, much stress was laid on the study of English Grammar. The writer well remembers that he knew but little about grammar after having studied it for five terms. Probably the teachers were poor and the pupil unusually dull, but there are many poor teachers and many dull pupils. The writer thinks that Page was right, when he declared that grammar was one of the higher or difficult studies. Pupils are required to decline nouns, conjugate verbs, parse every word, and learn a long list of rules and their exceptions. Common people and some pupils, said that, after all of this study, they did not speak and write correctly. The answers by the advocates of grammar were varied and unsatisfactory. The same questions have been repeated till even teachers begin to think that the time spent in the old-fashioned way of studying grammar was time poorly spent.

I take a few sentences from *The Teachers' Institute:* "We lay down the broad proposition that a child is not taught to write and speak the English language correctly by studying English Grammar; such a claim is a visionary one. The best pupil in English Grammar, measured in the school, is the one who can recite its rules the most glibly; it is not the one who uses the language with ease and accuracy. He spends days, weeks and months in learning the classification of words, not only that nouns are common and proper, but collective, verbal, and abstract, also." He learns that verbs are regular, irregular, redundant, defective, transitive, passive or neuter, but he does not learn to speak and write correctly.

But let us consider what it is best for the beginner to study—the average boy or girl of a poor, illiterate family, the child who will probably spend but a few terms in the school. Such a child has had no benefits of what may be called home culture. For such a child, reading, writing and spelling are of the first importance. Arithmetic has probably been overestimated.

In reading, it is important that the child become interested and have books and papers always before him. In this way, he will acquire a habit of reading and will pick up much outside of school. The teacher must strive to

make the ideas of the reading lesson understood and fixed, like a picture, in the mind of the pupil. It will be worth a great deal of effort for the child to learn early to use a dictionary. This habit, once formed, will be of lasting value through life. It will educate the child or prepare him to help himself.

Spelling is best learned in connection with reading. To become a good speller in the English language, is the work of a life-time with most of us. It is to be hoped that the long and much-talked-of spelling reform will soon be brought to a vote and become a reality. Such a reform will save much time and perplexity to the printer, the teacher and the pupil. Every child can then easily become an accurate speller, and much more time can be given to other subjects. The reasons for this reform are good and sensible.

Every child should learn penmanship, including the printing of letters. He should learn to express himself briefly and clearly. Pupils usually have a great dread of writing compositions. Let them begin early to write as they would talk on any subject. Begin with some easy descriptions of common objects, and then keep writing a little every day. On the blackboard should be written or printed some sentences containing the most common mistakes in our language. Below these, insert the corrections. Write the errors which are heard in the school-room. Encourage the pupils to collect such sentences and help to correct them. Keep this going persistently, and pupils will learn to speak quite accurately without knowing anything of parsing or analysis.

Many books have been made for teaching the subject of arithmetic, but I think the model has yet to be written, though I have not seen all of the latest books. Writers of arithmetics must consult the grocer, the butcher, the barber, and get all the best modes of using figures in actual business. It requires but very little knowledge of arithmetic to do most kinds of business correctly. As usually taught, there is a great deal of time thrown away on arithmetic. Pupils try to learn certain parts of it and the reasons therefor, before their minds can comprehend the subjects.

Agricultural College, Lansing, Mich.

EFFECTS OF PLASTER.

In my article on plaster a mistake occurred in the printing of the formula showing the change of ammonia and sulphuric acid into sulphate of ammonia. I wished this to be plain and simple and free from technical nomenclature as much as possible, so as to be easily understood and yet to be correct. What I intended to show was as follows, viz: that

Ammonia is H3 N
Water is H O
These combined are H4 N O

Sulphuric acid is S O3
Water is H O
These combined are H O, S O3 } These combined are Sulphate of Ammonia, which is H4 N O plus H O S O3

This formula will show the combination in a way that will be plain to almost every farmer who uses plaster, and who will be interested in knowing just how the ammonia is acted upon by the plaster, and that after the ammonia and sulphuric acid have combined, the lime only of the plaster is left. I have used in this illustration the old chemical notation, which is more familiar to most people than the new one, and because it can be easily understood by those who know nothing about atomic notation.

CATALOGUES, &c., RECEIVED.

In noticing the seed catalogue of Cole and Bro., Pella, Iowa, in a late issue, a slip made the State Illinois instead of Iowa.

E. B. Crofut & Co's Price List and Catalogue of garden, field and flower seeds, and agricultural implements, Syracuse N. Y. This Catalogue of 36 pages is free to applicants.

Mapes's Manures, Fertilizers and Chemicals, This pamphlet of 40 pages contains a list of the dozen different kinds of manures and fertilizers prepared and for sale by this company, together with testimonials from practical agriculturists of their excellent effects on various kinds of crops and soils. 158 Front St., N. Y.

John Saul's Catalogue of new, rare and beautiful plants for the spring of 1879. This work of 112 pages contains a very full list of desirable flowers and rare plants suitable for green-house or bedding out. Sent free to the numerous customers of this old-established firm; 10c. to others or a plain copy free. John Saul, Washington, D. C.

Proceedings of the American Poultry Association at the Sixth Annual Meeting held at Buffalo, N. Y., commencing February 3d, 1879. Also constitution and by-laws and list of officers and members. We notice that at this meeting several changes in the standards of various breeds of fowls were made. An appendix containing these changes will be mailed to applicants who inclose a three-cent stamp to Geo. S. Josselyn, Secretary and Treasurer: Fredonia, N. Y.

The Apiarian.

OUR BEE HINTS.

Do not be in too great a hurry to remove the bees from their winter-quarters to their places in the apiary on the first mild day of spring. Provided they are healthy and do not need feeding, it is best to keep them packed up and cool till the spring showers have abated, for otherwise many bees will be lost. Nor is the fear of their loss the only reason for keeping them in. It is important that they should commence breeding as soon as they begin to fly out; if they do not, they will dwindle away, and the strength of the colonies will be reduced, which it will take a long time to regain. But they cannot rear brood until they can gather pollen enough from which to make "bee-bread" to feed the young; hence, in northern latitudes where the chill of winter still suppresses vegetation, bees will be most secure in their winter-quarters for some time longer. Feeding, if necessary, must be attended to.

Those who venture into bee-keeping for the first time this spring, should make up their minds what hive to use and use no other. It is a great advantage to have every hive, board, frame and cleat equal in size and shape to every other, so as to avoid the trouble in transferring, changing of frames, etc., that constantly must arise where hives of different sizes and shapes are used. Of course, we talk of none but movable frame hives, but of these a very copious list of patterns might be enumerated, each claiming to have some distinguishing feature that makes it superior to all others. We shall not discuss the merits and demerits of these, but simply give some of the points most essential to a good hive, and then let each purchaser suit himself.

The hive should be *simple;* a number of strips, bits and pieces, that require to be accompanied by a descriptive catalogue in order to learn where each one belongs and what it is good for, are of no advantage whatever, but, on the contrary, serve to form hiding-places for bee-enemies, to confuse the apiarist and retard his work.

It should be *cheap;* numerous patents on movable frame hives have now expired, and no hive made of the best materials and painted, ought to exceed two dollars in price, and if the beginner is mechanic enough to make his own hives, they can be had much cheaper.

It should be *compact in form;* if any one dimension much exceeds the others, in being either too long, too broad or too shallow, the bees are spread over too large an area and are therefore more likely to perish from cold and the attack of enemies than if their home were of a more cubical form.

It should be *tight* and of *exact workmanship* The reasons are obvious. A hive full of cracks and openings that admit moths, ants and other insects, as well as rain, cold and heat alike, or which is made in so slip-shod a manner as to weaken the durability of the whole hive and render its parts unfit for use in other hives, cannot be profitably employed.

A hive we have used with good results consists of a simple box without top or bottom, made of inch lumber and measuring one foot deep, one foot wide and one and a half foot long, inside measure. The ends and sides may be joined by tongues and grooves, or simply by nailing, if carefully done. All around this box and two inches from the top is nailed a cleat which supports a similar box that forms the second story and which is made large enough just to slip over the first one, or lower story, but only ten inches high. This is covered with a tight-fitting lid and provided with a loose bottom board. The upper story gives room for storing honey in boxes or frames, the lower, for brood chamber.

The Herdsman.

THE HISTORY OF A POOR FARM.—No. 6.

What Cows Shall be Kept.

Which is the best cow for a milk dairy? This is an important question for those farmers who produce milk for sale or for disposal to cheese factories. It is stated in the census report of the State of New York for 1875, that the whole number of cows from which milk was sold to cheese factories, was 398,722; the whole product of milk per cow delivered to the factories in the season of 200, days was 3,108 pounds, or an average of 15½ pounds per day or about seven quarts, a quart of milk weighing 2.2 pounds. This is exactly equal to my daily product per cow, out of 18 cows, and at the depth of the winter season; but I have two dry cows included, and those included in the factory reports were doubtless all in full average milking. My cows are about the average of common dairy cows. Seven quarts per day is far from profitable for a dairyman who patronizes a cheese factory at less than one cent per pound, or sells his milk in cities at four cents per quart or less, and pays one and one-quarter or one and one-half cent per quart for freight. Ten to twelve cents a day of income from a cow do not pay the cost of the milk. Fortunately I am situated so as to get five cents a quart net for my milk, and that pays a profit. But there are other poor farms than mine, where milk must be sold at two and one-half cents per quart, or less, and the question what kind of cows shall be kept, becomes very interesting. I am farming for profit—and not for fun, by any means—so that it interests me also to know what kind of cows can be procured that will yield an average of ten to twelve quarts a day during nine to ten months, and when they fall off to five quarts, may be made fat and sent to the butcher.

"It won't be a Jersey cow, you may be sure," said Mr. Martin.

"These Jerseys, or Alderneys, as I call them, have ruined the stock of cattle here," said my old neighbor. "We have little scraggy beasts that give a little rich milk, perhaps, but after a few years they are useless, and to get fat upon them is out of the question. I was offered $8 the other day for a dry Jersey cow, and she has eaten $10 worth of meal in trying to make her fat. Jerseys may be well enough for butter-makers; but for a milk dairy they are poor stock."

"I think they may be left out of the question," I replied, "when the dairyman hopes to sell a fat calf and fat a cow when she fails in milk, for a return of his first outlay. I have a young Dutch cow here that has given 20 quarts a day, and is now giving 10, after having milked nine months, and is due to calve again in three months more; but I am not satisfied with the milk; my customers complain that her milk is too watery."

"What do you think of this?" said William. "My boy, Fred, has just come home from the Agricultural College for the holidays, and he gave me this scrap from an agricultural paper. It says that one Holstein—that is what you call Dutch, I think—gave 16,274 pounds of milk in one year; that is more than 20 quarts a day for the whole year."

"I don't believe it, William," said his grandfather.

"That is a pretty tough story," remarked Martin.

"It may be true, nevertheless," said I. I have seen those Dutch cows on their native pastures, in north Holland, and not in Holstein—where there are no such cows at all—and have known them to be milked three or four times a day, and give a large pailful each time; but the cows have been bred on the richest pastures in the world, for years and years, some say for more than 2,000 years, and have been brought up to it. Yet what is their milk good for? It makes those round, hard cheeses, which are said to have been used for cannon shot at the siege of Antwerp, when iron balls gave out, and the cheese, bursting into fragments, did so much execution that the enemy hauled off their ships and fled. And these cheeses have precisely the same flavor and texture as our skim-milk cheeses, which are so much berated by everybody but those who make them. My Dutch cow will not give two pounds of butter out of a whole week's milk, and as I am inclined to believe this is the general character of the breed, I exclude them from the list of cows profitable for a milk dairy. I have crossed this cow with a pure Jersey bull and expect the produce, if a heifer, will make a valuable cow. We shall see about that in time."

"What do you think of the Ayrshires?" asked William. "Fred calls them the model dairy cows."

"And Fred is right," rejoined the old gentleman. "When I was a boy, it took the whole of one cow's milk to make enough for my breakfast, and if we got two or three quarts at a milking from a fresh cow, that was doing pretty well, and the first good cows we could get, were the Ayrshire cross that came from New England about 40 years ago. Since then the best cows I have seen or owned had Ayrshire blood in them."

"Flint says, for purely dairy purposes the Ayrshire cow deserves the first place, and the Ayrshire cow gives a larger return of milk for the food consumed than a cow of any other breed," said Fred, who being fresh from books quoted confidently and fluently.

"The best cow I have seen," said I, was "the cross-bred Ayrshire and Short-horn exhibited a few years ago by General Hungerford at the New York State Fair. She gave over 100 pounds of milk a day for three days in succession, which is equal to 45 quarts a day. She was a heavy-bodied cow that would make, when fat, 600 pounds of beef at least. Now such cows as that are what we want."

"If we could ever get them," remarked Mr. Martin, dubiously.

"Why should we not? We have a race of beef cattle from which we can rear beeves of 1,400 lbs. at two years old and 1,800 lbs. at three years old, every time by proper feeding; now what is to prevent us from making a race of cows that will yield milk as surely as a Short-horn steer will make beef. The milk-producing capability should be made hereditary. We have pigs, sheep and cattle that possess certain meat-making qualities and never fail in them; we have the same as regards butter in the Jersey, and we want the same in regard to milk."

"Why don't we have plenty of good Short-horn dairy cows now?" remarked Dr. Jones; "Bell, in his history of Short-horns, mentions the first Duchess cow which gave 30 quarts of milk a day and made 24 pounds of butter a week, and at that time cows nearly as good were not rare; now, it takes two Short-horn cows to nurse one calf."

"Of some kinds," I replied. "I have seen plenty of nurse cows about the yards and stables of fancy breeders, but these nurses are all well-bred grade Short-horns and good milkers. Harris Lewis has a herd of pure Short-horns kept purposely for milk, and he wrote me not long ago that his cows give 40 to 50 pounds of milk per day, and are good to hold out if fairly fed. There are several high-milking herds of this breed in New England, and most of the best dairies which supply the cities of New York and Brooklyn with milk are made up of grade Short-horns.

"But those large cows consume more food for the milk produced than a smaller Ayrshire cow," said Fred. "A small cow of 800 pounds live-weight, will eat 24 pounds of hay or its equivalent of other food daily, and a cow of 1200 pounds weight will eat 36 pounds or 50 per cent more; if the small cow gives 20 quarts of milk, that will cost per quart just the same as 30 quarts from the large cow. If Mr. Lewis's Short-horn cows give only 40 to 50 pounds, or 18 to 22 quarts a day, and Mr. Crozier's or Dr. Sturtevant's Ayrshires give the same, the Ayrshire milk would only cost two cents a quart, if the Short-horn milk cost three cents; so that there would be a loss of 50 per cent on the large cows."

"Fred puts the case very well," I remarked, "and if he knows so much of other farm business as he has learned about cows at the College, an Agricultural College is a good place for the young men to go to. No one can work a farm profitably now, unless he thoroughly understands his business; and the want of this knowledge is, to a great extent, the cause of much of the dissatisfaction that is rife among farmers. The pity is that farmers do not see clearly that it is as necessary to educate their boys to understand *their* work, as it is for professional and other business men to give their sons a business education at a business college. But go on, Fred, tell us something about these Ayrshires of Mr. Crozier and Dr. Sturtevant."

Fred took from his pocket a small, red, leather-covered book; referred to an index, and turned over the leaves, until he found what he wanted.

"Let me look at that book Fred?" The book was a blank paper memorandum book ruled and paged, and with an index; the page Fred had turned to was headed "Ayrshire cows" and under that head he had many items respecting those cattle. "Well go on Fred," said I, returning the book.

"Beacon Belle, an Ayrshire cow imported and owned by William Crozier, Northport, Long Island, gave 43¼ quarts of milk, equal to 95 lbs. daily, when fresh, at eight years old. In 1873 when 15 years old, she gave 23 quarts or 50½ lbs. daily, a month after having her 13th calf.

"Dr. E Lewis Sturtevant of Waushakum farm Mass., records the yield of his herds during seven years viz:

Average of Natives..... 4775 lbs. per cow.
Average of Ayrshires..... 5309 lbs. per cow.

The yields in the best year of the seven for each class was:

Average of Natives..... 4834 lbs. per cow.
Average of Ayrshires..... 6047 lbs. per cow.

A daily average of 15¾ lbs. for the Natives and of 19 lbs. for the Ayrshire. The yield of the 10 best Ayrshires out of 18 was 7317 lbs. in the year, and of the 10 best Natives 6943 lbs. One Ayrshire cow, Lady Kilbournie, gave 1338 lbs. in one month after calving: another cow, Georgia, gave 1417 lbs. in one month when fresh. These cows weighed about 850 lbs.

In averaging the yearly yield of first-class Ayrshire cows, Dr. Sturtevant places it at 5674 lbs. or 2629 quarts per cow or nearly nine quarts per day for 300 days or 10 months, leaving the cow dry for two months in the year. As to the quality of the milk Mr. Miller of Delaware Co., N. Y. reports one Ayrshire cow as yielding 14 lbs. 13 oz. of butter in one week in June; another gave 14 lbs 11 oz. and another 13¼ lbs. a year previously the last cow gave 18½ lbs in one week. In a pamphlet, "Milk Analyses" by Prof. Sharpless, Ayrshire milk is shown to have almost precisely the same composition as human milk and is therefore the best substitute for the natural food of infants."

"That is not so good as I expected," said Mr. Martin; "but it is good enough; 2,639 quarts at 2½ cents is equal to $65.97 and at five cents would be over $130 per cow in the year."

"Harris Lewis's Short-horns yield 251 lbs. of butter per year and he expects to reach 300 lbs." I rejoined; if 20 lbs. of milk make one pound of butter, that is, 5000 to 6000 lbs. per cow, but his cow, Princess, will eat 50 per cent more than Ayrshire cows. Their great advantage, however is that when they have passed their profitable age for milk, they are easily fatted for beef. On the whole, I think the Ayrshires are the cows I ought to keep here.

"Take my word for it;" added my old neighbor "you are right, and if there is a good Native cow that turns up anywhere, when you find out her pedigree, you will find Ayrshire in it." Ayrshire cows will certainly be the most profitable for me.

Everywhere.

NORTH CAROLINA NOTES.

Effects of cold weather on crops and people; ruta-bagas; checking pear-decay; labels; legislative economy; the dog question; no-fence law.

THE last days of the old year and the first of the new, will be long remembered as the coldest that our people have experienced for a great while. The lowest point reached was eight degrees above zero. Except that rather protracted season, the winter has been mild. There has not been an inch of snow, this year. The extreme cold affected the wheat and oats somewhat, giving them the appearance of blight, but I think the rains and warm days have repaired the injury to a great extent—the roots not being generally damaged. In different parts of the State, the people are suffering from a disease somewhat like the epizootic; though it is not so violent as that "horse disease," as it is called. The horses are not attacked this time. In this community it prevails as an epidemic, but is not generally, very severe. It is, most likely, attributable to the extraordinary cold, connected with the great and sudden changes in the weather.

I have learned, this season, that the ruta-baga is much more hardy, under exposure to the cold, than other species. I sowed the seed the RURAL kindly sent and others, in the same lot with excellent varieties of both white and red turnips. Both the latter froze (many of them) and decayed; while the ruta-bagas remained comparatively uninjured. A near neighbor considers the ruta-baga preferable to other kinds for the table. I found it so, long ago. It is milder and sweeter.

Having an apparently vigorous but worthless pear-tree in my garden, I grafted the lower limbs last year; and, in the budding season, I budded the parts above quite freely. Months ago I discovered that the upper portion of the tree was gradually dying; and recently I saw that the decay had reached to within a few inches of the grafted limbs. Though regretting to lose my buds, I concluded (with a wise friend's advice) to cut off the diseased portion. I intend to watch the effect and report. The saw betrayed no unsoundness at the point of separation. I knew no better way to prevent the blight from completely destroying the tree.

My own experience teaches me that a word in regard to labels on young trees may not be unimportant. I once was surprised to find the wires that attached the labels, rapidly destroying the swiftly-growing little trees. I concluded to be more cautious next time, and was, but in examining a fine young peach-tree recently, I discovered that the wire was hiding itself in the rapidly-forming bark, although the wire was loose and much larger than the part it surrounded. I visited the young orchard of one of the best farmers in this section, lately, and I saw that he was in danger of losing his trees from the same neglect.

Our Legislature, this winter, contains a large proportion of farmers and practical men. It scarcely has lawyers enough. One would expect extraordinary legislation in the interest of the industrial departments and enterprises from such a body; but the contrary is threatened. The cry of *retrenchment* drowns almost, or quite, every other. The State Geologist is threatened with official decapitation, on the plea that he is a useless tax. His work is not understood, and therefore, cannot be appreciated. The Agricultural Department meets with much favor, it seems so far, and will be continued. The analysis of fertilizers has (a committee of farmers say) already saved many thousands of dollars to the State, in shutting out worthless compounds. The intelligent farmers are pleased with the reports issued by the analyst, but there is a call for plain language in those reports—suited to the plain men for whom they are designed. The chemist has also published valuable formulas for the direction of those who wish to compound their own fertilizers. This may do good; but it is hazardous. It is too much of a "patent medicine" system; just as the common use of commercial fertilizers. The doctor must know the disease and condition of the system of the patient, before he can prescribe safely. The farmer must know what his land has and what it lacks, before he can add with certainty of success. To learn this, he must be an agricultural chemist—to some degree—and then experiment with his crops, and observe. Right here lies the chief difficulty as to the improvement of land and profitable use of manures. How can it best be met?

The dog-question will probably be handled by the Legislature this year. At present the State sacrifices the sheep to the curs. As most voters have dogs and but few have sheep, the barking is louder than the bleating, and our law-makers are apt to yield to the *howls* of their constituents.

The no-fence idea is gaining rapidly on the people. In Mecklenburg county the experiment has proved exceedingly gratifying. Some who opposed it most bitterly, are now its earnest advocates. Our Commissioner estimates our fences (in the State) at $15,000,000. Making and repairing fences are fast destroying all our valuable timber, and on every farm consuming the spare-days that ought to be devoted to composting and other profitable work.

The recent convention of Northern settlers in the South, held in Charlotte, N. C., promises to accomplish good. They represented different political parties, but harmoniously declared that Northern men may safely come to live and labor in the South. Other meetings are to be held. Five States were represented. A. W. M.

Chapel Hill, N. C.

RURAL SPECIAL REPORTS.

KENTUCKY, Sardis, Mason Co., March 10.—Our county, Mason, is the third in Kentucky in point of wealth, and is singularly favorable to the production of the cereals as well as for hemp, tobacco, fruit, vegetables, etc. In vineyards and orchards, Mason is the peer of any county in the Ohio Valley. The excellent quality of the corn and of the abundant blue-grass, naturally forces this to be a leading stock county; here are found the best breeds of racing and trotting horses, Short-horns and Jersey cattle, Poland China swine, South-down and Cotswold sheep, mules, etc. "Old Bourbon" is the only article we import from our sister county, as a creature comfort, but we claim to make Crab Cider equal in flavor to Tokay wine. Our chief city and county seat is Maysville, which has more business in proportion to population than any other town on the Ohio River. The fertility of our soil has been so little lessened by cultivation that no manure is necessary, except clover and rest, as a means of raising successfully any crop suited to this latitude. The present outlook of the farming community seems encouraging. Tobacco is very brisk, selling from $10 to $12 per hundred. From 1,000 to 1,500 pounds are produced to the acre. Pork is advancing, and the wheat is not winter-killed. J. B. H.

MISSOURI, Springfield, March 10.—In the opinion of the "oldest inhabitant" we have had a "hard winter." It has been as cold here before, but it has been a long while since we knew it so cold for so long a time continuously. From 18 to 20 deg. below zero is excessively cold for southwest Missouri, causing a swop of the peach crop for an abundant one of ice. The peach trees, also, are damaged in many orchards—the result cannot yet be fully seen. Canes of the Red Raspberries are killed; and so are Black Caps in the branches and part of the main cane.

The Kittatinny Blackerry is all right. Wheat, also, is uninjured—the earth having been covered with snow during the coldest weather. The prospect is good for a full crop of wheat. Cattle and other stock went well through the winter, where well fed; for though so very cold, it was dry. At this date the blue-grass is starting and the sheep care less for hay. Man, beasts and birds rejoice at the approach of spring, after a long, cold winter. We welcome the robins now with us in large numbers—harbingers of sunshine and flowers. H.

NEW YORK, Fluvanna, March, 9.—Snow melting very fast. Ice on Chautauqua Lake, 25 inches thick. A large harvest has been secured by the ice-men and farmers. Both classes find ice a source of great luxury in our long hot summer days. In many places the roads are almost impassable from excess of snow, the sun and south wind making them too soft for horses to travel on, thereby crowding all the travel upon the ice in the Lake.

Provisions of all kinds are cheap. Hay, $7; wheat, $1 per bushel; corn, 45c.; oats, 30c.; potatoes, 75c.; butter, 20c. per pound. Cows are in good demand at $40@45. Dairymen are now much struck with the idea of sending their milk to the creameries instead of manufacturing the butter at home. In N. Y. market creamery butter usually brings a better price. Money seems a little easier and business men seem hopeful for the coming season. Indeed the outlook is encouraging. Economy and perseverance will soon bring about better times. H. A. W.

MICHIGAN, Schoolcraft, Kalamazoo Co., March 8.—The winter has been admirable for our wheat. I do not think it has been injured in the least, and even the barley and oats are doing well. Still for success we shall require a favorable season from this time on, as the wheat plant is small, having been sown late. Wheat is now worth $1 a bushel; oats, 25c.; corn, 30c.; potatoes, 60c. to 70c.; barley, $1.75 per cental; land, from $45 to $80 per acre. The first 30 years of my life were passed in central New York and 13 years here, and although I have traveled considerably in other parts of the country; yet, taking everything into consideration, I am decidedly of the opinion that southern Michigan comes the nearest to being the farmer's paradise of any part of the country that I have seen. H. C.

UTAH, St. George, March 4.—Our spring is advancing, and Apricots, Almonds and even Peaches are in bloom, and bees are having a gay time. Lucerne or Alfalfa is the great hay and fodder staple here, and it may already be found six and eight inches high, giving the first crop in April, and yielding, in good ground when properly cared for, four to five crops of two tons each, aggregating from six to ten tons per acre annually. This feed is one of the best milk producers; is greedily eaten by horses, cattle, sheep, goats, hogs and even chickens, and also affords fine bee pasturage. Were its value fully known, millions of acres would be planted yearly. Experience proves that work teams fed on this, without grain, will stand equal service with those fed on wild hay with grain. J. E. J.

NORTH CAROLINA, Warren Co., March 13.—We have had a severe winter, though our heaviest snow merely whitened the ground. The earth freezes too hard for plowing even now almost every night. Fruit buds are still dormant. Land is in fine condition for plowing when not frozen, which is every afternoon. Northern men living in the South, are holding conventions with the avowed object of correcting misrepresentations of northern papers, in reference to the state of society etc. among us, and also to try to draw the attention of emigrants this way. There is room for many more farmers here; but it is a poor locality for the indigent or lazy—we have enough of such already. M. B. P.

NEW JERSEY, Harborton, Mercer Co., March 6.—We have had quite steady and severe cold weather from the 24th of December up to March 1st, since which time it has been warmer, and the frost coming out of the ground, makes bad roads. The field mice have done a great deal of damage by girdling fruit trees. The wheat in the fields looks well. Stock of all kinds have stood the cold weather very well. Hay and grain are abundant and prices low. Wheat brings from $1 to $1 08; corn, 38c.; oats, 23c. per bushel. D. J. B.

VIRGINIA, NEWMARKET, March 8th.—Farmers are just beginning to plow here, it having been too wet, and the frost not being out of the ground before this time. Wheat looks "tolerably" well here. Times are dull; prices for produce, low, and money rather scarce. Wheat sells for 90@92c. per bushel; corn, 40@45c.; oats, 30c.; potatoes, 75c.; butter, 10c. per pound; eggs, 10c. per doz. Farmers generally are in good cheer. Wages for farm hands, $10 to $12 per month. P. S. W.

INDIANA, La Porte, March 3.—Our soil is a rolling drift composed in the main of clay tinctured with red and yellow oxides of iron, mixed with sand containing minute particles of shell lime. All these ingredients are thoroughly commingled. We use none but home-made manures, and second-crop clover which we plow in to return, root and branch, to the ground. J. S. B.

GEORGIA, Herndon, March 7.—The weather is now very fine and farmers are beginning to plow. Although this has been the most severe winter known for many years, we are anticipating a good fruit year and abundant crops. H. B. N.

IOWA, Marshalltown, March 10.—The weather is pleasant now, but the last half of February was severe. Stock is looking well; farmers are getting ready for such spring work as plowing and getting in grain. N. L. C.

NEW YORK, Seneca Falls, Seneca Co., March 10.—We have had a very severe winter here, snowing and blowing most of the time. Wheat, as a general thing, went into winter-quarters looking poorly. E. D. B.

IOWA, Belle Plaine, March 8.—March here has hitherto been warm. Sowing will begin soon. Prices for all farm products are steady, and slowly moving upwards. H. B.

OHIO, Bucyrus, March 10.—The weather here is spring-like, and we are preparing to plant spring crops. Wheat looks well. D. L.

The Querist.

ANSWERS TO CORRESPONDENTS.

Varieties of Grapes.

N. E. P., Fillmore, Allegany Co., N. Y., asks, 1, for a detailed description of the Rickett varieties of Grapes, and what do other vineyardists, who have tried them, think of their merits; 2, whether we have tried the white and red Grapes said to have been sent out a couple of years ago by Mr. Sylvester of Lyons, N. Y., and if so, what is our candid opinion of them; 3, what is our opinion of the Walter, Croton, Senasqua, Eumelan, Worden and Brighton Grapes; 4, whether we personally attended the late meeting of the N. Y. State Hort. Society, and if so, did we ourselves taste specimens of any new Grapes, and if so, whether their quality was good; 5, do we personally know anything more of those new varieties beyond what is set forth in the report, and if so, what; 6, names of some new sorts of Grapes that promise well.

ANS.—1. Highland, vigorous, the leaves large and thick; bunch and berry, large, compact and shouldered, black; flesh, juicy, sweet, slightly pulpy and vinous, very good; ripens between Concord and Catawba. It would occupy too much space to describe the others; send for catalogue. Other vineyardists know but little about them. 2. No.

3. The Walter is very like Delaware, a little earlier, more pulpy, fine where it succeeds, not as reliable as Delaware. Croton and Senasqua, both unreliable and subject to mildew. Eumelan is one of the best of our most reliable class of Grapes, but is, unfortunately, malformed in its reproductive organs; the filament is nearly, and sometimes wholly, aborted, and the pollen deficient, causing the clusters to be emasculated; but, with age, the vine bears better. The fruit is fine and keeps well. The Worden is valuable, two weeks earlier than Concord, but it is not quite so heavy a bearer; vine, very similar; fruit, a little better than Concord. Brighton is a hybrid between a European vine and Concord; fruit, good; vine, vigorous, but subject to mildew in unfavorable years and locations.

4, 5. No, we did not attend the Rochester meeting. 6. Lady, Whitehall, Martha, Worden, Eumelan, Champion, Elvira, Belvidere, Humboldt, Telegraph, Moore's Early, To-Kalou. European varieties do not succeed upon the Atlantic sea-board, and hybrids with our native vines are healthier only in so far as they happen to carry into their make-up the healthier qualities of our native vines. No hocus-pocus of mixing eradicates the weakening elements. This remark applies to any and all such hybrids. Many of them succeed well, under favorable conditions, but our most reliable Grapes have in the past come from improvements upon native vines. As the laws of nature are uniform, we must probably look to this source for any hope in the future. Under present conditions, some of these amateur Grapes are desirable. The following is a partial list of new ones deemed the best: Highland, Amber Queen, Brighton, Adelaide, Autuchon, Canada, Black Defiance, Black Eagle, Brant, Challenge, Concord Chasselas, Concord Muscat, Diana, Hamburg, Don Juan, Downing, Secretary, Triumph.

Origin of Wheat and Corn, etc.

Mrs. A. C. H., Roanoke, Ind., asks what plant was the parent of our wheat; 2, what of our corn; 3, could small natural seedlings of American Arbor-vitæ be brought from Canadian woods and made to grow on her place; 4, to whom should application be made for seeds furnished by the Government.

ANS.—The origin of wheat is a subject of much speculation. It is not certainly known in a wild state. Some suppose it descended from extinct wild species; others, that it is the cultivated form of what are now regarded as distinct wild species. About 1855 a Mons. Fabre claimed to have developed wheat by careful cultivation during 12 years from ægilops ovata, a grass common to the south of Europe, but the assertion has been generally discredited. Wheat has been a cultivated plant since long before historical times; the number of varieties is very large, one Frenchman having cultivated as many as 322, and many suppose there must have been three or four original species of the plant, but the entire subject of its origin is mere conjecture. 2. Corn, according to Alphonse de Candolle and Darwin, is of American origin, and seems to have undergone no specific change since the earliest ages, Darwin having found in South America heads of maize embedded in a beach which had been raised at least 85 feet above the sea. 3. Yes, if lifted carefully and well protected during transportation with moss about the roots. 4. To the Commissioner of Agriculture, Washington, D. C.

Stabling Cattle.

S. C. Bonsacks, Roanoke Co., Va., asks the best method of stabling cattle in winter, and whether it is better to keep them confined all winter, or to turn them out in fair weather.

ANS.—It depends very much on the kind of cattle and the purpose for which they are kept. Ordinary store cattle may be kept most cheaply and profitably in yards with open protected sheds attached, because the extra cost of providing expensive stabling and attention is not returned in the saving of food. But milking cows and fattening cattle cannot be kept profitably in that cheap manner. For these cattle the most comfortable and warmest stables (not neglecting light and ample ventilation) will be found the cheapest, because the cost of using them and the attention needed to maintain perfect comfort for the cattle, are repaid by the increased product. The writer has been testing the question the past winter and finds the weight of milk from dairy cows falls about 10 per cent when they have the run of a good yard for four hours a day only; and that the milk-yield returns, when the cows are stabled all the time. But the stable is airy, roomy, light, warm, clean, and the cows are kept comfortably bedded with dry clean litter. There is also a considerable saving of fodder when the cows are kept up and they gain in condition at the same time. It is the same with fattening cattle which are

invaribly closely stabled by those who make a business of feeding them.

The Mann Apple.

S. B. Lindsay, Ont., asks whether the Russion Man Apple is a winter Apple; whether the tree is hardy, and if it can be had from nurserymen generally.

ANS.—The "Mann" Apple, which is probably what Mr. B. means, is not a Russian, though often so represented by tree peddlers, who generally class all hardy Apples as "Russians." The tree originated as a chance seedling in the orchard of Judge Mooney, of Granby, N. Y. It is called hardy in our large apple-growing districts, and is being introduced as an "iron-clad" in the "cold belt." Its perfect hardiness in severe climates is not, however, sufficiently tested. It is not on the approved lists of the Minnesota, Wisconsin, or Montreal Horticultural Societies. It would probably do well anywhere near the lake in Ontario, and perhaps to a considerable distance northward. Mr. Downing, in his first Appendix, says it is "a late keeper, valuable for market and cooking, and a fair table fruit." The tree is called an annual and early bearer, but nothing is said of its productiveness. We believe that it can be had of most nurserymen.

Holsteins and Belted Cattle.

F. C., Middletown, Orange Co., N. Y., asks what color are the Holstein cattle, and whether they and the Dutch are identical.

ANS.—The color of the Holsteins is black and while, spotted or mottled unequally in different parts of the body. Almost all the Holsteins imported into this country come from Holland—not from Holstein, which now belongs to Germany—and are often called Dutch. The Belted or Sheeted breed of cattle, however, of which there have been a few importations, are strictly Dutch and are never known by the name of Holsteins, although they possess many of the qualities of that strain. They also are black and white, but instead of being splashed or mottled with white, they are marked as if black animals had broad white belts or sheets around their bodies.

Miscellaneous.

A. S. N., asks, what can incubators be bought for? 2. He planted some Cranberries last spring, but had to water them every day in summer, and he asks how this over-troublesome job can be avoided.

ANS.—A glance at our advertisements would show one offered there for $25. Indeed, many of the queries sent us are answered either in the advertisements, market reports or list of catalogues received. While we are always pleased to answer to the best of our ability, all questions of interest to our friends, still, for the sake of other readers, unnecessary questions should be avoided. 2. We presume the Cranberries were raised on uplands, which is, as a rule, a risky business, unless the soil and situation are favorable. The soil should be always an alluvium, never a drift formation, and should be naturally moist without having stagnant water. The Cranberry requires a great deal of water for so small a plant; but in summer time stirring the soil frequently around it, answers the purpose of watering it. For plantations in lowlands, arrangements should be made for irrigating them in summer.

L. P. H., Strafford, Vt., asks, 1, why Cranberries are flooded in winter; 2, where do peanuts grow, on the tops or in the ground; 3, what would be the difficulties in raising Peaches in Strafford; 4, will wheat mix if different varieties are sown by the side of each other; 5, name the two best Grapes for raisins.

ANS.—1. Cranberries are flooded to protect the vines in winter and to destroy insects in the ground and on the vines; besides, some growers hold that water has a fertilizing influence on the meadow. 2. In the ground. 3. We don't know exactly how Strafford is situated, the character of the soil, etc., but cold seems likely to be one obstruction to success. 4. If by "mix" is meant whether they will fertilize each other, then, yes, to some extent. 5. Raisins are made from several varieties of the Muscatel tribe, which are grown nearly exclusively in southern Europe and on the islands of the Mediterranean. None of our native varieties are grown for raisins.

Mrs. L. S. B., Pella, Marion Co., Ia., wishes to learn where she can get information about silk culture from some one engaged in the business.

ANS.—Write to Mr. L. S. Crozier, Silkville, Franklin Co., Kansas.

H. W. H., Currant Creek, Colorado asks, where can he obtain Law's Veterinary Adviser.

ANS.—Through this office, or direct from Prof. Law, Cornell University. Price $3,

H. W., Sheperdstown, West Va., asks where Mapes's fertilizers can be obtained.

ANS.—160 Front street, New York.

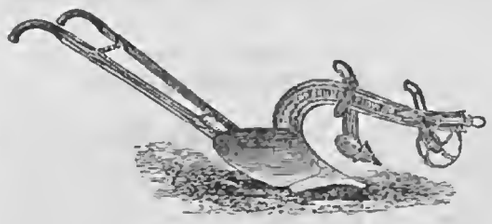
Implements and Machinery.

SYRACUSE CHILLED PLOW.

PRICE, FULL RIGGED, $16.

SAMPLE PLOWS DELIVERED FREE OF FREIGHT ON RECEIPT OF PRICE.



The Syracuse Chilled Plow Co.

have enlarged the capacity of their works *three-fold*, in order to supply the demand for the year 1879.

THEY MAKE THE

BEST CHILLED PLOW

THE WORLD HAS EVER SEEN.

IT IS LIGHTER OF DRAFT.
IT IS MORE PERFECT IN SHAPE.
IT IS MORE DURABLE.
IT CLEANS IN EVERY SOIL WHERE OTHER PLOWS FAIL.
NO PLOW SO WELL PREPARES THE SOIL FOR A CROP.
THE PECULIAR WAY IT PULVERIZES THE SOIL IS ONE OF ITS GREAT EXCELLENCIES OVER ANY OTHER PLOW.
IT IS MADE IN DIFFERENT STYLES—ONE HORSE, TWO-HORSE, OR THREE-HORSE.

Every Plow is Guaranteed under the Seal of the Company.

BEWARE OF COUNTERFEITS.

The reputation of the Syracuse Chilled Plow has induced unprincipled manufacturers to palm off on the farmers plows that they call *chilled*, which are, in fact, nothing but common plows, with the word "chilled" painted or branded thereon.

The SYRACUSE CHILLED PLOW has been made but two years and a half, and in that time

Nearly 35,000 Have Been Sold.

No other new style of Plow ever sold over Six Thousand in the same length of time.

Reference: EVERY FARMER THAT HAS TRIED ONE.

SATURDAY, MARCH, 22, 1879.

A LESSON OF THE TIMES.

To all and each of us in one way or another the question, "How can I manage in these hard times to make both ends meet?" comes very directly home. All, or practically all, have diminished incomes, and thousands know not where to get their bread in an honest and self-respectful manner. For years we lived on the vain belief of a sudden return to prosperity next spring or next fall, but of late "hope deferred" has literally made the hearts of many sick. Journals now clamor, too often in vain, about returning prosperity. Although their grounds for obtaining our confidence have greatly improved, yet the faith of many persons has waxed faint. One good, however, has come out of it all, and that is, a certain steadiness with which many of us are settling down to work, as if convinced that it must take a hard pull and a long pull to reach favorable winds and waters. Perhaps it is the very growing prevalence of this sentiment that is helping much to bring nearer the long-hoped-for good times.

But to say we are settling down to work does not exactly meet the question of how to make both ends meet. Economy will do much, and circumstances have forced us to practice it as we probably never thought we could. Under any system of expenditure, however, money must be had in some way in order to live. The wonderful prosperity of America heretofore has, fortunately, saved us from learning the hard lesson of the pressure of close competition and small profits so well known in Europe. But now the question is forced upon us, and the simple answer should always be, do that which lies nearest your hand, in the full belief that close application to such work will lead up to better things. The curse of the times has been that people would not go to work because they were waiting for better opportunities that never came to them. We know, indeed, that there have been many, very many, cases where work of any kind was absolutely unattainable; but, as a rule, people have not accepted existing circumstances. Whole families of persons capable, every one of them, of making something, if ever so little, have literally lived on one of their number, because they could not get just the work that suited them.

Fortunately all this is gradually changing, and people are answering the question of the times by doing the best work they can find to do. And the best work for vast numbers has proved to lie, as it must always lie, on the farm. Millions of acres were sold in the West last year, for farming purposes, and our increasing exports are already beginning to show the results of these sales. Because we are coming to learn this lesson of good, honest work by manual labor, or any labor possible, a renewal of prosperity seems at length to be clearly approaching; but our efforts must not therefore relax. It may be near us, but who shall say how near or how far, if we don't hold a wise course. And in any case, be it near or far, we can never afford to forget the lesson taught us by the past hard times, that man was intended to earn his bread by the sweat of his brow and that there is no royal road to riches any more than there is to learning. While doing the work at hand, however, let us train ourselves in any special line for which we know we have ability, that we may become skilled producers and not mere common routine workmen. Above all, let us interest ourselves more and more in farming, for therein lies the backbone of our prosperity, after all.

ROOTS FOR DAIRY COWS.

However it may prove with other farm stock, the conviction seems established amongst all our best dairymen that it pays well to grow roots for feeding to cows in milk. It is not likely that our farmers will ever grow roots so extensively as do the English. Our severe winters, which, north of 35° prohibit the feeding of turnips off the ground by sheep, veto that use of root crops. The abundance of good grass land, and the admirable suitability of our glorious maize for all feeding purposes, limit greatly the necessity for root feeding. And yet experience has developed the fact that dry feed, no matter how rich in all elements of nutrition, does not alone promote such a free secretion of milk from our cows as when a liberal daily ration of roots is added. It may be that in some cases soaked and steamed feed will give as good results for a time; but there is something about the fresh roots that seems not only grateful to the appetite, but equally promotive of a healthy action of the digestive organs, upon which in the end must stand the power of profitable production in our dairy beasts.

What roots are best for this purpose, is a question often asked. While we set a high value upon turnips for feeding sheep, and also for young or fatting cattle, we believe we give voice to an opinion that is becoming more and more settled when we say that for dairy cows beets are, all things considered, most suitable. The further question, what sort of beets are best, cannot be so positively answered. But we incline to take the view that whatever particular variety or strain is adopted, the practical dairyman will give preference to a certain form, and that the form of root chosen will be that most nearly approaching the globular, free from side roots, and with a tap-root as little fleshy as possible. Farmers cannot wash these roots before feeding, yet they are all sensible of the evil of feeding them mixed with the earth which adheres to the fine fibers and branching prongs. If no other reasons were to be given, it is sufficient that great injury from wear is inflicted upon the teeth of animals that must chew up an ounce of sand with every pound of root. The attention of seedsmen has been thoroughly awakened to the existence of this opinion among practical herdsmen, and most of the new and improved sorts now offered are of the globular form.

As between the mangolds and sugar-beets, we think form will carry the day. But if from the sugar-beet a variety can be produced which will have, with a globular form, an excess of nutrient matter, then the preference will naturally librate in that direction. In the matter of size, there can be little doubt that immense but watery roots are getting out of favor with men of experience. One of the great objections to roots is the great amount of frost-proof storage-room they require. The larger they grow the more room they occupy in proportion to their feeding value, and the more likely to be hurt by slight frosting, both before harvesting and after being stored. A firm, heavy bulb, of medium size, with small neck, top, and tap-root, and as near to no side roots or fibers as possible, is what is needed. We advise our readers to select from the lists of the seedsmen the roots of this class, testing various strains, and selecting those that best suit their soil and their judgment.

SUPPRESSING PLEURO-PNEUMONIA.

After an excitement on any matter, a reaction naturally sets in and there is always a risk that the subject which caused the commotion may be unduly neglected. There is danger that this may be the case with regard to the extermination of pleuro-pneumonia from the few places in which it still exists in this country. The discussions and investigations consequent upon Great Britain's restrictions on our importations of live cattle, have made it clear that the disease is confined to narrow circuits in a few places in the Atlantic States. There have been sensational reports of its appearance in some places in the West, but in every such instance that has come under our watchful notice, a thorough investigation by competent veterinarians has demonstrated the fallacy of the reports and the reckless disregard of the public interests shown by the papers that have given a place in their columns to such pernicious rumors.

In view, therefore, of the narrow limits within which the malady is confined, and of the broad extent of the injury its presence there is inflicting upon our stock interests, efficient measures should at once be adopted for its eradication. Experience in every European country which has been cursed by its ravages, shows that the only reliable means of effecting this end is the slaughter of all infected animals, the destruction or thorough disinfection of their stables and the strict quarantine of all exposed animals. Remedies have proved worthless; while inoculation as a preventive, however effective in diminishing the death rate among infected beasts, has served to spread the contagion, as to this end it is as disastrous as the original disease.

But as the slaughter of infected animals should be enforced for the public good, their owners should be compensated for their loss in proportion to the average chances of their recovery, which can be easily ascertained from recorded statistics. A portion, if not the whole of the expense of this measure, should be borne by the State, inasmuch as its herds are especially endangered by the disease thus eradicated; and, in all fairness, a part should be borne by the national government, inasmuch as the measure is a protection even to distant herds, and tends to bring about the speedy removal of the embargo on our cattle exports, from which the stock interests of the entire country are suffering. As the infected beasts are destroyed to insure the safety of the untainted, the loss should be assessed on the principle of a "general average."

OUR COUNTRY CEMETERIES.

Every traveler through the United States, as from the car window he surveys the country through which he passes, ever and anon observes in the distance, on some hillside or on the naked field, a small collection of white marble headstones. These collections denote our country cemeteries, and each headstone marks the resting-place of some departed member of the human family. Were it not that one knew it to be so by observation, the uninitiated might be tempted to take these cemeteries for artists' marble-yards, for little else indicates that they are burial places. They have no trees, no sweet-scented shrubs, no flower-beds, no walks, no seats, no song-birds—nothing, except the cold marble slabs and a luxurious growth of weeds, is there to be found. Is this as it ought to be? Have those who departed, some in the bloom of youth, others in wintry age, left no relatives, no friends behind that will cherish their memories or beautify their resting-places beyond the placing of a stone on the grave?

In Europe, at least in northern Europe, the country cemeteries present a different aspect. Though the parish may be small and poor, the church-yard blooms like a paradise with lovely plantations of trees and shrubbery. Clean, graceful walks wind through the groves, and though, instead of the costly headstone, there may be but a simple wooden cross, yet at its base one may be sure to find a Rose or Hyacinth, or other floral treasure to bear evidence that the sleeper is not forgotten by the living.

Of necessity our early settlers could not give much attention to the laying out of burial places; but the neglect of our country cemeteries is growing to be a national characteristic. The country is now getting older, richer and more densely populated; it is quite time therefore to make a change; there is no longer any excuse for the present condition of rural cemeteries. Destroy the weeds and produce, instead, a velvety grass sod. Plant flowers, hardy evergreens and deciduous trees to beautify and shade the spot. Plant them for the sake of the sacred memory of those you have buried. Plant them for your own sake who visit and cherish the spot. Plant them for the sake of the community in which you live, whose æsthetic taste you will thus help to educate,

THE SUGAR MAPLE.

It is a pity that the Sugar Maple is not more extensively grown than it is at present. As an ornamental tree its outlines are very symmetrical when young, while in advanced years it usually assumes a diversity of form seemingly dependent on the soil and situation. It sometimes reaches the hight of 70 or 80 feet, although it is generally considerably smaller, and it is remarkable for the brilliancy of its autumnal colors. As fire-wood it ranks next to hickory and is the most valuable wood we possess for charcoal. The curled and bird's-eye varieties are prized for cabinet-work and interior finishing, while the straight-grained kind is used for a number of household and artistic purposes as well as for ship-building.

Moreover, a maple orchard or sugar bush, as it is called, is a source of no small annual income on a farm. The product is cane sugar, is cheaply and easily manufactured and is preferable on some acounts to that from sugar-cane. The sirup, too, as the best in the market, always finds a ready sale, brings a higher price than any other, and some makers dispose of all their product in this form. According to the census of 1870, the total production of maple sugar in this country was 28,443,645 pounds. Twenty-eight different States contributed to this quantity, of which the following yielded the largest amounts: Vermont, 8,894,302; New York, 6,692,040; Ohio, 3,469,128; New Hampshire, 1,800,704; Pennsylvania, 1,545,917; Indiana, 1,332,332; Virginia and West Virginia, 755,699; Wisconsin, 507,192; Massachusetts, 399,800; Kentucky, 269,416. The total quantity of maple molasses or sirup was 921,057 gallons. Of course, the actual production of both sirup and sugar must have been considerably greater than the amounts returned by the census, for in all such cases the sins of omission both on the part of canvassers and small makers are always numerous.

The industry is at present confined chiefly to the few States mentioned, with small contributions from the other States East of the Mississippi and North of the 40th parallel of latitude; for west of the Father of Waters the sugar Maple is seldom met with, while in the Southern States it is found only along the mountains. The black sugar Maple which Michaux classed as a distinct species, is now regarded as only a variety of the common kind, and is generally considered the most productive sort.

CARE NEEDED IN PURCHASING NOVELTIES.

We hope that all of our readers having fruit trees or plants of any description to purchase, or to order this spring, will be careful as to where or of whom they purchase or order them. If new things be offered of surpassing—not to say of incredible merits—do not select them. Be assured that really good fruits or flowers must first be made known through the horticultural press, and that no Wonder in the land of plants can ever originate, be propagated and offered for sale, in these days by any one individual. Remember this, that *every* plant of real worth, may be found in the catalogues of all trustworthy dealers, with the price attached, be it Strawberry, Grape, Pear, or flowering shrub or tree. If you want plants at all, it is worth your while to *find out what* plants you want, and to order them or to buy them directly of such firms as can and will supply the plants you want, and of no others.

ABOUT THE CORN PREMIUMS, &c.

It will be desirable that those who intend to compete for the Corn Premiums send in their names for registry at an early day. It is not our desire so to arrange the premiums as that he who produces the greatest yield from the corn we send him shall be entitled to *all* of the premiums or to a great share of them, but rather to the first and most valuable premium; the second largest yield, to the second most valuable premium, etc. All this may be settled upon at some future time. As to the method of planting, area to be planted, etc., we need only remark that the seed corn which we send must be sown within one-fortieth of an acre or in a plot 33 feet square.

BREVITIES.

You who have none, plant a Quince tree this spring.

Unmindful people — people who haven't their wits about them—had better never meddle with hot-beds. If hot-beds are to be of any special value, they *must* be attended to understandingly and promptly.

Marechal Niel Rose. — "There are but three words," says Mr. Hole in the London Garden, "which we dare to speak in such a presence as this—Hip, hip, hurrah! The hips, of course, for the seedling Brier on which he is enthroned, and the hurrah for the Royal Rose."

Mr. C. M. Hovey, our well-known Boston horticulturist, has lately arrived in London, taking with him some of his best Camellias, to the raising of which he has given much attention during years past. Mr. Hovey often contributes his experiences and views to English journals; but he rarely writes for home journals.

The temptation to uncover vines, borders and protected things, is almost irresistible among young gardeners and florists. They want to have things look shapely and tidy; all of which is in accordance with the spirit of the true gardener. But protection for this climate is never more needed than now, and those plants which have been protected need it most of all.

To carefully lay aside a good thing not immediately needed, against a time when it may be wanted, is only a matter of common prudence in every-day life. The farmer does so with his seeds, with his agricultural tools and implements and with his money; but he seldom does so with a good article in his paper. It happens not unfrequently that an instructive article appears in this and similar journals at a time when some of the readers cannot straightway utilize the information contained in it, however useful it might be to them at another season. Prudence would in such a case suggest that the article should be carefully preserved for reference when its information might be beneficial; but often even if prudence's suggestion is at once obeyed, carelessness soon loses the paper. Whatever they may do with other numbers, we would strongly advise those of our friends who are interested in maple sugar making, and cannot this season avail themselves of the information and suggestions contained in the article on that subject in this issue, to keep the number carefully for reference next season.

Literary Miscellany.

WEAKER THAN A WOMAN.

(Continued from page 174.)

CHAPTER XLII.

Seven o'clock struck, and then half-past, and Felix persuaded Lady Chevenix to take some dinner. If anything had happened, he thought to himself, she would be better able to meet it after dining. She was very unwilling at first, but after a time she consented, and dinner was served.

"I know what I think myself," said Felix. "Sir Owen has called in somewhere, and they have persuaded him to stay. Try to imagine that; it seems to me not unreasonable."

They sat alone at the stately dining-table, where the silver plate and the richly-cut glass looked so brilliant—the table where Lady Chevenix had undergone so many humiliations. It was but a farce; neither of them could eat.

Eight o'clock chimed, and no other sound broke the summer silence.

"I cannot sit here any longer doing nothing," said Lady Chevenix. "I am quite sure now that something has happened; I must send out a few of the servants."

"I have done that," Felix told her. "All that is possible has been done; they will return together soon."

His words were prophetically true. Even as he spoke they heard a confused noise at the grand entrance-hall—the rush of many feet, the cries of women, and the deep voices of men.

Felix never forgot Violet. She rose from her seat, and stood hesitating for one moment, pale as death. Then she turned to the door. But Felix was before her. That which was happening in the hall was most assuredly something which she must not see.

"Sit down, Lady Chevenix," he said. "You must not go out there. Let me see what is wrong."

She did not seem to understand him; but he placed her in a chair, and then opened the door. There was a rush of terrified servants, and women's voices cried." "Oh, my lady—oh, my lady!"

He held up his hand with an imperative gesture.

"You will kill Lady Chevenix," he said, "with this noise. Let no one go near her."

He took one step forward, and at once saw the cause of the commotion. A crowd of men stood round a litter, and on the litter lay Sir Owen. Felix pushed them aside.

"Is he dead?" he asked; and the answer was, "No."

"Thank Heaven for that!" he cried. Then he uttered a little cry of dismay, for Lady Chevenix stood by his side.

"What has happened?" she said. "Tell me the worst."

"Sir Owen has been thrown from his horse; and Martin says the horse fell on him?" cried a dozen voices.

And then, his eyes dim with tears, his whole frame trembling with excitement, Martin forced his way through the group, and stood before Lady Chevenix and Felix.

"My lady," he said, "I wish I had been dead before this day came round. You sent me to take care of him, and he is brought home so."

"Tell Lady Chevenix how it happened," directed Felix hastily.

"Sir Owen rode nearly all the time, my lady, and I rode by his side. We went all round Lilford, Harberly, and Ripdale. He stopped at Ripdale, and took some refreshment. Then he came home by the woods, and the horse was all right until Sir Owen came to the ring fence. The church clock at Lilford had chimed half-past seven. He turned to me and said, 'Martin, I shall take that fence in fine style.' I begged him not; I prayed him not. I told him the fence was too high for any horse, even the best in the kingdom, to take. But he would not listen—you know, my lady, he never would listen. He put the horse at the fence, and it refused. He whipped it and spurred it until my blood ran cold; and then he put it at the fence again. But Plantagenet would not take it. A third time he used the whip and spur, until the horse went almost mad. A third time he went at the fence. The horse tried his best, but his fore-feet caught the top, and he fell over, master being underneath him, my lady. When I went to raise him, I was afraid he had been crushed into a shapeless mass, but he was not; nor was he killed, for I felt his heart beating. I had a flask of brandy in my pocket, and I put it to his lips—he could not swallow it. I had to leave him there while I galloped off to the nearest cottage and gave the alarm. Then we made a litter, and carried him home."

Felix turned to him.

"How long will it take you," he said, "to ride to Lilford, and bring two doctors?"

"I can do it in two hours and a half," replied Martin.

"Go at once," said Felix, "and lose no time. You, John, go to Ordstone Station, and send a telegram to Sir William Daly, the great London physician. The address is Hyde Park Gardens. Say what has happened, and ask him to come at once. You, Stephen, go for Mrs. Haye. Take the carriage, so that she can return at once. Horton, if you will help me, we will carry Sir Owen to his room."

Felix sent for Mrs. Wardley, the housekeeper, and when she appeared he begged of Lady Chevenix to leave them for a time. She was very unwilling to do so.

"I ought to be with him, Felix, she said—"I ought indeed."

"So you shall be when I think it is right to send for you," he answered; and she went away.

They carried the Baronet into a spacious handsomely-furnished bed-room. The curtains were drawn and the lamps lighted. They laid him on the bed of down, and the faithful servants wept over him.

"I always knew that it would be so," said Mrs. Wardley. "I have always expected this evil day. I was his mother's nurse, sir," she added, speaking to Felix, "and I nursed him until he was three years old. He never would listen—never—and it has come at last."

The men took off his clothes and placed him between the fine linen sheets. Felix examined him attentively; he could discover no bruise, no wound. But for the pallor of his face, he might have been asleep.

"I begin to hope, Horton," he said to the butler, "that there is not much the matter. I cannot see a wound. He is stunned with the fall."

But Horton shook his white head.

"I am afraid, sir, that it is more than that. What time is it now?"

Felix took out his watch.

"It is just a quarter-past nine," he replied.

"It will take two hours and a half to bring the doctors here; that will make it a quarter to twelve. My lady might come in, sir. There is nothing to frighten her."

Then Lady Chevenix did come in. Felix looked hopefully at her.

"I begin to have every hope," he said; "there is not much the matter, I think. Certainly there are neither broken limbs nor bruises. I am of opinion that Sir Owen has been stunned by the fall. We will bathe his head, and try to get some brandy between his lips. I do not think there is very much the matter."

Lady Chevenix went up to her husband, and knelt down by his side. She had never professed any love for him; but, as he lay there, white, silent, and helpless, a keen sense of pity and compassion for him awoke in her heart. She took his hands in her own and rubbed them.

"Owen," she said—"try to speak to me."

They brought brandy; Felix gave it to him himself with a spoon—and this time they were quite sure he swallowed it. Felix looked at Violet.

"He has swallowed it," he said; "and see—there is some color coming back to his lips! Lady Chevenix, speak to him again."

"Owen," she said—"my dear, can you speak to me?" And this time there was no mistake; one of his eyelids moved, and his lips trembled faintly.

"He is getting better!" she cried. "I can see his lips move!"

They redoubled their efforts, and presently the pale lips parted. Felix gave him a little more brandy. They left nothing undone that they could do, the four who stood so anxiously by him—his wife, Felix, the butler and Mrs. Wardley. At last the Baronet gave a deep sigh and opened his eyes. His wife bent over him.

"Are you better, Owen?" she asked gently.

He looked up at her.

"Better?" he repeated. "I am all right."—"Tell me what is the matter?"

"I had a nasty fall. I remember it now," said Sir Owen. "It stunned me. I do not remember how I came home though."

They told him, and he listened attentively.

"So Plantagenet fell on me," he said. "I wonder that he did not kill me. As it is, I am not hurt. I am stunned—dazed a little. Very likely I fell upon my head; but it is wonderful that I am not hurt."

"I am very thankful," put in Lady Chevenix. "It might have been so much worse."

"Yes, it might. I own now that my conduct was very foolish. Violet, you will give all those poor fellows who helped to bring me home a handsome reward, will you not? Lonsdale, I am glad that you are with me. You will stay, will you not? I shall be all right to-morrow."

They asked him if he had any pain. He said "No." There was a strange giddiness in his head, and a strange sensation of numbness in his body; but, save for that, he felt all right."

The old butler, when he heard that, turned and quitted the room. He felt sure as to what was coming.

Sir Owen lay perfectly still. The lamps were all lighted, and their clear brilliant light fell on the compassionate face of Felix Lonsdale, and on the troubled one of Sir Owen's wife.

"How bright and pleasant everything looks!" said the Baronet. "How strange it seems to be lying here! I shall get up to-morrow." Yet, when he tried to move, there was a sense of helplessness that he could not understand. "It is strange" he said to Felix, "that I have neither wound nor bruise. I was quite stunned, but that is all. This numbness will go away with a few hours' rest. I am so glad you are here, Lonsdale. You will not leave me to-night, will you? I feel strangely wakeful, and it is dreadful to lie awake through the long hours of night."

"Of course I will stay," he replied, "and Lady Chevenix too."

"How strange it was, Lonsdale, that you and I should have been talking about death this morning! It must have been a foreboding of this accident. I have had a wonderful escape. I shall never forget it. I cannot think how it was that brute did not kill me. Violet, come nearer to me, and let me hold your hand. What a strange sensation it is to be frightened at nothing, as I am!"

She came nearer to him, and took his hands in hers; he looked at her.

"I have had a narrow escape," he said again, with a shuddering cry—"a narrow escape. Violet, this will do what no lecturing and no sermon could do. It will make me a better man. I will be a better man, my dear—I will indeed. I will give up brandy, and I will be kinder to you; I will, Violet. I will look after things better than I have done. I will help the poor, and go to church."

There was a brief silence, and then he started suddenly.

"I was asleep," he said—"asleep and dreaming. How strange! I shall be better to-morrow. I wish this feeling of numbness would go. It is nothing, but it is uncomfortable—I cannot stir. I shall be a better man after this, Violet. We shall be happier than we have ever been yet. I wish to-morrow were come, that I might get up. Felix, you need not send for any doctors; I shall not want any. My head is dizzy; it will soon be all right."

"They sent for doctors as soon as you were carried home," remarked Lady Chevenix.

"They need not see me if they come," he said. "You can tell them I have no pain, no wound, no bruise. I do not like doctors, and I shall be all right to-morrow."

Ten o'clock and eleven o'clock struck. He talked to them the whole time; but at eleven he com-

SAND-STORM IN THE ARABIAN DESERT.

plained more of the terrible numbness and the inability to move.

"I lie here like a log," he said. "I shall be glad when to-morrow comes." He looked haggard and restless as the time wore on. "I will not ask for brandy," he remarked, "though I should like some; but I mean to give it up—I do indeed. You will see, Violet, how happy we shall be when I am well."

It was nearly midnight when the doctors came—Doctor Brown, the old established practitioner, and Doctor Brene, the clever young physician from London, who had bought a practice in Lilford. They looked in wonder at the scene—the superb room, the pale lovely woman in her dress of blue velvet and pearls, the man lying on the bed.

Felix explained rapidly what had happened.

"I am all right," said Sir Owen. "They need not have troubled you, gentleman. I have no pain, no bruise, no wound. The fall stunned me—that is all."

The doctors looked at each other, and then asked Lady Chevenix if she would leave them with her husband.

"There is no need," he said impatiently. "Lonsdale never mind what they say; do not go."

"I will not be long away," replied Felix.

He did not like the look that had passed between the doctors; it was not a hopeful one. He touched Lady Chevenix gently on the arm.

"Let us retire for a few minutes," he said; and kissing her husband's face, Violet rose and quitted the room.

They did not go far. Through the oriel window at the end of the corridor the summer moon was shining, and they both walked thither. She looked up at Felix, and he saw that she trembled.

"I am frightened," she said. "It seeems so strange."

In perfect silence they stood at the window, watching the moonlight on the gardens. They had been there quite twenty minutes, when the door of Sir Owen's room was slowly opened, and Doctor Brene came to them.

"I have bad news for you," he said in his grave full voice. "Lady Chevenix, you must be brave. I have very bad news."

She could grow no paler. She stood white, calm, and self-possessed before him; but her heart was beating painfully, and every nerve was strained to the utmost.

"You must promise to listen quietly to what I have to say. Tell me, first, whether Sir Owen has any worldly affairs to settle."

Lady Chevenix looked at Felix, as though she hardly understood.

"He cannot have much to do," he said. "His will was made and signed some months since."

She seemed to understand neither question nor answer. She looked at the doctor.

"What is it?" she asked. "I do not understand. Tell me about my husband."

"He is very ill, Lady Chevenix—very ill indeed."

"But," she cried, "he has no pain—he has no wound!"

"So much the worse. Any pain would be better than none. The truth is—now promise me to be calm, Lady Chevenix—the truth is that Sir Owen has injured his spine, and that there is no chance for his life."

She trembled so much that the doctor brought a chair and placed her in it. He asked Felix to get her some wine.

"Try," he said, "to bear up a few hours. Your husband cannot live longer, and you must be with him. You must comfort him to the last. Try to bear up."

"I will," she replied. "And he does not know?"

"No. He knows nothing of it yet," he answered. "Drink this wine, and come back to him. It is midnight now, and he cannot live until sunrise. Come at once, Lady Chevenix; you must tell him, if you can, that he has to die."

"I cannot," she said. "I know it is my place—my duty—but I cannot do it. In some things I am weaker than a woman; this is one of them."

"Then I must tell him myself," returned the doctor, as he moved away slowly; "but this is not as it should be."

"Felix," she said, "I have never seen any one die. I know nothing of death. I am terrified at the thought of it. Do help me."

"I will," he answered—"all that I can."

They went back to the room and Sir Owen looked up as they entered.

"Why did you let me be tortured with doctors?" he cried. "I was getting better quickly, and they have frightened me with their long faces. They say—oh, listen, Violet—that I am going to die!"

He uttered the last word with a scream they never forgot.

"It is all nonsense," he continued. "My back is hurt with the fall—that is all; it is nothing more—nothing more, I assure you. Lonsdale, send for your father. I want to see him; he has always been kind to me, in his way. He will see at once there is nothing the matter; send for him."

Felix left the room at once, and sent Martin off for his father. He asked if the carriage had returned with Mrs. Haye, and was told that it had not. He went back to the room, and found Violet kneeling by her husband's side. Her head, with the golden hair all unfastened, was on the pillow, and she was trying to reason with him."

(To be continued.)

EDITH'S BROOCH.

"THERE, that's enough, young woman," said the harsh voice of Mr. Garnet, the jeweler, as a young and timid female still lingered near his counter. "I have made you the offer. If you like to take it, well and good; if not, you had better be off at once."

Still the girl hesitated.

"Can you not do any more for me? The brooch is so very valuable. It has been prized as one which is extremely rare," she pleaded.

"My good girl, do be reasonable. I have given my ultimatum. I never make two prices," said Mr. Garnet, sharply. "I can waste no more time on you."

And the jeweler turned from the young lady—for lady she was, in all her look and attitude and tone—to a customer who had just entered the shop.

"Is my pin finished yet?" he inquired.

And Mr. Garnet turned off to a neighboring drawer to bring the trinket forth from its hiding-place.

"There it is, Mr. Trevaux. I hope it will prove all satisfactory, sir," was the civil reply, as the jeweler brought it to the counter. "It was a tiresome job, and we shall be obliged to charge accordingly. It will be $40, sir."

Mr. Trevaux drew out his purse, and paid the money without further comment.

But as he did so his glance fell on the splendid diamond and ruby brooch that was still reposing on the counter near its shrinking mistress, and then it turned on the young lady herself with keen though not attentive observation.

Hers was a face and figure that could well bear inspection.

Paul's gaze furtively rested on her winning charms, while the jeweler wrapped up the beautiful breast-pin that had been so costly in its repair.

Then the young man lounged carelessly about the shop, examining its precious contents, and now and then asking the price of the tempting articles, while Edith Montrose once again spoke to Mr. Garnet, in a low, eager tone.

"The brooch is worth $300, I have often heard. I will be content with $300. Can you not give it to me? Even then it is a great loss," she added, plaintively.

Mr. Garnet hummed and hawed, looked again at the jewel, and again appeared to give way.

"Well, well, I always was rather soft where youth and beauty were in the case. I expect I shall lose; but it cannot be helped. I will give you the money. There, write this receipt and your name and address, and it shall be a bargain."

Edith sighed deeply, but there was no alternative: a young sister and an invalid brother depended on her for support.

Was it for her to prefer a trinket, however valuable, to their comfort and welfare?

The thought emboldened her to conquer feminine repugnance to such a sacrifice.

The pen was seized and the acquittance given during the brief absence of the jeweler.

But as he returned to his post with the bank-notes, another customer entered, followed by a large Newfoundland dog, who made up to Edith and fawned upon her with singular marks of affection, while his master began to inquire for the articles that he required from the store.

"Can I go? Will you please give me that sum?" faltered Edith, in a low tone, as the stranger deliberately turned over the things he had demanded to be shown.

Mr. Garnet turned sharply round, gave the girl the bank-notes, and then devoted himself to his more profitable customer.

Meanwhile, Edith Montrose left the shop, and was followed for some distance by Paul Trevaux, though she was too much engaged with her own thoughts to observe his movements, or perhaps his very existence.

"What kind of brooch were you wanting, Mr. St. Croix?" asked the jeweler of his remaining customer. "I have not long since purchased one of exceeding value and beauty, which I should like to show you."

Mr. Garnet looked round to point out the jewel in question; but it was not visible. He searched the jewel-cases, the papers, and the inkstand from which Edith had taken the pen; but in vain.

The brooch had vanished. No trace of it could be found, and Mr. Garnet's ire was both loud and deep.

"The young minx! Yes, there can be no doubt of it! I am seldom so utterly befooled. But who could have believed such a thing? She really looked like a lady. Well, she shall suffer for it, cost what it will. I'll have no mercy. Mr. St. Croix, now am I not justified? You are witness. Look here at this receipt."

And he displayed the graceful handwriting of his young client to Mr. St. Croix's stern eyes.

"A trick, of course. You never can be up to them; they have as many disguises as a detective," he returned. "However, I shall be very happy to bear witness in the matter, Mr. Garnet," he added, pocketing the jewels which he had just purchased from Mr. Garnet's store, leaving the jeweler to the indulgence of his wrath.

* * * * *

"Young woman, we have a warrant against you. You must come with us," said two ferocious-looking individuals, or, at least, they had a most formidable appearance in the eyes of the poor girl and her invalid brother, as they entered their humble apartment.

"For what? There must be some mistake," faltered the girl, shrinkingly.

"Not at all. We never make mistakes. Ain't your name Edith Montrose?" they asked, sharply.

The girl bowed her head.

"Ah! yes; it's all right. And weren't you in the shop of Mr. Garnet, yesterday, jeweller, in Old Bond Street?" was the next query.

And again the assent was mutely given.

"Very well. Then you're the right person; and if you don't choose to give up the brooch you stole, we must take you off at once to prison," was the reply.

"I have no brooch. It is false! I sold it," exclaimed the girl, with flashing indignation in her eyes and face.

"Ha, ha! We know what all that means. We must search the house if you are still obstinate, young lady," returned the elder man.

"There are but three rooms on this floor that belong to me. I and my brother and sister lodge here," she replied, sadly. "My brother is in one of the rooms. He is ill. Please do not shock him by such a dreadful falsehood," she went on, presently.

"That's your look out; not ours. You should not have done it," the man answered, gruffly.

But the other whispered a few words to him that somewhat mollified his hardness; and when they pursued their search to the invalid's room, they so far softened their manner as to refrain from fully explaining their errand to the astonished Cecil.

"Well—well; its very cleverly hidden; but you'll be made to turn it out, young lady," said the official. "You must come with us; and if you choose to tell your sick lad there not to expect you back, it will, perhaps, save some trouble."

Poor Edith shivered; but her love for the suffering Cecil prevailed over her woman's fears, and she quietly told him she might have to give some evidence about a lost brooch, and that the younger sister Mabel would take her place in his room. And with this last brave attempt to conceal her suffering, she departed with her rough escort to the degrading destination of the police court.

The ordeal there was brief enough. There was no defence; but still only presumptive proof of her guilt. So a remand and a humane permission to occupy a room under surveillance instead of going to a common prison, was given by the indulgence of the bewildered and doubting magistrate.

* * * * *

"Miss Montrose, I have obtained leave to see you. I trust you will pardon the liberty I am taking in this self-introduction, and in obtaining permission to take up your case," said a gentleman, who had just been announced to the young prisoner in the rough and ready style of her jailor.

And Paul Trevaux stood before her, with a frank yet respectful air that was adapted to win at once her confidence and her respect.

"You are very kind, but I do not know you," she said, timidly. "I have no friends to help me to prove my innocence, and it is unfair to expect a stranger to believe when proof is so strong against me."

"Never mind whether it is fair or not," he replied, smiling. "It is enough that I do trust you as I would myself, and that, being a budding barrister, I intend to win laurels in vindicating you triumphantly as an innocent lady. Will you allow such presumption?

Edith's eyes filled with tears for the first time since her misfortunes.

"You are indeed good and kind," she said, "and I do assure you from my very heart that I am innocent—quite guiltless of the theft;" and her color rose indignantly at the degrading word. "No; I sold the brooch in question to Mr. Garnet, and received the money, and left the jewel, while he was engaged with another gentleman—the one with a large dog, I mean."

"And you are sure the brooch was on the counter then?" he asked.

"Quite sure," she replied, and then the subject dropped, and the conversation turned on other topics, and Paul heard, without much difficulty, the sad story of the young girl's early troubles, how she and her brother and sister had been left orphans, and that all her energies had been taxed to the utmost to meet the demands on her courage and her time by such a burden.

And though she only distantly alluded to any pecuniary difficulties, the very fact of parting with so valuable a family jewel, was enough to prove the straits in which they had fallen.

Paul lingered till the last moment of his time, and then departed, more than before convinced of the innocence of his fair client, and equally conscious that she appeared to him most lovely and fascinating.

* * * * * * *

"Pray, Mr. Trevaux, what witnesses have you to call in defence of the prisoner?" asked the magistrate, in an accent of severity that perhaps covered the dangerous yearnings of indulgence in his heart.

"Simply Mr. St. Croix and his dog," replied the young man, calmly. "I believe they are both in court, and if I can extract no information from them, I can only plead absence of any real proof for my client."

There was a general buzz as the large Newfoundland appeared by the side of his master, and looked round the crowded court with dignified inquisitiveness. But when his eyes fell on Edith, the creature could scarcely be restrained from rushing to her to display the strange regard he had conceived for her.

"Mr. St. Croix," said Paul, calmly, "may I ask if you have examined your dress, as you wore it on the day when the brooch was lost—I mean, so as to make it absolutely certain it cannot have been carried off by you in ignorance. Of course, I distinctly mean that the trinket might have clung to some part of your garment while you were utterly unconscious of its very existence, and I am sure, for this young lady's sake, you will pardon the question."

"It is impossible. I have worn them ever since the day. I must have detected such an involuntary theft had it been committed," replied Mr. St. Croix, gravely.

"And your dog? May I venture—or will you kindly undertake to pass this comb through his hair?" resumed the barrister.

There was a general laugh in court; but Paul was not to be turned from his purpose.

He came forward, and passed the large comb he held again and again through Neptune's thick coat of hair without effect. But just when a cry of derisive contempt was uttered by Mr. Garnet, there was a sharp, light sound on the floor of the court.

The missing brooch had become entangled in the innermost recesses of the shaggy mane, just below his broad leathern collar, and Neptune stood convicted of felony.

But he was not only freely shielded from punishment by a pardon, but some few months afterwards he was made a wedding present to Mrs. Paul Trevaux, *nee* Edith Montrose.

NEW YORK EXCHANGE FOR WOMAN'S WORK.

CONSIDERING the success of this social and charitable enterprise, we may expect to see similar institutions follow its example in all our leading cities. The Woman's Society of Decorative Art gave a powerful stimulus to every department of female industry, but from the necessity of its adherence to the most rigid standards, and its requirements not only of exquisite nicety, but of genuine artistic excellence, in the work admitted to its rooms, this society could afford opportunity to none except the most skillful — those trained to reach the perfection so many were willing and anxious to labor for.

The Woman's Exchange, on the other hand, while demanding that everything accepted shall be good in its way, recognizes the importance of affording a market for a thousand articles, pretty, useful and indispensable, which may be made by women in reduced circumstances to eke out a narrow income. The undertaking has been so successful that it is no longer necessary to argue about its *raison d' etre*. It has supplied a double need: it has not only aided a multitude of women in poverty who are precluded from the more active industries, but it has offered to buyers of holiday presents the best and pleasantest salesroom in the city.

This society was organized in the spring of 1878 by a number of leading ladies in New York. It has been simply and admirably managed. The rooms at 4 East Twentieth street recently vacated by the Society of Decorative Art were taken, and arrangements made for carrying on a quiet and, probably a losing, business until the autumn, when the summer travelers should return to town. Some time before Christmas the three rooms at first deemed sufficient proved too small, and the quarters were considerably enlarged. The place was full of goods of all sorts—some beautiful and claiming real consideration as works of a high order of decorative art. The sales in a single day frequently amounted to hundreds of dollars during the fortnight preceding the holidays.

The plan and methods of the managers might well be distinctly stated. The society will rely upon a permanent income resulting from the subscriptions of the members and of the subscribers. Any one subscribing five dollars a year not only helps an excellent charity, but at the same time becomes entitled to all the privileges of the Exchange, and can introduce the work of any one whom it is wished to help toward self-supporting industry. Articles can be entered only through the medium of a manager or a subscriber. All work is of course subject to the approval of a competent committee. It would be difficult to define or fix a limit to the kind of work received. Anything that a woman may do—from the painting of water color pictures on fire-screens to the making of tidies and dressing of dolls, from embroidering in Kensington stitch to the making of jellies and cakes—will be accepted. Nothing, in fact, has found a readier sale than the excellent preserves, spiced fruits, jellies, pickles and delicious cake which have been furnished. Ladies who have found it necessary to part with old valuables, such as laces, rare china, even pictures, have been able to do so with advantage.

The society receives only ten per cent. of the price: thus, the person who makes or offers the commodities is not despoiled. This small commission renders the exchange a distinctly charitable enterprise, as of course the proceeds of even the largest sales are too slight to defray more than a fraction of the necessary expenses.

Each article is registered and numbered without any delay and notice of each sale is at once sent by mail to the person interested, and she is requested to call and receive the money. There are but two salaried officers, the general superintendent and the secretary. Each lady-manager is expected to spend one morning of each week at the rooms, and co-operate if necessary. During the brisk traffic before Christmas, when the place was thronged with buyers, a dozen or fifteen of the graceful, accomplished lady-managers were frequently to be seen acting as saleswomen. H. THE PICTURESQUE ASPECTS OF SUGAR-MAKING.

W. I. CHAMBERLAIN.

Much of picturesqueness will always cling to the sugar camp. The romps of children through the "bush" on pleasant Saturdays, when "school don't keep," chasing with bows and arrows the squirrels just emerging "from out their winter home;" floating their little boats on the swollen, gurgling brook; boiling sap in a little pan, arch and shanty all their own, and making "maple wax" on drifts of still unmelted snow; hunting for "baby calico," that hardy pioneer of all the wild-flowers, that thrusts its tiny clustered buds above the dead leaves only to be buried in the next snow-storm; racing and romping till rosy cheeked and tired they go to bed and "sleep like logs" till Sunday morning. Then there are the troops of villagers who come to "see the folks and get some sugar"—so neighborly and social you know, in sugar time and peach-harvest! Then there is the night boiling with the lurid blaze leaping from the chimney top, and the red light flashing from open arch door, flooding with light the dark wood-piles and the trees beyond. There is your jolly companion who helps you enliven the evening with song and story, and then "turns in" on the rude bunk to sleep while you "fire up," and who in turn "boils" while you sleep. Or there is the lonely tramp through the "bush," for home, with the bright tin buckets flashing the moonbeams into your startled eyes from every quarter as their angles change with your advancing steps, till you half fancy you are hemmed in by Gideon's army, with pitchers broken and lamps all ablaze; and almost expect their trumpets to blow, and Jericho's walls to fall!

The fairies of the picturesque and the romantic have been driven from almost every corner of our modern, hum-drum farms by the demons of avarice and haste. The power mowers have chased them from our meadows, the reapers from the grain fields, and the whirring, smoking threshers from

our broad-roofed and generous barns. And even from our road sides, where once they boldly lay and watched the meek-eyed, sleepy oxen draw their loads on huge-wheeled ponderous carts, even from thence they have been scared by the flashing wheels of carriages whirled through the dust by their "two-thirty" spans, beneath the lashes of our modern Jehus!

The orchard was their safe home of old, but now in autumn, from the city comes the dealer, or the wholesale man, buys up the crop entire, and with a small army of pickers, and loads of barrels, baskets and ladders, and clatter of hammers and creaking of screws and clicking of packing clamps, in two days whirls off the crop to town. How could the fairies stay in such uproar as this? They fled to the maple grove, next, with its broad, arching limbs and silent shades—their only refuge now. Here they still wander, shy and scared beside the pebbly brook, scarce ever seen even by the children's watchful, all-believing eyes, except in thickening twilight or at the earliest dawn. Here only they now dwell and bless the farmer's family and home. Long may it be ere they are driven hence!

COLD FEET.—Cold feet predispose to colds in the head, throat, ears and lungs. Many people are troubled with sweaty feet; their feet consequently become cold. This is often caused by wearing woolen stockings. Cotton stockings should be worn under the woolen pair. A good remedy for cold feet is to bathe them at bedtime, commencing with water at blood heat, and gradually raising the temperature till the water is as warm as can be borne. They should be dried with a coarse towel, rubbed well with an inunction, and then incased in a well-warmed pair of stockings. Vaseline is recommended as an inunction. Boots that are thin, or tight and low shoes, should be avoided in cold or damp weather. Heavy, loose-fitting boots, with double uppers and wide soles, are proper. India-rubber overshoes should be worn in damp weather only, and should be removed as soon as the wearer enters the house. Slippers should not be worn by either sex during cold or even cool weather. One of the ways in which a cold is contracted is to exchange warm boots for low slippers. Those who do this forget that their feet and ankles have been protected all day, and that they have not only uncovered them, but placed them in the coldest stratum of air in the room. If they take the precaution to draw on over the stockings which they usually wear a pair of heavy woolen socks, the chances of taking cold from wearing the slippers are greatly decreased. Dr. Rumbold says that most women use elastic garters, which compress the veins and hinder the return of blood from the feet and legs. Almost every patient claims that her garters are not tight, yet most of them will acknowledge that when they are removed at night deep creases are found under the knees. In order to keep up the stockings without garters at all, they should be pulled on over the stocking-knit drawers and fastened with tapes. Four of these tapes, about six inches long, should be sewed on the drawers at about the middle of each thigh, one on the outer side and one on the inner side; also four tapes of the same length should be sewed one on the outer and one on the inner side of each stocking. The tying of the four pairs of tapes secures the hose in their place, and as they are long enough to come above the knees more of the limbs is then covered than when they are held up by the strangulating elastic or non-elastic garters.—*Dr. Rumbold in Virginia Medical Monthly.*

THE PRICE OF CORN.—The following from the *Burlington Hawkeye*, conveys a sound moral in a merry way, and after being laughed at may well be soberly pondered by farmers and others who are slow to see that the laws of trade "work both ways:"

"No," the honest farmer remarked, in tones of the deepest dejection, "the big crops don't do us a bit of good. What's the use? Corn only thirty cents. Everybody and everything's dead set agin the farmer. Only thirty cents for corn. Why, it won't pay our taxes, let alone buy us clothes. It won't buy us enough salt to put up a barrel of pork. Corn only thirty cents! By jocks, it's a livin', cold-blooded swindle on the farmer, that's what it is. It ain't worth raisin' corn for such a price as that. It's a mean, low robbery." Within the next ten days that man had sold so much more of his corn than he had intended, that he found he had to buy corn to feed through the winter with. The price nearly knocked him down. "What!" he yelled, "thirty cents for corn! Land alive—thirty cents! What are you givin' us? Why, I don't want to buy your farm, I only want some corn! Thirty cents for corn! Why, I believe there's nobody left in this world but a set of grasspin', blood-suckin' old misers. Why, good land, you don't want to be able to buy a national bank with one corn crop! Thirty cents for corn! Well, I'll let my carriage-horses run on corn stalks all winter before I'll pay such an unheard-of, outrageous price for corn as that. Why, the country's flooded with corn, and thirty cents a bushel is a blamed robbery; and I don't see how any man, looking at the crop we've had, can have the face to ask such a price."

SAND STORM IN THE ARABIAN DESERT.

THE engraving on page 189 shows one of these destructive storms in progress. The travelers are fleeing before it, hoping to reach the edge of the cyclone before their dread pursuer overtakes them. Failing this they will dismount, make a wall of defence of the camels, and wait for the storm to pass over them.

Girls are advised by a Chicago physician to always sleep on their backs if they wish to keep crow's feet from the corners of their eyes. "These blemishes," he says, "are the result of sleeping on their sides. The pressure upon the temple and cheeks leaves wrinkles at the corners and underneath the eyes which disappear in a few hours, but finally become so fixed that neither hours nor ablutions will abate them."

For Women.

CONDUCTED BY MISS FAITH RIPLEY.

A CHINESE SONG.

OVER green fields and meadows a tiny rill ran,
(The little precious coquette;)
She was pretty she knew, and thus early began
Gayly flirting with all that she met.

Her favors on both sides she'd gracefully shower,
Regardless of whom they might be;
One moment she'd kiss the sweet lips of a flower,
The next—lave the root of tree.

She would leap from one rock to another in play,
Tumble down on her pebbly bed;
Like a naiad let the dazzling sun-smitten spray
Fall in prismatic gems round her head.

Sometimes she would lash herself into rage,
And rush roaring and seething along;
Till a bit of smooth ground would her anger assuage,
When she'd liquidly murmur a song.

[*Macmillan's Magazine.*

HINTS ON HOUSEHOLD ADORNMENT.

Touches of Color.

BY S. J.

THE majority of households in our country are those of the great middle-class, and while the fortunate few whose palatial mansions are filled with costly gems of art, serve as models, as well as objects of which as loyal Americans we are justly proud; "the million" are obliged to employ a vast amount of consideration, as to the "ways and means," whereby each apartment of the unpretentious domicile may be made into a "thing of beauty."

At this time there is a loud outcry against all classes of house-furnishing which do not strictly accord with the "rules of high-art; while all "imitations" are pronounced "flimsy-shams" Now, while I admire all classes of true art-work, and feel an utter contempt for coarse, gaudy, or flimsy

6363

imitations of every kind, I hold that there is an intermediate line, whereon rests much that is beautiful and valuable, and that, inasmuch as a large majority of our people, must, either forego the pleasure of all beauty, or secure it by means of "imitations," it is better to copy good models, and form pretty and artistic objects, even though branded by the name of "home-made" than to allow the dwelling to remain bare and uninviting.

Dainty and carefully executed adornments, are peculiarly subtle and seductive in their influence and the gracefully draped portiere, the cozy "four o'clock tea-table," with its dainty and airy furniture, the bright, open fire-place, bordered with tiles, walls embellished with dado and frieze, floors furnished with rugs, and carefully stained or painted, grotesque wainscoting, painted panels, and various other artistic objects impress us as possessing natural, indefinable grace, while they become entitled to a three-fold welcome by reason of their inexpensiveness and utility. Let the adornment or embellishment be what it may, if carefully and artistically finished it is worthy of a place in the home of taste and the commendation of even the most critical judge.

Take as a beginning the entrance-hall to your little home; at the very threshold you may begin with your perfect imitations, by bringing a bit of vivid color to brighten this, the introductory apartment. Stained glass is beyond the ability of the limited purse, but who cannot afford to invest a few dollars in a set of those elegant vitromania plates, which, when properly applied, rival the most brilliant stained glass, and are used in England in many public buildings? Here, too, the floor may be stained in imitation of various beautiful woods, and if time permit, be laid off into blocks, quaint tiles or a center-piece, and borders. A Chinese, or other ornamental lantern, is easily made and imparts a glow and brilliancy that adds greatly to the cosy comfort. For these, I have used a base of wood, sawing it into a hexagonal of about fourteen inches in diameter, and finishing with a moulding around the edge, and six griffins, one fastened against each section of the hexagon and united at a point at the bottom (a few inches below). A pair of "drop-ornaments" placed together (back to back) finishes the arrangement; and when varnished and dusted with gold-bronze-powder, a substantial and most unique foundation is formed for the lantern. When securely fastened,

6377

and carefully bronzed, varnished, oiled or enamelled these ornaments appear as beautiful as richly-carved bronzes, from which they cannot be distinguished, unless closely examined. For the panels, six pieces of glass are cut, each a foot high and as wide as the inner side of the single sections of the stand, with pointed tops. Glue narrow strips of black muslin over the edges, then fasten together with stitches forming hinges at the top and bottom, leaving one panel open for purpose of introducing a lamp. Whether mediæval or modern designs be used for these panels the effect will be equally satisfactory, and when vitromania or Diaphenie is considered too expensive, various other modes of illuminating glass panels are worthy of a trial, of which I would mention the application of decalcomania transfers. After varnishing the entire glass with demmar, cover with bobbinet or Swiss muslin. The texts or mottoes of many kinds are most significant hall-ornaments, and the genial "Welcome," or cheery old "*Salve*," greeting the stranger at the open door, is equal to a friendly hand-shake, and at once bespeaks a hospitable people. Where possible these should be illuminated by hand, but if time and skill are not to be secured obtain tinted Bristol-board, and after sketching ornamental letters, of any kind preferred, apply floral decalcomania designs, and touch up with lines of gold, silver or bronze. When tastefully arranged this class of work is most satisfactory.

The umbrella-stand—though made only of a section of tile drain-pipe—placed within a shallow tin pan of proper size, may be made quite elegant, by giving the surface several coats of buff, grey, or other colored paint, then applying Japanese pictures, either transfers or the embossed sheets or better still the copper-colored classical designs, upon a black ground, which give a fine imita-

6377

tion of ancient-pottery. A tall vase in each corner, with a plate-cover, serving for a card-receiver on one, and a pot with ivy in the other, though transformed from common kitchen-jars to Antique Japanese-ware prove quite imposing, and are really of great utility.

Space forbids full directions for various other apartments, but I cannot forbear, suggesting the use of hangings instead of doors, between apartments, for book-cases, certain classes of cabinets, and other positions where doors are necessary; the application of dado and frieze divisions on the walls, instead of the uniform paper hangings so long used; the discarding of large, and the substitution of a number of small tables, of different sizes, some so small and light as to appear like mere Lilliputian affairs (here a wide field is opened for the artistic, in the use of imitations of inlaid ivory, *papier mache*, India ink and Sepia painting on white wood &c).

I would commend also, the use of rugs; cozy, and seductively comfortable chairs, and lounges; soft hangings, antique cabinets, tasteful brackets, wall-pockets and card-cases; above all luxuriant, growing-plants, which always proclaim the presence, of refined, pure and cultivated taste.

And here an unlimited amount of adorning is offered to the lover of the beautiful; for with some good soil, a few packages of seeds, or a selection of plants now offered so reasonably by our florists, and what may we not accomplish in the way of charming creations? Windows richly draped with the graceful luxuriance of green and color which no upholsterer may dare to compete; lovely swaying baskets from which the delicate sprays, and masses of vivid green come bubbling forth in fulness of life and beauty; stands and shelves; brackets and vases, "ferneries" and "Wardian cases," each and all offering a ready means for beautifying the home, where perhaps the limited ability to purchase materials forbids the use, of even home-made ornaments, for nature is a kindly and generous helper, and from her store-house we may draw without let or hindrance. So where no other adornment is available I would urge the use of growing plants, as a ready and satisfactory means of rendering home beautiful, and introducing those "touches of color," which render the series of household pictures, as effective and striking as the varied landscapes of the painter.

6363

Beautiful receptacles for these natural adornments may be obtained from innumerable refuse articles, variously utilized; and by means of a few colors, bronze-powders, and varnishes, many articles cast away as "rubbish" may be brought to bear upon the important point of household-beauty. Upon many of these, separate and useful articles might be written, and even then, "not the half could be told," but having extended my hints too far already, in conclusion I would say, whatever the work attempted, let it be accomplished in such a manner, that it will bear the closest inspection, and not only this, but prove to be perfect in all its parts. A fine piece of work, even though it be an "imitation," is a praise-worthy object; but a loose, rough, carelessly-finished piece of work at once condemns the operator, and is unworthy a place in any chaste home; for where a refined taste and exalted honesty of purpose dwells, no weak shams will be allowed. Loose and shaky ornaments must not sully an otherwise handsome cabinet; rough and sticky varnish shall not mar the perfect transferred picture beneath it.

We have all-sufficient of the false and unreal, the crude and weak, the unrefined and uncultivated, without the direct assistance of those who know the "true, and good and beautiful." A thing may be true yet not be original, and while I desire most earnestly to encourage all true art-work, I again say, where you cannot secure it, make a strenuous effort to imitate fine models, in every class of household-furnishing.

DESCRIPTION OF CUTS.

At No. 6377 and No. 6363 are given polonaise designs. They are pretty and graceful and will do excellently well as models for making over some old gown, which is to be worn about the house. I give them in response to many inquiries from ladie for a dressy polonaise pattern. Cost of patterns, cents each.

News of the Week.

MISCELLANEOUS.

Monday, March 17th, 1879.

The event that excited the greatest interest here during the week was the contest among pedestrians at Gilmore's Garden for the Astley belt, typical of the championship of long-distance walking. O'Leary, of Chicago, Ennis of the same city and Harriman of Boston, tried to keep the belt in this country to which the first of them had brought it not long since; while Rowell, a little Englishman sent over by the donor, Sir John Astley, to fetch it back, was pluckily resolved to obey orders, and easily managed to carry out his resolution. The first day of the six during which the struggle lasted, the Britisher got a start of 25 miles, and this he steadily maintained to the end, occasionally increasing it by a few miles whenever he wished to do so. O'Leary broke down on the third day, much to the disappointment of the public with whom he was the favorite, and not a little to the loss of his host of friends many of whom had bet heavily on his success. His two former successful struggles for the belt, had greatly injured his constitution, and want of proper training and care of himself had increased the damage. Besides his share of the gate money, he is reported to have lost $2,000 in bets owing to his failure. On the ex-champion's collapse, the hopes of those who wished Rowell's defeat hung at first upon Harriman, but on the fourth day he covered only 50 miles, showed marked signs of distress, and continued very shaky until the end. Ennis, who had hitherto been taking matters easy, now took second place, varying from 25 to 30 miles behind the Englisman, and hung on at this distance to the close of the contest. The following table will be of interest to those of our readers who prize tests of manhood and endurance:

THE COMPLETE RECORD.

The following table shows the number of miles made each day during the walk:

	Rowell.	*Ennis.*	*Harriman.*	*O'Leary.*
First day	110	95	100	93¾
Second day	87	78	86	70¾
Third day	86	77	84	51
Fourth day	77	85	55	—
Fifth day	67	70	65	—
Sixth day	73	80	60	—
Totals	500	475	450	215

HOURS OF REST EACH DAY.

Day.	*Rowell.* H. M. S.	*Ennis.* H. M. S.	*Harriman.* H. M. S.	*O'Leary.* H. M. S.
First	2 58 39	4 37 54	3 31 54	5 06 52
Second	6 39 22	7 04 07	4 15 03	6 27 04
Third	6 57 50	5 52 20	5 48 59	4 11 21
Fourth	10 16 59	6 20 14	12 00 29	
Fifth	9 22 36	7 35 34	7 37 42	
Sixth	2 27 24	3 55 24	5 17 34	
Totals	38 42 50	35 25 33	38 31 41	15 45 17

ACTUAL WALKING TIME.

	H. M. S.		H. M. S.
Rowell	102 15 15	Harriman	102 13 59
Ennis	105 34 27	O'Leary	48 15 43

AVERAGE TIME PER MILE.

	M. S.		M. S.
Rowell	12 16	Harriman	13 32
Ennis	13 20	O'Leary	17 35

It will be seen that the winner traveled within a very small fraction of five miles an hour the whole time he was on the track. He did a great deal of trotting, and it is generally conceded that the walker will have no chance with a runner in such contests in future. During the week, the attendance at the building was very large, although the price of admission was raised on Thursday from 50c. to $1. Vanderbilt charged $6,000 rent for the week; fire, gas, attendance, etc., would add say $4,000 more to expenses. At present it is estimated that the gate-money amounts to at least $50,000, leaving $40,000 to be divided as follows among the three contestants who covered 450 miles or over:

Rowell	50 per cent.	$20,000
Ennis	30 " "	12. 0
Harriman	20 " "	8,000

It is very probable that these amounts will be somewhat increased; but in any event, each contestant's feet have won him in a week more than his head would be likely to earn in a lifetime. Some rowdies tried at one time to create a riot to prevent the plucky little Englishman from winning, but respectability chiefly by means of policemen's clubs vigorously wielded, proved too strong for rowdyism.

Already about 35,000 applications for pensions under the late law, have been received at Washington. It is estimated that more than half of them will be allowed on investigation which commences next month, and that they will average about $900 each. All this is mere guess-work, but it is not guess-work that they *must* cost the Treasury upwards of $30,000,000 and possibly twice that sum. As no appropriations have hitherto been made to meet this outlay, prompt payment is hardly probable. There is likely to be a lively scramble for office in the next Senate. Twenty-seven places in its gift are worth not less than $2,000 a year each for about five month's easy employment—not work. Altogether it controls nearly 100 offices with salaries ranging from about $800 to $6,000 for the yearly session averaging less than six months. The consent of vice-president Wheeler, however, is necessary for the removal of most of the present employes. In that Rives's embroglio in Va., it is said the indicted State judges will decline to give bail; but will go to jail if necessary, and apply to chief Justice Waite for a writ of habeas corpus so as to get an early decision upon the constitutionality of Judge Rives's action and on the Civil Rights Bill under which he acts. Like the nation Indiana must submit to an extra session of its Legislature, because political legislation prevented the passage of necessary appropriations. The expense entailed on the State by this little trick will be from $25,000 to $50,000. Judge Blodgett of Chicago has been vindicated from the charges made against him by the old whiskey ring. Capt. Eads has been paid the $750,000 voted him by Congress for his improvements of the Southwest-pass of the Mississippi. How long will the improvement last despite the vast quantity of mud and *debris* brought down by the Father of Waters, and the shifting bottom of his mouths, for he has three of them?

The report of Gen. Crook's court of inquiry concerning the late massacre of Cheyennes at Fort Robinson, gives a complete history of the affair, points out certain errors committed by the officers in charge of the troops, but attaches no blame to anyone in the military service and recommends no further action. Gen. Crook approves of the findings. In the U. S. Court at Louisville, last Monday, Samuel McKee, a well-known republican lawyer, in defending some counterfeiters, showed three dies for the manufacture of spurious coin and said he could prove that the government detectives who arrested his clients, had themselves manufactured and sold counterfeit coin and used those dies. It is estimated that there are in this city now 11,393 men compulsorily idle, against 25,400 in 1873.

The Butter, Cheese and Egg Association assembled last week at Chicago, elected James F. Joyce of this city as President, R. M. Settler of Iowa as Secretary and Treasurer, and John A. Willett, of Massachusetts as first Vice-President. Bayard Taylor's body arrived in this city last Thursday, in charge of his wife and daughter. The flags on all public and many private buildings, were half-masted, and many other tokens of respect paid the dead traveler, author and Minister. Next day it was taken to his old home at Cedarcroft, near Philadelphia, and buried. The Fitz John Porter board of inquiry recommends his exoneration from the old charges on which he was condemned in the heat of late "Onpleasantness." The California Republicans, while conceding honesty of intention to the President in vetoing the anti-Chinese bill, declaim all responsibility for it. The constitution lately framed and adopted by that State, if constitutional, is so hostile to our almond-eyed visitors that they are pretty certain soon to abandon the "extraordinary fine climate" of the Golden State. It is not impossible that our treaty with China may soon be so modified as to restrict immigration from that overteeming country. Yet, after all, the exact figures with regard to Chinese immigration at the San Francisco Custom House, show that the net increase last year, was only 604—6,675 having arrived and 6,071 having departed.

Chicago is to have an elevated railroad 10 miles long. Canada spent $177,044 in promoting immigration last year, and 11,226 of the immigrants she enticed, slipped across the line into the United States. As a proof that business is reviving, it may be mentioned that according to the bank clearings, the total business represented by payments in 22 cities during February last, was 11.8 per cent. greater than in Feb 1878, though lately prices have been 10 per cent. lower. There is something tangible in this proof. Archbishop Purcell's indebtedness and the consequent hardships of his poor creditors are still prominent topics before the public. The Roman Catholic body generally seems inclined from an *esprit-de-corps* to help him in his difficulties by subscribing towards the payment or partial payment of at least the most pressing of his debts. His own available assets are said to be so trifling that they wouldn't pay more than from one to ten cents on the dollar, according to different accounts. At a meeting of 50 priests, held lately in Cincinnati, some very ugly stories were told about Father Purcell having been guilty of some very discreditable breaches of trust in appropriating funds placed with him merely for safe-keeping (!) towards paying his own indebtedness, and a criminal prosecution, it is said, can only be withheld by charity. Other reports exonorate him from everything, except gross carelessness and disregard of the interests of those who placed implicit faith in him, faults surely criminal enough. Several have taken legal action civilly against the Archbishop.

FOREIGN.

A terrible disaster has overtaken the Hungarian town of Szegedin, containing about 80,000 inhabitants. The town is situated on a plain, and the river Theiss which flows through it is confined by huge embankments, larger than the levees on each side of the lower Mississippi. The late thaws and rains rapidly melted the snow all along the river and on the mountains among which it takes its rise, and poured an immense body of water into its channel. The inhabitants of the city, aware of the danger to which this unusual influx exposed the embankments, hastily strengthened them in every possible way; but despite their utmost efforts the vast body of waters swept them away last Wednesday and the city was completely inundated. An official statement shows that 9,700 buildings were destroyed and only 261 left standing. The estimates of deaths range from 2,000 to 6,000, and now epidemic diptheria and other fatal diseases are appearing among the homeless inhabitants who throng the neighboring country. Sixteen thousand horses and cattle and 90,000 sheep, together with vast stores of grain and other farm products have been destroyed, and a broad reach of country swept bare by the torrent. The Emperor of Austria is now at the scene of the disaster, and has contributed 20,000 florins towards relieving the public distress. Other contributions are flowing in from all quarters, the panic-stricken fugitives are hospitably treated so far as the means and accommodations of the surrounding country allow; but still the suffering is appalling.

HERMAN.

THE CONNECTICUT MUTUAL.

THIS model life insurance company issues to-day its thirty-third annual statement, and, as is usual, in the matter of its regularly published report, shows advantages gained in the right direction. It has increased its amount of assets, lessened its ratio of expense, increased the amount of payment to policy-holders, and lessened the amount of interest deferred. Against the item "net premiums in course of collection" it writes as in the report of last year, "none." Its economical administration is shown in the low ratio of expense of management to receipts, 6.57 per cent.

The Connecticut Mutual was the first, in fact, the only company that at once, upon the proposal of a New York company to sell insurance at a discount, publicly advertised its purpose to do business as it had ever done, upon the safe accredited plan, understood by all the leading actuaries and experts of the country to be a true one. Acting always upon the only established principle that looks to financial results, which in life insurance teaches that a life insurance company to be safe must be *more* than safe, the management of the Connecticut Mutual has always conducted its affairs to the entire discredit of speculation. The showing of the statement to-day is the best proof of the wisdom of such action.

Schemes that are laid for sudden benefit, imagined or partially real, may be apparently successful as viewed by the sanguine man who hopes to gain advantage indirectly, but any departure from the proven path of rectitude in the administration of the business of a life insurance company must eventually lead to disappointment.

In a mutual life insurance company's business there is but one thing to sell, and that thing is the common property of all its members. For their respective parts of that property they have paid the fair, fixed, and universally recognized price. At the exact cost the new-comer makes his purchase. If the business has been large and the investments have been large in yield, at each year's close he has returned to him the proper dividend. In any event the surplus, in which as in all other matters and property he has an interest, should be so great that the most positive safety can be guaranteed.

The Connecticut Mutual begins its thirty-fourth year in the absolute possession of what makes a life company entitled to the foremost rank in business institutions. The information, the ability, the truthfulness, the economy of its management have been illustrated in the years past, and never more so than in that just closed. The course marked out by its direction is emphatically the same that has ever been pursued, and entitles it to the highest confidence on the part of all who would deal for future benefit with a first-class life insurance company.—[*Boston Daily Advertiser.*

PEN THOUGHTS FROM EVERY-DAY HOUSE.

ANNIE L. JACK.

Early Spring Preparations.

AND now the long winter is nearly over, the strong March sun, the softening March winds, are slowly but surely undermining the foundation of the snow drift causing the ice on river and lake to become treacherous and unsafe. We find the mornings longer; we observe our afternoons give us more time, but the evenings are much shorter for work or recreation. Thus it dawns upon us that the "winter of our discontent" has passed, that we are near another spring with new hopes, new joys, with its varied work, and pleasant surroundings—the time of Nature's grand awakening is at hand. The sap already flows on the sunny side of the Maple, and some day we shall hear the carol of a bird, to stir our blood to a quicker heart throb of enjoyment at its very sound. Let us make the best use of this, the last of our winter leisure, and try to be what the Scotch call "forehanded," in our spring preparations.

Lately in several houses where I have chanced to call, I have noticed the young ladies seemed to keep on hand a cotton stocking—some plain, others of fancy open work—that was taken up when callers came, by slow degrees to be completed. In several instances almost the same words were used. "One can knit and talk and they wear better than bought stockings and can be refooted." Little Mrs. Mackredy had all the summer clothing for each of the family over looked and packed away in drawers, and was busy making pretty little bibs for the baby's summer use. Then another family where I visited, were intent on needle-work in the shape of curtains to be put up after house-cleaning, while in the kitchen the men folks were making improvements, by planing and leveling the floor, filling all cracks with putty ready for a coat of paint. I saw a neighbor busy at work the other day in a shed near his ice-house, and he explained to me that he was building a pantry to keep things cool in in summer.

So each in his own way looks forward to the future according to disposition and character, and makes preparation for the busy days when in our different departments we must "make hay while the sun shines."

In the kitchen every housekeeper has her work to do, and it is a good plan in this month to look over all vegetables, and fruit, picking out the best for longer-keeping, and using that which is likely to spoil. Apples, if carefully picked over, can be made into a delicacy for June and July by canning all the quarters and half apples when peeled, and filling the jars that have been emptied of other preserves. In this way they come in when other fruit is scarce, a season that overtakes most of us just before strawberries are ready. All garden lovers too are busy now, looking with longing eyes at the catalogues that promise so many new and rare things for our beauty-loving eyes; looking over seeds, sending in our orders, starting cuttings and seeds, and planning the garden of the future, that in our hopeful minds knows no blight or mildew, and is not spoiled by drought or flood. So as these bright days come before regular work can be commenced, let us be up and doing; for these are indeed the weeks of preparation.

A STORMY DAY.

LOOKING out of the window this morning, I saw that it was just such a day as I had been wishing for, one in which to work without interruption. Not even a tramp would exert himself to come, for the snow was falling fast, and drifting as it fell. After doing my share of the housework, I went up stairs and began with the clothes-closet, taking everything out from the topmost shelf to the lowest, and from every hook. Then our maid "Mollie" washed the shelves and floor, while I examined the mountain of bundles that lay before me. On one side of the closet we keep several large bags for scraps of various kinds. The bags are made of calico, with strings of strong tape to hang them by, and bits of white cloth are sewed on, for labels which are written with indelible ink. If anything is wanted from any particular sack, in a hurry, it is a great help to know just where to find it. In one sack old cotton cloth is kept, in another, old linen etc. In looking over such articles a few times in the course of a year, we find a great deal that we do not need, so part of the linen, cotton and flannel is made into a neat roll to be sent to a hospital from which we often receive an appeal for *anything* that we can spare. Next the cast-off garments suitable for both sexes, are put aside to be given to the inmates of an orphan asylum. How much better to dispose of old clothes where they will be of use, than to keep them to accumulate dust and moths.

Before noon the closet is dry, and each article back in its place; so I proceed to the storeroom to see how the supplies are holding out. The cellar is visited next, but there is little to do, as it has daily attention. The moment we find decaying apples or potatoes, they are *trimmed*, the best parts given to the horses or cows, and the poorest added to the compost heap. We never feed *whole* fruits or vegetables to animals, lest they get choked, and decayed substances are not fit to offer *any* animal. It is afternoon. The weather is less boisterous, and the softly-falling snow puts me in the spirit of writing. My letter is done, and there will be time before night to cut out some work that requires considerable planning. The basket is piled high enough to furnish me with sewing for a week to come. Twilight is upon us, and I will spend a few minutes of it in preparing sticks for labels, as very soon we will sow seeds in boxes in the house and hot-bed. The snow storm is over. The last meal of the day is finished, and I'll take my place in the family circle for the evening. I am, "with weariness oppressed," but that will soon be forgotten, for my hands will be occupied with some easy work and I will listen, while somebody reads aloud from the good old RURAL. M. G. R.

Lyons, Iowa, January, 1879.

DOMESTIC RECIPES.

I BELIEVE of all the cakes I make, those made after the following recipes are praised the most, and disappear the fastest.

Cream Cake.

One cup of sugar; two eggs; one tablespoonful of butter; three tablespoonfuls of sweet milk; one and a half cup of flour; one teaspoonful of soda and two of cream-of-tartar. Stir the sugar, butter, and yelk of eggs to a cream, then add the milk, whites of eggs, soda and cream-of-tartar. Beat fast for a minute or two and bake in three jelly tins.

Cream.

The cream should be made before the cake is and put on hot. Heat one half cup of sweet milk, and stir in as soon as it boils one egg, one half cup of sugar and one half cup of corn starch. Pile up the cakes with this spread between.

White Fruit Cake.

One cup of butter: two of sugar; three and a half of flour; whites of three eggs, the whole of one; one cup of milk; one teaspoonful of soda; two of cream-of-tartar; over one cup of raisins. Other fruit may be added if desired.

To Cook Veal.

Roll the slices in beaten eggs, and then in rolled crackers. Melt a small quantity of butter in the frying pan and place the veal in it, cover tightly and let it stew for an hour.

Pie Crust.

I have not had any "essence of pork" or lard in my house for a long time, but in place

of it use cream for shortening. For pie crusts I skim what sweet cream I think I shall require in my bread bowl which is well lined with flour, add a pinch of salt and mix. Roll out while rather soft. Dyspeptics can eat pies made in this way, without injury.

MRS. L. E. K. TURNER.

"Brown's Bronchial Troches," when allowed to dissolve in the mouth, have a direct influence on the inflamed parts, allaying Pulmonary Irritation, and giving relief in Coughs, Colds and the various Throat Troubles to which Singers and Public Speakers are liable. **25c. a box.**

THE MARKETS.

PRODUCE AND PROVISIONS

NEW YORK, Saturday, March 15th, 1879.

BEANS AND PEAS.—Medium and marrow beans continue steady; other grades show a light business. Green peas became quiet under the recent advance quoted, nominal $1.42½@1.45; Southern B. E. peas weak at $2.50@2.55. Canadian peas, in bulk and bond, 72@73c., with fair sales at the easier rates.

Receipts of beans for week 3,784 bush.
Exports of beans for week 1,124 pkgs.
Exports of peas 12,325 bush.

BEESWAX.—Offerings are fair and prices easy Western and Southern quoted at 24@25c.
Exports, past week, 3,783 lbs.

BUTTER.—The past week has been of Springpromising temperature, while a few consignments of new white butter also tend to warn holders that the grip of cold weather trade must soon relax. With the urgency to sell thus caused, buyers of almost any quality have the easy side of prices. Really useful table old, it is thought, will be worked out with present figures nearly sustained: as a call for natural yellow lays considerably upon early made, especially for coastwise and other shipment. There is nothing, however, to save a large storing of State and Western from the low winding up rates that have hung over it all winter. New State pails range 18@23c.; Welsh 18@22c.; poor 14@16c.; new western creamery 18@20c., for strictly choice; other grades 18@2 c.

Single extra State half tubs, 25c.; choice lines, 21@22c.; State, full dairies, special, 18c.; other, 14@16c.; firkin dairies, fair to prime, 12@17c.; Welsh dairies, fine fall, 15@16c.; fair to prime do., 18@21c.; choice Welsh, 18c.; other 7@13c.; choice creamery 25c.; country packed creamery, 17@18c.; poor State, 7@11c.; Western dairy, fine fresh, 17@18c.; fair to good, 10@15c.; factory, indie packed, 15@16c.; good, 13@14c.; other, 7@9c.; rolls, 9@14c.; grease 4@5c.

CHEESE.—The stock of really fine has been worked down to very small amounts. Of low grades offerings have been fair, the receipts having increased, but prices have scarcely varied, although there are free sellers. Exporters are steady buyers.

Prices are 9@9½c. for fancy; 8½@8¾c. for fine lots; 7¼@8c. for good; 3@4¼c. for skimmed; 5½@6½c. for half skimmed; State, farm dairy at 8@8¼c. for fine; 7@7½c. for good to prime. Wisconsin factory, fine and fancy, at 8¼@9c.; do. good to prime, at 7½@8¼c. Western factory, fine 7¼@8c.; good and prime, 6½@7½c.; do. full skimmed, 3@@4½c.; do half skimmed, at 3@ c.

Receipts for week, 40,168 boxes.
Liverpool cable, 48s.
Steam to Liverpool, 35@40s.

The Herkimer correspondent of the Utica Herald says:—Dairymen of this section are making a movement toward lowering the price for the manufacture of cheese. They claim that for the past two years owners of factories and makers have received too large compensation considering the cost of furnishing and price of labor. Some makers have already contracted to furnish and make the coming season for eighty-five cents per hundred pounds. Others are to receive one dollar per hundred, and deliver the cheese to the railroad.

BROOM CORN.—Medium qualities have a very good demand and are well sustained in price.

Brush and short broom, choice, ₹ lb., 5@5½c.; do. common to good, 3½@4½c.; hurl, good to choice, 3½@4½c; do., common to fair, 3@3½c.; and crooked, 2@3c.

COTTON—Has varied slightly only with a very dull look to trade, chiefly on account of the slack condition of affairs abroad. Latest prices are for March at 9.33@9.34c.; April at 9.93@9.94c.; May at 10.09@10.10c.; June at 10.24@10.25c.; July at 10.39c.; August at 10 43@10.44 c.; September at 10.24@10.25c.; October at 9.98@10c.; November at 9.8 @9.90.

Quotations for spot cotton are based on American standard of classification, and on cotton in store running in quality not more than half a grade above or below the grade quoted:

	Uplands.	*N. Orleans.*	*Texas,*
Ordinary	8 1-16	8 3-16	8 3-16
Strict ordinary	8 7-16	8 9-16	8 9-16
Good ordinary	8 15-16	9 1-16	9 1-16
Strict good do	9 3-16	9 5-16	9 5-16
Low middling	9 7-16	9 9-16	9 9-16
Strict low middling	9¾	9¾	9¾
Middling	9¾	9¾	9¾
Good middling	10⅛	10⅛	10⅛
Strict good middling	10⅜	10⅜	10⅜
Middling Fair	11	11⅛	11⅛
Fair	12	12⅛	12¼

STAINED.

Good ordinary	8⅛	Low Middling	9⅛
Strict good ordinary	8¾	Middling	9 7-16

DRIED FRUITS.—Apples move out well to exporters, and there is more being done with the local trade, with some advance made on evaporated stock. Peeled peaches are better and in freer demand. Small fruits are quiet.

Alden's evaporated apples are 12@12¼c.; new process apples at 9c. State plums, 14c.; blackberries are quoted at 5c. Peaches—Peeled Georgia, 6@7½c. for poor; 8½@9¾c. for fair to good; 10c. for prime; choice North Carolina, 12@13c.; good do., 9@10c.; unpeeled halves, 3¾c. quarters, 3c. Pitted cherries, 20c@21c. Apples—New, 2¾@2¾c. for southern quarters in bags; 3¾@4c. for prime sliced; do., fair at 3@3¾c.; State at 3½@4c. for new sliced; and 3¾@4c. for new quarters; Western at 3½@ 4c. for new quarters. Raspberries, 26c. Apples, evaporated, fancy at 11¾@12¼c.; do. fairlots, 8½@9c.

Exports for week, 2,800 bls. apples.

FEED.—Is selling at $15@16 for 40c.@50 lbs.; $15@15 50 per 99 lbs.; $15@16 for 100 lbs.

EGGS.—Receipts for week, 7,855 bbls.; do. last week, 12,033 do. Receipts have been held back to some extent, and the market is temporarily firmer. The market should not be tampered with in this way at this season, as an irregular situation will be the result.

Near points, 19 @20c.; State, Penn., Western and Southern, 18½c.; poor stock, 17@18c.

FLOUR.—The market has steadily yielded in price on lower wheat values, and the spring-like weather promising an early increased movement forward of supplies from western points.

Latest prices are $3.35@3.70 for inferior to very choice superfine State; $3.70@4.00 for very poor to good extra do., odd lots and lines; $4.00@4.25 for good to choice do.; $3.35@3.70 for inferior to fancy superfine Indiana, Iowa, Michigan, &c.; $3.70@4 00 for inferior to good shipping extra do. and $4.00@ 4.25 for good to choice extra do.; common to about choice white wheat extras, $4.25@5.35; choice to fancy do. at $5.35@6.15; red and amber winter wheat, very inferior to very choice trade and family, at $4.10@5.75 (fancy held higher); round hoop Ohio at $3.90@4.25, and trade and family brands of do. at $4.50@4.85, the latter rate for very choice (a few fancy lots held higher); St. Louis, $4.25@5.10 for very inferior to good extra; $5.10@6 00 for good to very choice (with a few very fancy brands in high favor with the jobbing trade) quoted up to $6.50@6.75; Minnesota clear, very inferior to very fancy, at $3.75 @5.10; few brands going above $4.75; Minnesota "straight," very poor to very fancy at $4.50@6 00; and patent poor to strictly fancy at $5.25@8.25, few brands going above $7.50@7.75; unsound stock at from $2.25@ 5.25; city mill extra at $4.35@5.20 for West Indies (the latter rate for fancy in new packages); do. for England $3.75@3.90; do. trade and family extras, $5.25@ 6.25; do. for South America, $5.15@5.65 for fair to very choice: No. 2 at $2 35@3.20 for poor to strictly fancy, the latter an extreme.

FRESH FRUITS.—The advance in apples has brought out some fine reserves of red fruit, for which there is a steady retail demand. Greening and Russets are firm, with a good call for grocery and bakers' use. Exports continue large for the season; shipments for week, 7,3.9 bbls. Choice red, $2.50@ 2.75; Greenings, $2@2.37; Baldwins, $1.50@2; Russets, $1.75@2; Eastern lots, seldom touch $2; most of them go to the cheap trade. Cranberries dull, but the supply is not oppressive. Made bbls., $7@ 8.50; crates, $3.25@3. Florida oranges nominal at $5 for best hf. bbl, boxes; others, $1.50@3.50. Some fine Fla. strawberries brought $2@3 ₹ quart; hothouse, down to $3.50. Peanuts in good demand at full prices. Va. hand-picked, $1.10@1.15; other, 75c. @1; shelled, 4½5c. ₹. Pecans, 6@8c.

FURS AND SKINS.—Following the Hudson Bay Co.'s London sales were those of Sir C. M. Lampson & Co., but nothing was developed thereby to vary the situation of our home market, as expressed last week.

GRAIN.—All articles have declined considerably on an expected early larger movement forward of supplies from Western centres on the mild weather, and a good deal of an effort to sell by speculators. Export demands are moderate. Of wheat latest sales are of No. 2 spring at $1 04½; No. 3 spring at 93@95c.; No. 4 spring at 88@90c; rejected spring at 80@82c.; ungraded spring at 93c.@$1; ungraded amber at $1 10@1 10½; No. 2 amber at $1 10@1 11; ungraded red at $1 01@1 12; No. 3 red at $1 09; No. 1 red at $1 14½; No. 2 red at $1 13¾@1 14; do., steamer grade, at $1 10; extra white at $1 14; white State at $1 13; No. 1 white at $1 13¾@1 12½; No. 2 white at $1 10@1 10½; No. 3 white at $1 09; ungraded white at $1 11@1 12; No. 2 amber, March option, at $1 10½; do., April option, at $1 10¾@1 11; do., May option, at $1 11½; No. 2 red March option, at $1 13¾@1 14; do., April option, $1 13¾@1 14; do. May option, at $1 14½; No. 1 white, March option, at $1 12; do., April option, at $1 12½; do., May option, at $1 13¾@1 13¾. Corn closed at, for New York No. 2 at 44½@44¾c.; New York No. 2 old afloat at 45¾@46c.; New York No. 3 at 43½@43¾; New York steamer mixed, at 44@ 44½c.; New York steamer yellow at 44½@44¾c.; ungraded western mixed at 44¼@45¾c.; southern yellow at 44½@45c.; New York yellow, old, at 46@46¾c.; New York No. 3 white at 47¾c. for new and 48c. for old; round yellow at 45@45¾c. for new; New York No. 2 old, March, quoted at 45½c. bid; New York No. 2, March, at 44¾c; New York No. 2, April, at 45¾@ 45½c.; New York No. 2, May, at 46¾c.; steamer mixed, March, at 44¾c.; do., April, at 44½c. Oats at, for New York No. 1 at 34@33¾c.; New York No. 1 white at 35½@36c.; New York No. 2 at 32½@33c.; New York No. 2 white at 33½@33¾c.; New York No. 3 at 31c.; New York No. 3 white at 33¼@32½c.; No. 2 Chicago afloat at 33¾c.; do., in store at 31¾c.; white State at 31½@36½c. mixed Western at 32½@33½c.; white Western at 35½@35c. Barley dull; State, 6-rowed, 75 @80c.; do., 2-rowed, 65@70c.; Canadian, 90c.@$1.05.

HAY AND STRAW.—Demand is very good, especially for shipping lots and medium grades; prices generally well supported.

Quoted at 40@45c. for shipping, and 70@75c. for retail qualities. Straw quoted at 50@60c. for long rye, and 40@45c. for short rye, and oats at 40@45c.

Exports for week, 375 bales.

HOPS.—Exports for the week have been 649 bales. Demand is moderate from all sources, and on medium grades buyers have the advantage.

Quotations are for New York's, new crop, choice, 10@14; New York's, new crop, medium, 7@9; New York's, new crop, low to fair, 5@6; Eastern, 6@10; Western, 6@10; Yearlings, 3@5; Olds, all growths, 2@ 3; Pacific coast, 10@15.

HONEY.—There has been some movement at extremely low prices. Clover, 8@10c.; buckwheat, 7@ 8c.; strained, 6@8c.

MAPLE SUGAR.—Ohio, 10@14c. ₹ lb., with a downward tendency.

POULTRY AND GAME.—Live plenty; prices easy, especially for Western fowls. N. J. fowls, 10@11c.; Western, 9@10c.; roosters, 5@6c. Turkeys, 11@13c.; Ducks, 60c.@$1 ₹ pair; N. J. Geese, $1.75@2; N. Y. and Penn., $1.50@1.75; Western, $1@1.50; Pigeons, ₹ pair, 35@40c.

Trade in dressed is not brisk enough to prevent many lots from becoming stale, and all but really fresh stock is quoted easy. It is easy to overstock the market when spring novelties are in order. Light weight turkeys rather firm.

Turkeys, best, 15@17c., the latter for Pa. dry-picked; other, 12@14c; chickens, best, 14@16c.; other, 8 @10c; fowls, choice, 10@11c.; capons, 22@23c.; slips, 18@20c; ducks, best: 17@18c.; other, 13@15c.; geese, 7@10c. Very poor State chicks, 5@7c.

Very little good quality game here: ducks extremely low; most of the pigeons are shot and do not call first-class trade. English snipe have appeared; quoted $2 doz.; wild pigeons, 75c.@$1; Canvas backs, 75c.@$1 pair, the latter for Havre de Grace.; Redhead, 40@60c.; Mallard, 40c.; Black and Teal, 30@35c.; common, 15@20c.

LEATHER.—Hemlock sole is quoted at 18½@19½c. for light; 19@21c. for middle; 19@21c. for heavy; and 16@18c. for good damaged.

OIL CAKE.—Western is in demand and quoted at $27.50@28 per ton.

PROVISIONS—Have been generally dull and depressed, but left off strong on a better inquiry, especially for bacon. Mess pork quoted at $10.15 bid and $10.25 asked for new for March, and $10.20 bid and $10.30 asked for new for April, and May at $10.30 bid and 10.35 asked, and June at $10.35 bid and $10.45 asked. Bacon at 5.12½c. for long clear and 5¾c. for short clear. Lard—Western steam at $6.40 for spot lots; $6.63½ for April; $6.72½ for May, and $6.77½ @6.80 for June. Tallow at 6 9-16c. for prime. Stearine at 6¾@7¼c. for prime Western. Beef Hams at $18.25@18.50. Beef, at for extra India mess, $13@21, as to quality; packet, $11@11.50; plain mess, $9.50@10.25; extra mess at $10.50@11.50.

SEED.—Clover is easier, and slow, quoted at 6¼c. for prime, and 6¾@6¾c. for choice. Timothy is quiet at $1.35@1.45.

SUGAR.—Refined at 9c for cut loaf, 8¼c. for crushed, 8¾@8¼c. for powdered and granulated; 7¾@8¼c. for soft white, and 6@7¼c. for soft yellow.

TOBACCO.—Receipts increase a little, while there is no improvement to export demand; prices are, however, held steady.

VEGETABLES.—Exports potatoes, past week, 3,245 bbls; of onions, 100 do. Demand moderate for potatoes, but prices are strong for choice. Southern produce shows a variety. Charleston asparagus, $12 doz.; Florida green peas, crate, $2 50@3.50; Virginia kale, 62c.@$1 ₹ bbl.; do spinach, $3; Baltimore do., $1 75; Virginia radishes, $3. Onions have declined. Other items fairly firm when not in large stock.

Hot-house rhubarb, ₹ 100, $2@3; radishes, $3; cucumbers, $2.50@3 ₹ doz; mushrooms, ₹ lb., 50c.; lettuce, selected, 50@75c. ₹ doz.; poor, $2@3 ₹ bbl. Bermuda potatoes, $7.00@8.00 per bbl; Early Rose, Nova Scotia, $3@3.25; Eastern, $3@3.12; State, choice, at $2 50@2.62; fair to good, $2@2.25; Peach Blow, white, in bulk, $2.50@3; red, $2.25@2.75; Prolific, $2.25@2.75; Peerless, State, $2@2.25; in bulk, $3@2.12; Jackson white, $2@2 37; Mercer, $2.12@2.37; (outside rate per double heads). Sweet potatoes, Md. & Del., $2@2 37 Bermuda tomatoes, 25@75c. box. Onions, Eastern, white, ₹ bbl., $5@6, yellow, $2.75@3.10; red, $2.75@3.00; Chester, $3@3.50. Squash, Hubbard, $2 50@3.50; marrow, $2.50@2.75. Cabbages per 100, $6@7; R. turnips, per bbl., $1@1.25; beets, 75c.@$1; carrots, $1@1.12; celery, per doz. bunches, 50@75c.

WOOL.—The market displays more activity. All low grades, especially California and Texas lots, are freely offered and favor buyers, but fine stock is held very steady.

Ohio, Pennsylvania and Virginia—XXX and pinklock, 37@38c.; XX, 34@35c.; X, 33@34c.; No. 1, 34@36c.; No. 2, 30@32c.; common, 28@30c.; combing, 36@38c.

New York, Michigan, Indiana and Wisconsin—XX, 30@32c.; X, 30@32c.; No. 1, 32@34c.; No. 2, 27@30c.; common, 27@28c.; combing and delaine, 33@37c.

Iowa, Vermont and Illinois—X and XX, 29@31c.; No. 1, 31@33c.; No. 2, 27@28c.; combing, 33@38c.

Missouri, Kentucky and Tennessee—Washed fleece, 30@33c; unwashed fleece, 18@24c.; unwashed combing, 22@25c.

LIVE STOCK MARKETS

Saturday, Mar. 15, 1879.

BEEVES.—Receipts for the week, 4,883 head; do., last week, 10,391 do. Supplies were extremely light, but the demand has corresponded to the small offerings and easy rates have been quoted most of the week for ordinary stock. The range at the close was 7¾@10¾c.; to dress 55@57 lbs.; most business at 8½@9¾c., dress 0 lbs.

COWS AND CALVES.—Market quiet; spring helps trade usually, but it is early yet; besides buyers are disposed to be cautious in purchasing while stock is subjected to the prevailing special inspection. Range $40@60 ₹ head.

HOGS.—Receipts for week, 28,224 head; do. last week, 22,511 do. Recent sales of live at $4 ₹ 100 lbs.; bids at the close, $3.90 do. Country pork, light, 5¾ @6c.; medium, 5½@5¾c.; heavy, 5@5½c.; city, 4¾@ 5¼c.; Western, 5@5¼c. Pork tenderloins; boxed, 7c.

SHEEP AND LAMBS.—Receipts for week, 19,039 head; do. last week, 18,778 do. Sheep are in large supply for the season and prices are weak. Western, 5@5¾c.; N. J., 5@5½c.; cwes, 4@4½c. Lambs, winter, 5@6c. Spring dull with a wide range of prices: choice, $5@5 50 per head; good, $4.50; other, $1@2.50. Young lambs are unusually plenty this season.

VEAL CALVES.—Live calves have ruled easy; there is a good demand at the close. Good to choice N. J. and Bucks Co., 6½c.; do., State, 5¾@6c.; fair quality and heavy weights, 5@5¾c.; fed calves, 4@5c. "Bobs" seldom evade the confiscating clutches of the sanitary police. Some young stock has sold at 2@3c. per lb, or 75c. $1.25 per head. Dog dressed calves easy as the weather is becoming treacherous; best 8½@ 9c.; fair to good, 6@8c.; very poor, 2@3c.

SPECIAL NOTICES.

ORIGINAL AND ONLY GENUINE
"VIBRATOR"
THRESHING MACHINERY.

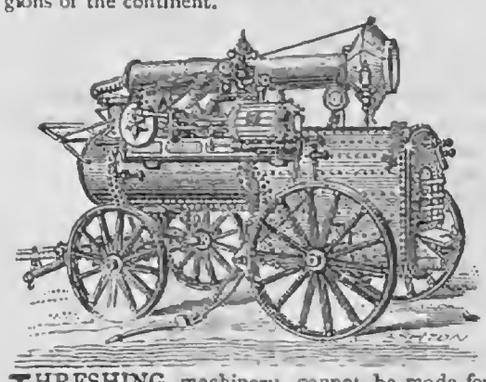
WE are sometimes asked why the prices of our goods are apparently higher than some others of inferior make, and we avail ourselves of this opportunity to place the matter in its true light.

OUR "VIBRATOR" Threshers and Portable Engines embody the best results of our experience and study during our long business career. Whatever would add to their durability, efficiency, and solid excellence, in any particular, has been eagerly seized upon and utilized without regard to labor or expense.

IN this connection it will be pertinent and timely to warn the public against **Cheap** Threshers and **Cheap** Portable Engines. The superiority of our machinery, in all particulars, is now so generally acknowledged that our competitors have no resource but to present the attraction of low prices and long credit. Their goods being inferior, they have to sell them for what they can get. Times are hard; and purchasers, without fully considering the subject, will sometimes allow a lower price to decide them. Manufacturers of "cheap" machines are so set on carrying out competion to its utmost—competition of **Cheapness,** not of Excellence—that they meet "bargain hunters" half way, and furnish them cheerfully with inferior machines at the cheap rate they are asked for.

WE are much mistaken if this is what the public wants or expects of us. Good machinery cannot be made when neither workman nor employer has pride in his occupation; interest and pleasure in the work are both wanting, and both are essential in making good machinery.

OUR mission and business is, to build Threshing Machinery **of the Highest Excellence,** whatever the cost, and, holding firmly to this single purpose, we have added improvement after improvement, until the reputation of our Machines has become co-extensive with the grain-raising regions of the continent.



THRESHING machinery cannot be made for nothing, even with the aid of machinery. Our prices are as low as they ought to be, and, without doubt, as low as they ever will be. Do not be deceived with mere cheapness—**quality always descends faster than price.** Low price, especially in Threshers and Portable Engines, means **Low Quality, with Low Performance and High Repairs.**

HORSFORD'S
Bread
Preparation
UNSURPASSED FOR MAKING
LIGHT BREAD
Biscuit, Rolls, Cake and Pastry.

It is Better and Healthier than ordinary Baking Powder, Cream Tartar or Yeast.

The cost of raising Bread, Biscuit, &c., with it is only about half as much as by ordinary Baking Powder, and the result is much better.

It restores the nutritious elements which are taken from the flour in bolting. No ordinary Baking Powder or anything else used for raising bread does this

Universally used and recommended by prominent Physicians.

If you cannot get it of your Grocer send a three-cent stamp to the manufacturers for a sample.

Manufactured according to the directions of Prof. E. N. Horsford, by the Rumford Chemical Works Providence R. I.

Reading for the Young.

UNCLE MARK PROPOSES THAT THE COUSINS UNITE TO FORM A HORTICULTURAL CLUB.

WHO WILL JOIN?

DEAR GIRLS AND BOYS: Not long ago Uncle True published ten questions for you to answer and offered two prizes for the two best answers. The readiness with which you responded to this proposal shows that you are wide-awake, and encourages me to make you an offer also. It is not to answer any questions, to solve any problems, or to perform any great feat of any kind. I simply propose that all of you who are fond of gardening and love flowers unite with me to form a Horticultural Club.

Many of you, I doubt not, have already little gardens all your own in which you raise such vegetables and flowers as you are especially fond of. I well remember the little garden I had when I was a small boy. It was a small plat of rich land, only about two rods square, in a corner of the large garden. This I fenced in with a hedge of currant bushes, and in it I cultivated strawberries, raspberries, peas, carrots and a number of my favorite flowers, and even grafted and budded fruit trees. I found it a very healthy and pleasant occupation, and acquired, in the cultivation of this garden, a love for flowers and horticulture generally that has never since left me, but which has, on the contrary, constantly grown stronger as the years have passed.

I venture to say that you will find gardening as pleasant as I did, and I shall be glad to assist you, by answering through the RURAL, all reasonable questions you may ask concerning the management of your gardens.

The season is already far advanced, and all who wish to unite with me to form such a club must make preparations at once. Secure a piece of ground, but only a small piece, if too large you will find it hard work to keep it clean. Secure seeds of the plants you wish to grow, and send in your names to me that I may know who belong to the club. But I desire to learn how much you know about gardening already. I therefore offer four prizes for the four best essays on horticulture, or any branch of it, that I may receive from the cousins before April 9th, 1879. The prizes to consist of choice flower seeds of our own selection.

1st prize	.....	30 varieties.
2d "	.....	25 "
3d "	.....	20 "
4th "	.....	15 "

It is not necessary to write an essay in order to to join the club. All can join the club, but those who desire to compete for the seeds must write essays. Now let me hear from you.

UNCLE MARK.

JOHNNY'S TROUBLE.

MAY MAPLE.

"WHAT troubles you, Johnny?" said a lady to a little ten-years-old boy, who stood in the doorway, with a swelling throat and tear-stained face, trying hard to keep back the tears that would steal from under the long, dark lashes, and to choke down the sobs that would betray the rising grief, he replied: "They don't care one bit for me."

"Who does not 'care one bit' for the little boy?"

"Pa and ma don't."

"Why, yes, they do, child," said the lady, at the same time stroking down the glossy rings of hair on the boy's head. "If they did not care for you and love you more than words can tell they would not get you so many nice clothes to wear and such a variety of pretty toys to amuse you and good books to instruct you. Be sure, my dear boy, they do love you ever and ever so much."

"Well, they don't ever act as if 'm did. They don't say they love me, and they're al'ays tellin' me I'm the worst boy they ever see, and I don't think they'd care if 'm didn't have any little boy."

"Oh, Johnny! you must not feel like that. You know papa and mamma would both be very, very sorry if anything should happen to their little boy. Don't you know how hard they are working to make a nice home for you when you are grown to be a man? When their boy is careless and naughty they feel out of patience with him; and then they think he does not do as well as he might, just as you feel toward Tip when he does not mind and do as you want him to."

"But Tip is a dog, and don't care if I do scold him; does he?"

"Yes. Tip cares and feels as badly to be scolded as you do. Haven't you noticed how he always droops his ears and hangs his head when you speak sharp to him? and how happy he seems when you tell him he's a good dog and you like him?"

"Yes; and I'll go now and find him, and tell him that I love him 'cause I was cross to him when ma scolded me just now for gettin' my clothes so dirty. I wish pa and ma ever had time to tell me that they loved me, I guess I wouldn't always be doing' somethin' they didn't want done."

Ah! how many little hearts are aching to hear those sweet words, "Mamma loves you," or "Papa loves his boy." Every day the little sentence may be repeated or demonstrated by a gentle caress, and it will never become old; never distasteful, even though the child counts the years of twenty, thirty, forty, even to three score and ten. The musical cadence of these words, "I love you," will ever be sweet to the listening ear."

Many parents seem to think it makes the little five-years-old boy unmanly to be petted; for him to sit upon lap is almost a disgrace; indeed many a child is ridiculed till its little cheeks burn with shame because he shows an inclination to be caressed by the mother he has been heretofore taught to feel was all the world to him. He is early turned off to be "Pa's man." Alas! for the little fellow, "Pa" is never demonstrative, and when Johnny comes hanging around his chair, hoping he may feel a loving arm about him and a kiss upon his cheek, in nine cases out of ten he is told to "sit down somewhere out of the way."

What wonder is it that so many children learn to feel that nobody cares for them, and thus become reckless of their actions for the present or future. How many of those who now fill our prisons might trace their unfortunate career to their childhood, when for the want of love demonstrated in words and caresses, they learned to be selfish and careless of others' weal or woe.

It is all wrong to let a child feel that he is ever too old to be loved and petted. It is *love* that keeps the heart warm for holy resolves and noble actions. One who feels and knows that he is beloved will have courage to face the world, even though his garments are threadbare and the larder empty. He is sure the sun shines for him as well as the rest of mankind.

On the other hand, one who never hears, or is never made to *feel* that he is inexpressibly dear to the family circle lives under a cloud, though he may ride in a chariot and be robed in "purple and fine linen."

Then don't be afraid or ashamed to say, either in word or act, to the son or daughter, "I love you."

SHADOW PICTURES.

SOME very amusing pictures may be formed of the shadows thrown on a wall or screen by letting a light shine through holes cut in a piece of

paper, and if these holes are skillfully cut the features and expression of a face may be closely imitated. You can easily see whom the accompanying picture represents, and if you draw it on tracing paper and then cut out all that is black, you can make a shadow picture of it.

My little relatives, don't you think it would be nice to make such pictures yourselves? If you try hard and practice much you will soon be able to make some very nice ones of persons and all kinds of animals. UNCLE MARK.

THE DUKE'S STRATAGEM.

THERE was once a German Duke who disguised himself, and during the night placed a large stone in the middle of the road near his palace.

Next morning a sturdy peasant, named Hans, came that way with his lumbering ox-cart.

"O, these lazy people!" said he, "there is this big stone in the middle of the road, and no one will take the trouble to put it out of the way." And so Hans went on his way, scolding about the laziness of the people.

Next came a gay soldier along. His head was held so far back that he didn't see the stone, so he stumbled over it. He began to storm at the country people, and call them "boors and blockheads for leaving a huge rock in the road for a gentleman to fall over." Then he went on.

Next came a company of merchants with packhorses and goods, on their way to the fair, to be held at the village near the Duke's palace. When they came to the stone the road was so narrow that they had to go off in a single file on either side. One of them cried out, "Did any one ever see the like of that big stone lying here all the morning, and no one stopping to take it away?"

It lay there for three weeks, then the Duke sent word to all the people on his lands to meet near where this stone lay, as he had something to tell them.

The day came, and a great crowd gathered at the Dornthou. Each side of the cut was thronged with people overlooking the road. Old Hans, the farmer, was there, and so was Berthold, the merchant.

And now a winding horn was heard, and the people all strained their necks and eyes toward the castle, as a splendid cavalcade came galloping up to the Dornthou.

The Duke rode into the cut, got down from his horse, and with a pleasant smile began to speak to the people thus:

"My friends, it was I who put this stone here three weeks ago. Every passer-by has left it where it was, and scolded his neighbor for not taking it out of the way."

When he had spoke these words he stooped down and lifted up the stone. Directly underneath it lay a small leather bag. The Duke held it up that all the people might see. On a piece of paper, fastened to the bag, were these words, "For him who lifts up the stone." He untied the bag, and out fell a gold ring and twenty large gold coins.

Then every body wished that he had moved the stone, instead of going round it and only blaming his neighbors. They all lost the prize because they had not formed the habit of helpfulness.—*Christian Advocate.*

HOW TO PLAY "GO TO ALBANY."

THE players sit in a row, and the first says: "I am going on a journey to Albany," or any place beginning with an A. The one seated next to her says: "What shall you do there?" The verbs and nouns in the answer must begin with the same letter, so on through the alphabet. The one who asks the question, "what will you do there," continuing the game. But as an example is better than any directions, we will relate to you how a party of children played it:

Ellen—I am going on a journey to Albany.
Louisa—What shall you do there?
Ellen—Ask for apples and apricots.
Louisa—(To her next neighbor.) I am going to Boston.
Frank—What will you do there?
Louisa—Buy bonnets and buns.
Frank—I am going to college.
Susan—What will you do there?
Frank—Cut capers.
Susan—I am going to Dover.
Sarah—What will you do there?
Susan—Dress dolls.
Sarah—I am going to Erie.
Russel—What will you do there?
Sarah—Eat eggs.
Russel—I am going to Fairhaven.
Grace—What will you do there?
Russel—Feed fawns with frogs.
Grace—I am going to Greenbush.
Howard—What will you do there?
Grace—Give gold to girls.
Howard—I am going to Hanover.
Sarah—What will you do there?
Howard—Hunt with hounds and horses.

The party goes through the alphabet in the above manner. Whoever cannot answer readily, after due time is allowed, must suffer a penalty.—[*Pacific Rural Press*

The Puzzler.

BEHEAD AND CURTAIL.

1. BEHEAD and curtail keen, and find to sever with a knife.
2. To desire, and find a verb.
3. A vagrant, and find a male animal
4. Betrothal, and find to decay.
5. To long for, and find a human organ
6. To journey, and find to talk wildly
7. A race, and find part of the human body.
8. A slattern, and find a dog's name.
9. The winning card, and find a drink.
10. Veracity, and find a wagon wheel track.
11. A sharp, ringing sound, and find pale and thin.
12. A traveling chest, and find to scamper.
13. Worthy, and find a metal crust.
14. Worthless, and find an eruption.
15. To gabble, and find an animal.
16. A metal, and find a preposition.
17. Of old, and find a conjunction.
18. A lad, and find not in.
19. A couple, and find two words meaning all right.
20. The stomach of a cow, and find to undo.
21. To suffocate by water, and find a quarrel.
22. The world, and find genius.
23. Dry weather, and find to put to flight.
24. An outbuilding, and find a pronoun.
25. To vilify, and find wickedness.

☞ Answer in two weeks. LITTLE ONE.

CROSS-WORD ENIGMA.

My first is in china-aster but not in cactus,
My second is in carnation but not in arbutus;
My third is in belladonna but not in dahlia,
My fourth is in heliotrope but not in fuchsia;
My fifth is in candy-tuft but not in jessamine,
My sixth is in rosemary but not in columbine;
My seventh is in laburnum but not in ladyslipper,
My eighth is in narcissus but not in oleander;
My ninth is in pink but not in amaranth,
My tenth is in golden-rod but not in tragacanth;
My eleventh is in coriander but not in japonica.
My whole is a fragrant flower.

☞ Answer in two weeks. MD.

TRIPLE ACROSTIC.

1. PRESAGED. 2. A month and a vowel. 3. Walking in sleep. 4. Touching. 5. Root of a word. 6. A town on the Hudson (curtailed of the last two letters). Primals, centrals and finals form three Irish bays.

☞ Answer in two weeks. BALTO.

MAGIC SQUARE.

ARRANGE the nine digits in the form of a quadrangle, so that any three figures, added vertically, diagonally or horizontally, will make fifteen.

☞ Answer in two weeks. MERMAID.

PUZZLER ANSWERS.—March 8.

SYNCOPATIONS.—1, Ghat, Gat; 2, Noon, Non; 3, Tuat, Tat; 4, Black, Back; 5, Sena, Sea; 6, Yeou, You; 7, Djoor, Door; 8, Flat, Fat; 9, Palte, Pate; 10, Meuse, Muse; 11, Lech, Leh; 12, Inn, In; 13, Drin, Din; 14, Tarn, Tan; 15, Toro, Too; 16, Jaen, Jan; 17, Nao, No; 18, Palos, Pals; 19, Swale, Sale; 20, Suir, Sir; 21, Herm, Hem; 22, Spey, Spy; 23, Iona, Ina; 24, Sanda, Sana; 25, Doon, Don.

Sabbath Reading.

THE FOUR CALLS.

THE Spirit came in childhood,
And pleaded, "Let me in;"
But ah! the door was bolted,
By thoughtlessness in sin.
The child said, "I'm too young yet;
There's time enough; to-day
I cannot open." Sadly
The Spirit went his way!

Again he came, and pleaded,
In youth's bright, happy hour.
He called, but heard no answer;
For, lured by Satan's power,
The youth lay dreaming idly,
And saying, "Not to-day:
Not till I've tried earth's pleasures."
Again he turned away!

Again he came in mercy,
In manhood's vigorous prime;
But still he found no welcome;
The merchant "had no time."
No time for true repentance;
No time to think and pray;
And so, repulsed and saddened,
The Spirit turned away!

Once more he called and waited·
The man was old and ill;
He scarcely heard the whisper;
His heart was cold and chill.
"Go; leave me; when I need thee,
I'll call for thee," he cried;
Then sinking on his pillow,
Without a hope he died!

[*National Baptist.*

DR. Thomas of Chicago, gives his ideas of the Sunday question in his usual frank fashion:—

One of the unsettled questions of our American society is the manner in which the public should be expected and required to observe the Sabbath day. The guiding principle in this, as indeed in nearly all questions, is, that the Sabbath is the servant of man, and not man the servant of the Sabbath; that is, the Sabbath was made for man, and not man for the Sabbath. It is not a great something that man should bow down and worship, or that comes to enslave man; but an appointment, a provision for his good. And acting upon this general principle, our modern society has moved away from the severer ideas of our earlier history. We no longer make the Sabbath a day of gloom, of closed windows and solemn aspect; but rather a day of happiness in the home, and joy in the house of God. We have adapted our ideas of labor and rest on that day to what seems upon the whole to be the least labor and the most rest for all, in permitting the use of street cars. In all things, we should study the whole nature and wants of man, and seek the greatest good of all. One use of the Sabbath is rest. All needful public labor should as far as possible conform to this idea, and be so lightened as to permit all to enjoy a degree of that rest. As an example, our street cars should be run fewer hours than on week days; and the public should conform to this. The company has no more right to run the cars on Sunday, simply to make money, than a merchant has to keep open his store. And so of all necessary public work. Then, we should consider that man has a nature suited to, and needing the influences of Divine worship and sacred associations. And when the law of congruity, or of fitness, is studied, it will appear that this appeals to a part of his nature, different from the light and the simply amusing. Man needs amusement as well as study or worship, but it does not seem that the Sabbath is the proper day for such a purpose. Especially does it not seem proper to make the Sabbath a day for public amusement. And this seems the tendency in our midst just now.

WAYSIDE SHRINES IN THE TYROL.

SCATTERED along the road at very frequent intervals are the shrines and stations and crucifixes with which this whole land is disfigured. To the South German mind the tears of the Virgin and the cruel bodily sufferings on the cross seem to be the only effective emblems of Christianity. Generally absurd, and often painful, and always coarse, these tokens are too frequent to excite reverence, and can have little other effect than to maintain the routine of the formal observances of the Church. The Madonna wears hoops of enormous dimensions; she frequently weeps behind a painted handkerchief; and in one instance, where she was of wood and of life size, she held the freshironed linen with painted border of our own time. So little does the real character of the crucifixion impress itself upon the popular mind, that it is by no means uncommon for the bleeding side of the wooden Christ to be decked with flowers and ribbons on festival days. In one case a bunch of cattails was stuck between the knees. It is perhaps well for the tourist that these shrines occur so frequently, for their shock is weakened by familiarity, and one soon comes to pay little heed to them.—*Harper's Magazine.*

We should feel that the religion of the Bible stands alone, not only as to the wisdom and grandeur of her communications, but equally so as to the boldness of her evidences, the sublimity of her credentials and the god-like dignity with which she cometh to the light, that her deeds "may be manifest that they are wrought in God."—*M'Ilvaine.*

LIKE as a father pitieth his children, so the Lord pitieth them that fear Him. God is love; that is, He is the very impersonation of love itself. Wherever His nature extends, there is love; love in its essence; love in its fullness. His love is commensurate with Himself. All His affections are as infinite as He is.

PERSONAL ITEMS.

Jeff Davis's health has improved. He has bought "Beauvoir" a handsome residence near Mississppi City, Miss.

There is a natural and confident expectation that Gen F. A. Walker, who superintended the census of 1870, will be called to do the same work in 1880.

Queen Victoria, who in April, takes a trip of a month on the Continent, it is rumored, has expressed a strong wish to see Canada, and the Prince of Wales is encouraging her to visit both that country and the United States.

Dr. McCosh of Princeton college is a good debt raiser. During his administration $2,500,000 have been given to that institution, and now the last $120,000 of its debt are lifted by friends who wisely stipulate that the college mustn't hereafter live beyond its income.

The heaviest verdict for personal damages ever secured against a railroad is probably that for $39,501, which Dr. Charles W. Hackett, of Maplewood, Mass, a rising young physician, has been awarded against the Eastern railroad for having destroyed his health and so cut off his income for life, by an accident.

Mr. Gladstone, although he has passed his sixty-ninth birthday, wields the axe with great force, and is more than a match, as a walker, for active and alert men twenty years younger than he. Gout and rheumatism have no terrors for this busy man, and one of his most intimate friends used to say that "wonderful as is his mind, it is nothing to his body."

Real Estate.

CHEAP FARMS AND FREE HOMES IN KANSAS

HOW TO GET THEM in the best part of the state. 6,000,000 acres for sale. For free copy of "Kansas Pacific Homestead," address Land Commissioner, Salina, Kansas.

Don't go WEST. | 250 Eastern Md. Farms. Low prices; easy terms; convenient to R. R. & Steamers. Catalogues. J. C. PLUMMER. Cambridge, Md.

IF YOU WANT A FARM OR HOME with independence and plenty in your old age, the BEST THING IN THE WEST is the ATCHISON, TOPEKA, AND SANTA FE R. R. LANDS IN KANSAS Circulars with map, giving full information, free. A. S. JOHNSON, Acting Land Com'r, Topeka, Kan.

GENESEE VALLEY FARMS FOR SALE. Some of the finest residences in the Valley, near R. R. Inquire soon of JOHN SHELDON, upon the premises, at Moscow, Livingston Co., N. Y.

W. & ST. P. R. R. FARMS IN MINNESOTA AND DAKOTA HOMES OVER 1,000,000 ACRES OF FINE FARMING LANDS IN MINNESOTA AND DAKOTA, For sale by the WINONA & ST. PETER R.R. CO., At from $2 to $6 per Acre, and on liberal terms. These lands lie in the great wheat belt of the North-West, and are equally well adapted to the growth of other grain, vegetables, etc. The climate is unsurpassed for healthfulness. They are Free from Incumbrance. Guide Book, Maps, etc., containing full information, sent free. CHAS. E. SIMMONS, Land Commissioner, Gen'l Offices C. & N.W. R'y Co., CHICAGO, ILL. Mention this paper in writing.

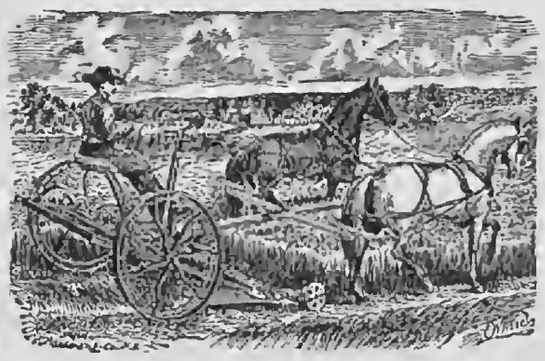
LANDS AND HOMES IN SOUTHWEST MISSOURI. GOOD WATER TIMBER & FRUITS. 1,000,000 acres of well watered, timber and prairie lands adjacent to the St. Louis and San Francisco R'y for sale, at from $2.50 to $8 per acre, on seven years' time. Excellent for stock, fruit, and agricultural purposes. Free transportation to those who purchase land. Send for maps and circulars to W. H. COFFIN, LAND COMMISS'R, TEMPLE BUILDING, ST. LOUIS, MO.

Implements and Machinery.

THE "ILION" RAKE

The Best Self-Discharging Rake in the market. Its simplicity makes it very desirable; being less number of pieces, which all duplicate, can be put together quicker than any other rake before the public. Has a wide range of quick adjustment. No grass catchets, etc., exposed to the wind. It is controlled by the will of the operator, leaving both hands free, and is so easily handled that a child can operate it. *Farmers, before purchasing, are invited to give this Rake a close inspection;* and if there is not one in your vicinity, write for full particulars to REMINGTON AG'L CO., Manuf'rs of Agricultural Implements, Ilion, N. Y., or 57 Reade St., New York. N. B.—Also manufacturers of the celebrated Remington Patent Steel Shovels, Scoops, Spades, &c.

Wilber's Direct-Draft



EUREKA MOWER

The Best Mower in the World.

LIGHTEST DRAFT.

Great Capacity for Rapid Work.

A Six-Foot Swath Cut with less draft than the average side-cut mower USES IN CUTTING FOUR FEET.

Grass cut by the Eureka cures one-third quicker and more evenly than after any other Mower. Oats and Barley harvested successfully and with great saving in time and labor when cut with the Eureka.

Prices Reduced. Terms Reasonable.

CASH, the Farmer's most profitable Agent. SEND FOR CIRCULAR.

EUREKA MOWER CO., TOWANDA, BRADFORD CO., PA.

BRICK and TILE MACHINE.

20 YEARS' standing as a TILE MACHINE, and without a rival as a BRICK MACHINE. For Circulars, address J. W. PENFIELD, Willoughby, Ohio.

Implements and Machinery.

$25 Every Day Can be easily made with our Well Augers & Drills

One man and one horse required. We are the only makers of the Tiffin Well-Boring and Rock-Drilling Machine. Warranted the Best on Earth! Many of our customers make from $30 to $40 a day. Book and Circulars FREE. Address, LOOMIS & NYMAN, TIFFIN, OHIO.

Please state you say this in the RURAL NEW-YORKER.

CENTENNIAL SWIVEL PLOWS!

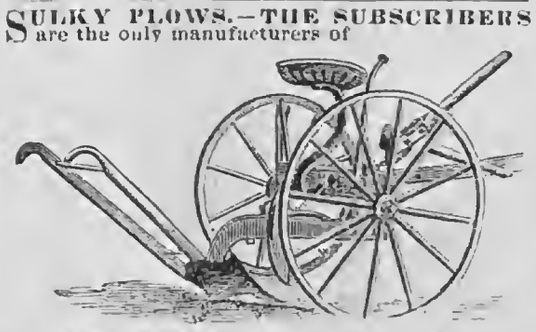
Triumphant Everywhere!

Accepted by the New England and Maine State Agricultural Societies. Superior to any for Level Land and Hillside.

AMES PLOW COMPANY, SOLE MAKERS, 53 Beekman St., New York. Quincy Hall, Boston, Mass.

☞ Liberal discount to dealers and agents. Send for Circular.

SULKY PLOWS.—THE SUBSCRIBERS are the only manufacturers of



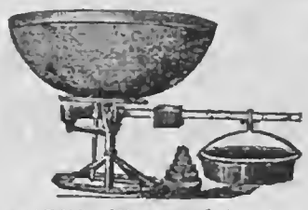
OSBORN'S SULKY PLOW,

the only Plowing Machine that has proved a perfect success in all kinds of soil. Any kind of plow can be attached. The plowman rides and handles the plow with ease, regulating the depth and width of furrow. The draft for the team is materially less, and the ordinary laborious mode of plowing is reduced to one of comfort and ease. Also, manufacturers of

THE MEADOW KING MOWER, and other Agricultural Implements.

Send for Circulars. GREGG & CO., Trumansburg, Tompkins Co., N. Y.

A Perfect Butter-Salting Scale.



Every pound of butter salted alike. Salts from three-quarters to one and a quarter ounces to one pound of butter. No MISTAKES. Will WEIGH ANY ARTICLE, from ¼ oz. to 64 lbs. No Dairyman or Butter-Maker should be without one of these SCALES. Warranted to give satisfaction, or money refunded. Sent C. O. D. on receipt of price—$5. Send stamp for Circulars. Address BUNNELL & BROWN, Guilford, Chenango Co., N. Y.

Every farmer, gardener or cultivator of a kitchen garden should send for a copy *mailed free.* BOWKER FERTILIZER COMPANY, 43 Chatham St., Boston; 3 Park Place, New York; and 21 North Water St., Rochester, N. Y.

STRANGE RESEMBLANCES.

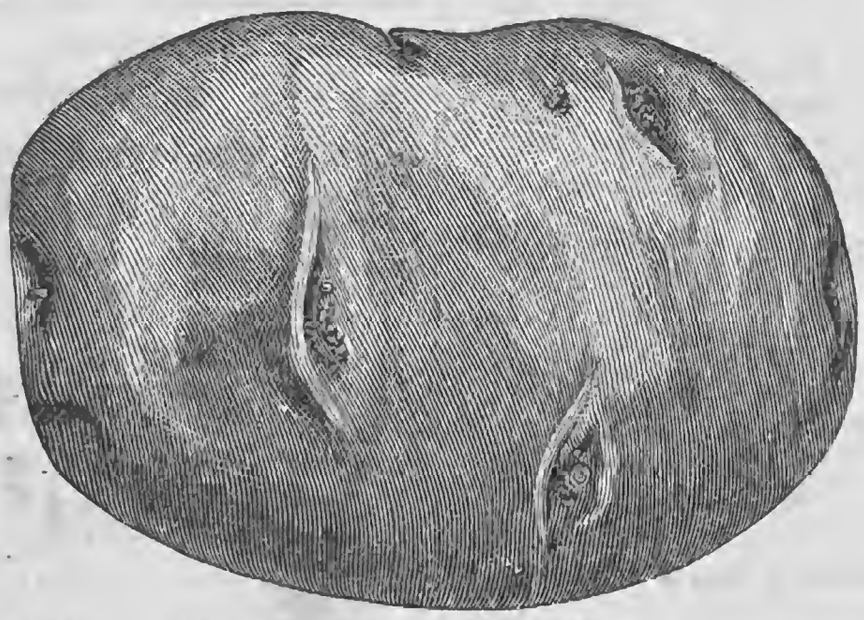
No. 5.

No. 6.

THORBURN'S NEW POTATO,

"The Beauty of Hebron."

A WEEK AHEAD OF THE EARLY ROSE.



WITHSTANDS THE RAVAGES OF THE POTATO BUG BETTER THAN OTHERS.

The following among its many good qualities commend it for trial:
The plants appear above ground very shortly after planting, and from that time continue to grow with great rapidity, outstripping all other varieties in strength of growth and luxuriance of foliage. The tubers, shaped like those of the "Early Rose," are very smooth, slightly tinged with pink around the eyes, but attain a pure white color during the winter. Their yield is really enormous. The tubers lying closely together in the hills, the labor of digging them is but slight. For culinary purposes, its mealy qualities and richness and delicacy of flavor give it a precedence before all other varieties. Contrary to what is usually the case in all large specimens of potatoes, the BEAUTY OF HEBRON almost invariably proves *sound and solid to the core.*
The RURAL NEW-YORKER has tested and commended it. See issue, Nov. 9, 1878.

Marblehead Mammoth Cabbage.

There being a good deal of seed in the market raised from very poor stock, which must fail to give satisfaction, having been the original introducer of the Giant Cabbage, which when raised from the right strain of seed under proper cultivation, has been grown to weigh *over 40 pounds* to a single plant, and sixty tons to the acre, I now offer to the public, seed that has been raised by myself, with peculiar care, all of it *from extra large, extra solid heads.* The Marblehead Mammoth is not only the largest, but is one of the most crisp and sweetest of all varieties of the cabbage family, as will be seen by extracts of letters to be found in my Seed Catalogue, where my customers state that they have raised cabbages from my seed that have weighed 40, 45 and 50 pounds each. Full instructions for cultivation sent with every parcel of seed. Seed per pound, $5.00; per ounce, 50 cts.; per half ounce, 25 cts. My large Seed Catalogue sent *free* to all applicants.
JAMES J. H. GREGORY, Marblehead, Mass.

NEW EARLY FIELD CORN

Queen of the Prairie.

A variety of Yellow Dent Corn which originated in one of our Western States, and has been carefully selected by the growers for several years, and has proved one of the earliest varieties of Field Corn in cultivation. It was planted, the last season, after the wheat crop had been harvested, and matured the crop perfectly. It was also planted on Long Island, July 4th, and fully matured the first of October.
Selected ears, 25 cts.; 3 lbs., by mail, post-paid, $1; shelled, $1.50 peck; $4 per bushel.
B. K. BLISS & SONS,

Industrial Topics.

MAPLE-SUGAR MAKING.

W. I. CHAMBERLIN.

It is interesting to trace an industry to its inception and through its early stages, and the industry which gives us our present subject is no exception to this rule. The history of the most delicious sweet produced by nature and human skill combined, will lead us through as many periods or stages as geology and archæology declare the human race has passed through in the slow lapse of ages, though the length of the former differed considerably from that of the latter.

Our Pilgrim Fathers found the Indians acquainted with the value of this sweet. Their tomahawks scarred the trees, rude devices for spouts conducted the sap into rude stone vessels, and it was boiled in vessels of stone, or of copper hammered cold from metal brought at some time from the Lake Superior region, or dug, already formed, from the tombs of the Mound Builders. This may be called the "Stone Age."

My own dim, childish recollections are of the second, or "Bronze Age," of the industry, and were gained during a year's sojourn in a village "away off in Michigan," near which in spring time camped a small tribe, or part of a tribe, of friendly Indians, who made sugar as pictured in our engraving, sold it to us urchins, and with our coppers bought whisky and tobacco. In its manufacture they showed their belief in the doctrine of women's rights to cut and bring the wood, gather and boil the sap, and tend the ba—papooses, while they (the lords and masters) lounged close at hand in placid contentment and smoked the pipe of peace and laziness. The squaws took it most philosophically, too. Their housekeeping was not disturbed by their sugar-making. They had no parlors to sweep and dust, no silver to polish, and no dresses or gowns to make, tucked and plaited and puffed and frilled and fringed and bordered with lace. And as for their dinner arrangements, these were in no wise disturbed. Coons, squirrels and vegetables were boiled in the sap with little loss of time, and the squaws stood by and stirred the mess with a long stick, a growing appetite and a contented spirit! Even our childish tastes used dimly to discern in the sugar a flavor of turnips and coon-oil, and when a visit to the camp revealed the *modus operandi*, our tastes revolted. But soon the all-devouring appetite of childhood conquered these foolish æsthetic prejudices, and we picked the squirrel hair from our teeth and swallowed the sweetness with our former boundless relish.

Dim visions of the memory or fancy picture a raid upon the sugar camp, as already intimated. It was reasonable to suppose that with the hoarded spending-money of a month, and with a few "big brothers" for protection, we could, by visiting the camp, buy at wholesale rates and save cost of transportation besides. If we displayed our combined treasures before their gaze and said in dialect used in every Indian tale from Cooper down, "Much money, much sugar, much cheap," how could the high-minded, generous savages fail to respond?—It did not prove a financial success! We had not dreamed the noble savages would get up a "corner in sugar" with the shrewdness of a Chicago wheat-broker or a Wall street "bull" or "bear." We had not dreamed they would lovingly take our treasures from our hands and say, "Pale-faced pappoose very rich. Big Injun much poor. Big Injun keep much money; bring white pappoose much sugar *by-and-by*." We had not dreamed we should "accept the situation," and depart "sadder and wiser men!"

The third or "Iron Age" of the industry—if we may still keep up the metaphor—was not much in advance of that last noticed. The early settlers worked in a rude way; long elder "spiles" conveyed the sap to "dug-outs" or sap troughs. These were made from soft wood, usually bass-wood. A tree a foot or more in diameter was cut in o lengths of three feet each, split in two and the halves dug out with ax and adze, so as to hold a pailful or so; or rude wooden buckets were made, like those shown in Fig. 2. The mode of boiling was some improvement, too, on the Indian mode. Three huge iron kettles were swung by long sweeps (see engraving) over a fire-place made by hauling and rolling near together two huge logs. Wood was thrust in from every direction and the fire lighted, and the draft from either or both ends made the blaze roll around the kettles and the sap in them toss and foam. Sticks and leaves and ashes and fire-brands and smoke had free access to the sap and helped to flavor the sugar and give it the real "maple-sugar color"—as black as the faces of the Indians who were its original manufacturers. As the sirup got thick enough to be in danger of boiling over, a chunk of pork suspended from above, kept it down pretty well, but sometimes the man would have to rush to the end of the sweep and lift the kettle from the flames and swing it aside for a moment to save its contents. A shanty over these huge sweeps was out of the question, and when the rain poured the man must stand and take it, or run occasionally for a moment into his cubby-hole of a shed (see Fig. 2) and wish he could stay there all the time. For twenty years of my infancy, childhood and youth, our nearest neighbor boiled with such an apparatus, and the whole scene was so often and so vividly impressed upon my mind that I am sure it is correctly pictured in Fig 2.

In the next stage of our industry a rude arch of brick or unhewn stone was built (see Fig 3, last issue), half dozen large iron kettles were "set" in it down nearly even with their rims, and the sap was boiled with large wood, running nearly to the back end of the arch. A simple roof supported by four posts, was sometimes built over the kettles and the part where the man stood to put in wood. The arch and kettles and shed worked so well that many retained their use until quite recently.

The next improvement was to substitute broad, flat sheet-iron pans in the place of these iron kettles. Many at first doubted whether these pans, which in the beginning were made with wooden sides, were an improvement. More than 30 years ago my father had one made, having got the idea, I think, from a Vermont hired man. It was the first of the kind, I believe, in the State, and many people came to see "the thing work." Most of them went away laughing at the idea of "boiling in a wooden trough." They "believed the kettles would beat the thing anyway." The sap didn't "roll and tumble as it did in the kettles," &c., &c. And it was many years before the pans came into general use. Nor was it until recently that it became common to take advantage of a slope or side-hill so as to save rolling up the barrels of sap on skids and dipping from the store-trough into the kettles or boiling pans. These and many similar im-

INDIANS MAKING MAPLE SUGAR.—Fig. 1.

provements, in utensils and methods bring us down to the improved methods and appliances of the present as described here last week.

EDUCATION AND KNOWLEDGE: HINTS TO TEACHERS.

PROFESSOR W. J. BEAL.

At the close of my last, I spoke of wasting time on Arithmetic. Later in life, a few weeks will enable the pupil to easily understand what he spent so much time over when a little boy.

The observing powers should be early cultivated. This will be valuable in all departments of business and all conditions of life. Observation can well be cultivated in connection with writing descriptions of objects, such as any piece of furniture, a plant, flower, fruit, or animal. These lessons will almost always interest those who are usually classed as "dull." We need more observers.

Drawing is valuable to use in connection with the study of objects, as it will tend to improve the observation. Some knowledge of Geography and History will be desirable, and some lessons on Physiology.

These are subjects for children to study in the common school. I should try to obtain a good teacher who knows how to teach these things well, but if he has not had the proper training in Natural History or in drawing, I should not urge him to devote much attention to them. I should rather allow him to put the most time on what he liked best, for those things he would teach the best. There are but few who know how to interest young children in botany and zoology or in drawing.

In all school-training the teacher must not lose sight of the discipline which every pupil should acquire.

We should educate as well as impart knowledge; train as well as stuff the mind. Knowledge is useful, but there is so much known at present that it is utterly useless to attempt to teach all that is known, even in any one department. Education is power; it is more powerful than knowledge. I believe it is much more important, while I am with my students for a few weeks, to teach them how to investigate any subject by themselves, than to spend the same time in imparting the knowledge without giving them the power to investigate. In botany, instead of showing them the plants and telling all about their names, their uses, their structure (which would be mere knowledge which they could learn by themselves, if they knew how)—instead of this, I put them in a way, with some selected exercises, to acquire this or any similar information, whenever they may desire it. This education is too often confused with theory by those who have not given the subject careful attention. Nothing is more practical than true education. The good teacher will stimulate a desire for knowledge and instruct his students how to acquire it. I have recently heard of a girl of sixteen who had received no training, except that in the district school. She had committed two grammars to memory, including most of the fine print and notes. What a pity! It is well to train the memory, but too bad to fill the mind with anything except the most valuable information. With proper training, what achievements this bright girl could have made, in outlines of history, botany, zoology, geography, and something in several other departments of knowledge. One of the most interesting and suggestive works I ever read on education was that by Herbert Spencer, published by D. Appleton & Co., and costing, perhaps, $1.50.

To maintain good order is one of the most important and difficult points in teaching school. Some persons can never acquire the faculty. To aid in keeping order, be particular, even in little things, as to where each pupil shall sit, in the way he shall come and go from class. Begin at once, on the first minute of the first hour of the first day. No time must be lost before beginning. As it is easiest to check a horse at the top of a steep hill and make him go slowly all the way down, so it is easiest to maintain order by beginning at once on the opening of school. The teacher must be quiet and never bluster, speak plainly and distinctly, using only just the words to express the exact meaning.

Always prepare a programme for the exercise of the day, and adhere to this, with, perhaps, now and then a change. Have a time for every thing. To aid in this programme, obtain a scheme of some good graded school. Always be on time for everything. This is one of the most marked defects of the people in the country. To aid in keeping good order, strive to get the pupils interested. To get them interested, manage every honorable way to get them out promptly every day. To aid in this, use a series of tickets, which I need hardly explain. Have what we will call, an *Honorary Roll*. We may use a part of the blackboard for this purpose.

The Honorary Roll should include, each week, the name of every student who was not tardy or absent during the previous week. He should also have had all his lessons reasonably well. At the close of the term, a summary of this roll should be conspicuously posted in the room where it may be surrounded with a wreath of leaves, evergreens or flowers, and allowed to remain till the opening of the next term.

The successful teacher must have unbounded resources and patience to get along well in a district school. He should be cheerful, not silly, and never lose his temper. He must be able to readily devise plans, which may be novel, for the punishment of an offender. He must not be outwitted by his pupils. Try on the start to impress all the pupils that you want to do them good, and then carry out the design. Get interested in their plans and business. Have some general exercise every day. Always have singing or some concert recitations once or twice a day. Give them little talks on physiology, geography, government history etc.

Get up a museum. Your pupils will aid in procuring some shelves. They will bring in all sorts of fossils, minerals, Indian relics, and trinkets of interest. Some of these may be valuable and only borrowed for awhile. The teacher can tell the pupils about them at certain times. This is one of the best ways to interest dull pupils. There is no one so dull that he cannot find some interesting object to bring to school. He may know something about it. Give each a chance to tell about the specimens.

SPRING WHEAT.

A. M. VAN AUKEN.

Advantages of It.

Many people come here filled with the idea that we of this region grow spring wheat through laziness, and they make up their minds that they will soon show us that it is just as easy to grow winter wheat, and have good flour and good bread; though, if the truth be told, the folks here seem to have very good bread from the spring wheat flour. Well, one of these new-comers gets his wheat, prepares his land, and sows it. The result is discouraging—the yield is small, for all his fine growth of straw. He gets it ground; for he consoles himself that there is enough for his own bread, at any rate. The miller smiles a little at it, but comforts our farmer with the remark that it is a very poor wheat year. The first baking draws tears from his wife: "What ails the bread?" The next batch is no better. He pockets his pride and asks his neighbor what is the matter. With a hoarse laugh, which is most mortifying, the neighbor says: "Well, I thort you'd get enuff of that winter wheat; you see it ain't fit fur this kuntry, and we quit raisin' it long ago." A native who "happens" along, chimes in with, "Yes, it don't was much use to try winter wheat now. When my granfadder was just got his farm clear up, he raise just so good winter wheat as ever was; but now our woods is all chop off, it is no good."

There is much truth in this last remark; for from thirty to one hundred miles further north, the winter wheat is good; but as fast as forests are cleared away, the winter wheat begins to fail. Many who come from the East imagine that our spring wheat is poor stuff and makes indifferent flour. This is a mistake. Let me illustrate: Four years ago we had an excellent crop of wheat of a variety called Minnesota White Spring. It was a good, plump, fairly white wheat. At the mill to which I took our grist, the miller was recently from Rochester N. Y. and was an excellent miller. While waiting for the grist, I was wandering about the mill and finally began to discuss with the miller the merits of their smutter. From this we began to discuss the different varieties of wheat and one which he called the best. I asked if it was better than ours. He said, no, but that that was a spring variety while ours was a winter. I corrected him. He looked at me; went and felt of the flour, of the bran, of the middlings, and looked at the wheat in the hopper and listened to the stones. He came to me and said. "And you say that is spring wheat?" I replied in the affirmative. "Well" said he "if that is so, there are thousands of people fooled in their flour. I have ground thousands of bushels of that same wheat into XXXX Rochester flour, and we consider it among our best wheats."

This man may have been mistaken, but if he was not, it proves that our spring wheat *is just as good* as winter wheat.

Now let me quote a few prices on flour from the Rural for Dec. 28:

Superfine State	$3.90
St. Louis, choice	5.60
Minnesota "clear," choice	4.50
" "straight," choice	5 65
" "patent"	8.25

These are in all cases the outside figures. They show a grade of flour worth double what "superfine State" is worth, and that flour is made from a grade of wheat which would not rank very high if exhibited at our county fairs, and would in the East excite derision.

To make this extra grade of flour, *hard* spring wheat must be had. The result of this is already seen—the Milwaukee board of trade, some years ago, established a grade called "Hard No. 1." And the wheat which is most likely to produce this grade, is the Fife.

The rules of the Chamber for inspection are: "No. 1 hard spring wheat shall be composed mostly of hard Fife or Black Sea wheat, and shall be sound, well cleaned, and must not weigh less than fifty-eight pounds to the measured bushel."

One great reason for the prejudice against this kind of wheat, lies in the fact that in making this flour, we take, say, five hundred bushels of wheat, or enough to make one hundred barrels of flour; from this we shall get thirty barrels of "patent" flour, fifty-five barrels of "clear" flour and fifteen barrels of a poor grade which is sold without a name for what it will bring.

This poor grade is largely shipped East, but little being sold here. It has no life and is "poor stuff."

The grade of flour called "straight" is ground the usual way, and the middlings are then re-ground. This is known in our local markets as "Half-Patent."

There is one advantage, that, I think, I have shown—that spring wheat makes the best flour. Other advantages will readily suggest themselves, such as the avoidance of winter-killing; the fact that in spring the farmer is better able to judge of the probable supply and demand of the market, etc.

Best Varieties.

It is the "Hard Fife" and the "Black Sea" varieties which are used in this extra grade of flour. By the "New Process," better flour can be made of soft wheat than by the old process; but it is far inferior to that made from hard wheat. It is to the interest of farmers to raise a wheat which will grade "hard No. 1," or, in any event, not fall below "No. 1." This wheat will not get into the general market. It will be bought up by local millers and agents for Eastern millers. Even Boston millers find it to their advantage to keep agents in Minnesota, and have wheat shipped direct to their mills.

It is, then, best to raise varieties which will come up to these requirements. First stands the Fife. But it must be good. It is seldom one will get a good sample from an Eastern house. They make no specialty of it, and one will be as apt to get "soft" as "hard" from them. A few years ago we had a new wheat introduced, "all the way from Maine." It was called the "Bismarck," and had a wide sale. It proved to be only an invigorated Fife. The Club wheat is in every way inferior, and so is its prototype, the Lost Nation, the difference between which wheats it is hard to discern. Two varieties which seem to be lost, I think, would be valuable to us now; they were called the "Hedge-row wheat" and the "California wheat." The Rio Grande is an inferior wheat, and the White Russian is too little known to risk an opinion on its value.

Brown Co., Wis.

PROPAGATING POTATOES.

We have been in the habit of procuring most of the new potatoes when first offered, and usually propagate them in this way: About the first of February we plant the potato in the greenhouse, and in about twenty days there will be a good growth of sprouts on it. We now take up the potato, and slip off all the sprouts, planting them, three together, in pots. Having done this, we next replant the potato, and have another set of sprouts ready in about the same time as before. We now repeat the slipping off and replanting. The next set of sprouts, if left to get well rooted, can be planted at once in the ground. If the weather is too cold, pot the same as before. This process can be repeated as long as the potato keeps solid and does not become exhausted.

We usually keep sprouting until June, at which time we cut the potato into as many pieces as there are eyes, and plant them. The sets should be planted as soon as the weather and soil will permit. A pound of potatoes, treated in this way, ought to produce about three bushels of good, sound potatoes. It is best, in putting out the sets, to choose a moist time, or shade them. If properly started, they will produce potatoes just as large, sound and healthy, as though planted in the usual way. It is to be supposed, when any one plants potatoes, that he will endeavor to raise all he can. We find the ground should be kept mellow until the potatoes are ripe, and it should be rich to begin with. I. J. Blackwell.

Mercer Co., N. J.

How Much Wheat Seed per Acre?—Neigbor Glover always sows two bushels and a peck of seed wheat per acre. My rule is, one bushel and a half, and if the land is in good heart, it is enough, and if it is not in good heart, the quantity is certainly enough likewise, for thereby we save the plant-food needed for the growth of the straw from the three pecks of extra seed. He told me of a single kernel of wheat that produced 150 separate stalks. One grew in my garden among the carrots with 75. But why multiply instances when the evidence is so one-sided to show that there is no need for thick sowing. What is there in the nature of the wheat plant, that it should require eight times as much seed as for a corn crop, and how can we expect it to yield to its full capacity, without some after cultivation? P. W. C.

Dairy Husbandry.

THE RISING OF CREAM.

T. H. HOSKINS, M. D.

Cream and Butter.

There has been, of late, a great striving among dairymen and others interested, to understand the true principles concerned in the separation of cream from milk when left standing undisturbed. All agree that cream is lighter than milk, as oil is lighter than water. The microscope has shown us that the cream exists in very minute drops, called globules. Pure cream is simply ungathered butter—that is, the butter globules, after they have assembled together upon the surface of the milk, constitute cream; the same globules caused to adhere together by churning, form butter. There is no difference between pure cream and butter save this mechanical one; but cream, as ordinarily taken, is mixed with milk, which remains after churning as "buttermilk." Until recently the

Action of Gravitation

has been regarded as sufficient cause for the rising of cream. But since it has been discovered that under certain circumstances and conditions cream rises much more rapidly than under others, there has been a search, or groping, after some other cause, as necessary to explain all the facts. The

Law of Specific Heat

has been appealed to as furnishing an auxiliary force, or rather as increasing the levity of the cream globules relatively to the milk when rapidly heated or cooled. A little consideration of this law and its action, however, shows that so far as it acts at all in the matter, it has directly the reverse effect. For under this law when milk is rapidly cooled, the cream globules cool faster than the milk. Consequently they would have a less tendency to rise, rather than a greater, as their greater condensation or contraction makes them relatively heavier than before the cold was applied. So, theoretically, cream ought to rise slower, rather than quicker, when subjected to the strong and rapid cooling of the "Swedish method," or its modifications, the Hardin and Cooley systems. As it does in fact rise much quicker, those theorists who have been seeking for a motor power in aid of gravity to account for the observed facts, stand at a nonplus in the matter. I have long studied this subject along with others in relation to milk, and have always believed that the force of

Gravity Alone is Sufficient,

and that no other cause need be sought for to account for the separation of cream from milk, no matter how slowly or how rapidly, under various conditions, it may occur. I am convinced that the slight variations in relative weight between the globules and the milk effected under the law of specific heat by sudden cooling or heating, are not sufficient to cause any measurable difference in the rapidity with which they may come to the surface. But

Something Retards the Rising

of cream. All experience shows that widely variant periods of time are demanded for the perfect separation of cream from milk, when left to stand for that purpose under varying conditions, especially of temperature. Now what is this something? For that we are to look for is not some recondite hastening force or cause. No such thing has been demonstrated, and no such thing is needed. No apparatus has been devised positively to hasten the process. The most efficient apparatus is that which most effectively removes or prevents the obstruction referred to. Now

What Is It?

It is simply and only the existence of currents in the milk, which carry with them the globules and prevent them from gathering together at the surface, as they tend to do under the law of gravitation. The recently introduced methods of

Raising Cream at Low Temperatures

have misled observers. Setting milk for cream so successfully at a temperature of about 40 deg. by the use of ice or otherwise, has led people to believe that cold is the efficient force which in some mysterious way drives the cream quickly upwards. This hasty conclusion, that the sudden abstraction of its heat from the milk has a direct influence in throwing up the cream, has been the delusion under

which inquirers have felt compelled to resort to the law of specific heat, as referred to above. They stumbled upon it, they stumbled over it, and some have now stumbled through it, and admit their mistake, but are still at a loss to account for a mystery that, rightly looked at, is

No Mystery at all.

Cold setting is effective, not because it is COLD setting, but because it is setting *at a fixed and uniform temperature*. When the temperature of a fluid is continually varying, that fluid is permeated by currents. The warmer particles are rising to the top, and the colder particles falling downwards. Changes in the air or other surrounding medium, are communicated to the fluid through the walls of its containing vessel and its exposed upper surface, so that as long as these external changes of temperature are occurring, the currents are continued. In milk, when these currents are produced, the globules of the cream are carried along by them, going up and down, and only gaining the power to remain at the top as they occasionally coalesce in like masses, and thus obtain sufficient floating power to remain at the surface after reaching it in the course of the current. That merely

Making Milk Cold

throws up the cream, is an error refuted by the experience of every dairyman, in winter, for he finds that in ordinary pans exposed to the air, the cream rises with great difficulty and very slowly, at that season. In cold milk the globules do not coalesce or gather in masses, and consequently the lively currents induced by the great variations of temperature in the house at that season, make the separation of the cream from the milk a very slow process. To hasten this, scalding is resorted to; and why? Not because, as some think, the sudden reduction of heat after scalding throws up the cream under the law specific of heat (for that, as I have explained, works the other way), but because scalding favors the agglomeration and even the actual union of the globules, and thus greatly increases their floating power, as soon as the stronger currents abate.

Carefully Conducted Experiments

have shown me that where one unvarying temperature is maintained, there is no noticeable difference in the time taken by the cream to rise, whether that temperature be 130 deg., 40 deg., or any intermediate degree. Some other recent experiments also prove that while scalding hastens the rising of cream upon milk in small pans during cold weather, yet the cream does not *begin to rise so quickly* in the scalded milk as in a pan from the same mess set in a warm room. While the currents are strong in the milk, as they are while heating and cooling, the cream rises slowly, but when the scalded milk falls near to the temperature of the surrounding air the currents become sluggish, and the cream is thrown up almost at once.

The Best Uniform Temperature.

A uniform temperature is the chief requisite for rapid cream separation, yet while cream will rise with equal promptness at *any* uniform temperature between scalding and freezing, there are questions of convenience and economy which must be considered in fixing the one that will be most available in practice. Ice or iced water, in closed chests or tanks, furnishes probably the most convenient, if not the cheapest means of securing a permanently uniform temperature in which to set milk for cream. It also, by keeping the milk cold, preserves it in perfect condition for sale skimmed, or for making it into cheese. These objects will cause ice to be generally used. But I am experimentally assured that cans of milk, set in a closed tank supplied with water at a perfectly uniform temperature (be that temperature 130 deg., or 40 deg., or anything between), will throw up all their cream inside of twelve hours. The sole and only point to be observed, is the entire abolition of currents in the milk, by the preservation of an absolutely uniform temperature.

THE CREAMERY SYSTEM is rapidly extending, judging by the large number of notices of new creameries in our exchanges.

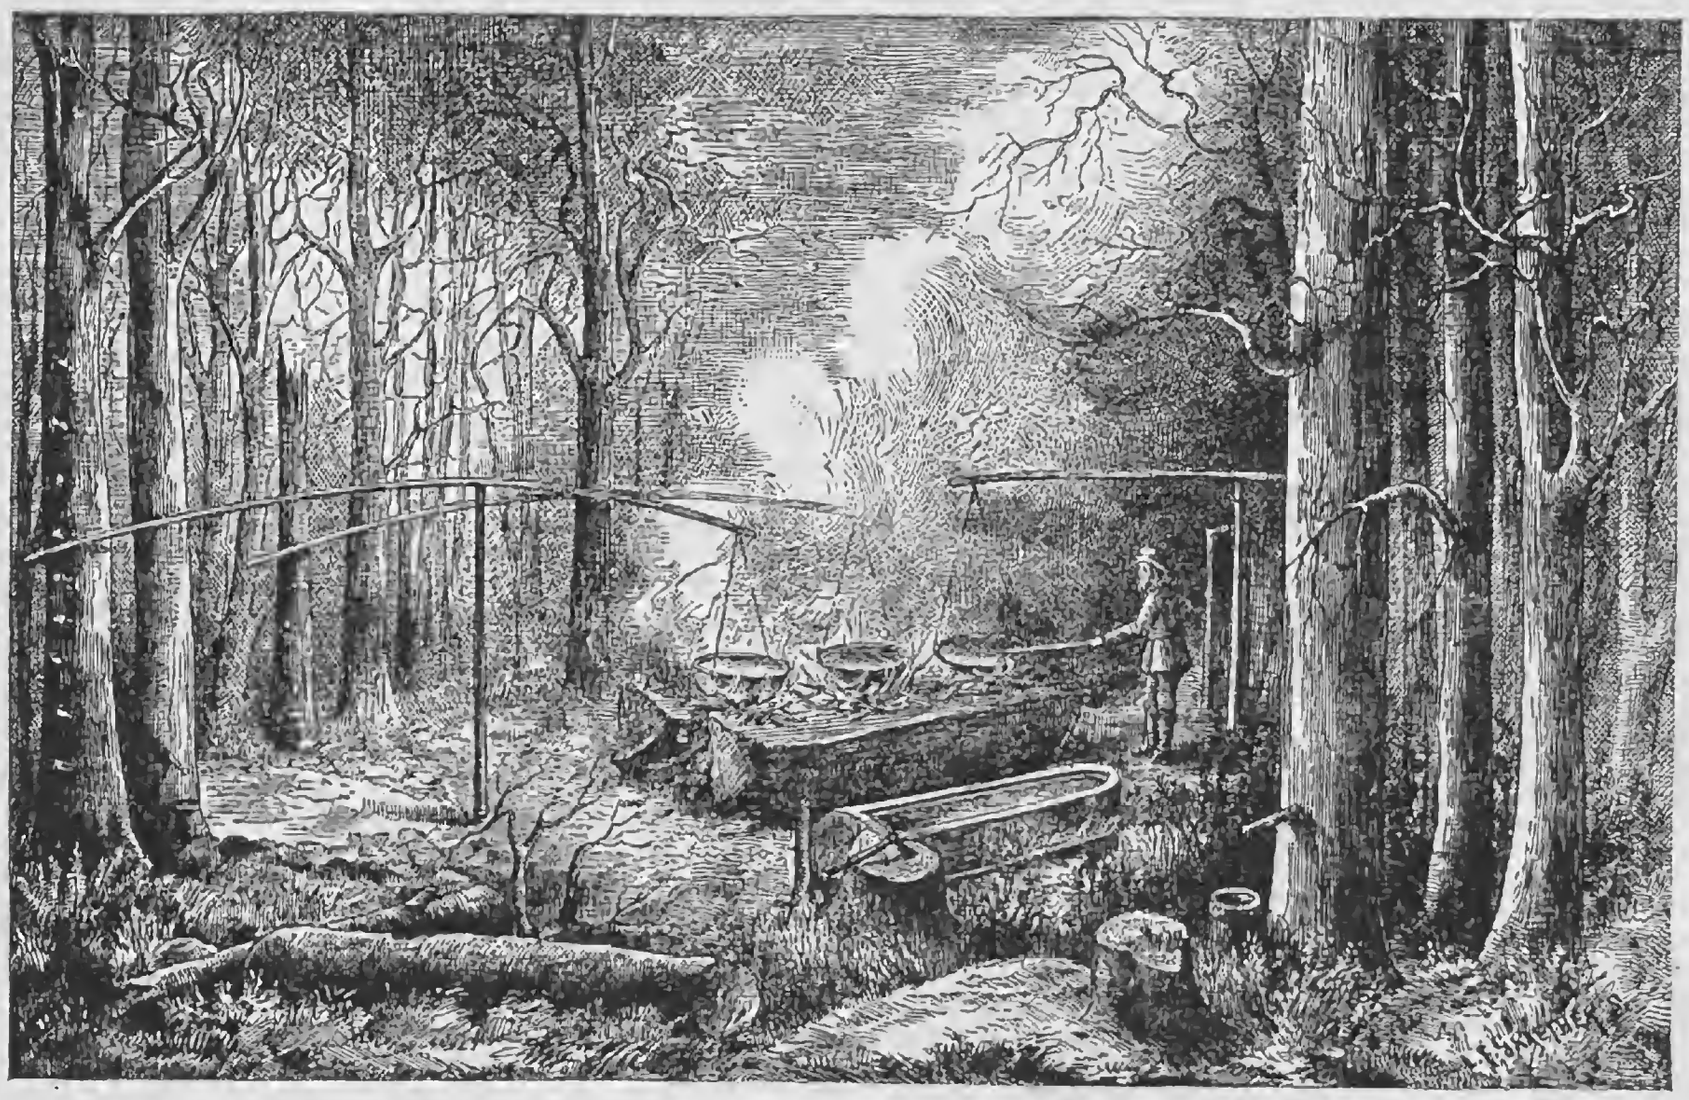
The Herdsman.

HOLSTEINS.

WING B. SMITH.

Their Antiquity.

THE dairy and farm interests of this country demand a milch cow better adapted to their needs than those that now fill the stables and graze upon the pastures of the ordinary dairyman or farmer, and with this point in view cattle breeders have been endeavoring, through



OLD-FASHIONED SAP-BOILING—FIG. 2. (SEE FIRST PAGE.)

importation and careful and scientific breeding, to procure or produce a breed of cattle with the requisite characteristics developed to such a degree as to satisfy the reasonable demands of both the farmer and dairyman. The results of the efforts in this direction are designated by many names, are of a variety of forms, sizes and colors, but usually carry to a more or less marked degree the points generally conceded to be favorable in the make-up of a superior milch cow: and without intending to disparage other breeds, I desire to call attention to a breed of cattle that for upwards of two thousand years have been bred in their native country, with a view to a practical combination of the milk-and flesh-producing qualities of the animal.

Grazing upon the meadows of Holland can be seen great numbers of cattle, large, finely-formed, wonderfully symmetrical, fully developed, uniform in color and general appearance, with a remarkable development of the milk-producing organs whose yield at the pail fully realizes the promises of their development.

Some of the choicest of these animals have been imported into this country, and they, with their descendants, constitute the Holstein breed of cattle of the United States. It must be borne in mind, therefore, that the Holsteins are not an experiment either in Holland or in this country, having been known here since 1852. No other breed known to us can so directly trace their lineage back for so many centuries.

Milk Records.

Americans, tired of humbugs, demand more than unreliable statements, surmises and estimates, and insist upon facts in the form of reports and records fully substantiated by unquestionable proofs, coming from persons well known, and consisting of weights, measurements, tests, etc., and these I will now give in proof of the correctness of my statements. The most essential quality in a cow for the dairy or farm, lies in her capacity for giving a large yield of milk. Now I unhesitatingly assert, that the Holsteins as a breed, are the most abundant milkers known. In proof of this statement, I place before RURAL readers the following records selected from among the very many now in my possession, many of which have been furnished me by prominent and trustworthy breeders and owners, embracing animals of almost every important herd of Holsteins in this country:

Crown Princess's largest daily yield is 76 pounds of milk; and largest yearly yield 14,027 pounds. Topsy produced 40½ pounds of milk in a day, before she was two years old. Maid of Twerk, in 280 days or 9 months and 10 days, gave 11,618 pounds of milk, an average of 40 6-10 per day. Her largest yield was 71¼ pounds of milk in a day. Verta averaged 52 2-10 pounds for 85 days. Johanna, imported in 1878, calved July 23d, 1878, and averaged 72 pounds of milk per day during last week in August; largest yield in one day, 78 pounds. Gentle Annie has had three calves, her first at 23 months old, and has consequently been in milk three continuous years, during which time she has given 26,860 pounds 14 ounces of milk, or an average of 8,713½ pounds per year, for the three years in milk commencing at two years old. Jufrau has completed her third continuous and consecutive year at 11,680 pounds per year. Janeka her fourth year at an average of 10,090 pounds per year. Lady Cliffeden (imported October, 1874,) calved February 1st, 1875, gave 2,093 pounds of milk in March, an average of 67 16-31 pounds per day. Record for 362 days, 16,274 pounds or 7,745 quarts of milk, an average of 21 143-362 quarts per day; largest yield in a day, 75 pounds. Maid Marion (imported) gave 21 quarts per day for six weeks; she gave 11,112 pounds in 365 days. Lady Andover gave, from October 1st, 1876, to June 1st, 1877, 9,856 pounds, an average of 35 67-91 pounds per day. Zwaan gave 12,009½ pounds of milk in a year. Astrea, eight years old, gave 80 pounds per day for 10 days. Maid of Twisk, five years old, gave in 303 days 12,593½, an average of 47 7-16 pounds. The next year she gave 14,312 pounds, an average of 44 pounds 7 ounces; her largest yield was 90½ pounds in a day. Jacoba Hartog, two years old, in 358 days gave 10,430¼ pounds, an average of 29 7-16 pounds per day. Sitjtje Bleeker, two years old, in 365 days gave 10,711⅝ pounds, an average of 29⅜ pounds per day. Neilija Korndyke, two years old, in 365 days gave 9,932¾ pounds of milk. Maid of Twisk averaged for 30 days, 73 1-6 pounds of milk a day.

The cow, Eva, for three consecutive months averaged *forty-two quarts* of milk a day; this was in the months of September, October and November, and during the following five months she averaged thirty quarts daily, making 8,352 quarts of milk in eight months. Eva 2d, at two years and six months old, with her first calf, gave an average of twenty quarts of milk a day for six months. Three months after dropping her second calf, she gave twenty-eight quarts of milk a day. In a herd of fourteen fully matured cows, not one of the fourteen will give less than sixty pounds of milk a day when in full flow.

Butter Records.

As to quality of the milk, we believe it is universally conceded that the butter and cheese of Holland are rarely excelled, and to the breeder or dairyman another vital point is the quantity of butter given. Records prove more than mere statements. Maid of Twisk gave 14,312 pounds of milk in a year; actual experiment proved that 20¼ pounds of milk made one pound of butter, which gives 706¾ pounds of butter in one year.

Snow Flake, two and a half years old, gave 10 pounds in a week. Texelaar produced 17 pounds 14 ounces of butter from cream of six days' milking. Texelaar 9th produced 12¾ pounds per week, and her daughter 14 pounds of butter in a week.

Sixty-eight pounds of milk taken from two cows (Maid and Jacoba) were set aside, the cream taken off when milk was sour and churned by itself in a common "dasher" churn, with the following result: three and a half pounds of butter to 68 pounds of milk, or one pound of butter to 19 3-7 pounds of milk; butter was weighed before salting and milk thoroughly washed from the same. From the daily milkings of Eva three pounds of butter were made for long periods. To prove the importance of Holland as a dairy country, let me state that one small province of that country exports nearly 5,000,000 pounds of butter annually to the markets of Continental Europe and the British Isles. Holland exports annually 32,000,000 pounds of butter and 61,000,000 pounds of cheese, which for so small a country is truly remarkable.

Flesh-forming Capacity.

The next most prominent feature of these cattle, and one of great importance to the breeder, is the readiness with which they take on flesh, and its quality. Experiments without number have proved that Holsteins take on *more* flesh with the *same food* than any other breed of corresponding weight.

Comparative Milk Records.

Professor Lehmann, in charge of the experimental agricultural station at Pommeritz, selected from both Short-horn and Holland races cows that had passed their sixth year, but which were not so old that their age affected the flow of milk. The experiment of milking commenced July 31, 1866, and terminated July 30, 1867, occupying precisely 365 days; during which time there were yielded by four Short-horns 27,240 pounds of milk, or an average of 6,801 pounds per cow, while four Hollanders yielded 32,136 pounds, or an average yield of 8,034 pounds per cow. Highest yield by Short-horns, 7,648 pounds; highest yield by Hollanders, 9,411 pounds. The same food, keeping, care and surroundings, which in the Short-horns produced 100 pounds of milk, produced 118 4-10 pounds in Hollanders, or fully 18 per cent. in favor of the latter as milk-producers.

At the Agricultural Academy at Eldena, many experiments were made in feeding and milking cows, etc., and very precise accounts were kept of the product of every cow, as well as of the expense of keeping her: and it was found that three Ayrshire cows averaged 2,247 quarts of milk per cow, while twenty-two Holland cows averaged 4,437 quarts per cow. Highest yield by Ayrshires, was 3,811 quarts; highest yield by Hollanders, 5,677 quarts. The Hollander consumed about five pounds of hay or the equivalent, to every quart of milk yielded, the Ayrshire nine pounds of hay to every quart of milk. One other experiment conducted by Villeroy, resulted in showing that 100 pounds of hay produced in Hollanders 28,92 quarts of milk, in Devons 19.13 quarts and in Herefords 15.97 quarts. Baron Oekle, in Frankenfelde, made a comparative experiment with Ayrshires and Hollanders, the average weight of the Ayrshires being 806 pounds, that of the Hollanders, 1,016 pounds. The experiment showed that the Ayrshires consumed 33.10 pounds of hay for every 100 pounds of live-weight, while Hollanders consumed 28.10 only.

Records of Live-Weights.

I have claimed for this breed of cattle a place among the beef animals, and would sustain my position by offering the following actual weights:

Bull,	4th Highland Chief	2,700 lbs.
"	First Consul	2,120 "
"	Dictator	2,140 "
"	Uncle Tom, at 26 months	1,525 "
"	Pken, 2 years	1,022 "
"	Chieftain, 21 months	1,425 "
"	Wild Eyes, 11 months	950 "
"	Calf, Pedro, 8 months	550 "
Cow,	Virginia, 6 years	1,635 "
"	Finesse, 8 years	1,625 "
"	Lady Texal, 6 years	1,780 "
"	Lady Cliffeden, 9 years	1,580 "
"	Lavina	1,500 "
"	Isis, 4 years	1,510 "
"	Mary	1,360 "
"	Aaltje Hengeveld, 5 years	1,280 "
Heifer,	Mabel, 3 years, 10 months	1,400 "
"	Minnie Winkle, 3 years, 10 mos	1,320 "
"	Angie Hertog, 3 years	1,112 "
"	Altonia, 3 years	1,174 "
"	Meika, 21 months	1,010 "
Calf,	Anna, 11 months	770 "
"	Jenny, 11 months	690 "
"	Sappho, 10½ months	700 "

The above cows were all in milk at time of weighing, and not in extra flesh, and had they not been in milk at the time of weighing they would have weighed very much more. I could extend this list indefinitely, but space does not permit.

Adaptability to Environment.

Holsteins have now been introduced into many of our States, and, without reference to

climate, soil or location, they thrive as well and furnish equal records of milk in Virginia, Massachusetts, Vermont, New York, Illinois or California. Be it on the highlands or lowlands, in the cold climes or warm, under all circumstances, with all kinds of food and divers manners of supplying it,—under all these conditions they still maintain that same superiority as milkers and beef animals with which they have been here accredited. They are remarkably vigorous and are seemingly little given to disease; and, standing beside the popular breeds of this country, they are far less affected by the extremes of our variable climate than others, while they bear exposure far better than most other breeds.

Their Prepotency.

The power of transmission of prominent characteristics by the Holstein males, is remarkable; for they invariably stamp their progeny with the color markings, form and size of the breed as well as with its all-essential milking qualities. This power is not confined to crosses with our Native or grade cows alone, but is equally manifest in crosses on full-blood animals of any breed or race.

A few instances that have come under my personal observation are sufficient to satisfy my readers on this point. Dolly Dutton's dam was a grade Durham that would hardly give milk enough to raise her calf, while Dolly on coming in at 18 months, gave thirty-eight pounds of milk a day. Another half-blood gave, as a two-year-old on dry feed, 40 pounds of milk per day, and when put on grass, 42 pounds in a day. Favorite, a half-blood, came in at twenty months, and gave milk in good quantity for over two years without cessation, and it was with difficulty she was dried off before her third calving. And here let me state as one of the very prominent and to the breeder an all-important characteristic of cows of this breed, their continuously large flow of milk during the whole year, as it is often with difficulty the cow can be dried off before calving.

After the presentation of such an array of facts as the foregoing, I feel justified in saying that in the Holstein cattle, the breeders and dairymen of the United States will find a breed possessing more desirable qualities and more fully meeting the demands and the wants of this country than any other; for in them we have size, form, finish, wonderful development, uniformity in color and general appearance, vigor and the production of remarkable quantities of prime milk, butter, cheese and beef.

Onondaga Co., N. Y.

Horticultural.

NOTES FROM THE RURAL GROUNDS.

Select Plants.

PEAS—EARLIEST.—Philadelphia Extra Early is the earliest and poorest of green peas. This variety owes its continued existence to the fact that a few market-gardeners obtain a higher price for it for two or three days than for any other. *All* of the extra early peas are inferior in size of pods, number of peas in them, and in flavor. Early Daniel O'Rourke, Carter's First Crop, and for dwarf, Tom Thumb and Laxton's Alpha are among the earliest. The last is the best of any very early pea that we have ever tried—and we have tried nearly all.

EARLY.—The best among the early peas is McLean's Little Gem. This comes in three or four days after Carter's First Crop, and Waite's Caractacus and Kentish Invicta. Little Gem does not *require* brushing, though it is better for a little support. In quality and fruitfulness there is not one other better pea than this. The vines grow about 15 to 20 inches high. American Wonder Pea (Bliss) was tried here, and found to be as early as Little Gem. It is an excellent pea, but we do not know why it should take the latter's place. In fact, it would seem that any real improvement upon older varieties is impracticable. The most that we can do, is to select good seed and to keep varieties pure and distinct.

MAIN CROP.—From our own trials we pronounce Eugenie as good as any for a main crop. It is sweeter than Champion of England, and does not grow so tall by a foot or so.

LATE CROP.—For this purpose British Queen is our choice. The vines grow very tall, but they are prolific and they give green, tender peas, through an unusually long period. They are very juicy, much wrinkled, thick-skinned, tender and sweet.

REMARKS.—As we have before remarked, it is perhaps the best way, for our climate, to plant the very-early, early, intermediate and late about the same time. Brush or support (for the garden) all varieties that grow over one foot in hight, and, for those that do not, straw or hay, placed beside the plants, will serve to keep them green and in a growing condition for a longer time than when not so treated. We have never thought that late-sown peas were worth the trouble of producing them, taking our summers as they run.

TOMATOES.—From careful trials and inquiry we believe the Acme and the Trophy the best tomatoes for family use. Little Gem is the *earliest*, but it is small and watery, keeps poorly, and in short, has only its earliness to commend it. Hundred Day is one of those varieties that a person will never be anxious to plant twice. Golden Trophy is the best of the Goldens. Green Gage, Yellow Cherry, Pear-shaped and Strawberry Tomato are the best for preserves.

ASPARAGUS.—There is virtually but one sort—the Conover's Colossal. Unless strong, healthy roots are purchased and planted, it is best to sow seed. Sow thinly in rows in early May. Thin out, retaining only vigorous plants. Next year the permanent bed may be formed, and the year-old plants set therein.

BEANS.—For DWARF, Early Mohawk and Golden Wax. The new variety of dwarf, Golden Wax, is excellent for pickling. For POLE, the Improved Lima (Dreer's).

BEETS.—Vilmorin's White Sugar is the sweetest and most tender beet we have ever tried. For early summer use, the Early Bassano; for general and later use, the Long Smooth Red.

CABBAGE.—Early Jersey Wakefield and Early York are the earliest. For main crop, Large Flat Dutch, Late Drumhead and Marblehead Mammoth Cabbage. For pickling, Early Blood-red Erfurt is excellent.

CAULIFLOWER.—For early, Early Snowball; Lenormand's for main crop. It may be well to remind our readers that a rich soil, good cultivation and a steady supply of moisture are essential to the perfecting of this fine vegetable. Too often the crop is rendered worthless by neglect. The Cauliflower is not worth planting unless it receives unremitting attention.

CELERY.—The golden and red sorts are this season brought out prominently in a number of catalogues. But, in so far as the color of the stems is concerned, be it golden or red, this need not induce anybody to try them, for the reason that the color almost entirely blanches out. The "Golden Heart" is, however, early and of fine flavor, while the red is dwarf and of good flavor also. Giant White Solid and Dwarf Crystal White are best for family use.

CUCUMBERS.—Tailby's Hybrid is still the best variety for cucumbers we have ever tried. It is rather long, pointed, greenish-fleshed, extremely tender and with few and small seeds. Green Prolific is best for pickles.

SWEET CORN.—We have repeatedly praised the Black for table use. The ears are too small for market purposes, and the color objectionable; but for sweetness and richness this variety is unsurpassed. Early Minnesota Sugar, Early Narragansett, Early Dwarf Sugar are best for early; Mammoth Sugar and Stowell's Evergreen for late.

LETTUCE.—For forcing, Curled Simpson and Golden Stone Head; for summer crop, American Gathering; for winter, Brown Dutch and Red Winter Cabbage.

OKRA.—A few plants of this in every garden are desirable for seasoning soups. The dwarf variety is best, simply for the reason that it takes less space and causes less shade. The flower is like that of the cotton plant, belonging to the Malva family.

RADISHES.—Of these we continue to try all novelties, by which trials we are not shaken in the belief that the old Scarlet Turnip is still the best. For late or winter radishes, we have no varieties to commend. We do not deem them worth cultivation at all.

EGG PLANTS.—Among these Long and Early Dwarf Purple are earliest; New York Purple the largest and best.

MELONS.—Among musk-melons, we prefer the Nutmeg and Christina. We have tried almost every sort praised abroad, and find that our climate is not suited to them. Among water-melons, we prefer the Black Spanish and Mountain Sweet.

PEPPERS.—For ornamental jars of pickles, Red African, Oxheart and Cranberry are preferred. For mangoes, Sweet Mountain.

SQUASH.—Summer Crook-neck, Early Green-striped Bush and Early Golden Bush, are best for early summer; Yokohama, Hubbard, Boston Marrow and Marblehead for winter.

PARSLEY.—The Fern-leaved is pretty as well as a good variety. Extra Curled and Moss Curled are the best for general use.

CARROT.—Extra Early Forcing is good for early and late; Half-long Carenton and Long Orange are best for main crop, while the last is best for stock.

PUMPKINS.—Of these the Large Cheese is best for home use, while Improved Mammoth is more profitable for market. Connecticut Field is perhaps best for stock.

RHUBARB.—Roots can be purchased for from $1 to $1 50 per dozen. Seeds may now be sown and the plants set a foot or less apart. Next spring the plants should be set about three feet apart each way, and the year after the stalks will be large enough to cut. For family use, it is economy to buy a few roots.

Small Fruits.

STRAWBERRIES.—Of the many new varieties that have been made known of late years, there is no doubt that several have come to stay. As we look over our vines to-day (March 20), we see that of all these new candidates for favor, the Sharpless bears the largest, greenest, healthiest-looking leaves; the Duncan next; Golden Defiance next, and Duchesse next. As between the others, there is no marked difference. To those who care to purchase any of the newer varieties we would recommend the following for trial:

Golden Defiance, Prouty's Seedling—Sharpless, Cumberland Triumph, Captain Jack (for market only), Duchesse—Pres. Lincoln—Parmalee's Crescent Seedling, Forest Rose, Duncan (for early home use), and Cinderella.

To those who desire to purchase old, well-tried sorts only, we would name: Wilson (for market), Triomphe de Gand, Charles Downing and Seth Boyden (Boyden 30) and Monarch of the West.

We would remind all who raise strawberries for their own tables or friends, that good drainage, rich soil and moisture are the secrets of entire success.

BLACKBERRIES.—Kittatinny is the best so far as we are enabled to judge—Snyder for trial.

RASPBERRIES.—Brinckle's Orange is the best of the yellows. It is of fine quality and quite prolific, if the canes are well protected during winter.

Of Black-Caps—Doolittle and Mammoth Cluster; of the native Reds, Herstine, Philadelphia, Brandywine;—of the foreign, Franconia, or Nuomi, and Clarke. For trial we commend the Montclair, Cuthbert, and (for market) Thwack.

GOOSEBERRIES.—Downing, Houghton. Avoid the *standards* about which so much fuss was made in Centennial times.

CURRANTS.—The Red Dutch is the most fruitful. Cherry, Champagne, White Grape, and (for jelly) Black Naples.

GRAPES.—For market or general use, the old-sort Concord must still be mentioned first. According to locality, the Isabella, Catawba, Delaware, Iona, Hartford Prolific. We think that Lady may now be mentioned among our reliable standard Grapes.

It would seem that there were scores, if not hundreds, of new varieties that must prove superior to well-known sorts. We would mention for trial all of Rickett's that are as yet for sale, such as Lady Washington, Don Juan, Eldorado, Newburgh, Highland, etc.—any of Roger's Hybrids—many of them do remarkably well here and in various other parts of the country—Moore's Early—Eumelan—Champion—Telegraph.

ONION (Allium Cepa).

THE culture of onions has for many years past been a very remunerative branch of market gardening, and at present there are perhaps more onion growers than there have been at any previous time. It is not a crop that can be universally grown throughout the United States. Successful onion culture is mostly confined to the area between the 40th and 43d parallel; farther north the season is too short for the crop to ripen, and south of this it is too hot for them to develop.

Soil.

It is generally believed that onions require a peculiar soil in order to do well; this is not the case, however; they will succeed on almost any soil, except on very stiff clay and on dry sand. Success depends not so much on the nature of the soil as on the preparation of the land and the cultivation of the crop. Some growers have raised immense crops on low and peaty lands, while others recommend a sandy loam, and still others have been equally successful on a rather clayey soil. Experience goes to show that a soil that has been in cultivation for many years is preferable to comparatively new land, and that onions may be raised on the same plat year after year, without any diminution of the crop. New land is too poor and not so easily pulverized, and the ability of older land to produce the same crop for a long time without intermission, cannot be accounted for on the score that onions follow onions, but is rather due to the constant enriching of the soil, the thorough pulverization that is necessary, and the vigilance with which the weeds are kept down.

Preparation.

The onion patch should be plowed in the fall, and if the manure one has at disposal is rather coarse, it may then be plowed under; if guano or any other fine manure is used, it should not be applied before spring. As early in the spring as the ground is fit to work, it should be prepared to receive the seed. It should not be plowed deeper than four inches, for onions feed on the surface soil; and if plowed in the fall, but not manured, fine manure may now be worked in by a thorough use of the cultivator. Pulverize the soil well; harrow, back-harrow and harrow again, level the plat with a scraper if necessary, and, finally, dress any uneven spot with the rake. It is of great importance that the land should be level, otherwise a single heavy shower will wash the seed away and the crop will, of course, be a failure. Any kind of manure may be used, some growers giving preference to one kind, others to another; the main point is to give a liberal supply. Stable and barn-yard manure must be well decomposed before it is applied. Night soil, where it can be obtained, thoroughly mixed with dry earth, is considered the best kind of fertilizer for this crop.

Sowing the Seed.

When the ground is thus prepared, the seed should be planted in drills from 12 to 15 inches apart. Either mark out the whole plat with a marker, or use a seed-drill that marks the rows as the operator proceeds. In either case taking particular care to get the first row straight. This may be best accomplished by stretching the garden-line to mark the first row. The seed-drill should be set to drop about five seeds to two inches, which may be ascertained by trying it on a board or a row of paper, and the seed should not be put more than one-half to three-quarters of an inch under the surface; if planted deeper, much of the seed will not germinate, and some hold that stiff-necks, or scullions, will be more numerous. It requires about four to six pounds of seed to the acre. There are several seed-drills in the market that open the drill to any desired depth, sow the seed, cover it up, and roll the row, all at the same operation; of course, they can be used for other seeds as well.

Never use poor seed. Nothing in onion culture is more important than to get the best quality of seed that can be procured. Only American seed should be used; foreign seed cannot be depended on for a good crop. And it should always be purchased either from the grower direct, or from a reliable seedsman, never from peddlers or small local dealers in seed. A difference of a few dollars in the price of seed, may make a difference of as many hundreds when the crop is harvested.

Cultivation

As soon as the onions are so far up that the rows can be seen, the plat should receive the first hoeing. Keep the weeds down by never allowing them to start. One man can go over more ground in one day, before the weeds start, than five men can in the same time when they are a couple of inches high. Occasionally they must be gone over on the hands and knees, and all weeds removed from the rows with the fingers. When the onions are about three inches high, they should be thinned to about one to two inches apart, but it is better to sow reliable seed at the distance the plants are wanted, than to thin too much, as those left standing will be more or less injured by the operation.

In August, when about two-thirds of the tops have fallen, it is time to pull the crop. This is done by hand, to avoid bruising them, each man taking three rows as he goes along. Six or eight rows are thrown together in a windrow, where they remain for several days till they are thoroughly dried, being stirred once a day to dry them the quicker. Next, the tops are cut off, the onions measured and carted to the barn, where they are placed about a foot thick on an airy loft, till they are marketed.

It is not advisable to lay them much over a foot in thickness; so, where space is limited, shelves may be erected, or some special arrangements made for keeping them.

Marketing and Storing.

About the middle of October, when shipping has commenced, is the best time to market onions. The prices are then apt to be higher than earlier in the season when the market is glutted with the newly-gathered crops. The price varies greatly. It has been as low as 75c per barrel and some years ago as high as $14 or even $16 per barrel. During the winter, onions should be kept in a cool, dry place, free from hard frost. It will do no harm if the thermometer should sink a few degrees below freezing point in the store-room; but by repeated hard frosts and thawings they become soft and unfit for use. They may be stored in a dry cellar in barrels which are perforated with air-holes. They will thus be ready to ship, as soon as spring opens, without further trouble; or they may be placed on a barn floor underneath which it cannot freeze, and covered with hay. Large quantities should never be stored during winter in an unsuitable place, and they must be thoroughly dry.

Varieties.

Of the many varieties of onions in cultivation, three seem to be standard: the White Portugal, the Yellow Danvers and the Red Wethersfield. The White Portugal is rather a small onion of mild flavor, and is excellently adapted to cultivation in private gardens for family use. It is rather a poor keeper. The Yellow Danvers is an early onion, and a favorite in the Boston market. Red Wethersfield is mostly grown for the New York market, and for shipping purposes. It attains a large size and is an excellent keeper.

Onion sets are small onions of the previous year's growth. They should be separated from the larger ones in the fall, kept free from frost during the winter, and set out as early in the spring as the ground can be worked. Prepare the land as for seed onions, and plant them in rows, like these, but three inches apart in the row. By the middle of June, they will have attained the size of an ordinary onion, and be ready for market. Some growers sow seed very thick on dry, poor land, for the purpose of raising sets. Small onions, no larger than peas, are just as good for sets as those of an inch or more in diameter.

The Schallott is a distinct species of onion (*Allium Ascalonicum*), which is not much cultivated in this country, but is a favorite in European kitchen gardens. It has a milder flavor and can be used earlier than the common onions. Onions of this kind are planted like onion sets; but, instead of enlarging the bulbs as sets do, they multiply and form a cluster of bulbs which will be ready for use in the beginning of June. The bulb is of a more conical shape and generally flattened on the side that grew next to the mother onion. They are excellent keepers.

The Potato onion is also a multiplier and should be treated like the foregoing. Like this, it is early, and has a mild flavor, but it is not so good a keeper, nor is it generally so prolific.

Top onions are small sets, about the size of peas, that grow in a cluster on the top of a certain kind of onion. They are planted and treated like sets. The large onions grown from them, are coarse, though of a pleasant taste, but do not keep well.

Sets, Seballotts, Potato onions and Top onions are mainly grown to supply the early market. Neither of them is depended on by onion growers, for the main crop, though in private gardens they are raised more or less in preference to the common seed onion.

Enemies.

A disease, something like mildew, occasionally makes its appearance on old onion beds. The plants become covered with a white dust, cease growing and die. The only remedy is to destroy all affected plants and plow a little deeper to bring more of the subsoil to the surface.

The onion fly lays its eggs on the plants near the ground. The eggs soon hatch and the maggot absorbs the juice from the stem, which turns yellow and falls over. The remedies, such as the sprinkling of scalding water, etc., are generally as injurious to the plants as to the maggots. It is recommended to soak sawdust in ammonia-holding liquors and scatter it over the onions.

Everywhere.

RURAL SPECIAL REPORTS.

KANSAS, Parsons, Labette Co., March 10.—For a week we have had a sun-heat of 60 to 80 deg. in the shade. We have radish and lettuce in full leaf, sowed in the open ground a short time ago. Farmers are plowing on high ground. The prairies are aglow to-night. In walking around the house we could count 20 or 30 fires. Those which were five or more miles away could only be seen by the lurid sky, and appear like the furnaces in the iron districts. There is one within half a mile of us. This has a fire line of one-third of a mile. These fires are started when the wind is still, but lightning in the north-east has started out its winds, and ever and anon the fire roars and crackles and sends out a light by which the boys can read their examples from the arithmetic. The men watching the fires look like Milton's devils. By the way, we have had a windy time lately. The winds have been strong, and for eight days, with only a few hours of intermission, they have been blowing at the rate of from 15 to 40 miles per hour. Kansas is famous for her *zephyrs*, as they are jocularly called. In March and April, and in September and October, they are heavy and nearly continuous. According to the reports of the State University at Lawrence for Oct., 1878, the entire distance traveled by the wind was 15,106 miles, the mean daily velocity being 487 miles, and the mean hourly velocity 29.03 miles. The highest velocity on the 8th was 50 miles an hour. This would give a rectangular pressure of 12½ lbs. per square foot. This is not enough to drive a *good* house from its foundation. If the side or gable struck by the wind was, say, 24x16 feet, there would be about 384 square feet, and the pressure would be 5,250 lbs., which would be equivalent to the pull of more than twenty horses. J. B.

N. Y. SENECA FALLS, March 15.—At wheat-sowing time last fall, the weather was very dry, and on this account and through dread of the Hessian Fly much of the seeding was not done until late; and wheat did not get up until the arrival of very cold weather. Accordingly our wheat stand is the poorest I have ever seen, and the prospects of the crop hereabouts are by no means good. No sales of land here. Wheat is worth only 95c; corn, 40c; oats, 25c; hay, $6 50 to $8 00 per ton; butter, 15c per pound; eggs, 13c. per doz. The prospects for the farmer who is in debt are not encouraging. We all hope for an early spring as we are anxious to get our crops into the ground as soon as possible. For myself, I believe in the early sowing of good seeds for almost any crop. W. S. M.

ALA., Danville, March 13.—Weather spring-like; farmers busy planting corn; wheat started growing on the advent of mild weather, and bids fair to turn out a large crop. Spring-sown oats are up and looking fine. Farmers are once more going to plant cotton heavily. They are in debt and see no other way to pay what they owe except by the sale of this staple. If they planted less of it and raised more bread and meat at home, the price of the cotton produced would be higher; the money now sent off for supplies to the grain-growing and stock-raising States, would be kept among us, and our aggregate wealth would increase much more rapidly than under the present system. Peach orchards are in bloom. Money tight; prices low; farmers somewhat discouraged. T. N. V.

INDIANA, Oaktown, Knox Co., March 19.—We have had the longest and severest winter for some years, the thermometer registering 18 deg. below zero on Jan. 3d, our coldest day. Peaches and all the finer kinds of Cherries, have all been killed, and in many places the trees are also killed down to where they were protected by the snow. Blackberry bushes are also dead, and Raspberries are considerably injured. Wheat looks fine, and a snowfall of six inches yesterday will help it still more. Our stock of grain, hogs and cattle is lighter than I have ever known it at this season during the past seven years. A. J. H.

MICHIGAN, Bennington, March 19.—Snow has covered the ground since Thanksgiving. Farmers have "improved" it by drawing wood and logs. Wheat looks well after having laid under the snow the whole of the long and severe winter. Barring accidents, we shall have a larger yield than usual. Wheat is selling here for 95c.; oats, 20c. to 25c.; potatoes, 45c. to 60c.; white beans, 75c. to $1; butter, 14c. to 16c. per pound; eggs, 12c. to 13c. per doz.; hams, 6c. per pound; corn, 18c. to 20c. per bushel; hay, $7 to $8 per ton; labor, by the day, 75c.; by the month, from $8 to $14. A. P. H.

NEBRASKA, North Platte, March 12.—The winter throughout Nebraska has been unusually severe, and in the western part of the State—which is the cattle region—the snow lay on the ground for a long time, and as our large cattle men never put up much hay, the animals become very thin; then the severe weather came on and at least 25 per cent. of the ill-conditioned, unsheltered beasts were frozen to death. But now the snow has disappeared, and the surviving animals will be able to pick up a living until the grass starts. There will be a very heavy crop of small grains put in throughout central Nebraska this year. E. C.

ALABAMA, Selma, March 18.—Fine weather here; peach trees in full bloom; most people have finished planting corn, and are now bedding up for cotton. My Strawberries are in full bloom; some young berries have already appeared on the vines; if we shall have no more freezes, I shall begin picking about the first of April. Despite the reports of hard times everywhere, we have here plenty to eat and plenty of work for everyone who wants it. Wages, 'tis true, are low, but all provisions are proportionately low. There is more money, I understand, deposited in the banks here now than at any time since the war. J. M.

GA., Fulton Co., March 18.—Our winter is over and the mocking-bird has taken its seat again in one of the oaks in front of the house, singing a welcome to the rising sun. The trees are putting forth their green leaves. The Peaches are in full bloom, though three weeks later than usual. Farmers have planted their early vegetables, such as potatoes, peas, cabbage, beets, onions, and some even beans, and now they are rushing to the corn field where they will plant more than usual. Wheat is looking well; oats more or less killed by the severe cold weather in January. Business lively. C. D.

WEST VA., Hulltown, March 20.—This has been a cold winter, unusually snowy and rainy hereabouts; more sickness, too, than usual, such as pneumonia and uncommonly bad colds. Wheat and grass have come out wonderfully during the warm weather we have lately had. The past season we had the largest crop of wheat and corn, of good quality, ever produced here. Wheat sells for $1.17@1.20; oats, 33c.; rye, 78c.; corn, white, 48c.; yellow 44c.; clover seed, $4; eggs, 12c. per dozen; butter, 15c per pound; land, from $23 up to $100 per acre. J. A. H.

NEW YORK, Crumb Hill, Madison Co., March 18.—Stock generally is wintering well; hay is abundant; wages are low, so is produce of all kinds. In the "History of a Poor Farm," it is claimed that cow dung is the best manure; but I have found the best results come from horse manure. I make a snug pile of it: fork it over occasionally, so that it will rot without over-heating during the winter, and be ready for use in spring. I put it under my corn hills in planting, and, barring frost, always get a good growth of both corn and stalk. L. P. N.

MICHIGAN, Mendon, March 17th.—Our long winter and heavy fall of snow have disappeared together, and we are having very warm and pleasant weather. As I am writing we are having our second thunder shower. Wheat is looking quite well, better than was expected, as the snow was mostly blown off from a good many places, leaving them quite bare. Stock is generally looking well. Wheat is worth from 95c. to $1; corn, 30c.; oats, 23c.; potatoes, 65c.; good clover and timothy hay, $7 per ton. G. A. A.

NEW YORK, Hanover Falls, St. Lawrence Co., March 17.—We up here in this Siberian climate of St. Lawrence County have been inclosed by snow-drifts since Christmas. Our roads have been through the fields, those between the fences having been rendered impassible by snow. The only work we have been able to do was to plow roads, take care of cattle, make fires. Despite the cold, however, good care has preserved twelve nice lambs to me, which the butcher will come after about June. G. R. C.

WASHINGTON TERRITORY, La Conner, Whatcom Co., March 10.—This is a strictly grain-growing county. The land is reclaimed marsh or tide land. Wheat has as yet been little grown, oats and barley having hitherto been our chief crops. There are eight steam thrashers in the county, which thrashed 250,000 bushels of oats and barley grown about the Delta of the Skagit and Samish rivers. The average price of oats during the past season was 40c., including sacks. Our market is San Francisco. L. A. S.

NEW YORK, Sherman, March 17.—The fall of snow has been very great, and roads have become nearly impassible. Snow has been as high as 10 and 15 feet deep in many places. Butter sells at 15@18c.; cheese, 11@12c.; maple sugar, 10@11c.; potatoes, 75c. bushel; eggs, 10c. dozen; good cows bring high prices. Making maple sugar is now in order, but owing to the great depth of snow it is hard for people to get around in the woods. M. L. D.

KANSAS, Oswego, March 20.—Oats are all sown and a good many are plowing for corn. Wheat looks well, but of it there is only a small acreage. A large area, however, will be planted to corn. Timothy is starting finely. Fat cattle have not all gone yet to market. They are selling at 2½ to 3c. per lb. Hogs have nearly all been sold at 2c. to 3c. Times as dull as usual. S. S. B.

KANSAS, Oswego, Labette Co., March 16.—Weather warm; oats are being sown throughout this neighborhood. The ground is in good working condition. Peach buds are not all killed. Farmers are getting only small returns for their labor, and consequently "hard times" still generally linger among us. Beef cattle and hogs are selling to-day for $3 per hundred pounds. S. F. B.

OHIO, Hudson, March 13.—The space devoted to maple sugar making in our agricultural papers seems to me vastly below a fair proportion. Corn, grass, vegetables, fruits of all kinds, stock and implements of every description have hundreds of columns devoted to them year after year, where this industry has one. W. I. C.

OHIO, Summerfield, March 17, 1879.—We have had a week or ten days of fine spring weather, and farmers were busily engaged at plowing; but last night we had a fall of six or seven inches of snow, and farm work has received a check. We have a large crop of wheat sown, and it generally looks very well. J. W. H.

KENTUCKY, Jeffersonville, Montgomery Co., March 17.—The Peaches are all killed here. The apple trees begin to show green leaves, and the grass is starting finely. Produce is low: Wheat, 30c.; corn, 40c.; oats, 35c.; potatoes, 40c. to 50c.; butter, 10c. per lb.; eggs, 8c. per doz.; hogs, $2.50 per 100 lb.; cattle, $3. W. L.

CONN., Berlin, March 20.—The winter has been rather severe on some trees and shrubs. Buds are killed in both apple and pear trees, and grape-vines have been somewhat injured, the new growth in some cases being killed twenty feet back on vines that were not trimmed in the fall. Mud is king now. IPSE.

ILL., Canton, March 18.—Thermometer, from 68 deg. to 80 deg. Some wheat sown upwards of two weeks ago. We commenced sowing on the 10th. Land in fine condition. C. H. B.

TEXAS, McKinnie, March 15.—We have finished planting corn hereabouts. The weather has lately been very dry; we haven't had a drop of rain for two months. W. N. W.

WISCONSIN, Lavalle, Sauk Co., March 19.—Wheat is worth 80c.; corn, 25c.; oats, 23c.; butter, 12c. to 15c.; improved land, $30 to $40. W. S. H.

The Poultry Yard.

POULTRY SQUIBS.

Poultry in spring always repay extra care. A change of food or a change in feeding proves beneficial. No extra expense need be incurred. If whole corn has been their only diet all winter, in spring feed cracked corn, and the fowls will require less of it, because it is more easily digestible, and more of it will therefore be assimilated. Better still, cook their feed.

I save my little potatoes for the purpose of making a change at this time of the year. I get my servant to boil a wash-boilerful of them, and as soon as done he removes them from the stove and mashes them, while boiling hot, in cracked corn, wheat bran and ground oats. I take about an equal bulk of the feed and potatoes, rather more of the tubers, perhaps, and the potatoes cook the feed and put it just in the proper condition for a prime diet. The bran and oats are only added in small quantities, just to give variety. I know of nothing better than this. I feed the mixture in the morning, and coarse, ground or cracked corn at night. When one mess is used up, I boil another, and so continue until the grass grows.

I believe in Light Brahmas. I consider them more desirable than any other breed. To be sure, I have always been partial to them and have never kept any others; but I have observed acquaintences who did, and do, keep the other breeds. My observation goes to show that those who keep the Leghorns and the smaller breeds, generally discard them after a while through dissatisfaction. I know this is true with Brahmas, too, but with them the practice is nothing like as general as with other strains. It is my opinion, too, that Brahmas will not degenerate as rapidly as the other breeds by in-breeding, a cause of degeneracy which often accounts for the change in breeds made by those who begin with the smaller varieties.

I like the way the Brahmas "handle." Feed for flesh, and you will be sure to get it, and no fowl will "stuff" more readily. Feed for eggs, and the birds will respond at once. Stimulate when the market is high and eggs scarce, and you will be sure to get the increased product. Care for them well in the winter, and when everybody else is paying a good round sum for eggs, you are pocketing what others pay. Neglect them, and they will respond at once, though they will thrive better under neglect than any other breed with which I am acquainted.

I had a mongrel about two months ago, sick with the roup. The ailment did not frighten me in the least. I did nothing for it. I did not clean the hennery; did not "doctor" the patient; did not remove him from the others, and did not even ventilate the house. And now, I am sorry to say—because I don't like to go contrary to all authorities—that that mongrel recovered perfectly and died the natural death of fat poultry (with funeral services at 12 M.) and not another bird was affected by contagion. This is the third time my fowls have passed through the same "contagion" in the last six or eight years with the same result, except the first time. Then I killed the patient out of pity for his condition.

Middlesex Co., N. J. M. CAREY.

[Despite the good fortune of our correspondent's fowls, we certainly would not advise other poultry-keepers to imitate his disregard of preventives and remedies.—EDS.]

EARLY SITTERS.

NOVICES in poultry breeding, and frequently older hands, are apt to make the mistake of crowding too many eggs under the hens at this season of the year. Nine eggs under an ordinary-sized hen, and eleven under a large one, are fully as many as will give good results. In three times out of four, more chicks will be hatched from nine eggs than from fifteen. During the very cold weather, the outer eggs in the nest get chilled, and as the eggs are constantly moved by the hen, each in turn getting an outside position, they all get more or less chilled, and either do not hatch or else bring out weakly chicks, which droop around for a while and then die.

Much may be saved in giving proper attention to the nests. The best method at this season is to use large boxes, or, better still, barrels sawn in halves; fill the half-barrel nearly half-full of straw or fine hay well packed down, then make the nest, hollow, and about ten inches across and four deep, in the middle of the hay. Set the hen on this, giving her nine or eleven eggs. She will cover them well and there is less fear of getting them chilled.

Another source of disappointment at this season is the non-fertility of many of the eggs. It is a fact well known to poultry fanciers, though possibly not to most of those who raise fowls, that the first two or three eggs laid by the hen or pullet rarely hatch. It is well, therefore, to be a little watchful, and consign such eggs to the kitchen. As a rule, I should never set anything earlier than the fourth egg. Should it be found impossible to detect such eggs, I should examine the eggs by means of an "egg-tester" on the fourth or fifth day, and remove all those which are not fertile. If three or four hens are set at once, those eggs which prove fertile may be put under two of them and the others given fresh eggs, thus saving time and eggs. A. M. HALSTEAD.

The Querist.

ANSWERS TO CORRESPONDENTS.

Rings for Hogs; Scab Mites, etc., etc.

J. W. L., Smith's Grove, Ky., asks: 1. Where can he get rings for mischievous hogs, rings that can be inserted in their noses and taken out at pleasure, somewhat on the principle of watch-chain rings? 2. In the West, small insects, found in spring, under the skins of cattle, are called "wolves." He inquires whether this is the right name, and the cause and remedy for the same? If the fats and acids of animals, instead of being consigned to sinks and creeks were applied directly to the soil, he wants to know whether they would not produce as good an effect as if composted, so that the trouble of this operation might be avoided? 4. What is the best time to plow under weeds, grasses, etc., with a view to producing the best fertilizing results from their decomposition? 5. Where can he get the best pocket memorandum?

ANS.—1. We do not know of any rings that can be put into a pig's nose and taken out at pleasure. Such a ring would be apt to be taken out at the pleasure of the pig. A "ring" can be made by a common blacksmith out of soft iron, and shaped like a long and thin horse-shoe nail, with a hole in the head through which it can be clinched and held fast in the pig's nose. Such a "ring" could be detached, if not worn out, and used on another hog. One like a watch or chain ring would catch at the ends and tear out or break? 2. The insects found under the skin of cattle are the same which cause scab in sheep and mange in hogs, dogs, etc. It is the *Acarus scabiei*. It is a minute insect, scarcely discernible to the naked eye. The name "wolves" is not the correct one. It begins its ravages in small spots, which should be treated as soon as discovered, to prevent spreading. Carbolic acid, diluted one drop to ten of water, will kill the vermin. The parts should be softened and dry scabs be removed first by thorough washing with soap-suds. The wash of carbolic should be followed by the application of an ointment of hog's lard and powdered sulphur, equal parts, or smearing with coal tar. In mild cases the latter might be the only remedy required, and is preferable to the lard and sulphur. Cattle in good condition are not exempt from the attacks of mange, but those in poor condition are more liable, as the dry state of the skin seems to invite the contagion. The disease spreads by contagion, by cattle touching each other, rubbing, etc., and also by the mites being carried in the air and lodging on the animal. 3. As a rule, all manures can be utilized more economically by immediate *mixing* with the soil. This is especially true of such active principles as fats and acids. 4. When they have attained full growth and before the seed is formed. 5. There is a great variety of these, and a selection can be made at any first-class bookstore.

Moonshine.

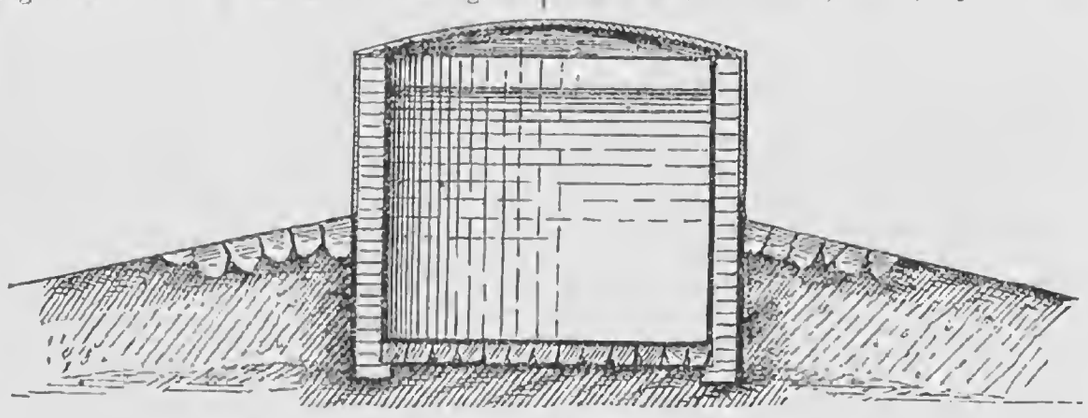
M. B., Smithville, Ont., Canada, asks what effect has the moon upon vegetation, the killing of animals, the setting of fence blocks, etc., etc.

ANS.—We are disposed to treat with indulgence all time-honored beliefs honestly entertained on matters of practical concern, however much they may be opposed to the results of modern scientific investigations. Millions of men, who were no fools, have been convinced that lunar influences were powerful for good or ill on human life and actions. Thousands have thought the same with regard to the stars; but stellar influences are fast disappearing from human imagination where alone they ever had an existence. The moon, too, is in a fair way of being soon robbed of blame or credit for the result of men's actions. Madhouse doctors already deny that she has any sensible effect upon the condition of their patients, although the very name of lunatics, which designates these, is derived from a supposition that they were markedly affected by her phases. True it is that the tides are known to be influenced by her movements; but scientific investigations coincide with close practical experiments in proving that her influence on all human operations and their results, is inappreciable. It is not impossible that light of all kinds has some effect on vegetation, and, perhaps, an infinitesimal influence on the decomposition of animal matter, but if this has any existence, it is so exceedingly small that hogs may be killed, fence posts set, and all other human operations performed without any fear of ill results from lunar influences. It would be pleasant to us to come out boldly against modern scientific incredulity, and in support of the venerable notions entertained by our great-grand-mothers, but the remembrance of G. W. and his little hatchet restrains our longings.

Canker in Poultry.

F. W., Philadelphia, Pa., asks what ails his chickens and a remedy for it. The eyelids become swollen and a thin, watery discharge glues them together. The bowels are very loose; the inside of the mouth becomes coated with a hard, white substance that emits a nauseous odor. In some cases the coating becomes so thick as to prevent the mouth from closing. The disease is very contagious. He at first mistook it for roup, but found out his mistake on discovering that there was no discharge from the nose.

ANS.—The disease is canker. It often accompanies roup, and affects the eyes in a manner similar to roup; it is very contagious, and, unless apartments are purified by whitewashing or carbolic acid, it is liable to occur again.



A SURFACE TANK.

To cure: take a piece of hard wood, the size of a lead pencil, and make one end spoon-shaped. With this remove the cankerous coating down to the raw flesh; then wash thoroughly with a solution of chlorate of potash, and anoint with vassaline or carbolic salve. Wash the eyes thoroughly, and anoint with the same. Repeat this daily until cured. Give tincture of iron in the drinking-pans with the water, and soft feed only. In very severe cases, use a solution of nitrate of silver in place of the potash. This must be used with great care, however.

A Surface Tank.

H. M., Huntsville, Ala., asks the best plan for building a water tank without the use of wood. The tank is to be on the surface of the ground and hold about 60 barrels.

ANS.—A water tank, or cistern, may be built above ground in the following manner: Choose a slightly elevated spot, and dig out as much as may be required, throwing the earth in a heap around the foundation. Then procure hard brick and water-lime mortar, made of one part of hydraulic cement and three parts of sharp sand mixed quite soft, and build the tank in the shape of a cylinder. For 60 barrels the tank should contain 240 cubic feet, which would be seven feet in diameter and about 6½ feet deep. The tank should be plastered with clear hydraulic cement, half an inch thick, inside and out, and the earth heaped up around it. A wooden or stone casing should be made around the cistern, to keep the water cool in the hot weather, and to strengthen it.

Tanning a Bull's Hide.

S. L., Sharon Center, N. Y., who had an inquiry on this subject in a late RURAL, receives the following recipe from P. H.: "If the hide is dry, soak it in salt water for one week; then put it into lime water for a few days, stirring it up once a day. When the hair is loose, scrape it off. Next put it into a bath made of hen dung and water, to extract the lime; stirring it up once a day for two days. It is now ready for the tan. Make a liquor of oak or hemlock bark—oak is best—put the hide into it; stir it up once a week for ten weeks. Then renew the liquor, and continue the same process until the leather shows a uniform color clear through, which will be in about nine months. Cut the thick edge of the leather to test the color. When properly tanned, partly dry it and give it a coat of lard. Then dry it thoroughly and it is ready for use. Apply the lard on the fleshy side. The work can be done by a steam tannery in six weeks.

The Muskoka Duck, Again.

D. L. B., Nunda, N. Y., like many others, asks where he can get a few eggs of the Muskoka duck; 2. where can he get the Beauty of Hebron potato, and its price per bushel or peck.

ANS.—In answer to our inquiry about the Muskoka duck, Mrs. Annie L. Jack says that is the correct name, and that her description of the bird was quite accurate. Those in her possession were presented to her by an old huntsman who periodically visits her neighborhood. On his next return she will find out all about the Muskoka, and let our readers know whatever she may be able to learn. At present, she seems to have a close monopoly of Muskoka. 2. Of J. M. Thorburn & Co., 15 John street, N. Y.; price, $4 per bushel; $1.25 per peck. See advertisement in last issue.

Measuring Corn in a Crib.

P. W., West Chester, Pa., asks for some rule for measuring the quantity of corn in a crib without the necessity of handling every bushel of it.

ANS.—Measure the crib so as to get the cubic contents in feet. Three cubic feet of ears will make one bushel of shelled corn. For instance, a crib 16 feet long, four feet wide at the bottom and six at the top, and seven feet from floor to top, will be measured as follows: the average width will be half the sum of the two widths, or five feet; multiply that by seven and by 16, which will give 560 cubic feet; 1½ cubic feet is one heaped bushel, and two heaped bushels ought to make a bushel of shelled corn; then divide 560 by three and the result will be 187, the contents in shelled corn. This rule needs to be modified to suit different circumstances.

Injured Leg in a Cow.

H. J. B., Amsterdam, N. Y., says: "Some weeks since I had the misfortune to have one of my cows bitten in the limb by a hog. I think I have succeeded in taking the soreness out, still the cow has not full control of her limb. The cords seem weak; what can I apply to strengthen them?"

ANS.—In such a case, we recommend dashing cold water on the afflicted limb, either from a small vessel or by means of a hose or fountain pump, to be continued for three or four minutes and followed by vigorous friction with wisps of straw till the part is dried and a reaction takes place. In case the weather is too cold to use the water treatment, dry friction may answer, or the application of a stimulating liniment with friction or even a mustard paste.

Remedy for Scours in Sheep.

S. W. T., Ithaca, N. Y., asks for a remedy for scours in a ewe:

ANS.—Confinement to dry food for a day or two often suffices. If the purging is severe, and especially if the voidings be accompanied with slime or blood, a gentle cathartic should be used, such as half a drachm of rhubarb, an ounce of linseed oil, or half an ounce of Epsom salts for a lamb, and a proportionately heavier dose for a sheep. This should be always followed by an astringent, and in most cases, if the latter alone is administered, a cure will be made. For this purpose use a quarter of an ounce of prepared chalk in half a pint of tepid milk once a day for two or three days. An English sheep cordial, which is strongly recommended, is the following: Take of prepared chalk one ounce; powdered catechu, half an ounce; powdered ginger, two drachms, and powdered opium, half a drachm; mix them with half a pint of peppermint water. Give two or three tablespoonfuls morning and night to a grown sheep, and half that quantity to a lamb. Any good drug store should supply the ingredients.

Hen Manure for Corn.

H. A. T., East Troy, Wis., asks whether it will do to put ashes and hen manure in the hill before or after dropping the corn therein, without mixing the manure with the soil.

ANS.—A great deal of mischief is caused by placing hen manure, mixed or unmixed with ashes, in direct contact with seed. This is too concentrated a fertilizer, and in most cases would seriously injure or entirely burn up the seed under such circumstances. A thin layer—say, half an inch—of soil should intervene between the manure and the seed. If the former, however, is mixed with about three or four times its bulk of loam, soil from the fence corners or dry muck, the danger from its contact with the seed will be trifling.

Wash for Fruit Trees.

W. H. H., Poughkeepsie, N. Y., says: "I shall scrape and wash a large number of apple trees this spring—will not a wash of caustic soda, with a little carbolic acid, be as good as the usual whale-oil soap and lime?"

ANS.—We have never used whale-oil soap. Charles Downing recommends dissolving two pounds of potash in two gallons of water, to be applied with a brush.

Silos?

J. J. Welch, Laneville, N. Y., asks whether there are any farmers in Livingston or the adjoining counties, who use silos for preserving corn fodder.

ANS.—We trust that any of our readers who may know of any conveniences of the kind in the section referred to, will communicate with our correspondent, as per above address.

Plants to Name.

T. J. E., Luling, Texas: The flowers are so dried up and crumpled as to be unrecognizable; the "moss" is Tillandsia usneoides, lately figured and described in the RURAL. We will be glad to name native wild flowers for our readers, providing the flowers reach us in good condition. Plants or flowers to be sent by mail, should be packed in tin or light wooden boxes; pasteboard boxes in mail transit are often bruised—as was the case in this instance—as flat as a pancake, and the contents reduced to a condition beyond discernment.

Miscellaneous.

J. B. J., Decatur, Macon Co., Ill., asks, 1, whether sheaf oats will make cows dry up, as he has been told by a neighbor: 2, will such food make the milk bitter; 4. He has a mare that for the last six or seven weeks has been growing poorer until he is afraid she will die. She seems in good health, and eats and drinks well. She is in foal. A friend says she is hide-bound.

ANS.—Sheaf oats, as compared to grass or other more succulent food, will make cows dry up, and as compared to hay or cured cornstalks, the oats in the sheaf not supplying sufficient succulence to offset the dry and unnutritious character of the straw, so much bulk of straw must be eaten in order to get a moderate supply of oats that the average succulence falls below that of the forage enumerated above. If the oats were cut while comparatively green, they would afford much more milk. 2, If the straw is free from rust and foul weeds it will not make the milk bitter, as there is nothing impure in clean oats to produce the effect. 3. The mare evidently requires more nutritious feed or her digestion is impaired. In either case give her, twice a day, four quarts of wheat bran scalded, with plenty of oats or one quarter of a pound of Glauber salts every other day mixed with four quarts of dry bran. The salts will correct the condition of the stomach and gently act upon the urinary organs which treatment will soon tell upon the skin. If there is too much loosness of the bowls produced, hold up a few days.

J. A. B., Needham, Mass., desires our opinion as to the new breed of poultry called Plymouth Rock, and asks where can eggs be procured. 2. What breed would we recommend for "all-purposes" fowls? 3. Please mention several reliable small fruit-dealers.

ANS.—We are much pleased with it. The fowls are gentle, mature early, are good winter layers. Very little can be said against them and much in their favor. 2. At this time, and judging from our own experience, we should say Plymouth Rock. Mr. J. T. Lovett, a trustworthy dealer, offers an excellent strain of P. R. His address is Cornwall-on-the-Hudson. His advertisement appears in the RURAL. 3. Dr. F. M. Hexamer, Newcastle, West. Co., N. Y.—E. P. Roe, Cornwall-on-the-Hudson, N. Y.—F. R. Pierson, Tarrytown, N. J., and a number of others. We do not believe that at the present time there is any other journal published which exercises more diligent and independent care as to the class of advertisements presented. Our friends may all of them consult these colums, therefore, with a reasonable assurance that they will not be deceived.

M. Mc. Bloomville, Seneca Co., Ohio, asks 1. for what purpose was the last ecumenical council held at Rome; 2, whether the steeple of the buildings in which it assembled was struck with lightning during its session; 3, whether any of our readers knows of a crab apple the size of an ordinary Rambo apple, but flavored like a peach.

ANS.—The last ecumenical council, opened by Pius IX on Dec. 8, 1869 in the Vatican basilica of St. Peter's, was assembled mainly for the purpose of declaring the infallibility of the pope, when speaking *ex cathedra*, that is, in his official capacity as the head of his Church, on points connected with faith and morals. 2. We do not remember to have heard of any unusual freaks of lightning about the building in which the Catholic prelates assembled from all parts of the world. 3. ?

S. W., St. Clara, W. Va., asks what is the best variety of yellow corn, briefly considered in all its points?

ANS.—This depends largely on the soil and climate. On bottom lands of rich alluvial soil the best kind would be some of the larger varieties of yellow Dent with medium-sized cobs and 16 to 22 rows of kernels, close set and deep. The ears of good length. If the soil is hilly and porous, the Dutton yellow—a 12-rowed variety of bright, plump kernels; ears of good length. If very poor soil, the eight-rowed yellow; small ears but very prolific, with small stalks. We have seen fine crops of each of these varieties. The Dent and Dutton require the longest time to mature.

J. L. B., Norfolk, Va., asks for a preventive of rust on turnips and for the flower fly.

ANS.—As far as we know, no reliable remedy is known for this disease. 2. Some Anthomyians are called flower flies, and some species of Coleoptera are called flower beetles. The latter may be shaken off the plants, gathered and destroyed. The flies lay their eggs on various parts of the plants; many remedies have been

tried, but most of them are more destructive to the plants than to the flies. The only effective remedy is to carefully look over leaves, stem and the upper part of the root of each plant and destroy all eggs and maggots that may there be found.

M. L. D., Sherman, N. Y., asks, 1, are all the seedsmen who advertise in the RURAL NEW-YORKER reliable firms, who sell only *pure* seeds and true to name; 2, what is a copyright book or newspaper; 3, does it pay to buy seeds at the stores of merchants or dealers, or is it better to send to some seedsmen; 4, do we know anything of the merits of the Washington potato.

ANS.—1. As far as we know they are. 2. One that has secured a right by law to the exclusive use of its name and original articles. 3. We should prefer to buy of seedsmen. 4. We have never tried it.

G. C., North Linndale, O., wants to know how to propagate the palm tree from seed.

ANS.—There are a great number of Palms in cultivation, and their propagation may vary somewhat, according to their hardiness, etc.; but, as a general rule, the seed should be sown in pots or boxes and placed on a gentle underheat. When the young plants are well under way, they should be transplanted, each in a small pot, and kept in a hot-house. As they grow, they should be transferred to larger pots, and have richer soil mixed with pieces of charcoal.

W. W. D., North Paris, Me., asks, 1, the names of some reliable breeders of Merino sheep; 2, the merits of a fertilizer he names; 3, where can he obtain the book "Grace Truman."

ANS.—1. N. T. Sprague, Brandon; S. G. Holyoke, St. Albans; E. N. Bissell, Shoreham; C. D. Lane, Middlebury; E. S. Stowell, Cornwall; V. Rich, East Shoreham, all of Vermont. Full information will be given by Albert Chapman, Middlebury, Vt. 2. We do not know of any fertilizer called by that name. 3. The American News Co. of this city.

M. A. E., Wellsville, Me., wants to know the proportion of lime and salt used in making chloride of lime, and directions for making it.

ANS.—Chloride of lime is best formed by acting on carbonate of calcium (marble, limestone) with hydrochloric acid. The reaction will take place thus: CaCO3 plus 2HCl equals CaCl2 plus H2O plus CO2. The products are chloride of lime, water and carbonic acid gas; the gas escapes and the chloride of lime remains dissolved in the water.

G. A., Campville, Conn., asks how Rhododendrons can be successfully grown in Northwestern Connecticut.

ANS.—They can be grown successfully in a greenhouse. For out-door culture, choose hardy or nearly hardy varieties, plant them in a sheltered place in a soil rich in humus and free from calcarious matter. During the summer season, they must be shaded somewhat from the hot sun. During the winter they may be covered with leaves, if small; otherwise packed in straw.

E. K., Thoroughfare Station, Va., asks whether the experiment made in the manufacture of sugar from beets in Maine, is an assured success.

ANS.—Those who have the enterprise in charge express themselves as satisfied with the measure of success that has hitherto rewarded their efforts; yet in view of the numerous failures elsewhere of similar undertakings which inspired hopes equally strong at the outset, it is yet too early to consider the experiment a complete success.

M. D. C., Eaton, N. Y., wishing to get as much seed as possible from the "Beauty of Hebron" potato, and to raise two crops this year, has planted the pieces in large tubs, and asks whether it would be better to transplant them when the weather is warm enough, or let them remain, and grow the first crop in the tubs.

ANS.—As the tubs are large enough to allow them full room, it would be better to grow the first crop therein, and the second crop in open ground.

S. E. W., Tiptonville, N. H., has a barrel of pork brine, and wants to know whether he should use it in his hot-bed, or on the asparagus bed; and, should hen manure be used with stable manure for a hot-bed.

ANS.—1. Give the asparagus bed a sprinkling with it about once a week. 2. No; dry the hen manure, pulverize it by trashing, and sow it on the ground like guano.

M. S. B., Long Island, wants to know what sort of a mill is used to grind sage.

ANS.—Sage is ground in a mortar when small quantities are handled. The rubbing and crushing effect leaves the material in the best condition. The ordinary burr-stone mills, such as the Plantation Mill described in a recent number (page 5), will serve when a large quantity is to be ground.

J. M. K., Burford, Ont., asks, which is the best kind of bee-hive in use, its price, and where it can be procured.

ANS.—It is a matter of opinion which hive is the best, some bee-keepers preferring one kind, and others, another. See Our Bee Hints in last week's RURAL. Visit some intelligent and successful bee-keeper near you; it will pay for the trouble.

W. H. W., Oak Ridge, N. J., asks if the Hemlock that grows in his section, will make a good hedge, and whether it can be trimmed into any form desired.

ANS.—Hemlock is a name sometimes applied indiscriminately to several evergreens, so we are not quite certain what our correspondent refers to. Hemlock Spruce (Abies Canadensis) is used for hedging and bears trimming well.

G. W. K., Tecumseh, Mich., asks where can he buy a good "Incubator" for farmers' use.

ANS.—Send to A. M. Halstead, Rye, N. Y., and also to Prof. A. Corbett, 7 Warren St., N. Y., for descriptions of the Incubators they have for sale; compare them and judge for yourself which is best adapted to your needs.

W. Y. Y., Salisbury, N. C., asks where can he get a good, pure, white variety of hominy corn.

ANS.—Thorburn & Co., 15 John St.; Peter Henderson & Co.; 35 Cortland St.; B. K. Bliss & Sons, 34 Barclay St.

C. C. N., Greenfield, O., asks whether the Bronze Crimson Lettuce and Ornamental Beets are purely ornamental, or grown also for the table?

ANS.—Both are useful for the table as well as ornamental.

J. P. B., Erie, Pa., asks where Lost Nation spring wheat may be obtained.

ANS.—From D. M. Ferry & Co., Detroit, Mich. The other question will be fully answered for all our readers in a week or two.

COMMUNICATIONS RECEIVED FOR THE WEEK ENDING SATURDAY, MARCH 22d.

T. F. F.—W. R. B.—J. A. H.—M. W. F.—J. B.—E. P. P.—Dr. T. H. H.—G. P.—W. H.—F. W. C.—A. B. C.—F. D. C.—W. W. H.—M. L. D.—S. T. B.—C. H. B.—P. H., thanks—W. S. M.—E. G.—J. B., see next issue—L. A. The above is a fair specimen of hundreds of letters received. Soon these friends will complain that they did not receive the seeds applied for. We have received hundreds of applications for seeds some of which have had no signatures—some no address—some that could not be read, etc.

Trees, Seeds, Plants, &c.

Forest Rose Strawberry Plants

At $1 per 100; $8 per 1,000. Also the leading and new varieties of **Strawberry, Blackberry** and **Raspberry** Plants, including "**Gregg**" in large supply. Japan Persimmon, Japan Maple. Send for Price-List of **GENERAL NURSERY STOCK** and small fruit. LEO WELTZ, Wilmington, O.

SEEDS.

All the leading and most desirable kinds of **Vegetable, Field and Flower Seeds**, will be found in my new-priced list, mailed free.

ALFRED BRIDGEMAN,
876 Broadway, New York.

PEARL MILLET.

The susbcriber has just received a fresh lot of this valuable forage plant. Clean, heavy seed, free from chaff, 60c. per pound. If sent by mail, 16c. per lb. must be added for postage.

ALFRED BRIDGEMAN,
876 Broadway, New York.

ROCHESTER TREES COMMERCIAL NURSERIES

Hardy Trees, Shrubs, Vines and Plants, per dozen, 100 and 1000. **FINE ROSES a specialty.** New Spring **Price-List** now ready, and sent **free** to all applicants. **Ornamental Catalogue** (illustrated), **10c. Fruit Catalogue, 6c.** Both free to customers. Fine, thrifty stock and low prices. W. S. LITTLE, Rochester, N. Y.

RELIABLE HOME-GROWN SEEDS.

Ten Packets for 25c. RURAL NEW-YORKER with *Extra* Premium for $2. Also Rabbits, etc. Send Postal for Circular.

TUISCO GREINER, Naples, N. Y.

STRAWBERRIES. 15,000 Quarts

per acre. The genuine PARMELEE CRESCENT SEEDLING has produced the above amount; is perfectly hardy and healthy; never known to rust or blight, this variety stands without a rival. Send for free Circular, giving full history and directions for culture.
H. H. SMITH, West Haven, Conn.

STRICTLY FIRST-CLASS
SMALL FRUIT PLANTS,
Seeds and Seed Potatoes.
Catalogue free. Address F. M. HEXAMER, New-Castle, Westchester Co., N. Y.

$1,000 Worth of RASPBERRY PLANTS Given Away

Strawberry, Blackberry, Currant, Grape, Gooseberry and Asparagus. 100 varieties. Strong plants true to name. Extraordinary offer. Family supply 20 varieties $3. Circulars free. **G. H. & J. H. HALE, South Glastonbury, Conn.**

LANDRETHS' GARDEN SEEDS

Are the **PRODUCE OF OUR FARMS**, situated at

BRISTOL, Bucks County, Pennsylvania. BURLINGTON, Burlington County, N. J.
MANITOWOC, Manitowoc County, Wis. MONASKON, Lancaster County, Va.

The whole comprising a total of 1571 ACRES, owned, occupied and cultivated by ourselves. Upon these lands we have applied in a single season, $20,000 worth of purchased fertilizers, a fact which exhibits the magnitude of our operations.

THE STOCK SEEDS

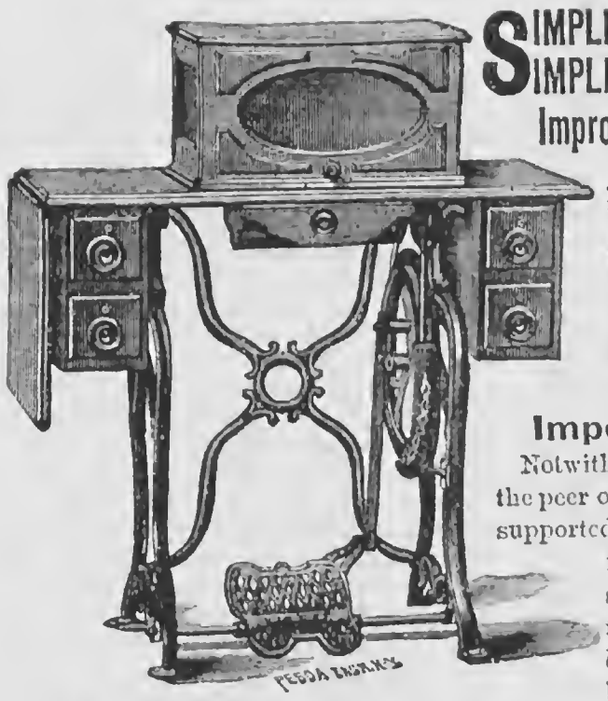
From which all our crops are grown on all the farms, are produced on Bloomsdale, the Pennsylvania Farm, and under the daily scrutiny of the proprietors, are thoroughly culled of all departures from the true types, and produce crops of such purity of strain as to warrant us in declaring that NONE ARE SUPERIOR, AND FEW EQUAL!

Varied soils and climates, systems of cultivation, drying houses, steam machinery, implements and appurtenances generally, demonstrate our ability to produce large and varied stocks of seeds of the purest quality, at the very fowest price. All who desire good seeds, should purchase LANDRETHS'.

If your merchant does not keep them, write for them. ILLUSTRATED CATALOGUE FREE.

23 So. 6th St. **DAVID LANDRETH & SONS,** PHILADELPHIA.

Sewing Machines.



SIMPLICITY SIMPLIFIED! SUPERIORITY MAINTAINED!
Improvements September, 1878!

Having regard for the demand of this progressive age, we now offer to the World the

NEW VICTOR

WITH SEVERAL

Important Improvements.

Notwithstanding the VICTOR has long been the peer of any machine in the market—a fact supported by a host of volunteer witnesses—we now confidently claim for it greater simplicity, a wonderful reduction of friction, and altogether a *Rare Combination of Desirable Qualities.* For sale by Merchants and others.

Send for Illustrated Circular and Prices. Liberal Terms to the Trade.

Don't buy until you have seen the lightest running machine in the World,—the Ever Reliable "VICTOR."

VICTOR SEWING MACHINE COMPANY,
MIDDLETOWN, CONN., and Nos. 199 and 201 Wabash Avenue, CHICAGO, ILL.

Trees, Seeds, Plants, &c.

NEW PLANTS for 1879.
CATALOGUE NOW READY.
Most of these NOVELTIES in Plants and Seeds were SELECTED PERSONALLY by us, while abroad, and are now offered for the FIRST TIME in this country
C. H. HOVEY & CO.,
22 Tremont St., Boston, Mass.

10 ROSES MAILED FREE FOR $1

Splendid assortment of Plants sent safely by express or mail, any distance. Satisfaction guaranteed. Send 3 cent stamp for catalogue. Address,
R. C. HANFORD & SON,
Columbus Nursery, Columbus, Ohio.

GOOD CURE FOR HARD TIMES.
A PLANTATION OF EARLY PROLIFIC and RELIANCE RASPBERRIES.
100,000 Plants FOR SALE; *also* 200,000 *Cinderella* and *Continental Strawberry Plants.* Millions of other Plants, Trees, etc. Everything new, novel and rare. *Prices low.* Send for *Descriptive Circular* to **GIBSON & BENNETT, Nurserymen and Fruit Growers,** Woodbury, N. J.

Acme Red Smooth TOMATO.

The finest of all Tomatoes. Perfectly uniform smooth red. Best for Market Gardeners; best for private gardens. Price by mail, per packet, 10c.; per ounce, 50c.; per pound, $5.

Catalogues on application.

J. M. THORBURN & CO
15 John St., New York,

A NEW LETTUCE,
"EUREKA."

A new variety of our own production, which we offer for the first time to the public, and can confidently say it is the best Lettuce for family use ever introduced. Possessing more good qualities than any variety we have ever tried. The entire stock of this valuable introduction is in our hands. Give it a trial. **Price, 25 cts. per packet, or 5 packets for $1.**
Address, CROSMAN BRO'S, Rochester, N. Y.
N. B.—Our Seed Catalogue sent free on application.

THE LADY GRAPE.

The best and earliest perfectly hardy **White Grape** in America. Ripens in August, and is hardier than Concord. Two strong vines, post-paid, by mail, for $1. One dozen 1 yr., $4. Also Delaware, Concord, Brighton, Moore's Early, and all other valuable varieties, over 60 kinds, at greatly reduced prices. Raspberries, Strawberries, Gooseberries, Flowering-plants, &c.
Catalogues free.
GEO. W. CAMPBELL, Delaware, Ohio.

Trumpet Creeper or Bugle Vine.

Grows 10 feet in one year. Perennial; hardy. 50c. per vine; seed 20c. per packet. S. A. E. WOLFE, Canal Lewisville, Coshocton Co., Ohio.

HALF A MILLION PEACH TREES.

The largest and best stock ever offered, embracing all the new extra Early and Late sorts, with all the old Standard market varieties; also 300,000 Apple trees, 200,000 of them extra long keeping varieties, adapted to Southern planting or wherever long keepers are desirable. Japanese Persimmon, Queen of the Market; Reliance Raspberry; all the desirable new Strawberries. I also offer a full line of all kinds of Nursery Stock at prices to suit the times. Apple and Peach trees sent by mail to all sections. Catalogues, with fine colored plates of the Japan Persimmon, also showing how and what to plant, with much valuable information, mailed gratis to all applicants.
RANDOLPH PETERS, Great Northern and Southern Nursery, Wilmington, Del.

SEEDS
Best ever grown
Down goes prices cheaper than dirt. Warranted fresh from grower. Send for free Illustrated book and Guide to the garden. Prettiest ever printed.
R. H. SHUMWAY, ROCKFORD, ILL.

Shaker's Garden Seeds.
True and Genuine. Fresh and Reliable.
One of the oldest seed firms in the country. Seeds sent by mail, postage free. Special prices and terms to *Grangers.*
"The excellence of the Shakers' Garden Seeds is generally admitted."—*Eds. Am. Agriculturist.*

JOHN SAUL'S
Catalogue of New, Rare and Beautiful Plants,
will be ready in February, with a colored plate.—Many new and beautiful Plants are offered, among Draenas, Crotons, and other fine foliage plants, with a rich collection of Green-house and Hot-house Plants; Bedding Plants; new and choice Roses; Dahlias, etc. Well grown and at low prices. Free to all my customers, to others 10c.—a plain copy free.
JOHN SAUL, Washington, D. C.

ARTICHOKES.

Red Brazilian and White French varieties; cheapest hog food known. Send for Circulars.
E. F. BROCKWAY, Ainsworth, Iowa.

THE
RURAL NEW-YORKER.
PUBLISHED EVERY SATURDAY.

Address RURAL PUBLISHING CO.,
78 Duane Street, New York City.

SATURDAY, MARCH. 29, 1879.

TRY IT AND TELL US.

THE RURAL does not wish to be considered as advocating any seemingly unnecessary expenditures of any kind. We believe in "rigid economy"—we believe that the extravagant, improvident farmer *must* fail in a business the very foundation of which is economy and labor. But there is a sort of excessive economy that makes men hateful to their friends, to their families, and, we should think, to themselves as well. As benevolence is not benevoleuce the very moment anybody gives away that which his own family needs—so economy must be called by another name whenever a man "economizes" so far as to deprive himself of those "common decencies" which should separate a man from a brute. We have no patience with the farmer who, according to his means, is too economical to be willing to make the interior of his home cheerful and comfortable. We have no patience with the farmer who has no appreciation at all of what are expressively known as the "refinements of home."

But what *are* the refinements of home? It is, unfortunately, true that each individual must answer this question for himself, and that consequently, in a majority of cases, it must be erroneously answered. We can not make "a silk purse out of a sow's ear," nor can we drum into the head of a dirty, heedless, thoughtless, selfish man that it is as much his duty to attend to the brightness of his own home as it is to eat his meals thrice a-day. But there are hundreds of our readers who are "refined" at heart, and do not, always show that they are refined simply because "the refinements of home" have never been presented to them in a forcible manner. There are others who from education take a partial or distorted view of what every man owes to his family and to every other man. For instance, we have neighbors who own fine barns and houses. The houses are furnished as well as need be—sometimes elegantly. Their animals receive good care; everything indicates prosperity—save one, *viz.*, the door-yard—the lawn—the strip of ground between the dwelling and the road, by whatever name it may best be called. That is given over to weeds and to an occasional stunted fruit or ornamental tree. Now there is nothing that so enhances the appearance of the house itself and of the entire premises as a meed of attention to this same "piece of land." Why is it not freely given? In reply to this question squarely put to good farmers, we have been told—"*Oh it's too much bother!*" or, "It takes too much time,"—or, "It costs too much"—or "That's all hifalutin; what *good* does it do?"

In such answers we see merely a disregard of the refinements of life. Such replies can not be supported by reason. Is it "too much bother" to have one's floor carpeted? Does it take "too much time" to set a neat, inviting table for the daily meals? Is it "hifalutin" to black one's boots and to put on the dress-up suit for Church or Sabbath-School? What is "hifalutin" in the one case, is "hifalutin" in the other, and the only difference is in degree. The orderly and even beautiful appearance of the grounds about the home is, to our way of thinking, of just as much importance as orderliness or beauty in any other part of the homestead or farm. Aye, if we were called upon to neglect our lawn on the one hand or our Sunday dress-up on the other, we should choose to neglect the latter and feel that we acted wisely.

Spring is upon us, good readers. The weedy, unkept plots of ground may now be turned into things of beauty, and so maintained for no more expense than is requred to maintain the tidy room, the clean carriage, the Sunday dress-ups and the ordinary marks of a regard for "decency" which we have called "refinements of home." Plant a few dwarf Pears; a few evergreen and deciduous shrubs and trees; a few Grape-vines, etc. Cut the grass every week—keep the path, or paths, clean and free of weeds, and then tell us, good readers, next November if, in truth, it is "too much bother;" if "it takes too much time;" if "it's all hifalutin!"

BEET SUGAR.

THERE is an aptness, which is continually illustrated, in the old story of the dying man who informed his weeping children that a pot of gold which was buried in his garden was their inheritance. The old man was doubtless soon buried beneath the sod, so that his mourners might find the treasure. The garden having been soon dug, and dug over and over without finding the buried treasure, was planted, and the unusual [illegible] resulted in a wondrous crop, which was found to be, in fact, the sought-for wealth. So with beet sugar. An enthusiastic gentleman promises the farmers of Maine that they have a veritable pot of gold in each of their fields, and that to find it they need only to plant sugar beets. We entirely agree with this idea, although it may not be in precisely the way that the enthusiastic person referred to would have us coincide with him. There is gold in beets, even though there may not be sugar as the intermediary. The manufacture of sugar may not be successful (although its success is to be greatly desired for many reasons), yet the culture of beets cannot fail to be of the greatest profit to the growers, if it only results in their learning how to grow roots successfully.

Root culture is one of the most promising innovations in our whole farm practice. No other product, from an acre of ground, will support so much live stock, produce so much meat, milk, mutton, wool, pork, lard or manure, as a well-grown root crop, and of all the root crops the sugar beet is the most nutritious. Sugar is by no means to be ignored as a nutriment, although a writer in a leading agricultural journal, recently intimates that the 10 or 12 per cent. of sugar in these roots may be dispensed with in estimating their value. It is in this respect that sugar beets have an advantage over the more productive mangels, and the lighter crop of the former thus balances in a great measure the heavier yield of the latter. The sweetest beet, the French or Silesian sugar beet, is of small size, or, at least, so desired by the sugar manufacturers; and if the crop is grown for sugar, these varieties, or one of them, is chosen. But if beets are not to be grown for sugar, they should by all means be grown for stock feed; and this is precisely where the analogy heretofore referred to, appears. If roots for stock, whether beets or mangels, are grown by reason of the present interest in sugar beets, the mythical pot of gold will be found, although in an unexpected way.

The moral of this is, "grow beets"—for sugar if you will, but if not, grow beets; or even other roots, and their sweet influences cannot fail to be appreciated by the live stock, greatly to the farmer's profit.

A STABLE INDUSTRY FOR THE FUTURE.

ONE of the most stable and profitable industries in the future will be the raising of sheep, and the production of mutton and wool. One of the conditions which will insure this is the fraternal relations which exist between the wool-growers and the manufacturers. The united action of these interests can doubtless succeed in regulating Congressional action so that no unjust or destructive legislation will be had in regard to either branch, which might not be the case if the wool-growers and the woolen manufacturers should each go their own way, and not unite to promote the general welfare. Last year, when the Committee of Ways and Means undertook to annul the tariff laws, the representatives of these interests met, and agreed in the most harmonious spirit to oppose any change so far as the woolen interests were concerned, and succeeded in convincing Congress of the wisdom of their wishes, and, no doubt, their influence did more than that of any other, and, perhaps, more than that of all other interests, in defeating the bill reported by the committee. Those engaged in woolen interests may take courage from these facts.

In connection with this favorable action of Congress, the establishment of new lines of steamers to run in conjunction with the great trunk lines of railroads to Great Britain for freighting live stock, opens up an almost unlimited market for all of the surplus mutton we can produce. The American farmer should be able to produce mutton at so low a cost as to be able to send it to Europe and undersell both the farmer of Great Britain and the Continent. The whole country east of the prairies is being impoverished in the productive ability of the soil, and needs the replenishment which sheep husbandry and stall feeding can best supply. This system of farming has made England a garden, and is the most wholesome and natural panacea for our depleted and worn-out lands. Shall we avail ourselves of the opportunities now presented, and so favorable for entering upon a new system of husbandry, or let the blessing brought to our doors pass by unheeded?

SEEDING AND FERTILIZING IN SPOTS.

MOWINGS and pasturage, when seeded and manured, are treated usually only once for all, and as a whole. We have often wondered why it was that farmers allowed bare or sandy spots to go unattended to until the bareness, or the weediness, extended so as to cover a large proportion of the soil. This is, we know, altogether needless. We are acquainted with at least one extensive farmer and dairyman who, not content with keeping his pastures free from all sorts of brush, never permits a bare or seedy spot in them. If from the settling of water, the effect of frost, or the pawing of animals, a bare spot appears, it is at once seeded, and in some cases even sodded, so that the turf is maintained unbroken. Similarly, where the grass gets thin and weeds begin to appear, manure is applied to that spot, and the enfeebled grass thus stimulated to reoccupy the ground. In this way a pasture of a hundred acres presents at all times a sod of pure, thick grasses, the like of which it would be hard to find on this side of the Atlantic. Yet there are thousands of farmers as well situated and as well able to have such pastures, if they only would, and the same principles are equally or more applicable to mowing lands.

The result is not only a matter of looks, but of profit. The cheese of the farmer above alluded to is sought for and taken by the high-class restaurants and hotels of New York and Philadelphia at a fancy price. Much of its excellence is doubtless due to his hereditary skill in its manufacture, but certainly the excellent quality and perfect uniformity of this cheese are due, in no small degree, to the fact that it is made of grass-milk, and because no weed-milk or browse-milk ever goes into it.

PEARS—THE DUCHESSE.

THE Duchesse d'Angoulemc! Do not purchase this pear for home use. It is often worthless—never good. It is at best coarse-fleshed, of a low flavor, and ripens only with much care. Else it is spongy and shriveled. *For market!* Oh, yes, it is an excellent market pear. *It is large!* The trees (dwarfs) are highly productive. It is a *fine* dwarf market pear—this Duchesse. Anything is a good market variety that is *large* and has *some* flavor. The *market* has to do with buying and selling. It cares most for *looks*. A strawberry that is *hard*, and sour, and red, is better than one that is sweet and delicious, though a little off color and soft. The demands of the market are peculiar. There is only a slight connection between *market* and *good* fruit. We say to our friends who want delicious pears—do not plant the Duchesse. A contemporary remarks of pears: "The variety is bewildering!" The varieties of medium or poor pears from which to select, *are* bewildering. But of really first-class pears, there are very few, and those that thrive in one locality may do but poorly in another. This cuts down the list still further.

IT IS HARD TO PLEASE ALL.

WE have never *felt* the truth of the above so forcibly as during the past few weeks in the matter of our free-seed distributions. Many have written to us complainingly, as if our distribution of seeds were something that we are paid for and that they have a right to demand, regardless of the terms and restrictions which we have been obliged to impose, and which we have published again and again. For instance, we have been told, within the ten days past, by many that we have *no right to discontinue* our first seed distribution, and that it is our duty to serve all alike. Many others have complained that they did not receive *all* of the sorts ordered, but that others were substituted which they did not want. If our complaining friends could only be induced to read the special and general notices which we are at pains to place clearly before them, they might see that their complaints have nothing whatever to stand upon.

Pinus Edulis.—Four years ago we planted nuts (seeds) of this Pine. They germinated freely, and when once well rooted in pots, were planted permanently out-of-doors. For three winters they have been unharmed, though at present not over seven or eight inches in hight. We have sent a great many of these seeds to our friends in place of others applied for, which we could no longer supply, and we hope they will be given a good trial. Prof. Torrey has said of this Pine that "it is found in rocky places on the Llano Estacado; also near Hurrah Creek, New Mexico, September 20, with ripe seeds." It seems to attain, according to situation and climate, a hight of from 20 to 50 feet. The nut is sweet and much liked by most persons, about the size of a hazel-nut, though rather more canoe-shaped. Those of our friends who have never raised Pine seedlings will, at least, see much to interest them in the singular manner of their first growth, sending up, as they do, half a dozen or more "first leaves," instead of two, as in most hard-wooded plants.

BREVITIES.

BALDWIN APPLES are now selling at wholesale in England, for $5 50 per barrel.

AFTER the practical details of the best modern methods of maple-sugar making, a description of older methods has all the more interest.

IT will soon be the best time of all the year to plant Strawberries. The reader is reminded to refer to the special strawberry, raspberry, &c., numbers of the RURAL of last fall for all needed information.

COL. COLMAN says, touching the extensive planting of Early Amber and manufacture of sirup and sugar, "Go slowly—wait—don't overdo the thing—slow and sure is the motto in all new enterprises," and this is our own advice to our Western friends.

IN this climate and at this season and a little later, spring bulbs (Tulips, Hyacinths, etc.) are very often harmed by frosts. Sometimes the flowering stalks of Hyacinths are cut off entirely. To prevent this, nothing is better than to mulch with old barnyard manure.

THERE is an unusual concurrence of opinion all over the country, among those who ought to know, that the Acme is the best tomato. Many of our readers will remember that the RURAL was among the first to state this opinion, having tried it with many other varieties when it was first introduced.

WE intended to have mentioned last summer when it occurred, the case of a double flower of Gladiolus—not "double" in the usual sense, but two flowers grown into one. It was nearly double the usual size, with twice the number of petals, stamens and pistils. By the way, what a miserable word "double" is to express what is meant by it. "Double" flowers are not, in fact, double in any sense. *Very* double—*extremely* double—*semi*-double, are the mongrel qualifications of this unmeaning term.

BEWARE of working in the garden too early in the spring. If attempts are made to transplant trees while there is even an inch of frost in the ground, great danger will be incurred from the accruing injury to small fibers. The preservation of these small fibers, be it remembered, is of vital importance to the life of the tree during the operation of transplanting. Moreover, ground that is worked in the spring before warm suns have dried it out, will, very likely, remain heavy and lumpy, and be otherwise injured throughout the season.

THE records of the Am. Pom. Society show that Bartlett and Seckel are highly thought of by 32 States;—Duchesse, Beurre d'Anjou, Doyenne de Eté and Lawrence by 29 States;—Flemish Beauty, Bloodgood and Buffum by 27 States;—Louise bonne de Jersey, Howell, Dearborn's Seedling and Onondaga by 24 States; Beurré Giffard, B Superfin, Winter Nelis, Doyenné Boussock, Rostiezer Sheldon and Tyson by 21 States. The above is a far better guide than selecting Pears haphazard out of catalogues or according to the dictation of tree peddlers.

STABLE manure seems to hold its own against all competing fertilizers, as is indicated by the fact that in these days of low prices, the value of good stable manure, in the market of New York, has gone up this year at least 20 per cent. Two facts are probably developed still more by this rise. Firstly, that stable manure is rather gaining than losing in popularity, and, secondly, that the demand is increasing because more people are turning their attention to farming, and because those engaged in it already are improving their methods.

THE culture of Willows for basket-making does not prove a success in America. Some say labor is too high to allow any profit. The facts are that willow shoots of the proper size for basket-making are worth only 5 cents per pound delivered in New York or the nearest city in which they can be sold. A large yield of willow shoots is one and a half to two tons to the acre, and there are many expenses which accompany their culture. Probably the chief cause of the general discouragement concerning willow cultivation is the fact that an insect or bug frequently ravages such plantations in a decidedly wholesale manner.

MR. N. OHMER of Dayton, Ohio, has ten or twelve acres of the Gregg Raspberry, and reports, according to Mr. Charles Downing in the N. Y. Tribune, that it is the largest, best and most profitable of any of the Black-Cap family he has grown. It is hardy, he says, and will succeed in any good soil. Mr. Downing thinks Souvenir du Congress pear "is promising as a market pear—being of good size and handsome, though only of second quality." "Good size," "handsome"—"second quality"—"good market variety." No doubt the *market* will continue to supply what sells best. We are only sorry for the people who choose size and appearance before quality. Why not buy *wax* pears larger and handsomer than any that grow, and keep them on the mantle-piece to look at, and then demand quality of the market?

Literary Miscellany.

THE FIRST STRAWBERRY.

MRS. FANNIE E. NEWBERRY.

A MYTH.

POMONA once, in meditative mood,
Turned languid eyes upon the Sisterhood,
And spoke with accents mild, and mellow tones,
"Come, sisters, let us wake and gird our zones;
We must not dream these lovely hours away,
A work we have before us this May-day—
Have you not heard great Jupiter's request?
He asks for something which may add a zest
To lovely Venus's birthday festival;
Some rare, delicious fruit which may excel—
Even Bacchus's wine, or roots of asphodel.
I have in mind a thought of something sweet
As honey of Hymetus, and complete
In flavor as that rare, ambrosial brew
Which Venus drinks, her beauty to renew,
And yet, withal, a crispness it must have
Like to the spicy cress which brooklets lave;
And e'en its color must be brilliant, too,
For Venus's beauty-loving eyes to view.
Ah! tell me, Sisters, what this fruit shall be
To please the gods in taste and symmetry."
Fair Ceres thoughtful seemed, and turned away,
And sparkling Flora not a word could say;
The seasons, always helpful to the three,
Looked in each other's eyes and sighed—"Ah, me!"
But bold Pomona, roused to action now,
Sprang to her feet, with triumph on her brow!
"Oh! Sisters, listen—heed my least command,
And haste to bring the best from every land.
Then in the magic bowl your gifts I'll brew,
And from it mold this fruit, all rare and new."
They flew on wings of thought, or sailed away
On downy clouds which, moored in ether, lay.
Fair Flora ransacked all her beauteous bowers,
And tore the hearts from out her choicest flowers;
While Ceres found the nourishment which lay,
Hidden from other eyes, in wheat away;
Then, thinking this an off'ring all too mean,
She wandered on among the wheat fields green
Till suddenly, with thrills of sweet surprise,
She met the glances of a baby's eyes,
Who, lying in content beneath a tree,
Had seen her beauty, and laughed out in glee!
Stooping, with strong desire, the goddess sought
To steal a kiss from off his lips, but caught
His breath, so subtly pure and sweet, she cried—
"I have it now—a gift to suit my pride!
This baby's breath contains a perfume far
Sweeter than airs from spicy gardens are—
Pomona will accept this offering,
E'en though from mortal lips its sweets I bring."

* * * * * *

The Seasons brought their dainty off'rings in
Of sun rays warm, and rain drops left of sin
Untouched and pure, since once their multitude
Flooded this wicked earth and left it good.
And as each off'ring mingled in that bowl
Into whose mystic depths no mortal soul
May ever look—Pomona, priestess fair!
Stood over it, and waved her white wand there;
While, ling'ring round about, the Sisterhood
With looks of doubt and eager wonder, stood:
At length, she lifted thence a drop, or two,
Which shone with radiance of the morning dew;
And from her finger took her thimble gold,
To pour therein the amber drops till cold—
Then turned them, hardened into shape, upon
A rose-leaf pale, which fluttered there anon.
But carelessly her white hand touched a thorn,
And by it was, with playful malice, torn;
A drop of blood oozed from the tiny wound—
Impatiently she shook it to the ground,
It fell upon the dainty, amber mold
And into crimson turned its lucid gold!
Pomona lifted it, surprised and mute,
But in her heart she knew she'd found the fruit,
O'er which both gods and men may well grow merry,
The luscious, fragrant, crisp and sweet strawberry!

Coldwater, Mich.

WEAKER THAN A WOMAN.

(Continued from page 190.)

CHAPTER XLIII.

AT one o'clock in the morning, Darcy Lonsdale reached Garswood. He had no words to express his surprise and dismay on hearing of Sir Owen's accident. He had returned home on the previous evening from London, and a few hours afterwards received the summons to Garswood. He went direct to Sir Owen's room, and was startled by the loud cry with which the dying man received him.

"Come here, Darcy," said Sir Owen. "You have more sense than all the doctors put together. Do I look like a dying man?"

"You look better than I expected to find you," answered Mr. Lonsdale.

"Yet they say I am dying. They say my spine is injured. I am talking to you now; yet they say when the sun rises I shall be dead. It is absurd—say it is absurd, Lonsdale."

Mr. Lonsdale looked down with infinite pity on the face that was almost convulsed with terror.

"I am afraid," he said, "that you have heard the truth. It would be cruel to give you one false hope. It is time for you to make your peace with Heaven."

Sir Owen turned his agonized face to his wife.

"Oh, Violet, they are all against me, my dear, but you! You do not believe it, do you? You are kinder and you care more for me. What is my life to them? Tell me—do you believe that I am going to die?"

She whispered her answer. No one heard it but himself, and with a wild cry he turned away his face.

"They are all alike! They want me to die! They will not let me live!" he exclaimed.

Doctor Brown stopped his wild raving by telling him that the quieter he was the longer he would live. The presence of the two doctors, however, irritated Sir Owen so greatly that they were compelled to go down-stairs. Felix followed them. The night had grown cold and chill. A storm was brewing; the wind was wailing round the house, bending the tall trees, and robbing them of leaves.

The servants were all up and a fire had been lighted in the library. Felix ordered hot coffee, and sent some to his father and Lady Chevenix.

"This is a terrible state of things," said one doctor to another. "There seems to be no sense of what should be done. We ought to send for the Vicar."

"Yes, it would be better," agreed the other. "It would save appearances. But I am no believer myself in death-bed conversions."

"You forget," rejoined his friend, "that mercy may be extended even at the last moment."

"No; I do not forget that. But I think the best preparation for death is a good life. I would not change places with Sir Owen."

Felix sent at once for the Vicar of Lilford, and then returned to the Baronet's room, leaving the doctors together.

Sir Owen had grown very quiet now. He lay with Violet's hands clasped in his, as though clinging to her, he could not die. Darcy Lonsdale sat at the other side, his kind, sensible face full of compassion. He had seen nothing in all his life that affected him as this death-bed scene did.

"I am no worse," he said; but the voice was changed and faint. "Have you sent the doctors home?"

Felix bent over him without replying; but there was such kindly sorrow and anxiety in his face that Sir Owen said—

"You are a good friend—what I call a true friend. My dealing with you was not as fair as regards Violet here. But you forgive me?"

"Yes," answered Felix, "I forgive you."

"Now look at me," whispered the faint voice—"look well at me. I feel weak, but that is through lying here so long, and being frightened. Tell me, do I seem like a dying man?"

With a woman's weakness, Felix bent lower over the face that a few hours since had seemed to him repulsive, so that Sir Owen should not see the tears which filled his eyes.

"Do not be angry with me," he said—"I dare not say 'No.'"

The Baronet groaned; and shortly afterwards Mrs. Haye arrived from Lilford. Lady Chevenix never moved; she still knelt by her husband's side, and Darcy Lonsdale kept his station opposite. Sir Owen smiled when Mrs. Haye came in—he had always liked her.

"Did they send for you also?" he said. "What folly! You must not believe one word they say."

The darkness of the night passed—there was a faint gleam of early dawn in the eastern sky. The dying man's quick ears detected the first notes of the birds.

"Hush! Hark!" he cried. "The birds are chirping! Now who is right? They said that I should be dead before the dawn! Draw those hangings, Violet, and put out the lamps. It is dawn now; I see the red light in the sky. I am right, and the doctors are wrong."

They drew the hangings and put out the lamps, the dawn came flushing into the room. The great window faced the east, so that the first rays of the sun shone directly into the room. How gray and haggard Sir Owen's face looked as those beams touched it!

Darcy Lonsdale discerned what Violet could not—the speedy coming of death. He knelt down by the dying man's side, and he spoke to him as no one would have thought he could speak. He dwelt so much upon the mercy of Heaven and the goodness of God that Sir Owen's pale lips trembled.

"I wish," he said, "that I had thought of all that before. It is too late now—much too late."

The Vicar came; but when he stood by the Baronet's death-bed, it was perceptible to all that Sir Owen neither heard nor understood. He roused himself soon afterwards, however.

"I feel very ill, Violet," he said—"very ill indeed. I have no strength; I cannot move. Can it be true what they said? Call the doctors back, and tell them they must do something for me."

They were brought back, and such an hour passed then as they hoped never to see again. Sir Owen's terrible cries, his screams of fear—for he was afraid to die—horribly afraid of the unknown future—distressed them. It was such a scene that those present were long in forgetting it. Then, when the bright sun came forth in his splendor, and the birds chirped loudly, the Baronet turned his face to his wife, sighed softly, and his spirit fled.

He had been dead some minutes before the doctors found it out; and the same sunbeams gilded the dead face of the husband and the white, beautiful living face of the wife.

They carried her away; for the horror of the scene proved too much for her. She was so overwhelmed as to cause alarm amongst those who loved her. It was bright morning then. The doctors took some breakfast, and each went off to his duties. Lady Chevenix lay in her room, with Mrs. Haye keeping anxious watch by her. Felix went home, and Darcy Lonsdale remained, to take charge of everything.

The gloom of the next few days was great. Into the darkened house there came no sunlight. People kept going and coming, all intent on the same melancholy business—preparations for the funeral. Dull gloomy days they were, into which came no gleam of hope.

Sir Owen's death caused great dismay; still no one was very much surprised at his untimely end; and, curiously enough, the suddenness of it excited great pity. People who had spoken unkindly of him, and condemned his faults most vigorously, now grieved most for him. His sins and errors seemed to be covered by the great, dark, thick veil of death.

The day of his funeral came, and half the county attended. Sir Owen was buried in the churchyard at Lilford, where the oak-trees seemed to murmur among themselves that they had foreseen what would happen, in the early days, when he walked under the spreading shade of their great branches.

Then came the reading of the will. The lawyers and trustees assembled in the library, and Lady Chevenix, in her widow's dress, entered soon afterwards, accompanied by Mrs. Haye. There was some little commotion at her entrance. One gentleman brought a chair, another a footstool. She looked so delicately lovely in her widow's dress, her golden hair half hidden by a pretty Parisian cap, the heavy folds of rich crape sweeping the ground. Lord Arlington hastened to meet her, and, after a few kindly words, took his station by her side. It was well known that he and Captain Hill were the two executors of the will. He spoke some few words to her in a low voice, and then both composed themselves to listen.

It was a good and just will—evidently the product of a thoughtful mind. Mr. Lonsdale had, in fact, suggested almost every clause in it. Every old servant in the house had a handsome legacy; the trustees, all Sir Owen's old friends—every one was remembered. The bulk of his fortune, with Garswood, was left to his "dearly-beloved wife." There was a very handsome bequest to Francis Haye, and one to the Vicar; there was a large sum left to each charity in the neighborhood.

There was a murmur when the reading ceased. Every one was pleased. Lady Chevenix bowed as she quitted the room, and the gentlemen stood in little groups to talk about her.

"What a fate!" said Lord Arlington. "So young, and so beautiful! She will have an income of over thirty thousand pounds per annum too. What a strange fate!"

"That comes of having a beautiful face," put in frank Captain Hill. "A beautiful face is better than a fortune."

"At times," said Darcy Lonsdale. "Every beautiful woman is not favored like Lady Chevenix."

Then matters pertaining to the estate were discussed by the executors; and it was arranged that, with the young widow's consent, all business should still be left in the hands of Mr. Lonsdale.

A very different scene was passing in the room where Lady Chevenix sat with her mother. Mrs. Haye was walking up and down, her pride and elation almost more than she could conceal.

"I always liked Sir Owen, my dear. I always said that he was a most honorable man. What could be nobler than his treatment of you? I have known such terrible things happen."

"What kind of things, mamma?" asked the widow—but there was little interest in the tone of her voice.

"Terrible things, my dear. I have heard of rich men dying, and leaving a handsome fortune to their wives on condition that they should never marry again. Now I call that atrociously mean."

"So it is, mamma," said Lady Chevenix—"and very wrong, too."

She spoke, however, as one whose thoughts were not with her words. She had untied the widow's cap, and was caressing with her fingers the long golden hair that fell over her shoulders. Mrs. Haye did not observe her.

"Sir Owen, you see, Violet, had more sense than that. I have never heard of a more generous will. Only twenty-six—and you do not look twenty—young, beautiful, with a fortune like that—what more could any woman desire?"

"I desire no more, mamma. I only feel as though I wanted a long rest. I am very tired; no one can tell how tired I am."

"Your income will be over thirty thousand a year. Only think of that! And it was so good of your dear husband to leave your father and myself five thousand pounds; it showed such a kind feeling. It seems strange that so much good fortune should have fallen to your lot."

The young widow looked round her sumptuous room.

"Yes," she said, "it is strange to remember that I was once Violet Haye."

"'Beautiful Violet Haye' all the young farmers called you," rejoined Mrs Haye. Then she saw the golden hair lying on the folds of crape. An expression of horror came over her face. "My dear Violet, how can you be so careless," she cried—"and after such a will as that? Put on your cap, my dear child, at once! Only imagine my feelings if one of the servants saw you! I should never forgive myself."

"I did not think of what I was doing," said Lady Chevenix, languidly.

"But you must think of such things. You must study appearances. It is a duty."

Mrs. Haye hastened to her daughter's side, and with her own hands wound the golden hair into a large knot, and placed the cap securely on her head.

"Do not take it off again, Violet," she said "after such a will, it seems quite heartless."

She wondered why her daughter laughed with a tired, hopeless expression—she who was mistress of thirty thousand a year.

CHAPTER XLIV.

Long months had passed since Sir Owen was laid in his grave; and now August was come round again, with its ripe fruits and yellow corn. Lady Chevenix, every one agreed, was a model widow. During the interval that had elapsed since her husband's death, hardly anyone had seen her. Visitors had called, but had never been admitted; they had left cards and condolences, and had each approved of the fact that Lady Chevenix kept herself quite secluded.

Mrs. Haye spent a great deal of time with her daughter. It was indeed that most estimable lady who had advised the long course of seclusion—who saw that the golden head was not uncovered until the proper time—who brought to her daughter all the news of the outer world, and formed the one link between her and society in general.

Nothing could have been more decorous or proper; and every one felt it to be quite the right thing to speak of Lady Chevenix as feeling her husband's loss so keenly that she was no longer able to see any one.

Did she feel it so keenly? She never asked herself the question. She had been overwhelmed with the horror of the closing scene—as indeed had every one else who had witnessed it. It had haunted her sleeping and waking hours, as it had the days and nights of every other witness. She had been stunned and bewildered by it. She had been so frightened that all her natural high spirits had left her.

Did she regret Sir Owen very much? She could not tell—she never asked herself the question. She had been shocked, startled, horrified—but it was not the keen sorrow of her loss that made her shrink from all observation. It was rather the reaction from what she had suffered. And she suffered still. She often started in alarm from her seat, her heart beating with terror, thinking that she heard her husband's voice; then she remembered that he was dead. She woke often from her sleep, her pillow wet with tears, her whole frame trembling with the horror of some terrible dream, in which her husband was an active figure—and then she remembered with a strange emotion that he was dead.

It was strange to go about the house without fear; it was strange to give her orders with the certainty that they would be obeyed; it was strange to know that she need tremble and suffer no more. There were to be no more anxious hours spent in waiting for her husband's going out and coming in; it was all over—he was dead. She said the words to herself a hundred times each day—"Sir Owen is dead." She had found it difficult to realize her subservience; she found it just as difficult to realize her independence. She told herself at times that she was absolute mistress of Garswood—absolute mistress of thirty thousand a year; but she could neither realize nor understand it.

One day Lord Arlington found it necessary to see Lady Chevenix on business; he was accompanied by Captain Hill. She received them with quiet grace, and listened to all their business statements; then she said it was her express wish that Darcy Lonsdale should continue to act in every way for her, but, as he would have more to do, she insisted on doubling the salary Sir Owen had paid him. Lord Arlington was very pleased about it, and the interview ended satisfactorily.

Meanwhile Darcy Lonsdale spent whole days at Garswood; and it was strange that he never once mentioned Felix to Lady Chevenix—nor did she inquire about him. But one day, when some protracted business was coming to an end, she looked up suddenly and said—

"Your son was very kind to me in my distress, Mr. Lonsdale. I can never forget how kind he was. But for him I do not know what I should have done."

"I am sure that he would be pleased to be of service to you, Lady Chevenix," he replied.

"It was doubly kind of him. He heaped coals of fire on my head," she declared warmly. After a few minutes she added, "I should like very much to make him a present, Mr. Lonsdale—just as a slight acknowledgment of his kindness to me. I should like to present him with a diamond ring. I thought I would consult you first. What do you think of it?"

She saw Darcy Lonsdale's face flush. He did not answer for a few minutes; then he replied—

"I will speak to you quite frankly, Lady Chevenix. I do not think that he would like it."

She bowed to him.

"I am glad that I asked you," she replied. "You know best."

"I am quite sure that the fact of his having been of service to you will be far more to him than any diamond ring, or anything that could be given to him," said Darcy Lonsdale.

"How is your son?" she asked. "Is he well? He never comes here."

"He is quite well, but so busy that we see little of him at home. He works without intermission."

She looked as though she would fain ask some other question. She played for a few minutes with the strings of her widow's cap and her face flushed. Whatever the question might have been that she wished to ask, it remained unspoken.

On that same evening her mother was at Garswood. Lady Chevenix seemed restless. She changed her seat continually; and then, tired of sitting, she walked up and down the room.

"You are very restless, Violet," said Mrs. Haye. "What is it, my dear?"

"I want to hear some news of my Lilford friends; none of them comes near me. How is Eve Lester, mamma? Has she a *fiance* yet? Is there any rumor of her marriage?"

"No. People say that she has refused some good offers—no one knows why," said Mrs. Haye.

"And—Felix Lonsdale, mamma. Is he going to marry?"

For a moment Mrs. Haye looked keenly at her daughter, and then she answered carelessly—

"I hear nothing of him. I do not think he will ever find time to marry; he has too much business."

"Does he — let me think — what is the Lilford phrase? Does he 'pay his addresses' to anybody?"

She waited restlessly for the answer.

"No," replied Mrs. Haye, "I have not heard that he does; in fact, he has no time."

She looked at her, but Violet's face was turned to the window.

Later on Mrs. Haye began talking to her of the brilliant second marriages she had heard of—marriages of fair young widows who had been left with large fortunes — how they had made most brilliant matches, married lords and dukes, filled grand positions, and made famous names. She did not say that there was a moral to be drawn from all this; but she left it for her daughter to think over.

So time passed; and at last Lady Chevenix wrote to implore Marian Hethcote to return to her, if only for a few days—for she was longing for a change. But, when Marian came, it was found that she had permission to remain for six months, if Lady Chevenix desired it.

Miss Hethcote deplored the sudden and untimely death of the master of Garswood; but there could be no doubt her second visit was more pleasant than her first. Lady Chevenix was cheered by the presence of her young guest; it was novel to hear the sound of a laugh in the gloomy Hall. Marian said to her one day—

"Dear Lady Chevenix, do you know what, if I were in your place, I should do?"

"I cannot guess," she replied.

"I should leave Garswood for a few months, or longer. This house is haunted, I am sure, for you."

"That is just it," she acknowledged; "it is haunted. If I go into the library, I see my husband there. I fancy I hear his voice in the corridors. There is not a room in the house which has not some sad or sorrowful association. I should like to go away, Marian. Will you come with me? Mamma cannot"

"I will go with pleasure," she replied. "Where shall we go? Shall it be to Scotland, Switzerland, or France?"

"Let us go to Normandy," said Lady Chevenix; "and I should like to stay away some time. Perhaps if your mamma wants to see you she will pay us a visit there. We will take some pretty chateau; and then I shall regain what I have lost—my health and youth and spirits."

So it was settled; and in three weeks after that conversation Lady Chevenix and Miss Hethcote left Garswood, to spend some months in picturesque Normandy.

Lady Chevenix sent for Darcy Lonsdale, and said farewell to him. She did another thing which pleased the lawyer very much, though he said little about it. When passing through London she sent such a hamper of toys to the Lonsdale children as had never been seen before. There was not one amongst them forgotten. To Katie she sent such ornaments that her eyes were dazzled as she looked at them; to Darcy himself she sent a superb diamond ring.

In the letter that accompanted these presents she said—

"I did not see your son, to bid him farewell; but tell him that I send my kindest wishes, and thanks for kind sympathy and help that I shall never forget."

Darcy Lonsdale looked at his son when he read the message; but Felix turned away without a word; nor did he ever mention Lady Chevenix's name. Darcy Lonsdale was pleased with her thoughtfulness.

"Her sorrow has done her good," he said to his wife.

But that obstinate little lady shook her head gravely; even the sparkling ornaments had not changed her opinion.

The state-rooms at Garswood were closed, and silence reigned where poor Sir Owen had at times made daylight hideous and night terrible. Again the neighborhood was delighted. Nothing could have been more proper. People told each other, with sympathetic faces, that "dear Lady Chevenix" had gone abroad to recruit herself after her great trial. Even Lady Rolfe said to herself that it was one of the most sensible things she could have done, and that, after all, she had turned out better than she for one had ever anticipated.

"I think Lavinia," she said, "that it was fortunate you lost such a chance. A widow with so much wealth! It is very sad. I never like to think of it."

"I would not have changed places with Lady Chevenix for all the money Sir Owen was worth," said the curate's wife. "I have at least a good, kind husband, mamma; while the poor girl lived in fear of losing her life. Money is a great advantage; but it is not all the world. I am happier now than I should have been had I married Sir Owen."

After a few days the gossip about Lady Chevenix died away; while she and Marian made themselves comfortable in their pretty chateau. Violet soon recovered her bloom; a lovely tinge as of a blush rose came to her face; her eyes grew brighter, and lost all their shadow; the last few years seemed to fall from her, and she looked young and fair—as she had looked when she married Sir Owen.

"You appear to be so well," said Marion to her one day, "yet you are so thoughtful. What are you always thinking about, Lady Chevenix?"

"Am I always thinking?" she asked, with a happy brooding light in her eyes. "I did not know it."

"What is it about? Something pleasant, I am sure, for you smile as you think, and at times a little pink flush creeps up to your hair even. I speak to you, and you do not hear me. I leave you, and you do not miss me. Why is it, I wonder?"

But Lady Chevenix made no answer. She never imparted to any one these the most treasured thoughts of her life.

(To be continued.)

THE NEW YORK PEDESTRIAN MATCH.

THE result of the walking match which for a week was the one theme of metropolitan conversation and journalism is now known. The proper thing for the patriotic American, as we are informed by the best Irish authority, is to abuse the Englishman who has won the champion belt for pedestrianism, and takes it back whence it came. We have got so far down from the original idea of the republic that we must pick out our citizenship instead of inviting all the world—as the Chinese are now learning,—and that nobody but an American must win any stake or honor here—except an Irishman. This is one lesson of the contest.

Another lesson is that barbarism is not expelled by our gloss of civilization. The exhibition of these six days at Gilmore's garden was as purely brutal as a bull-fight,—the bulls are eliminated, that is all the difference. There are a good many stories afloat, of course, that the race was sold, that O'Leary was bought, and his retirement a humbug. Certainly there is a basis for suspicion in the fact that the man whom everybody counted first should break down with nothing done, that the man least thought of should come off second best, and the one expected to be second should turn out a poor third. But it seems certain that the champion Irish-American entered the contest a sick man, and was inhumanly outraged with stimulants to keep afoot so long as he did. Every participant in the match suffered a physical wrong that must shorten his life. It was a thoroughly brutal show.

And it was carried on with brutal surroundings and appurtenances. It is a triumph of debasement that taints our civilization. The place in which this boasted athletic contest was waged was a miniature hell of drunkenness and profanity. By posting policeman two yards apart around the arena, the riot threatened by race animosity was prevented, but the threat was there, and the evil passions of the lowest grade of the people, the notorious criminal class of New York, were pandered to by a sale of liquors never surpassed if indeed ever equaled in this country. The week at Gilmore's garden was a disgrace to the great city and to American character.

The great newspapers gave up their space and their attention to this performance. There seemed to be no other interest under heaven worth consideration, except the question whether the Englishman, the American or the Irishman should win. This is the one great international competition of the year 1879. The character, the resources, the future of countries hung upon it. It has been quite painfully amusing.

The interest has not been confined to the roughs and reporters, however, but all the city was agog with feverish anxiety; Rowell and O'Leary, Ennis and Harriman were household words in the mouths of all New York; Wall street did not watch the rise and fall of stocks more closely than the hourly record of their respective miles, and streets, hotels and social gatherings were invaded by this barren topic. It is evident that the public mind has little to busy itself with of serious concern when this primitive sport, common to red Indians and black Africans, and only "improved" among us by the vivacity and vulgarity of the gamblers who are chiefly concerned in it, can absorb the attention so thoroughly. The public mind is as vacant and trivial as a child's.

There is a certain legitimate interest in human endurance and achievement, but its limit, in a trial so speculative, inhuman, profitless and vicious as this has been, is altogether passed.—*Springfield Republican.*

THE RESULTS OF INTEMPERANCE.

1. A HARVEST OF POVERTY. It results in the waste every year, in the United States, of seven hundred million dollars. It would pay off the national debt in three years. It nearly equals the sum paid for wages in all our manufacturing industries. It would give two and one-half barrels of flour to every person in the country. No wonder there are hard times. There are one hundred and sixteen thousand paupers, two-thirds of whom came to the poor-house through intemperance. We estimate that the world consumes twice as much as these four nations (England, France, Germany and the United States): spirituous liquors, 314,031,882 gallons annually; beer, 2,797,291,632 gallons annually; wine, 1,482,239,914 gallons annually. Thus the cost of liquors in the world, in ten years, is $64,405,042,231, or twice the value of the United States of America.—*Parker.*

2. HARVEST OF CRIME. Three-quarters of all crime in this country is connected with intemperance. This nation receives in return for this traffic, 500 murders, 500 suicides, 100,000 criminals, 200,000 paupers, 60,000 deaths from drunkenness, 600,000 besotted drunkards, 600,000 moderate drinkers who will be sots ten years hence, 500,000 homes destroyed, 1,000,000 children worse than orphaned.—*T. Parker.*

3. A HARVEST OF IGNORANCE. Intemperance stands in the way of all moral and mental progress. It is opposed to churches, schools and education. Free schools cost in the United States, $95,400,000 a year. Rum costs 700,000,000, or more than seven times as much.

4. A HARVEST OF DISEASE. It ruins the body. It makes it subject to disease, and its victims are far more likely to be carried away by prevalent diseases. A temperance man is far safer in times of cholera, or when wounded, than an intemperate one.

5. A HARVEST OF LOST SOULS. No drunkard can enter the kingdom of heaven.

MUTTON HAMS.—As a change from a too frequent pork, eggs and poultry diet, mutton hams would be very desirable. A sheep slaughtered occasionally would furnish sufficient fresh meat for a week's consumption, without the legs and shoulders. These may be cured as hams, and afford a toothsome change of diet, either sliced raw or lightly broiled over clear coals. To cure the hams, proceed as follows: The legs of a fat sheep are cut into the shape of hams, and rubbed over with a mixture of equal parts of bay salt and brown sugar. They then remain twenty-four hours. A pickle is made as follows: two pounds each of bay and common white salt, six ounces of saltpeter and one pound of brown sugar are boiled in four quarts of water, the liquid being skimmed as it boils; when the pickle is cold, the hams are put into it and kept covered for two weeks. They are then taken out, wiped dry, hung up and smoked over a slow fire of damp wheat straw. The knuckles should be filled with brown sugar and tied over closely with pieces of bladder. The hams are then hung up in a warm place, which causes the fat to melt partly and become absorbed by the lean meat. A few sweet herbs may be pounded and mixed with the pickle to add desired flavor. The shoulders may be prepared by removing the blade bones and treating them as above, taking care to rub the openings with plenty of the mixed salt and sugar. When taken from the pickle, they should be sewed up. To keep the meat, place it in a clean box between layers of sweet hay; cover with a close-fitting following lid, upon which a weight should be laid.—*Boston Journal of Chemistry.*

OFFICE-HOLDERS are not like sunflowers: they never give the God, when he sets, the same look that they gave when he rose.

RECENT LITERATURE.

Improved Dwellings for the Laboring Classes.—New York: G. P. Putnam's Sons.

This pamphlet of 45 pages, appearing as it does simultaneously with the agitation of the horrors of the tenement-house system among the property holders of this city, is calculated to accomplish much good. There is no question which so vitally concerns the well being of a nation as that of the health and comfort of the working classes. Notwithstanding the efforts of the various charitable and hygienic societies, there seems to have been thus far so little done, that in 1878 the death rate in this city was 24⅞ per 1,000, nearly one-half of which was furnished by children under five years of age. By such statistics the pamphlet demonstrates the need of improvement in the construction of the dwellings of the largest portion of our inhabitants; describes some model tenements, with diagrams, &c., and gives some valuable suggestions as to the means of effecting the much-desired reform.

Out of His Reckoning. By FLORENCE MARYATT Boston: Loring. Price 50c.

This little story of domestic life will be enjoyed by those with whom the author is already a favorite. There is nothing at all sensational about it, the only villain being a well-mannered youth whose greatest fault is his inability to decide which of two charmers he will marry.

How We Saved the Old Farm and How It Became a New Farm. By a Young Farmer. Boston: Loring. Price 50c.

This instructive work will furnish many useful hints to the farming community, and as the "hints" are conveyed in a most entertaining style the book can be read for pleasure as well as profit.

FISH AS BRAIN FOOD.—Since during the acts of sensation and intellection phosphorus is consumed in the brain and nervous system, there arises a necessity to restore the portions so consumed, or, as the popular expression is, to use brain food. Now, as every one knows, it is the property of phosphorus to shine in the dark; and as fish in a certain stage or putrefactive decay often emit light, or become phosphorescent, it has been thought that this is due to the abundance of phosphorus their flesh contains, and hence that they are eminently suitable for the nourishment of the nervous system, and are an invaluable brain food. Under that idea many persons resort to a diet of fish, and persuade themselves that they derive advantage from it in an increased vividness of thought, a signal improvement in the reasoning powers. But the flesh of fish contains no excess of phosphorous, nor does its shining depend on that element. Decaying willow wood shines even more brilliantly than decaying fish; it may sometimes be discerned afar off at night. The shining in the two cases is due to the same cause—the oxidation of carbon, not of phosphorus, in organic substances containing, perhaps, not a perceptible trace of the latter element. Yet surely no one found himself rising to a poetical fervor by tasting decaying willow wood, though it ought, on these principles, to be better brain food than a much larger quantity of fish.—*Dr. J. W. Draper, in Harper's Magazine*

THE LIBRARY TABLE, which has heretofore been published as a Fortnightly, will, after the 22d of March, be issued weekly. It will be increased to 32 pages, several new departments will be introduced, and a number of distinguished contributors, in addition to those whose writings have already placed this journal in the foremost rank of periodical literature, have been engaged. Dr. McCosh, who is regarded by many as the ablest orthodox minister in this country; Junius Henri Browne, the popular magazine writer; Edgar Fawcett, the author of so many charming verses; Henry W. Bellows, D.D., L.L.D., the distinguished Unitarian divine; Rev. O. B. Frothingham accomplished as a preacher and writer; Thomas Bailey Aldrich, that most delightful of authors; Rev. Chas. S. Harrower, the popular Methodist minister, whose originality and brilliancy make him attractive as a preacher and an author; G. T. Lanigan, one of the most industrious and instructive editors of "The World," who also has an enviable prominence through his delightfully humorous poems. Geo M. Towle, the latest of whose works, "Pizarro" and "Vasco de Gama," should earn for him the eternal gratitude of parents. Abbey Sage Richardson, Edmund C. Stedman, J. T. Trowbridge, Arthur Gilman, Samuel Osgood, D.D., L.L.D., are a few of the well-known and brilliant writers who are announced as contributors.

The characteristic features will be, independent discussion of social and political topics, comments on current events, critical notes on literary topics, reviews of new books, biographical and critical papers on noted contemporary authors, contributors miscellany, notes and queries, "a forecast of new books," and a weekly review of finance and stock markets. The drama, music and the fine arts will each have separate departmens, conducted by the best talent that can be secured. Subscription price, $2.50; six cents per copy. Messrs Bothwell & Hinton, No. 1 Evening Post Building, New York, are the publishers.

ECLECTIC MAGAZINE.—The April number of the Eclectic contains twenty articles, and there is scarcely one of them which does not possess some feature of special interest and value. The one which will attract most attention, perhaps, is the lecture on The Electic Light, delivered by Prof. Tyndall, at the Royal Institution. This is the opening article of the number, and is followed by a remarkably entertaining paper on Edinburgh Society Seventy Years ago, containing personal reminiscences of Jeffrey, Sydney Smith, Brougham, and the rest of the famous group that founded the Edinburgh Review, besides other prominent figures in the society of that period. Another highly entertaining article is one on The Evil Eye, and other popular superstitions; but the paper which, after Prof Tyndall's, will arouse most interest is the opening instalment of John Stuart Mill's Chapters on Socialism, which promise to be a pregnant discussion of a subject of vital importance at the present time.

The remaining articles are as follows: Animals and their their native Countries, by Alfred Russell Wallace; the concluding part of The Earth's Place in Nature," by J. Norman Lockyer, F. R. S.; About Joseph Addison; the second instalment of Mademoiselle de Mersac, which promises to be a fresh and charming story; A Broken String, a poem; the second paper on Ancient Egypt, by Reginald Stuart Poole; At the Convent Gate (poem), by Austin Dobson; Mesmerism, Planchette, and Spiritualism in China; Robert Dick, the Thurso Baker, by William Chambers; The Pope's New Encyclical; A Flower (poem); A Biographical Sketch of the Rev. James H. Fairchild, D. D., President of Oberlin College, which is accompanied by a steel engraved portrait; and four well-filled Editorial Departments.

ST. NICHOLAS FOR APRIL—Opens with Little Puritans, an article from the pen of Horace E. Scudder, describing child-life among the early settlers of New England. There are two illustrations, by George L. Barnes, one of them. The Tithing-man keeping order among the Little Puritans at Church, forming the frontispiece of the number. Thomas Hughes, the famous author of Tom Brown's School-Days at Rugby, contributes a lively English boys' story. Harriet Prescott Spofford is represented by the first half of a story entitled A boy Astronomer, one of the illustrations being by C. S. Reinhart. The New York training-school for Little Housemaids, popularly known as the Kitchen-Garden, with the games and songs of the children, are described by Olive Thorne in a long article profusely illustrated by Jessie Curtis. Celia Thaxter, presents a lovely Easter Song; Lucy Larcom, a charming April poem entitled, Shower and Flower; and Mrs. Mary Mapes Dodge, some comical verses about The Little Big Woman and the Big Little Girl. There are two tales of adventure: one, A Morning Call from a Panther, dealing with life in Hindustan; the other, Spoiling a Bombshell, describing, with the aid of a striking picture, the daring act of a midshipman during a sea-fight. Besides all this, there are: a biographical sketch of John Milton, with three portraits of him at different periods of his life; a story of German fairies; and the usual overbrimming supply of good things in the editorial departments—Jack-in-the-Pulpit, Letter-Box, and Riddle-Box.

THE THIRTY-SEVENTH ANNUAL REPORT of the Board of Education of the County of New York, for the year ending Dec. 1878. The "Report" is interesting reading. From it one learns, among other things, that for "accomplishments" so called, the following sums were expended; Special teachers of music, $12,871,80; special teachers of drawing, $25,778,40; special teachers of German, $13,597,15; special teachers of French, $2,555,10. Special teachers of philosophy, chemistry and science, are reported *nothing*. The whole amount of money drawn from the Comptroller for purposes of public instruction, during the year, $3,288,374,93. Male teachers receive not less than $1,500; female teachers, an average not exceeding $800 (the justice of this must strike the most indifferent observer). All the schools have been examined at least once during the year, and a series of tables are given, showing the results in each class of schools. In instruction (that is percentage attained in studies), under the head of "excellent"—the highest classification—male schools are recorded as 244, female schools, 317. In discipline, male schools, 401, female schools, 466.

The following table of "comparative proficiency" is extremely interesting:

	Discipline, Excellent.	Reading, Excellent.	Spelling, Excellent.	Writing, Excellent.	Arithmetic, Excellent.
Male schools.....	82	40	73	69	41
Female grammar schools	98	80	92	93	56

The report says "the female grammar schools have improved in every respect, and are superior to the male grammar schools in all the matters referred to. Seventy-nine members of male schools suspended, two in female schools. Much space is given to outlining methods of instruction and to discussing sanitary conditions of the schools. These two divisions alone should recommend the book to the careful consideration of every one interested in the cause of education. Salaries paid to the officers and teachers of the College of the City of New York, amounted to $119,107,20. Whole number of scholars entered for the year, 1,263.

VARIETIES.

THE SHADOW KISS.

WE sit in the bright, cozy parlor—
My Lady Coquetterie and I;
"Oh! I'd give the world for just one kiss,"
I more than half pleadingly sigh.

Then she roguishly metes me my answer:
"And I tell you, sir, once and for all,
You shall never kiss *me* till the wedding day,
Though you'd give twenty worlds, Mr. Saul!"

'Twas my fiftieth time to beseech it,
And her fiftieth time to decline,
And try as I would, I could coax nor steal
No kiss from this madame of mine.

So we sit in the cozy, bright parlor,
And she gossips of Lent and the ball,
While the light on the table behind us throws
Our shadows before on the wall.

"Now surely," I once again ply her,
"You could have no objection to this;
Look there on the wall two shadows there be—
Let my shadow your shadow kiss."

"Very well," and we watch the performance
Of the profiles approaching eclipse;
In a second 'tis done—our shadows have met—
Our shadows and likewise our lips.

"*Sainte nitouche*, so at last I have triumphed!"
And she innocently says, "Not at all!
'Twas only a shadow kiss." Then she resumes
Her chat about Lent and the ball.

[*Courier-Journal.*

THE BOTTOM DROPS OUT OF A FARM.—An incident occurred at Bow Park farm (of the Hon. Geo. Brown, of the Toronto Globe), about four miles from this city, a few days since, which created quite an excitement in the neighborhood. When darkness settled down over the scene the night before there were no signs of what occurred during the silent watches of the night. The river wound gracefully along, and the road leading to the homestead was as firm as a rock. In the night one of the employees heard a deep rumbling sound. In the morning he told what he experienced, and declared he had heard the shock of an earthquake. The mystery was soon solved, for on proceeding along the roadway a sight that struck amazement into every witness was revealed. An acre or more of the earth had sunk nearly forty feet, and the tops of the trees were just visible on the level with the surface. The earth on the sides of the chasm is quite perpendicular, and the query is, where has that acre of land gone to? It is not a land-slide, but a complete disappearance. Some think that it is caused by a quicksand bottom, and others that the river had washed a stratum out beneath. Whatever the cause, the occurrence is a startling one in our staid and tranquil neighborhood.—*Brantford* (Can.) *Reporter*.

NEW DEFINITIONS.—The School Board is responsible for the diffusion of much useless knowledge. A Board Examiner, performing his functions in a purely agricultural parish, recently asked a mixed class. "What is a husbandman?" No answer was given for sometime, till at last a little girl ventured, "Please, sir, a man as has got a wife." The Examiner became thoughtful, and sorrowfully took his way to a parish owned by a Duke, and overawed by dueal establishments. Here he said, "Tell me what is meant by a nobleman?" There was silence for some time; at last one smart little boy replied, "Please, sir, it's a gentleman as gains his livelihood by riotous living!"—*London Echo*.

The Princess Louisa Margaret went to England to meet her Patrick. The convenience of this royal matrimonial arrangement is immense. The young man has only to tilt his feet upon a window and watch the coming of his pretty Princess to his side from over the seas. The British tax-payers doubtless contemplate the ceremony from a fiscal standpoint, as they have had to grant Arthur Patrick a marriage allowance of not less than $50,000 a year. The young man's present allowance of pocket money is $75,000 a year, and it is said he is to be made Viceroy of Ireland, which will give him $100,000 a year more, with the expenses of the Vice Regal household ($30,000) paid by his mamma's government. The young couple will be able to go to housekeeping.

ONCE upon a time a man sailing between New York and Norwich said to the captain of the ship: "I wish I had something to do." Whereupon the captain, Colt, replied: "Do you see those bundles and packages in the berth of my state-room? Their number is increasing with every trip; they are in the way, and the care and attention I have to give to them consumes more time than I can afford. Suppose you collect and take charge of these private packages for a fair compensation. I think you can easily build up a paying business." The man, whose name was Adams, took the hint, and from such a beginning originated the Adams Express Company.

GOVERNMENT STATISTICS.

	Yearly.
Salaries of the ministers of the Gospel,	$6,000,000
Cost of dogs	70,000,000
Support of criminals	12,000,000
Fees of litigation	35,000,000
Cost of tobacco and cigars	610,000,000
Importation of liquors	50,000,000
Support of grog shops	1,500,000,000
Whole cost of liquor	2,200,000,000

[*Maine Temperance Journal.*

A MEMENTO of the great Napoleon at Tallahassee, Fla., is a gilt china teacup adorned with the Emperor's monogram and a colored representation of the harbor of Otranto, Italy. It also bears the date 1813. The relic is thought to have found its way to Florida in care of the son of Marshal Murat, who went to that State in 1821.

CHINAMEN wear five buttons only on their coats, that they may keep in sight something to remind them of the five principal moral virtues which Confucius recommended. These are *jeu*, humanity; *y*, justice; *ly*, order; *tche*, prudence; *sin*, rectitude.

For Women.

CONDUCTED BY MISS FAITH RIPLEY.

"CONQUERED AT LAST."

Some time ago the Mobile Evening News offered a prize for the poem, by a Southern writer, which should be judged most meritorious, "expressive of the gratitude of the Southern heart toward the people of the North for the philantrophy and magnanimity so freely and nobly displayed in the time of the dire affliction of the South by pestilence." There were seventy-seven competitors, widely scattered, and their work was carefully examined by a competent committee, who decided that a poem entitled "Conquered at Last," by Miss Maria L. Eve of Augusta, Ga., though it was rough in construction, yet for its brevity, directness, spirit and force most truly represented the real sentiment of the Southern people. The following is the poem:—

You came to us once, O brothers in wrath,
And rude desolation followed your path,
You conquered us then, but only in part,
For a stubborn thing is the human heart.

So the mad wind blows in his might and main,
And the forests bend to his breath like grain;
Their heads in the dust, and their branches broke;
But how shall he soften their hearts of oak?

You swept o'er our land like the whirlwind's wing,
But the human heart is a stubborn thing.
We laid down our arms, we yielded our will;
But our "heart of hearts" was unconquered still.

"We are vanquished," we said, "but our wounds must heal;"
We gave you our swords, but our hearts were steel.
"We are conquered," we said, but our hearts were sore,
And "woe to the conquered" on every door.

But the spoiler came, and he would not spare,
The angel that walketh in darkness was there:—
He walked thro' the valley, walked thro' the street,
And he left the print of his fiery feet

In the dead, dead, dead, that were everywhere,
And buried away with never a prayer.
From the desolate land, from its very heart,
There went forth a cry to the uttermost part:—

You heard it, O brothers!—With never a measure
You opened your hearts, and poured out your treasure.
O Sisters of Mercy, you gave above these!
For you helped, we know, on your bended knees.

Your pity was human, but oh! it was more,
When you shared our cross and our burden bore.
Your lives in your hands, you stood by our side;
Your lives for our lives you lay down and died.

And no greater love hath a man to give,
Than lay down his life that his friends may live.
You poured in our wounds the oil and the wine,
That you brought to us from a Hand Divine.

You conquered us, brothers; our sword we gave;
We yield now our hearts—they are all we have.
Our last ditch was there, and it held out long;
It is yours, O friends! and you'll find it strong.

Your love had a magic, diviner than art,
And "Conquered by Kindness" we'll write on our heart.

TALKS ABOUT MY JEWELS.—No. 4

BY MARGUERITE.

GERTIE stood one morning, waving a hair-pin over her head, with a button dangling in the center of it and exclaimed, "Hurrah for mamma, and hurrah for mamma's childers!" I had just promised her that she might go with us to church, and she was supremely happy. I hardly know whether it is better to take children to church or not, if they can be left at home. I know I want mine to grow up to be constant church-goers, attending, not from a sense of duty but wholly prompted by love; but how can I be sure of accomplishing this?

One auntie declares that "Gertie will be disgusted with church by-and-by, if she attends now when she cannot understand the service," and besides, a mother has little rest, if she has a sample of "Helen's Babies" at her side. The little one may be demure enough during prayer, and put the little chubby hand over her face, and watch the minister through her fingers, or she may slip quietly off her seat and slyly pass into the next pew, to visit a boy neighbor, who has been intently looking at her for a long time. I find if the first liberty taken is unnoticed another soon follows twice as bad. The only consolation I got in my last tribulation of this kind was the remark—that "a mischievous child was never a fool."

The other day a gentleman called who is notorious for his antipathy to things religious. He asked Gertie "to take a ride with him." She declined. He insisted, and showed her his horse and carriage. She hesitated a moment and said, "Sometime;" then added brightly, "sometime, I'll go with you to church!"

"Church!" he said, as if provoked. "What do you want to go there for?"

"Oh!" she answered, "to show my new stockings."

"Yes," he replied exultingly, "that, or something like it, is just what everybody goes for!"

If she had told the minister that, I would not have cared, but was very sorry she said it to one who already held religion in contempt. I had a quiet talk with her afterward and told her it was Jesus we went to church to learn about, and of the home prepared for us if we love Him.

"Will there be lots of little boys and girls to play with, and any w'ocking chairs up there?" she asked me once.

I told her there would be everything she would need to make her happy, and she often talks yet of the heavenly "w'ocking chairs."

I wonder if every one hurries through their prayers sometimes, on the same principle of the boy who said, "Mamma, God knows the rest."

Bessie was gone one evening, and Fred cried whenever I left his side, and in my haste to get Gertie into bed, I said, "Only say God bless papa and mamma and take care of Gertie this night." She did it, and after I left her she cried bitterly because "she hadn't said it right." I went back again, and she went through with the usual form:

"Now I lay me down to sleep,"

and said "it right," as I supposed, and I left her. Again she cried as if heart-broken, and I could not understand her. Papa solved the mystery. In my haste I had not waited for her to say "Amen." She has a "God bless" for all her new friends, even remembering often "Jack and Gill" and little "Johnny Stout," who are real characters to her. She was almost asleep the other night when she called, "Mamma, I forgot to pray for Cousin Mamie." "Well, just say, God bless Mamie," I said.

"I must get out of bed first," she said, and the little white-robed figure, with clasped hands and closed eyes, asked "for a blessing on cousin, and that she might be made well." "Bless Will, too," I prompted, which she repeated, for I felt that one would not be entirely happy, even with God's blessing, without the other to share it.

PATCH-WORK.

As this old-fashioned work is again becoming fashionable, a few remarks about its appropriateness and utility may not be amiss. There are some people who have a perfect passion for this work; there is for them a peculiar fascination in arranging and placing the various bits of color. No other kind of needle-work is as suitable for teaching a little girl the use of the needle. It is pleasant to see the effect of the combinations and contrasts, and the little fingers can work more nimbly, in the short over and over seams, than they would in the long seams of either pillow-case or sheets. It is, besides, a nice way to make disposition of the accumulation of remnants in the scrap-bag. Old ladies, too, like to piece bed-quilts, and "grandmother's quilts" are precious heir-looms in many families. It is a matter of pride with these venerable ladies to be able to do something that is useful and pretty; and, no doubt, many memories of the by-gone years are stitched into the seams, and perhaps some sad reminiscences are called forth by the sight of a long-forgotten remnant of a garment, worn in the long ago by one whose busy hands are placed over her pulseless heart. To the old ladies who delight in this work, it is doubtless, a solace in many a lonely hour, and it would be almost a deed of cruelty to pronounce the labor of their hands useless. And to the little ones, who ought to learn to ply the polished shaft, it is mixing pleasure with profit. If an active, mature person has nothing else to employ idle hands and hours, it may do to cut up calico into scraps, just for the sake of keeping out of mischief; but there are so many more profitable ways of employing one's time and energy, that it seems a waste of both to spend them upon patch-work. An aged lady of my acquaintance has, within the past year, pieced together, for quilts, over thirty thousand pieces of cloth, and showed great taste and ingenuity in their construction; and it is really a deed of kindness to employ her to make patch-work, as it helps support her, and enables her to to purchase many comforts with which to brighten her pathway to the grave.

FARMER'S WIFE.

NEVER.

BY JOHNNY MOFFATT.

NEVER to see your face again,
Never to press your hand,
Never to look in your loving eyes
'Till we meet in the better land;
Never to walk in the shady lane
With your hand upon my arm,
Never to hear your voice again.
In song's bewitching charm.

Never—how hard 'tis to write that word;
Never—how long it seems;
Never—ah! no, for my darling one
I shall see thee oft in dreams
Again, as I saw you in dreams gone by,
When stars shone bright above;
When we were so happy, you and I,
In the dawn of our early love.

[*N. O. Picayune.*

"PUTTY."

ESTHER had been making a very pretty bracket which was ornamented with leaves and grapes done in putty work. It had cost her but a few pennies expense in addition to her labor, and she was justly pleased and proud of her handiwork. There was still a roll of the plastic material left over, and frugal Aunt Heppy suggested that they should mend up things with it.

"Nothing lasts like putty, if it doesn't make a very handsome seam. Now, there is that big pitcher of mother's, Esther, let's see what we can do with that."

It was the very best room pitcher, and Nelly had broken in the side of it as she went flying along one morning to fill it, the day they expected Aunt Agnes. Mother had saved the pieces, she thought so much of that pitcher, and then she had a vague hope that some day a one-armed soldier would come along with a cement that really *would* mend glass and China. She had tried all of them thus far, but without success. Father rather suspected that she meant to start a cement store some time, she was laying in so much stock.

"That never will answer for the the spare room, but we can make it good and sound for common use," said auntie. "If it is rather homely we mustn't mind that these hard times." So a nice seam of putty work was laid on over the broken edges, and the piece laid away to dry. Mother entered into the spirit of it and brought out a great number of cracked or broken articles which would be the better for a similar treatment. She was so glad not to give up her big stone crock which had been cracked from top to bottom, and the good butter bowl she had used for years. Altogether, Aunt Heppy's putty work gave great satisfaction, and proved a saving of a good many dollars, though not as ornamental as Esther's bracket.

J. E. M'C.

TOILET NOTES.

TO CURE MOTH-PATCHES.

(1) Add about one teaspoonful of pulverized borax to a basin of water when washing the face morning and evening; or a more convenient way would be to keep a quantity already dissolved in a bottle of water, and pour it into the wash-basin as often as needed. Twice a day is quite often enough to use it, and the moth-patches should slowly disappear in about ten days or two weeks. (2) Wash at night with equal parts of glycerine and white of egg; in the morning wash off with fine soap and warm soft water; repeat till cured. (3) Take two drachms of iodide of potash, one drachm of powdered rhubarb, and mix them with one ounce of lard, then rub a little on the spots once or twice a day.

SIX RECIPES FOR REMOVING FRECKLES.

(1) Get ten cents' worth of gum-benzoin and alcohol. Let it stand until the gum has dissolved sufficintly to redden the alcohol, and then pour off this mixture into a pint bottle, to the depth of half an inch, and fill the bottle with soft water. The preparation will then resemble milk, and is ready for use. Bathe the freckles with a soft cloth dipped in the liquid. If the skin smarts under the application, add a little more rain water. (2) Take beef's gall, half an ounce; saleratus, borax and gum guaiac, of each a quarter of an ounce (pulverized); alcohol and rose water, of each a quarter of a pint; mix and let stand ten days, shaking occasionally. Use as a wash twice a day. You can get this wash made up at the drug stores; it will cost you about thirty cents. (3) Emulsion of almonds one pint, powdered borax two drachms, tincture benzoin compound two drachms, mix and apply to the face night and morning. (4) Sour bran water applied to the face at night and allowed to dry there, will remove freckles and sunburn in a short time; will make the skin smooth and fair, but very easy to freckle again. (5) One-quarter gallon rain water, one ounce benzoin, one ounce aqua ammonia, one ounce rose water, two ounces glycerine; mix well; shake before using. (6) One ounce of lemon juice mixed with a quarter drachm of sugar will remove freckles. Keep this lotion in a glass bottle, corked tightly, a few days before using, and apply to the freckles occasionally.—*Evening Post.*

QUESTIONS ANSWERED.

MISS RIPLEY:—Would you be so kind as to give me some information in regard to the "Study at Home Society," mentioned by Annie L. Jack, in the RURAL? If I knew something of its rules and requirements, and if it were possible, I would like to become a member.

I have been an interested reader of the "Woman's Club," and, woman-like, have wished very much to have *my say*; but my long unused pen refuses to do its office. I find everything I wish to say, said so much better than I could possibly say it, that I hold my peace and look on. I would, however, like to thank Margaret B. Harvey for her excellent article on music, and to recommend it to the notice and *practice* of all RURAL musicians. It may afford her a little pleasure to know that one, at least, of the readers of that article, after years of neglect, has again opened the piano, and attacked "Strauss' Waltzes" and the "Shepherd Boy."

MRS. S. G. H.

On application to the Secretary of Society for Encouragement of Study at Home, No. 9 Park St., Boston, Mass., you will elicit full particulars as to the aims and requirements of the Society.

MRS HORTWELL, MADISON Co., N. Y.—An adult exhales by the lungs and skin, in the twenty-four hours, three pints at least of moisture, loaded with organic matter ready to enter into putrefaction; the quantity is often increased in sickness and the quality is always more noxious. This moisture goes chiefly into the bedding, in the case of invalids. It *stays* there, because, with the exception of a weekly change of sheets scarcely any other airing is attempted. Must not such a bed be *always* saturated, and be always the means of *introducing again* into the body of the unfortunate patient who lies in it that poisonous matter which nature is trying to get out of the system? This is probably why your physician ordered you to buy fresh, clean straw, put it into a ticking and burn the feather bed on which your son has been lying during his six weeks fever.

A great deal of fun has been poked at woman for looking under the bed as a last act before retiring, and it has been supposed that the habit was a silly and altogether useless one. But a Mrs. Mastin, of Dallas, Tex., has personal knowledge to the contrary. The Herald, of that place, says: "Mrs. Mastin went to her room to retire, but, woman-like, she looked under her bed, and though she had oftentimes done so before, it was well that she did so then, for there underneath lay curled up a man." What followed can thus be condensed: Mrs. Mastin screamed, the man came out and ran, and a neighbor came and fired his gun. No one hurt and no one caught. But the theory that it is necessary for a woman to look under the bed is established.

The ladies of Virginia are to erect at Winchester, June 6, a shaft memorial to the Confederate dead. It will be dedicated on that day with appropriate ceremonies. It will be in hight twenty-two feet, the base four feet broad. The column will be made of the finest Italian marble, and surmounted by a funeral urn and drapery, and the base of Richmond granite. On its front will be the coat of arms of the State, and on the different panels will be appropriate inscriptions.

Mrs. John Jacob Astor, in ten years, has secured homes and the means of a livelihood for about 45 homeless children at a cost of about $67,000.

Domestic Economy.

CONDUCTED BY EMILY MAPLE.

SOME NEW COOK BOOKS.

MARY WAGER-FISHER.

Was there ever before, in the history of the world, such a mania as now for writing books on cooking? How many new ones have been published within the past ten years—or five—I cannot say: but a good many. I have five at my elbow as I write, each one excellent in its way, and the author of each claiming for it a specific superiority over all the others. The copy I have of Miss Leslie's "Standard Cookery," published nine years ago, was then in its *sixtieth edition!* Her cookery is somewhat complex—too elaborate for plain cooks—but very good and reliable. Professor Blot's "Hand-Book of Practical Cookery for Ladies and Professional Cooks," is still more complex, and, as might be expected, contains very much that is foreign to American cookery; but for soups and for novel and palatable ways of using up "odds and ends" of meats, etc., it is excellent.

Mrs. Trowbridge's "Cook Book and Housekeeper's Aid," opens with a list of rules for housekeepers, that are alone of great use. They treat of buying groceries, a lesson which every inexperienced housewife appreciates: tell how to care for household supplies, and give a multitude of recipes for the "hundred and one" things that one likes to know about, and which do not appertain to the domain of cookery. Her recipes for cookery are of the plainest description and the briefest, rather too much so in some essentials. Marion Harland's "Dinner Year Book," containing a bill-of-fare for twenty-eight dinners for each month in the year—336 dinners—with instructions as to how to prepare each article, is a voluminous book of seven hundred pages, with a number of colored lithographic plates. She writes an amusing preface, which is followed by an article "Touching on Saucepans," that abounds in bright suggestives.

A little later comes Mrs. Whitney's "Just How; a Key to the Cook Books." While Marion Harland prepared her "Dinner Year Book" for the convenience of such persons as are always worried with the "What-shall-we-have-for-Dinner?" question, Mrs. Whitney writes her's for the sake of furnishing most explicit directions—putting in what other cook-book makers leave out. For instance, instead of the ordinary direction, "add flour sufficient to make" a dough or batter, she gives the exact amount, leaving nothing to guesswork. Her book is a small affair, of scarcely more than three hundred pages, looking even smaller, so compact it is and convenient to handle, although the type is large and clear. It is admirably practical, abounding in excellent directions. I have looked it through carefully, and find nothing I feel like criticizing but her method of boiling eggs, except for really hard boiling—as an egg for ordinary eating should *never* be *boiled*, but only remain from three to seven minutes (according to one's taste for hardness) in very hot water that does not boil.

Perhaps a recipe from each book will best convey an idea of their respective merits. Here is one of Mrs. Whitney's directions for "MILK-DIPPED TOAST." Make ready: Fire, and sliced bread, say a dozen slices cut smoothly, evenly and a quarter of an inch thick; one quart of milk scalded in an inner boiler; three round teaspoonfuls of flour, or two very heaping of corn-starch mixed with cold milk put to it by the teaspoonful till smooth and thin; one teacupful of broken butter; one round teaspoonful of salt; a clean spider. Set the spider on the fire; pour the scalded milk into it as the spider becomes hot; let it come to a boil; stir in the flour-thickening; pour it into the middle, stirring it round steadily and smoothly till all is thickened. Be sure the milk is boiling when you add the thickening, and that it boils up, cooking the flour before you leave off stirring. Now put in your butter, stirring smoothly again till it is melted and united, without oiliness, to the thickened milk. Add the salt.

Let all your stirring be done gently, and *underneath*, in spreading circles from the middle, holding your spoon horizontally, with the back of the bowl slightly touching the spider. Set the spider on the back of the stove, or the top of a hot kettle, while you toast your bread. Dip each slice of toast, as ready; turn and soak it, then pile in toast dish. Pour the remainder of the dressing over the whole. I prefer to keep the toast slices in the "dip" over the fire, as long as may be without their breaking to pieces. If they get a bit of a *boil*, it is no harm. Slide each piece under the preceding ones, until you have as many in the spider as you can manage, then lay them in the dish for table. A griddle spade is nice to take them up with when they are very tender."

It should be mentioned, that in a set of rules, she explains what she means by "broken butter," "round teaspoonful," etc.

Here is one of Marion Harland's "Dinners." It is for Thursday, first week in April:

Chicken Soup.

Mayonaise of Fish. Veal Chops with Tomato Sauce,

Potato Strips. Macaroni and Eggs.

Jelly Cake Fritters.

Chicken Soup.

Take the fat from the top of the liquor in which your chicken was boiled yesterday, and put on the soup to heat. Meanwhile, boil half a cupful of rice tender in a pint of salted milk; and when the rice is soft, stir in a tablespoonful of butter worked in flour to prevent oiling. When the soup boils up clear, skim and add the rice and milk, with two tablespoonfuls of minced parsley. Pepper and salt to taste; simmer ten minutes; chop up three hard-boiled eggs fine; put into the tureen and pour the soup upon them.

Mayonaise of Fish.

Yelks of three eggs; two tablespoonfuls of best oil; two teaspoonfuls of sugar; six tablespoonfuls of vinegar; one teaspoonful of salt, and half as much each of pepper and made mustard; white of one raw egg; two cupfuls of cold boiled fish (yesterday's cod); two heads of lettuce. Rub the yelks smooth with the oil, add sugar, salt, pepper, and mustard, and, when all are mixed, the vinegar, a little at a time. Set by, covered, while you cut—not chop—the fish into strips an inch long, and shred the lettuce. Mix these in a bowl. Whip the frothed white of egg into the dressing, and pour upon the salad. Stir up with a silver fork and put into a glass dish. Garnish with rings of the whites of boiled eggs.

Veal Chops with Tomato Sauce.

Trim and flatten the chops. Dip in raw egg, then in cracker dust, and fry, rather slowly, in lard or dripping. Open a can of tomatoes, and drain off the liquor. Salt the rest of the tomatoes and reserve for Friday's soup. Put the liquor into a sauce pan with a sliced onion and stew ten minutes. Strain out the onion, return the juice to the fire; thicken with a great spoonful of butter, worked up in a teaspoonful of corn starch; pepper and salt. Boil up sharply, and when you have laid the chops upon the dish, pour the sauce over them.

Macaroni with Eggs.

Break half a pound of macaroni into short bits; cook tender in boiling, salted water. Drain well; put into a deep dish and pour over it a cupful of drawn butter in which have been stirred two beaten eggs, and two tablespoonfuls of grated cheese, with salt and pepper. Loosen the macaroni to allow the sauce to penetrate the mass. Pass more grated cheese with it.

Potato Strips

Pare, cut in long, even strips; lay in cold water for one hour; dry by spreading them upon a towel and pressing another upon them. Fry to a light-brown in salted lard. Shake off the fat in a hot colander. Line a deep dish with a napkin and put in the strips. They should not be crowded in frying, but each should be distinct and free from the rest.

Jelly-Cake Fritters.

Cut a stale sponge or very plain cake into rounds with a cake-cutter. Fry to a nice brown in sweet lard. Dip each round in *boiling* milk, to soften it and get rid of the grease. Lay upon a hot dish and spread with sweet jelly or jam. Pile neatly one upon another, send around hot, sweetened cream to pour over them.

Fixing over "yesterday's leavings" is one peculiarity of the Dinner Year Book—the author, having, it would seem, followed home dinners in the series she here gives. I think Mrs. Whitney's recipes are perhaps more wholesome—if one is dyspeptic—than are those of Marion Harland, and may be a trifle less toothsome. Mrs. Whitney makes no pretence at competing with more comprehensive cook books, but it is at the same time quite complete enough for the ordinary housewife. It is cheap in price—one dollar—and is published by Houghton, Osgood & Co., Boston. "The Dinner Year Book" is, as I have remarked, an elaborate affair, admirably and satisfactorily gotten up, and costs $2.25. It is published by Charles Scribner's Sons, New York.

Bryn Mawr, near Phila.

SCRAP-JARS, AND WORK-BASKETS.

One of the most useful articles a lady can have, is a scrap-jar to stand by her sewing chair or writing table. Mine is a two-gallon pickle-jar that had been put among rubbish, because so badly cracked as to be unfit for holding liquids. A coat of brown paint and pictures brightened it up, so that the once worthless jar is now an ornament. The pictures are put on with wheat-flour paste, cooked until smooth. My scrap-jar is as convenient as an editor's "waste basket," as it saves time and steps when there are bits of paper or cloth to dispose of. The jar should be smaller at the top than at the bottom, so that the contents cannot be seen. When full, it can be emptied into the paper-rag bag, which is usually found in country homes.

A common peach-basket makes a neat and substantial work-basket. It should have a wire bail. Cover the outside of the basket and line it, also, with some bright-colored cambric. Wind the handle with braid to match, and cover the upper edge of the basket, with plaited braid to conceal the stitches. Small pockets of cambric may be sewed to the lining—on one side, or both—for holding small articles, like buttons and spools. Each pocket should have a piece of elastic cord drawn into the upper hem to keep it in shape.

To make a standing basket for work; take two peach baskets of the same size, invert one, and set the other upon it. Cover the two with cloth in *one* piece, and tie braid around where the baskets come together. Draw the braid tightly and tie, giving the shape of an hour-glass. The upper basket can be finished like the one first described. The lower basket is merely a stand for the upper one.

Lyons, Iowa. M. G. R.

AN EXCELLENT RECIPE FOR REMOVING DANDRUFF.

A well known physician tells us that there is nothing better for the above purpose than the following preparation: To one pint of alcohol add gum-camphor as large as a small hickory-nut. This, so to speak, merely camphorizes the alcohol. Bergamot, or oil of rose, or any other essence, may be used to perfume it as the individual desires. Wet the scalp with this daily. It will also be found a stimulant of the scalp; a promoter of the growth of the hair and will, in many instances, prevent it from falling out.

DOMESTIC RECIPES.

To Fry Salt Pork.

Cut into very thin slices and freshen by letting lie for an hour or more in cold milk or water. Roll in flour and fry until crisp. Drain from the fat and place the slices where they will keep warm. Pour off most of the fat from the frying-pan and stir in, while hot, a tablespoonful of flour—a little more may be added if the gravy be liked thick—and half a pint of new milk. Season with pepper and salt if not salt enough. Boil up and serve with the crisped pork.

Ham Balls.

Mince very fine cold, cooked ham—that which has been boiled is best, although fried ham will answer if not too salt—add an egg for each person; stir in a little flour and make into balls. Dip into egg and then in grated bread and fry until of a nice brown.

MARY B.

Canning Rhubarb.

Permit me to tell the readers of the RURAL how to can rhubarb—pie-plant—as I have never seen it among the recipes given: Prepare same as for pies and pack into glass cans, covering with *cold* water, taking care to get all the air out, and then put the cover on as tightly as possible. I have just used some which kept nicely, being nearly as fresh as new though not quite so sour, as some of the sourness soaks out in the water, which of course is not used. The pies are made the same as from fresh pie-plant.

MRS. W. W. HUNT.

Prune Pudding.

Take one pound of good prunes and let swell in hot water until soft; drain and take out the stones; spread on a dish and dredge with flour; mix smooth in a very little milk eight tablespoonfuls of sifted flour; add a scant quart of milk and six well-beaten eggs; stir in the prunes by degrees; beat the whole very hard; pour into a mold and boil two hours; serve with wine sauce. MARY B.

Mustard.

We find that all do not know that if mustard be mixed with the white of an egg instead of water or vinegar when used for plasters, it will prevent the skin from blistering. E. M.

News of the Week.

MISCELLANEOUS.

Monday, March 24th, 1879.

Conspicuous in the list of deaths this week have been Thomas W. Sherman, major-general of the United States army; cousin of W. T. Sherman, at Newport, R. I., of which he has long been a resident, and where his wife died only a few days ago; Gen George C. Foster of Burlington, Vt., who served with distinction with a Vermont brigade in the civil war; Dr. John M. Woodworth, surgeon-general of the United States marine hospital service at Washington; Rev. James De Koven, dean of Racine (Wis.) college and a native of Middleton, Ct.; and ex-United States Senator George Goldthwaite of Alabama a native of Boston. Now comes another speedy cure for hog cholera—warranted effectual, cheap, and easily tried without trouble or outlay. It is burnt corn, and the best way to use it is to make a pile of corn on the cobs, effectually scorch it, and then give the affected hogs free access to it. After the second day not a single hog, it is said, will be lost, and the disease will entirely disappear. The remedy is reported to have been tried in a number of cases and never to have failed.

There is quite a secession spirit in Missouri just now. Kansas City has been making a stong effort to get the State line fixed so as to be included in the territory of Kansas, and St Louis is talking about getting herself annexed to Illinois. A member of the Legislature has also introduced a bill to split the state into a North and South Missouri. The President has reached an interesting decision in the matter of the charges filed against each other by Gens Hazen and Stanley who for years have caused a world of scandal by their quarreling and charges and counter-charges of cowardice, ungentlemanly conduct etc, etc; He has ordered a court martial with Hancock president and with Gens. Pope and Augur and other members to meet in Washington to try both Hazen and Stanley.

The extra session of Congress has assembled. Randall of Penn has been elected speaker badly defeating Blackburn of Ky., his Democratic competitor. The Greenbackers had no show: and the Republicans of course had no chance. With the election of Randall the State division of the honors of that position since the organization of Congress has been as follows: Southern states—Kentucky, 9 times; Virginia, 7; North Carolina, 3; Tennessee, 2; South Carolina, 1; Georgia, 1. Northern States—Massachusetts, 5 times; Pennsylvania 5½; Indiana, 4¼; New Jersey, 3; Maine, 3; New York, 1; Connecticut, 1. Which foots up, Southern Speakers, 23; Northern do., 23.

The grand prize of the French academy for poetry has been adjudged to the communist refugee Renard, now a professor in Louisiana; professor of what—dancing, cookery, fiddling or teaching—is not reported; but we learn that New Orleans folks are curious to know who or what he is. Kansas counts on even a heavier immigration than she had last year. One day last week 2500 new-comers from the East arrived at Kansas City, Mo., *en route*, and this week the railroads centering there were notified to prepare for 10,000 more, chiefly from the Middle States. The reduction of the tobacco tax one-third was to give the poor man—cigars are not affected—cheap tobacco. If the manufacturers can keep the price up, as they have resolved at New York, a single firm, the Lorillard, will make $1,000,000 and the rest ratably. Meanwhile, the public revenue has lost $5,000,000 yearly. North Carolina has about one dog to every three sheep, and 28,000 of the latter were destroyed last year by the canines. The farmers want to know if the slaughter can't be stopped. United States officers report that there is less lawlessness on the Rio Grande border than at any time for the last 10 years. The Mexican authorities are making every effort to maintain good order, and have removed the Lipan and other marauding Indians to the interior, where they will have no chance to make it unsafe for Texan life and property.

The Kansas charge against Senator Ingalls is that he bought thirteen members of the legislature to vote for him. The feature in Wall Street has been the advance in the rates for money. The call-loan rate a week ago was 3 to 4 per cent; it is now fully 5 per cent and the tendency is still upward. The banks have been depleted of legal-tender notes by the payments into the Treasury on account of 4 per cent bonds, and the reserve in excess of the 25 per cent. required by law has fallen to $3,840,000, or to less than one-fourth of what it was a year ago. As this low reserve comes just at the beginning of the usual outflow of currency for the April settlements there is some uneasiness about the working of the money market, and the Secretary of the Treasury has thought it necessary to publish a letter assuring the public that he will exert the full power of the Treasury to prevent "tight money." Money in London is down to 2 per cent., and rates are unusually low at every European city. Sterling exchange was near to the gold-exporting point until late in the week, when on account of higher rates for money it fell off. Subscriptions to the 4 per cents continue on a moderate scale, but another $10,000,000 of 5.20 6 per cents have been notified for redemption, making $270,000,000 of the debt on which the annual interest has been reduced one-third since January 1. Silver has taken another tumble in London from 49⅜d to 49⅛d per oz, the latter being the lowest price since demonetization in this country. The bullion value of the 412½-grain silver dollar at the close of the week was $0 8295.

In the Senate of nineteen chairmanships of different committees, the South take twelve and the North seven. In that body there are 19 ex-confederate and only four Union officers, as follows: Ex-confederates, Morgan, Garland, Walker, Call, Cockrell, Vest, Ransom, Vance, Withers, Johnston, Gordon, Williams, Jones, Lamar, Butler, Hampton, Harris, Coke, Maxey. Ex-federal officers—Logan, Plumb, Burnside, Kellogg.

FOREIGN.

Lord Dufferin has been sent as ambassador to St Petersburg, and excused himself in his usual graceful fashion, at a dinner given him by the Liberals at the Reform Club, for taking service under a Tory Government by saying that he held diplomacy to be, like the army and navy, outside the sphere of party politics. He goes out to urge upon Russia with gentle firmness the propriety of getting her proteges in Eastern Rumelia and Bulgaria to carry out the Treaty of Berlin in a peaceable and orderly manner. The fact is that the Eastern Rumelians are determined not to submit to Turkish rule in any form, or to have the Balkan Passes garrisoned by Turkish troops, if they can help it, and they are encouraged naturally in their resistance by the meeting of the Bulgarian Parliament at Tirnova, inasmuch as this body seems to be fully as much occupied with their fate as with the affairs of its own province. Some of the English papers keep exhorting Lord Beaconsfield to give up Eastern Rumelia; but this is asking a little too much, because this he considered the great stroke of his Berlin mission. Nevertheless there are rumors that he is beginning to think of doing it, provided he can get something from

Russia in return that will help to cover his retreat.

The Duke of Connaught and the Princess Louise Margaret, daughter of the Prince and Princess Frederick Charles of Prussia, were married on Thursday. Windsor Castle and St. George's Chapel were finely decorated and the display of wedding presents at the castle was large and brilliant. The Archbishop of Canterbury performed the cermony. The bride was given away by her father. At the conclusion of the service the choir sang the Hallelujah Chorus and Mendelssohn's "Wedding March" pealed forth as the bride and bridegroom left the chapel. The bride wore a white silk dress trimmed with myrtle flowers, and the bridesmaids were similarly attired.

The Zulu war is still the chief topic of foreign interest in England overtopping the war in Afghanistan, and the Eastern embroglio. All idea of annexing Zululand is for the present abandoned. The Fingoes, a powerful Caffre tribe to the South of Natal, which, some years ago gave England a good deal of trouble, are again reported to be discontented and thinking of going to war again. Meanwhile reinforcements are being hurriedly sent forward, but the delay in this matter shows plainly how ill-prepared Great Britian was for going to war with Russia. From Afghanistan there is no news of importance. Yakoob Khan is still negotiating with the British.

In France the members of the Ministries "posted" throughout the country, as mentioned here last week, are preparing a vigorous protest against the action of the majority of the Assembly. On the establishment of the present form of government, it was made a part of the Constitution that the Legislature should meet at Versailles, a town of upwards of 60,000 inhabitants, situated 10 miles southwest of the center of Paris. This was made the seat of government, 1st, because the legislative buildings in Paris had been wrecked by the Communists; 2d in order to punish the capital for its recent turbulance; 3d, to remove the members from danger of pressure from mobs and threatened revolution, and for several minor reasons The red-hot republicans, however, whose stanchest supporters are the lower orders, of whom mobs are usually composed, have always been opposed to the removal of the legislative body from Paris, and now that they have got the upper hand, they insist on a return to the capital. As this will require an amendment of the constitution, and it was stipulated that whenever that document should be subjected to any single alteration, others might also be made, it is expected that the entire constitution will soon be revised and made more favorable to radical republicanism.

A Cough, Cold or Sore Throat requires immediate attention, as neglect oftentimes results in some incurable Lung Disease. *"Brown's Bronchial Troches"* will almost invariably give relief. **25c. a box.**

THE MARKETS.

PRODUCE AND PROVISIONS.

NEW YORK, Saturday, March 22d, 1879.

BEANS AND PEAS.—After the recent fairly liberal business in mediums and marrows, the market is easy again and quotations are regarded extreme. Red kidneys in few hands and held firm. White kidneys and peas have hardly an inquiry. Green peas steady at $1 45 sale bright. Southern B. E. peas dull at $2 50 per bush. bag. Canadian, in bulk and bond, 72@73c Medium beans, choice $1.30@1.35 fair to good, $1.15@1.25. Marrow, prime, free on vessel, $1 40 fair to good, $1.20@1.35; pea, $1.20@1.35; white kidney $1.35@1 40, red, $2.40@2.60; black, $2 10@2.50. California Limas, $4@4 25.

Receipts for week beans, 3,312 bush.; exports, 973 bbls., do. peas, 4,265 bush.

BROOM CORN.—The best short corn is offered moderately only. Other grades are plenty and favor buyers.

Brush and short broom, choice, ₱ lb, 5@5½c; do, common to good, 3½ 4 c.; hurl, good to choice, 3½@4½c; do. common to fair, 3@3½c.; and crooked, 2@3c.

BEESWAX.—Small sales have been at 24@25c. for Western and Southern, with fair offerings.

BUTTER.—There has been a general marking down in prices for old crop butter and some dealers feel that it will be close work to get it out before new becomes a feature. Now is plenty enough to city dealers trade, and old must have exceptional merits to induce a whole sale customer. It is thought that exporters will want much of the remnant, but with the present situation of the market they will be apt to hold off until prices are solely in their favor. New selects still mildly, and arrives quite freely for the early set of the season. Carefully made fresh flavored brings the extremes readily; but when wheels off in quality, it is more of a drug that common old. This fact should be noted, especially by nearby shippers, who have the best end of the market for this production.

NEW BUTTER.—State pails and half tubs, choice 21@22 c.; good, 17@20.c.; Welsh tubs, 17@21c.; very poor, 9 @14c.; Western Creamery extra 28@29c.; fair to prime, 24@27c; poor, 19@21c; imitation, 17@22c.

OLD.—Best half tubs, 18@2 c.; fair to prime, 12@17 c.; firkins, full, 2@2½c.; do., firkins, 14@16c. common State 7@9c. Western, 10@16c, fair to best; State creamery, best, 20@22c.; poor, 4@14c., Western dairy, 14@18c; ladle packed, selected, 15@16c, factory, do., 13@15c.; other, 6@10c.; rolls, 9@14c.; grease, 4@7½c.

Receipts for week—2,574 pkgs.; exports, 1 000 pkgs.

COTTON.—There has been much more activity, and the market closes firm at a decided advance on a better market in Liverpool. Last sales prices are for March, 10.24c.; April, 10.36c; May, 10.47@ 0.48c; June, 10.56c.; July 10 78@10 79c.; August, 10 87@10.89c September, 9 9@10,71c; October, 10 41@10 43c.; November, 10.16@10.18c.; December, 10.11@10.13c.

Quotations for spot cotton are based on American standard of classification, and on cotton in store running in quality not more than half a grade above or below the grade quoted:

	Uplands.	N. Orleans.	Texas.
Ordinary	8 7-16	8 9-16	8 9-16
Strict ordinary	8 13-16	8 15-16	8 15-16
Good ordinary	9 5-16	9 7-16	9 7-16
Strict good do	9 9-16	9 11-16	9 11-16
Low middling	9 1-16	9 15- 6	9 15-16
Strict low middling	10	10¼	10¼
Middling	10⅛	10⅛	10⅛
Good middling	10⅜	10⅜	10⅜
Strict good middling	10⅝	10⅝	10⅝

Fair	12⅜	12⅜	12⅜

STAINED.

Good ordinary	8⅛	Low Middling	9⅛
Strict good ordinary	9	Middling	9 13-16

CHEESE.—Really fancy stock is quite scarce, and occasionally runs above the outside quotation, otherwise there are free sellers, and demand unsatisfactory through the week leads to a little easier tendency of prices.

Quotations: 9@9¼c. for fancy; 8½@8¼c. for fine lots; 7¾@8.c. for good; 3 4½c. for skimmed; 6½@6¾c for half skimmed; State, farm dairy at 8@8¼c. for fine; 7@7½c. for good to prime. Wisconsin factory, fine and fancy, at 8½@9c; do. good to prime, at 7½@8½c. Western factory, fine 7¾@8c.; good and prime, 6½@7½c.; do. full skimmed, 3@4½c.; do half skimmed, at 5@ c.

Exports per week, 42,8 0 boxes.
Receipts for weeks, 50,6?0 boxes.
Liverpool cables, 48s
Steam to Liverpool, 30@35s.

DRIED FRUITS.—Apples are having a very good export and a fair local movement, and prices are well sustained. Peeled peaches have been active and firm in price Small fruits are generally dull.

Alden's evaporated apples are at 12@ 12½c.; new process apples at 9c. State plums, 14c.; Blackberries are quoted at 5c Peaches Peeled Georgia, 7@7½c. for poor; 8½@9½c. for fair to good; 10c. for prime; choice North Carolina, 12@13c.; good do., 9@10c.; unpeeled halves 3½c. quarters, 3c. Pitted cherries, 20@21c. Apples—New, 2½@2¾c. for southern quarters in bags; 3¾@4½c. for prime sliced; do., fair at 3@3½c.; State at 3¾@4¼c. for new sliced; and 4@4½c. for quarters; Western at 3½@4½c. for new quarters. Raspberries, 26c.

Exports, apples, 1,821 bls.

EGGS.—Receipts for week, 9 917 bbls.; do. last week, 7.855 do The market has been excited at one time during the week, 22c. was quoted for all fresh. The trade withdrew at that rate, and closing quotations will hardly survive until Monday

Near points, 19c.; State, and Penn., 18@18½c.; Western, 18c. Southern, 17½@18c.; poor, 16@17c.; duck, 26@28c.; goose, 60@70c.

FLOUR.—Values have been easier on larger supplies of various grades, and buying moderate.

Latest prices are as follows for inferior to very choice superfine State; $3.70@4.10 for very poor to good extra do., odd lots and lines; $4 00@4.25 for good to choice do.; $3.35@3.70 for inferior to fancy superfine Indiana, Iowa, Michigan, &c.; $3.70@4 00 for inferior to good shipping extra do. and $4.00@4.25 for good to choice extra do.; common to about choice white wheat extras, $4.25@5.35; choice to fancy do at $5 35@6 10; red and amber winter wheat, very inferior to very choice trade and family, at $4.10@5 75 (fancy held higher); round hoop Ohio at $3 90@$4.55, and trade and family brands of do at $4.50@6.80; the latter rate for very choice (a few fancy lots held higher). St. Louis, $4 25@5.10 for very inferior to good extra; $5 10@6 00 for good to very choice (with a few very fancy brands in high favor with the jobbing trade) quoted up to $6.50 6.75. Minnesota clear, very inferior to very nice, at $5.75@5.10 few brands going above $4.75. Minnesota "straights," very poor to very fancy at $4.50@6 00; and patent poor to strictly fancy at $5.25@8.25, few brands going above $8.50@7.75; unsound stock at from $3.25@5 25 city mill extras at $4.85@5.20 for West Indies (the latter rate for fancy in new packages); do. for England $3.80 4.00; do trade and family extras, $5.25@6 25 do for South America, $5.15@5 65 for fair to very choice; No. 2 at $3 35@3.15 for poor to very choice.

CORN MEAL.—Sales at $2.10@$2.30 for yellow Western and $2 0@2.05 for Brandywine.

FRESH FRUITS.—The apple market is good for fine stored stock, but prices are kept tame by the comparatively large rail and boat arrivals, mostly from the East. Spitzenburgs, $2@2 37; Russets, $ 75 2; Baldwins $1.75@2, N. E. and poor State, $1 5 1.75. Cranberries nominal at $7@8.50 for made bbls. $2 25@3 fair to fancy crates. Strawberries arrive regularly and down to 75c @$1 ₱ quart hot-house, do., $1.50@2. Pineapples have a fair demand for the few lots of prime coming and here; fancy bbl. boxes, $5 50; fair to prime, $3@4 50; poor, $2@2.25. Peanuts in good demand, with 5c. advance. Va hand-picked, $1 15 1.20; other, 90c. @1 05; shelled, 4¾@5c.

Exports of apples for week, 4,450 bbls.

FURS AND SKINS.—There are no new features. Late caught skins do not bring full rates.

HONEY.—Comb quoted, 7@10c.; strained, 6@8c.

MAPLE SUGAR.—New Ohio, light, 12@13c.; dark, 10@11c.; old, 6@8c. Market dull

GRAIN.—Wheat has been variable, but closed lower on full offerings, and the advices from the other side not especially favorable to shippers. Latest sales are of ungraded spring at 95c.@$1 02; ungraded amber at $1 1¾@1 11½; ungraded red at 95c.@$1 01; No 1 red at $1 14¾@1 14¾; No. 2 red at $1 14@1 14¾; No. 3 red at $1 0 ¾@1 09; ungraded white at $1 1?@1 13; extra white at $1 14¾; white State at $1 13¾@1 14¾; No. 1 white at $1 12¾@1 13, No 2 white at $1 09¾@1 11½; No. 2 amber. March option, at $1 11¾; do., April option, at $1 12 1 12¾; do., May option, at $1 13; No 2 red, March option; at $ 14¾; do., April option, at $1 14¾@1 15; do., May option, at $1 14¾@1 15; No. 1 white, March option at $1 13@1 13¾; do., April option, at $1 13@1 13¾ do., May option at $1 13¾@1 14; No. 2 white, delivery by April 1, at $1 11¾. Rye is lower; Western at 56@59c., and State at 59 61c. Corn is fairly active, closing at for New York No 2 at 44¾@4 ¾ c. New York No. 3 oil at 45¾@45¾c.; New York steamer mixed at 43¾@43¾ ungraded western mixed at 43¾@44c. New York No 2 white old at 48c.; New York No. 2 white at 47c for car lots New York steamer white at 45@45¾c.; round yellow, new, at 45c.; New York yellow old, at 46c.; New York steamer yellow at 46c; New York low mixed, old, at 44¾@44¾c.; yellow western at 44@4 ¾c; yellow southern at 45¾c; New York No. 2. March option, at 44¾@44¾c do., April option, at 46c; do., May option, at 45¾c.; New York steamer mixed, March option, at 43¾c. do., April option, at 43¾c.; do., May option at 44c. Oats are in very good demand for New York No. 2 white at 33@33½c.; New York No. 3 white at 31½@32c.; New York No. 1 at 32¼c.; New York No. 2 at 31¾c. New York No. 1 white quoted at 35@35 c.; New York No 3 at 30¾-31c.; mixed western at 30¾@32c.; white State at 33@36 c.; white western at 33@33½c.; mixed State at 32¾c.; prime No. 2 Chicago all rail at 32 .; do., in store at 30 c. Barley dull; State, 6-rowed, 70@80c.; do., 2-rowed, 55@65c.; Canadian, 80c.@$1 5.

HAY AND STRAW.—Prime hay is doing better on a good inquiry, shipping grades are fairly active.

Sales at 40@45c. for shipping, and 70@80c for retail quantities. Straw quoted at 45@5 . for long rye, and 40@45c. for short rye, and oats at 35@45c.

Exports for week, 1,832 bales.

HOPS.—Emmet Wells, in his Circular, says:

In sympathy with a decline in the London market prices here have fallen 1c. per lb. on nearly every description of hops We revise our quotations accordingly Those holders who hoped for better prices have not given sufficient importance to the fact that most of our home brewers are still well supplied with old hops hops that they bought last season on speculation when prices were even lower than now. Of course they are not carrying anything like as much stock now as they did in the beginning of the season, but we can mention the names of several brewers in this city who would not be obliged to come into market for a year to come. The same, we think, can be said of many of the London brewers who took from us last season nearly a 100,00 bales. There really remains nothing now to give hope for better prices until something is definitely known of the condition of the root in Europe. The heavy snows in America have protected our roots, but the low price of hops will drive many farmers out of the business.

Quotations are for New York's, new crop, choice, 9 13; New York's, new crop, medium, 7@8 New York s, new crop, low to fair, 5@6; Eastern, 6@9; Western, 6@9; Yearlings, 3@4; Olds, all growths, 1@2; Pacific coast, 10@14.

LEATHER.—Hemlock sole is quoted at 18@19½c. for light; 18½@21c for middle; 1.@21c. for heavy; and 16@18c. for good damaged.

POULTRY AND GAME.—Fowls have been scarcer and prices are doing better. We shall soon however, have Southern additions, which may weaken rates. Turkeys do not well. Fowls, N. J., 11c.; Western, 9½@10c.; Southern, 9@9½c. roosters, 5@6c. Turkeys, N J., 12@13c.; Western, 11@12c. Ducks, N J., N. Y. and Penn., $1.50 1.75; Western 75@11.37, Geese, N. J., $1 75@2; nextnearest, $1.50 1.75; Southern, $1@1.25 Western 75@$1.37, the latter for grey. Pigeons, ₱ pair, 3@40c. Choice sizeable turkeys have been scarce and have advanced; eight to twelve pounds is the style wanted. Chickens are selling well when fresh and bright. Some State lots are still quoted at 6@7c. Scant game gives prime ducks some sale. Geese no longer quotable. Frozen poultry is in market; some very choice from Vermont. Frozen turkeys, choice, 18@20c.; fair to good, 14@17c.; frozen chickens, 10@12c. Dry-picked winter chickens, 24@25c.

Turkeys, best, 13@14c., the latter for Pa dry-picked. other, 11@13c; chickens, best, 16@ 7c.; other, 10@14c; fowls, choice, 10@1 c.; capons, 24@25c.; slips, 18@20c; ducks, best; 16@17c.; other, 14@15c. English snipe and plover quoted $1.12@1 37; small snipe, 5@60c.; Mo. wild pigeons, $1.25@1.50. Prospect for good quality pigeons said to be poor this spring. Some of their feeding points very scant of beech nuts. Wild ducks, 50c.@$1.00 for canvass; 40@55c. red heads; 35@45c., Mallards; 25@30c., black; 30@35c. teal; 15@20c., common. A few selections for fancy may exceed these figures, but the bulk of the supply is poor.

OIL CAKE.—Western is quoted at $27@27.50 per ton

PROVISIONS—Have been very dull through the week, but held firm Mess pork quoted at the close, $10.40 bid and $10.50 asked for new for March, $10.45 bid and $10.50 asked for new for April, and May at $10 55 bid and 10.60 asked, and June at $10.65. Bacon at 1¼c for long clear and 5¼c. for short clear. Lard—Western steam at $6.65 for contract grade, $6.62½@6.65 for March; 6.65 6.67½ for April; $6.72½ for May. Steam lard at 6¾c. for prime. Tallow at 6 9-16 for prime. Beef Hams at $18 18.50. Beef, at for extra India mess, $19@ 1, as to quality; packet, $11@11.50; plain mess, $9.50@10.25; extra mess at $10.50@11.50.

SEEDS.—Clover is easy and dull; Western quoted at ¾c. for prime, and 6¼ 6¾c. for choice. Timothy is quiet, quoted at $1.30@1 40.

TOBACCO.—Export demand is slack and home trade light with prices without important change.

VEGETABLES.—Exports potatoes, past week, 1,125 bbls; of onions, 42 do. A demand for potatoe seed has strengthened prices generally local demand also better at, buyers wanting prime quality. Ordinary garden stuff quiet as Southern products begin to divide the trade. Sweet potatoes have kept admirably this season.

Charles on asparagus, $10 doz.' Florida green peas, crate, $1 50@3.50; Virginia kale, 62c @$1 ₱ bbl. do. spinach, $3; Baltimore, do ,$1 75. Virginia radishes $1 Hot-house rhubarb, ₱ 100, $4@8; radishes, $3 50@4; cucumbers, $2@ .50 ₱ doz; mushrooms, ₱ lb, 5 c.; lettuce, selected, 25@30c. ₱ doz.; poor, $1 50@3.50 ₱ bbl. Bermuda potatoes, choice, $5@8 per bbl.; Early Rose, Nova Scotia, $3@3.25; Eastern, $3@3.25; State, choice, at $2 50@2.62 fair to good, $2@2.25; Peach Blow, white, in bulk $1 50@3; red, $2 25@2 75; Prolific, $2 25@2 75; Peerless, State, $1 75@2; in bulk $2@2 12; Jackson white, $2@2 87 Mercer, $2.12@2.37; (outside rate per double heads). Sweet potatoes, Md. & Del. $2 50@2 75. Bermuda tomatoes, 50 80 box. Onions, Eastern, white, ₱ bbl., $1@5, red and yellow, $3@3.25; Chester, $2.50 3. Squash, Hubbard $3@3.50; marrow, $3. Cabbages per 100, $6@7; Ruta baga, per bbl., $1@1.25; beets, 75c.@$1, carrots, $1@1 12; celery, per doz bunches 50@75c.

WOOL.—The movement has been very moderate through the week, and the low grades have been offered at easy figures, but the best fleeces on the moderate assortments are held steady. Quotations are for Ohio, Peonsylvania and Virginia—XXX and picklock 36 37½c.; XX, 34@35c.; X, 31@34c.; No. 1 33@34c. No. 2, 31@33c. common, 26@30c.; combing, 34@ 9c.

New York, Michigan, Indiana and Wisconsin—XX, 30@32c. X, 29@31c; No. 1, 26@30c; No. 2. 27@30c.; common, 26@28c.; combing and delaine, 33@37c.

Iowa, Vermont and Illinois X and XX, 28@30c.; No 1, 30@32c; No. 2, 27@ 28 .; combing, 33@36

Missouri, Kentucky and Tennessee—Washed fleece, 30@33c; unwashed fleece, 18@24c.; unwashed combing, 22@25c.

LIVE STOCK MARKETS

Saturday, March 22, 1879.

BEEVES.—Receipts for the week, 7 689 head; do., last week, 4,883 do, Light supplies last week and moderate offerings for the past six days, proved rather under even Lenten requirements. At the close there was quite a wild demand for cattle, high prices were obtained, especially with the quality of droves considered sellers had the market at their own figures, but seemed satisfied with the advance of ½c. over Wednesday's rates, which brought quotations up to the following points: Poor to medium steers and useful oxen, 9@10c.; fair to good, 1 ¼@1 ¾c; prime and extra, 11@11½c; unusual dressed. Foreign advices indicate the want of American beef in England.

The exports for the week are 8 950 quarters.

COWS AND CALVES—Dull; only a moderate spring trade noted at $ head.

VEAL CALVES.—The market is heavily supplied when including hog-dressed. Prime live, however, bring good prices. N. J and Bucks Co., milk 6¾@7¼c.; good, heavies, 6@6¾c.. State, 5@6c.; poor to fair, 4@5c. Yeals have no settled quotation; the question being very much between current sales or seizure. Hog-dressed calves choice, 9c.; fair to good, 6@8c.; poor 3@4c.

SHEEP AND LAMBS.—Receipts for week, 22,323 head; do. last week 19,019 do. There is an easy feeling in sheep price extreme, 5@6¾c. Winter lambs, 5¾@6¾c. spring lambs, ₱ head, fair to choice, $4 6 It is useless to send fairly small lambs; some have brought only $ @3.50 ₱ head During the week 1,000 live sheep and 3,675 carcasses have been sent to Europe.

HOGS.—Receipts for the week, 18,596 head; do last week, 25,221 do No late sales; quotable rates, 4¾@4¾c. for good corn.

Country-dressed pork light 6¾@6¾c.; medium, 6@6¼c.; heavy, 5¾c.; city dressed, 5¾@6¾c.; Western, 5¾@6c., pigs, 6¾c. Tenderloins, 5 7c.

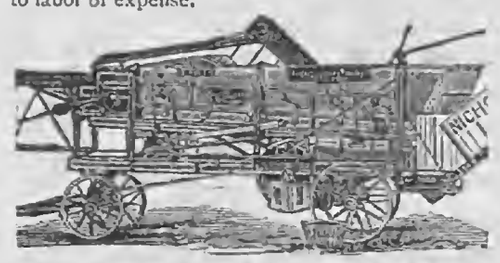
ORIGINAL AND ONLY GENUINE
"VIBRATOR" THRESHING MACHINERY.

WE are sometimes asked why the prices of our goods are apparently higher than some others of inferior make, and we avail ourselves of this opportunity to place the matter in its true light.

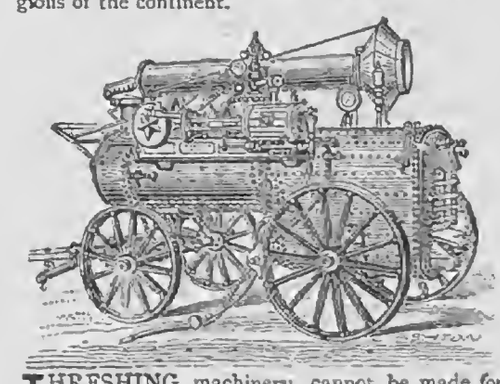
OUR "VIBRATOR" Threshers and Portable Engines embody the best results of our experience and study during our long business career. Whatever would add to their durability, efficiency, and solid excellence, in any particular, has been eagerly seized upon and utilized without regard to labor or expense.



IN this connection it will be pertinent and timely to warn the public against **Cheap** Threshers and **Cheap** Portable Engines. The superiority of our machinery, in all particulars, is now so generally acknowledged that our competitors have no resource but to present the attraction of low prices and long credit. Their goods being inferior, they have to sell them for what they can get. Times are hard; and purchasers, without fully considering the subject, will sometimes allow a lower price to decide them. Manufacturers of "cheap" machines are so set on carrying out competion to its utmost—competition of **Cheapness,** not of Excellence—that they meet "bargain hunters" half way, and furnish them cheerfully with inferior machines at the cheap rate they are asked for.

WE are much mistaken if this is what the public wants or expects of us. Good machinery cannot be made when neither workman nor employer has pride in his occupation; interest and pleasure in the work are both wanting, and both are essential in making good machinery.

OUR mission and business is, to build Threshing Machinery **of the Highest Excellence,** whatever the cost, and, holding firmly to this single purpose, we have added improvement after improvement, until the reputation of our Machines has become co-extensive with the grain-raising regions of the continent.



THRESHING machinery cannot be made for nothing, even with the aid of machinery. Our prices are as low as they ought to be, and, without doubt, as low as they ever will be. Do not be deceived with mere cheapness—**quality always descends faster than price.** Low price, especially in Threshers and Portable Engines, means **Low Quality, with Low Performance and High Repairs.**

HORSFORD'S
Bread Preparation
UNSURPASSED FOR MAKING
LIGHT BREAD
Biscuit, Rolls, Cake and Pastry.

It is Better and Healthier than ordinary Baking Powder, Cream Tartar or Yeast.

The cost of raising Bread, Biscuit, &c., with it is only about half as much as by ordinary Baking Powder, and the result is much better.

It restores the nutritious elements which are taken from the flour in bolting. No ordinary Baking Powder or anything else used for raising bread does this

Universally used and recommended by prominent Physicians.

If you cannot get it of your Grocer send a three-cent stamp to the manufacturers for a sample.

Manufactured according to the directions of Prof. E. N. Horsford, by the Rumford Chemical Works Providence R. I.

Reading for the Young.

OUR FRIEND FROM SWITZERLAND RELATES SOME OF HIS EXPERIENCES.

DEAR UNCLE TRUE AND RURAL COUSINS: As I am just now at leisure I thought it best to write a few lines to my RURAL relatives, and to present, at the same time, my sincere thanks to Dr. Asplnwall for his very kind and wise advise in regard to the preservation of Indian relics. I had my little collection, consisting of a number of stone-axes, arrow-heads, gauges, war-clubs and other implements already arranged in about a similar manner as this gentleman advises us to do, and I really think it to be the best way of any. I am actually in possession of several stone implements which some people commonly call "gauges" (probably from their resemblance to the more modern gauges). Their length varies from 4 to 10 inches, and their breadth from 2 to 3 inches with a sharp, concave edge on one extremity. Some archæologists pretend that the Indians used these implements to tap the maple trees with, and that they prepared sugar of the sap thus obtained. Others pretend that the "red man" did not know anything about the manufacture of maple-sugar, but that he employed this implement for another purpose, for that of tanning the skins. Not being familiar with the Indian customs, I do not know which of these two suppositions is the correct one, and I would be very thankful for any reliable information on this subject. One of my friends who was digging lately for Indian pottery on the shores of Lake Champlain, found the grave of an Indian, as he supposed, containing the cranium and part of the facial bones, the os lunominatum and part of the extremities, and a tomahawk in close proximity to this skeleton.

Now, dear cousins, I intended a long time ago to give you a brief description of my experiences during the first year of my stay in America; but I always found my letters long enough without doing so, until to-day, when my thoughts strayed by chance three years backwards, bringing to my memory those days in which the ocean steamer "Celtic" landed me, then a lonely stranger, on the shores of America. I had made the resolution to communicate to you a few of the most interesting incidents. I told you in one of my former letters that when I first came to this country I was perfectly ignorant of the English language, and that a Frenchman was kind enough to hire me out to a farmer residing not very far from where I live now.

My principal objects in hiring out to work on a farm were to learn American agriculture practically; to learn the English language as quickly as possible, and to earn, anyway for once in my life, my own bread. But soon after I had commenced to work for "Uncle Joe," as everybody called him, I found out that I could not easily realise my anticipated hopes and wishes under his guidance. For he was the most peculiar man I ever met in my life; he cannot write or read a single word, but that don't seem to bother him much; on the contrary he feels proud of his ignorance, and he forbade me several times to read some English newspapers and books which I borrowed from my neighbors for the purpose of learning the orthography, pretending that a farmer has no need of any learning; that he himself got along very well without it, and that other folks could do the same.

And indeed he got along well enough in pecuniary regard without having the faculty of distinguishing one letter from another. He has accumulated during the past fifty years an estate containing over 700 acres of good land.

During the year 1876 he was appointed postmaster of this place, and as he was himself unable to fulfill the duties he charged me with the transaction of the business. One day when I was making out the quarterly report for the Post Office Department at Washington, Uncle Joe got mad on account of the small salary that he received for such an important office, and he ordered me to write a letter to General Washington notifying him that in case his salary should not be speedily increased he would shut up the post-office at once, and let old Washington run the risk for the whole "consarn." I remonstrated, that as far as I knew, General Washington died a long time ago, and that it would be hardly fair and legal to shut up the post-office and to throw all the risk that might grow out of such a proceeding on the shoulders of the deceased Father of America.

But all my expostulations on this subject were in vain: he replied very positively, that he knew General Washington to have been head postmaster for several years with two or three of his "sisters" in his employ. (He thought furthermore that those "sisters" must be old maids now by this time). After I reasoned with Uncle Joe for two or three hours on national history and Post Office business I commenced to see into all mistakes. In his dignity as P. M. he received occasionally official letters from the Postmaster General at Washington or from the assistant Postmasters General. I always had to read the letters and to report to him their contents. I generally remarked that such a letter came from Washington (meaning of course the capital) and such a letter from the 1st. 2d. or 3d, assistant. Now, Uncle Joe, thought all the time that I meant by Washington the famous General and by the assistants the General's sisters.

On another occasion a beggar woman desired to stay in his house over night, and before he would permit her to, he asked her, if she was of French or Irish *consent*. The poor woman did not know what to answer, until I explained to her, that Uncle Joe did not mean consent, but he only desired to know her descent or origin of nation.

Shortly after this incident my employer got thrown off from a mowing machine, while taking a nap mowing, hurting himself very badly and in consequence of this, he was obliged to keep the bed for a long time. He was in a very dangerous situation, when the Minister of the Gospel called on him one day, to bring him consolation and the blessings of the Church. Uncle Joe took this reverend gentleman for a whiskey drummer and inquired of him, how he would sell a barrel of whiskey to him, pretending that he wanted it only for his own use. The minister expressed his astonishment and explained that he was not that kind of a drummer, whereupon Uncle Joe dismissed him, unwilling to enter into any other relations with him.

When winter came my employer sent me cutting timber and gave me the advice, to build a fire in the woods, if I should find it too cold there. After I found myself all alone in the forest, I thought that a fire would feel very comfortable indeed, and I commenced to look around for some dry kindling wood, which I soon found in sufficient quantities in the shape of about 100 wooden buckets scattered all over on the ground, around an old fire-place. These buckets were used for the gathering of the sap in the manufacture of sugar, but at that time I was ignorant of this fact, having never seen nor heard of any maple sugar before in my life. I observed quite a number of the same kind of buckets all over in the woods and came to the conclusion finally, that they must be used during summer for the purpose of watering the cattle. Concerning the buckets around the fire-place, I thought they were thrown away, perhaps as useless or superfluous to be burnt up on this place at some time. I took my axe and in less time than it takes to describe it, a dozen buckets were smashed up in small fragments. I set fire to them and the heat thus produced was so gratifying to my cold nose and ears, that I repeated the same exercise every day, until the buckets were all gone.

The following spring when Uncle Joe and I went out together in the woods to make sugar, he wondered very much, what had become of all his sap-buckets, and only then commenced I to understand the extent of my mistake in burning up said buckets.

On another occasion, when cutting down a hollow tree, I found it to be inhabited by a long-tailed animal. I had visited in time a great number of menageries and zoological gardens all over Europe, but never had I met with a specimen of this kind before, and, as it was quite tame, I resolved to take it home alive, to show Uncle Joe what a precious treasure I had found. I caught the animal very carefully by the neck and traveled with it homewards; from time to time my nose caught the impression of a most peculiar smell, and I was often tempted to let the animal go again. But curiosity and self-denial succeeded at last, and I brought the animal home alive and unhurt, in Uncle Joe's parlor. At the sight of my gem which I held up in my hands, the ladies commenced to scream and to run from one part of the house to another; Uncle Joe ordered me very harshly to take that skunk (for that appeared to be its true name) outside the the building and to kill it there. With a heavy heart I obeyed his orders, and with tears in my eyes, I gave my poor pet the death-blow. This remarkable event wrought a good many changes in the family: Uncle Joe kept all the doors and windows open for a fortnight; the ladies would not smile any more upon me, and to please them, I was obliged to dress in my best Sunday clothes, until I had a chance to buy another suit.

Having finished now my skunk adventure, I do not think that the cousins of the tender sex will care about hearing any more of my stories, and I will close this letter, expressing the wish that my young relatives will follow my example and open their hearts before our circle, for I think it would be better to write nonsense than not to write at all, as it almost appears to be the case now. I admire "Ivy's" poetical strain in her last letter very much, and hope to hear from her again; furthermore, I expect some more details of "Jumping Jack's" travels. I would like to get acquainted with Uncle Mark, because I like his letters very much. I never knew before that we have two uncles, and I hope that all the cousins will fire off their guns speedily, and if they are aimed right, I warrant you that they will find their way to the "True Mark." JOHN SCHWYN.

Clinton Co., N. Y.

TO THE SONS OF THE FARMER.—No. 4.

REV. A. W. MANGUM.

A WORD of caution is necessary, on account of the great number of occupations that court the attention of an American youth in this enterprising age. The number and diversity being so great, it may reasonably be expected that callings which are very different as to utility and profit, may appeal with special force to the same taste. One who is endowed with talent to excel in the highest department of Fine Arts, may have a fancy, in earlier years, for the lowest and simplest work that can engage a mind whose æsthetic power is entirely undeveloped. You are admonished not to follow any pursuit unless you can give other reasons besides your inconsiderate preference.

You should expect and be prepared for discouragements and difficulties in any work that you may choose. If you wait for a field that is free from all that tries patience and spirit, you will wait forever. This is taught by the nature of man and the world in which we live, and is exemplified by universal experience. So true is it, that one who cannot bravely struggle with opposition and surmount dread obstacles, is regarded by all the wise as utterly unfit for any important undertaking. Be not appalled! Difficulties bring discipline; discipline gives strength and experience; and these promise success in still greater struggles in behalf of nobler, vaster interests. The following suggestions are respectfully urged upon your attention:

Seek the opinions and advice of your parents; for they desire your highest success, and have much more knowledge of life and labor than youth is likely to have. But you must remember that it is natural for them to have preferences that are caused by the peculiarities of their own lives and fortunes. Hence, you should seek not only their views and counsels, but also their reasons. Avail yourselves of the experience and discretion of other intelligent, prudent, and successful people, provided you can find such among your special friends. When you have obtained their advice and their reasons for it, you must calmly weigh all, and make your decision upon the great question in accordance with certain important principles. Be careful to consider that the question of respectability is decided favorably as soon as the fact of utility is established. Lord Bacon truly said that, "Usefulness is the measure of greatness." None but the vain and foolish entertain different notions now-a-days. If that which is not useful is to be avoided, of course that which is hurtful and corrupting is to be shunned as the deadly plague. True dignity, pleasure, and peace are utterly impossible to him who pursues a calling that debases himself and others, or a calling that tends directly to poison human enjoyment and destroy sweet peace of mind. Money and flattery may seem, for a time, to compensate for the evils incurred and the injuries inflicted; but, soon or late, the vain delusion will be dispelled, the baneful consequences will appear, and the nights of bitter remorse will begin. No man can afford to pursue a vocation that will make good parents and a pure family ashamed. Low, hurtful, corrupting occupations drive the best blessings that money is expected to obtain, far beyond the purchasing capacity of money. Bear this in mind: The occupation that you choose for a life-work should be one susceptible of development and expansion. As you grow older and learn more of the world, your conceptions and desires will be enlarged, and your wants are almost sure to be much increased. If you enter upon a kind of work that, in itself, can be carried to only a certain limited degree, you must not regard that as your highest, your real calling, but only as introductory to something more worthy of your growing talents and experience. I am glad to say that there are few, if any, vocations that are really and absolutely restricted to a certain measure of skill and ability. Probably those that bear such an appearance, are only seeming illustrations. From the highest round of any ladder of enterprise, there is, perhaps always, another ladder whose lowest round is in easy reach of the eager, determined step. Therefore, whatever your calling, while careful not to abandon it without sufficient cause, let *progress* be your watchword, and do not fear that you will reach what is absolutely the highest right.

To be faithful to you, and to cover all the ground at once, I must add that the one all-governing question that is to guide your choice is, *What is it my* DUTY *to do?* That alone brings the matter to the proper test. What are the real ends of my existence? In what can I best fulfil those ends? Philosophers have given sundry answers to the question, "What is the true end of life?" I assume that while you will naturally consider what will best promote your individual interest, and then look with magnanimous concern to the privilege of doing the most and the best you can for the welfare of others, you will bring every thought and purpose into complete allegiance to the one sublime thought that you must do what you sincerely believe that it is the will of your Creator that you should do. Governed by this, your choice will be wisely made. It will be a safe choice; for "the path of duty is the path of safety." It will be a discreet choice; for it will carry with it the assurance of constancy, the fountain of contentment and cheer, and the best guarantee of success. It will be a fortunate choice; for he who humbly, steadily performs the will of his God, is sure therein to best subserve all his own interests and to truly promote, in the noblest and most lasting way, the welfare of his fellow-beings.

LETTERS FROM BOYS AND GIRLS.

DEAR COUSINS:—In making our first visit to you, we feel as if we were leaving mamma and papa—going off alone on a long and hazardous journey, where our faults will appear magnified because so many hundred miles from our native home. Yet we hope that you will pass our imperfections by, and as our friendship matures we will feel a warm interest in each other, trying to fulfill our Saviour's command, that ye "love one another." If we meet with encouragement, we will tell you, in our next, of our home by the sea side. From

THE TWO SISTERS.

DEAR UNCLE TRUE AND COUSINS:—As this is my first attempt at writing to you, I hope you will not criticise me too sharply. I hope all of you will welcome me into your noisy circle. Perhaps noisy is too strong a term, for of late there has been no excitement whatever. Why can't we renew the stirring controversy of last year. Wonder if Slayer of conceit has stopped his subscription? If he has (poor fellow), let's pass around the hat, and renew it for him! Some one spoke of getting up a collection of relics. I have fourteen whole, and ten broken, Indian arrow heads, besides three broken tomahawks. If this letter does not go into the waste basket, you may hear from me again.

West Salem, Wis. RELIC SEEKER.

DEAR RURAL COUSINS:—Can I be welcomed as one of your number? I should very much like to be so welcomed. My father has long taken the RURAL, and the letters from the Cousins I have always read. Jumping Jack's letter was very interesting. I have not much to talk about, so I will say a few words about my pets. The principal one is the cat, Chub. He is a large gray cat, and very cunning. One of his cutest tricks is to have a chair to sit in by the window, and if it is not there, he will beg until he gets it. My other pets are the chickens, of which I am very fond. I have one pheasant hen that is six years old and a great pet. Nearly all our hens know their names, and come to eat out of the hand. I have had quite an experience in taking care of chickens, and I wish some one of the Cousins would write a letter, telling something more about chickens or other pets. As this is my first attempt, and as I am not yet Cousin, I will make this letter short. Yours truly, with all cousinly love, MINNIE S. WHITE.

Erie Co., N. Y.

Sabbath Reading.

BEFORE THE REFORMATION.

THOSE "good old times," which were all change by the Luthern Reformation, may be understoo by reading such a passage as this by Dr. Hagenbuck in his History just published:

We have already, in our History of the Middle Ages, made mention of the religious plays, the fools' and asses' feasts, and the therewith connected mummeries and banquetings in the churches. In spite of ecclesiastical prohibitions, these disorderly proceedings continued and increased. Let us transport ourselves for an instant to th Cathedral at Strasburg. High mass is about being celebrated. The nobles make their appearance magnificently attired, wearing peaked shoe that clatter as they walk, and accompanied by hounds and falcons, the latter of which they occasionally let fly, by way of pastime, during the service of God. Here merchants are settling their worldly affairs, yonder a magistrate publicly administering justice, in the church. For the sake o shortening the way, sucking pigs from the marke close by, are carried through the sanctuary, so tha the noise and bustle thereby occasioned, force th priest to pause in his conduct of the mass. Above the minster organ was placed a grotesque figure, called the "ape of the pipes."

During Whitsun-tide some wag would conceal himself behind this, and amuse the multitude by howls, course jests, and comic songs. From the feast of St. Nichols to Innocents' day (to Adven and Christmas time) it was customary for a boy, dressed as a bishop, to read mass; the rest of the people who frequented the church likewise appeared disguised in various costumes within its consecrated walls. Processions were held and secular songs were sung. Of a still madder character were the proceedings at the feast of the consecration of the cathedral, on St. Adolphus's day (August 29), which was the time for the annual fair. Casks of wine were placed in the chapel of St. Catherine, the high altar served as a table, and the most immoderate indulgence in wine completed orgies which surpassed those of the heathen in unruliness.

THE LOGIC OF A HOLY LIFE.

SOME years ago a young man who gave clear evidence that he was truly a subject of the regenerating grace of God, was asked what had led to the change in him, as he had been wild and thoughtless. Was it any sermon or book that had impressed him? He answered, "No!" "What was it, then? Did any one speak to you specially on the subject of religion?" The same response was given.

"Will you then state what first led you to think of your soul's eternal welfare?" The reply was:

"I live in the same boarding-house, and eat at the same table with J. Y."

"Well, did he ever talk to you about your soul?"

"No, never till I sought an interview with him," was the reply. "But," he continued, "there was a sweetness in his disposition, a heavenly-mindedness, a holy aroma about his whole life and demeanor, that made me feel that he had a source of comfort, and peace and happiness to which I was a stranger. There was a daily beauty in his life, that made me ugly. I became more and more dissatisfied with myself every time I saw him; and though, as I said, he never spoke to me on the subject of personal religion till I myself sought the interview, yet his whole life was a constant sermon to me. He was 'a living epistle,' speaking by action so clearly that I could resist no longer; and accordingly I went and sought an interview with him. We held repeated conversations with each other. Then he pointed me to Jesus Christ, prayed with me, counseled me, watched over me."—*National Baptist.*

It is a pitiful thing to see a young disciple going about and asking everybody how much he must "give up" in order to be a Christian. Unfortunately, many of those who take it upon themselves to instruct him give him the same impression of Christian discipleship—that it consists chiefly of giving up things that one likes and finds pleasure in. But a man in solitary confinement might as well talk about what he must "give up" if he is pardoned out of prison, or a patient in consumption about what he must "give up" in order to get well. The prisoner must give up his fetters, and the invalid his pains and his weakness—these are the main things to be sacrificed. It is true that the one has the privilege of living without work, and the other the privilege of lying abed all day; these are privileges that must be relinquished, no doubt. And so there are certain sacrifices to be made by him who enters upon the Christian life, but they are "not worthy to be compared" with the liberty and dignity and joy into which the Christian life introduces us; and to put the emphasis upon this negative side of the Christian experience, as so many are inclined to do, is a great mistake.—*Sunday Afternoon.*

"Whosoever," is written on the outside of mercy, and "Whatsoever," on the inside. The "Whosoever" takes in all classes, ages, every individual of our race. The "Whatsoever," covers the whole range of each individual's time and eternity. Hasten to get inside mercy's golden gate, if not already there, and when admitted to her banqueting house, grasp firmly the promise, "Whatsoever ye shall ask in my name, I will do it"

PERSONAL ITEMS.

The Delaware Senators are both tall. Mr. Saulsbury measures six feet three and Mr. Bayard six feet two.

Wade Hampton now goes out hunting every clear day. He rides almost as well as before his unfornate experience, but never tackles a mule.

Mrs. Alfred Tennyson Dickens, one of the young daughters-in-law of Charles Dickens, was killed in Australia a few weeks ago. She was driving out with her little daughter when the horse ran away, killing both the occupants of the carriage. Alfred Tennyson Dickens, son of the novelist, has been living in Australia for several years.

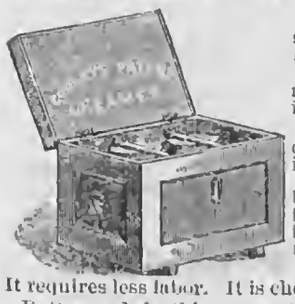
COOLEY CREAMER



Supersedes large and small pans for setting milk.

It requires no milk room. It requires capacity for one milking only.

Impure air, dust or flies cannot reach milk set in it.

It makes more butter, because it raises all of the cream, and the quantity is never lessened by unfavorable weather.

It makes better butter. It requires less labor. It is cheaper.

Butter made by this process took the HIGHEST AWARD at the INTERNATIONAL DAIRY FAIR—and brings the highest price in all the great markets.

CATARRH.

THE NORWEGIAN BALM

acts upon the mucous membrane of the Nasal passages the same as SOAP and WATER act upon the skin of the body. It immediately cleanses, softens and opens the pores, admitting of a free secretion of mucus, and if the body is kept clean and the bowels regular, the worst features of CATARRH will soon be overcome. Cleansing the Nasal passages of all foul matter *immediately restores the breath to its natural purity.*

EXTRACTS FROM TESTIMONIALS.
(For full text see Pamphlet).

PATERSON, N. J. December 16, 1878.
Mr. N. B. PHELPS,—Dear Sir; We are pleased to inform you that we are selling more of your *Norwegian Balm for Catarrh* than all other remedies for that disease, and find that it gives good satisfaction.
VAN DALSEN & SYKES, 131 Market St.

19 MURRAY ST., NEW YORK, Jan. 8, 1879.
Members of my family have used your NORWEGIAN BALM with great satisfaction. It really seems to have all the merit that you claim for it. *We surely should not know how to do without it.*
SAMUEL HOLMES, Treas. Bridgeport Brass Co.

905 Eight Ave., New York, Dec. 17, 1878.
I think your remedy for Catarrh "One of the greatest discoveries of the age." Before using the NORWEGIAN BALM my wife *suffered untold misery for years.* We sought medical aid, far and near, but to no effect. Our regular Physician, distinguished for his knowledge, skill and honesty, pronounced the disease incurable; that it would extend from the nasal organs to the throat and bronchial tubes, and finally to the lungs—and that death would be the result at no distant day. This was well nigh the case. But in your NORWEGIAN BALM *she found immediate relief;* the extremely offensive odor of her breath, from which she had suffered so many years *entirely disappeared within two weeks* after she commenced to use the BALM. After having used only one bottle, if not fully cured, she feels well on the way.
C. C. SULLIVAN,
Produce and Commission Merchant,
155 Chambers Street, New York.

IMMEDIATE RELIEF GUARANTEED.

On our Most Distant Frontiers,

As in our busiest and most populous cities of the seaboard and interior, Hostetter's Stomach Bitters is pre-eminently popular. Wherever civilization plants its foot on this continent, thither the great tonic soon finds its way. Nor is this surprising, for it is the medicine of all others best adapted to the wants of the Western immigrant, be he miner or agriculturist. It is an incomparable remedy for the diseases to which he is most subject, and which are liable to be brought on by a change of climate, hardship, exposure, unaccustomed air and diet, and miasmatic atmosphere and water. Among these are disorders of the stomach and bowels, rheumatic ailments and malarious fevers for all of which Hostetter's Bitters is a certain specific. A course of the Bitters before departing for the new field of labor, or on arriving, will have the effect of preventing the evils for which it is such a signal remedy.

The Herdsman.

OUR ANIMAL PORTRAITS.

In continuation of our series of portraits of distinguished animals, we this week present to our readers two excellent likenesses of beasts that have won for themselves a wide reputation and for their owners no small amount of prize money and *eclat*. That of the cow Gaily, is a full representation of the animal of which a partial view only was given in our issue of February 15, as she stood nearly fronting the spectator on the extreme left of the group of Mr. McCombie's polled Angus cattle from the Paris Exposition. She is four years old and a fine specimen of a breed which has lately been attracting a great deal of attention in this country, as being specially adapted, owing to their horuless state and their fattening qualities, to the exigencies of our foreign and domestic cattle trade.

The portrait of Empress represents a fine specimen of the admirable Hereford breed, which are daily gaining popularity, especially as beef animals, wherever they are known in the United States. Empress is barely two years old, and was bred by Mr. John Morris, of Ludham, Madley, Hereford, England. Her sire was Sir Charles (4959), dam, Cowslip 3d, by Bangus (3667), etc. Empress took the first prize in a large class of yearling heifers at the last Bristol Show of the Agricultural Society, and it is rarely that an animal so closely approaches the form of the ideal parallelogram, which it is the ambition of all breeders of beef animals to produce.

Both likenesses were engraved from photographs for the English Agricultural Gazette, from which they have been transferred to these pages as very fine portraits of famous animals.

LATE MILKING A CAUSE OF ABORTION.

The last number of the Rural was received by this morning's mail. In perusing it I find an article on "Abortion in Cows,"—a matter of great importance to stock raisers and dairymen. On this subject I would like to give an opinion, however little it may be worth. Several years ago, I was in Herkimer Co., N. Y., when dairymen were suffering serious loss by the trouble above referred to, and could discover no cause or remedy. I visited and examined a number of stables, made many inquiries, and formed an opinion and told the dairyman how I believed it could be avoided.

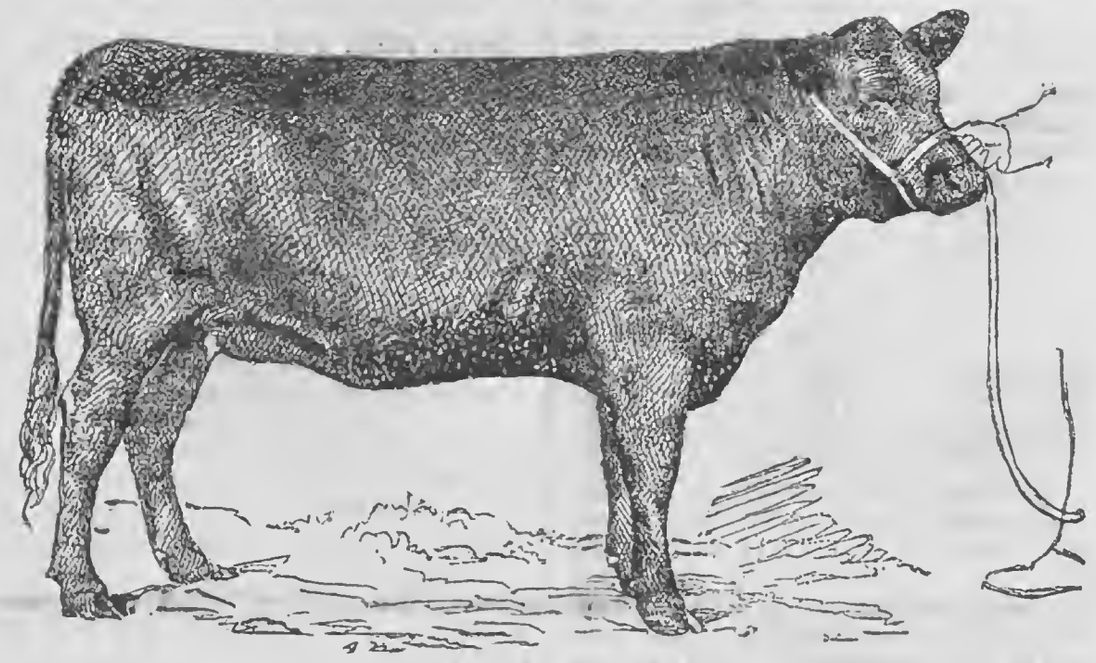
The cows had been well fed, and were in good condition. The water furnished them was the best well or spring water. They were well cared for—only large numbers were stabled together in well and closely-built barns. But I found that the cows were milked very late before calving, and I reasoned that, no matter how well cows were fed or kept, sufficient nutriment could not be supplied to nourish the fœtus and furnish milk at the same time. Acting on this hint, the trouble was stopped. While the statements made by the Rural's correspondent may have weight, and may be true, none of the conditions he mentions were found in the region I refer to.

Hammonton, N. J. H. E. Bowles, M. D.

DOES IT PAY TO KEEP HOGS?

That depends upon circumstances. If your hogs are the long-legged, slab-sided, long-nosed "elm-peelers,"—no. Such hogs will not pay at any time, still less when pork is 2½ to 3½ cents per pound, dressed. Besides, such hogs are a nuisance to you and your neighbors. They are hard to fatten and their meat is of inferior quality. But it will pay any farmer to keep a few pigs of some improved, small-boned, early-maturing breed, like the Berkshires, Essex or Chester Whites. They can be kept and fattened on little besides the waste from the kitchen and dairy. The best way is to have the pigs come early in the spring and turn them off in the fall. It will not pay to keep them longer. A litter of pigs can be kept in good growing condition through the summer on the waste from the kitchen, together with a little skim milk, if they have the run of a good pasture. In the fall they can be easily fattened on pumpkins and a little corn. If you want nice pork, don't confine your pigs in a pen, but give them as large a run as possible.

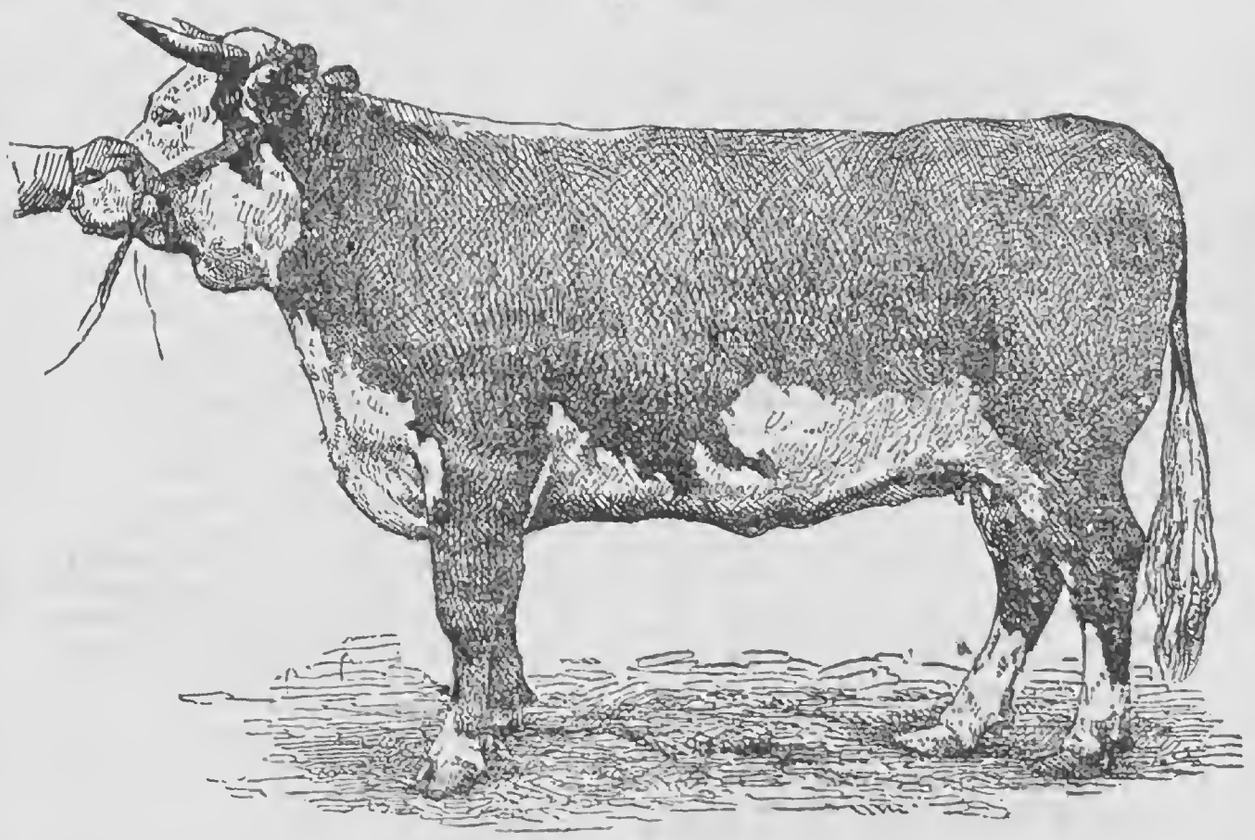
Some people object to giving pigs a large range for fear that they will not fatten so fast as if confined. I think that this is a mistake. None of the small, improved breeds will roam enough to work off much fat. But even if they did, the quality of the pork is so much improved by having a large range that the improvement would compensate for the slight loss of fat. The nicest pork that I ever ate, was made from a hog that had the free range of a thirty-acre field. Now all cannot give their pigs as much liberty as that, nor is it necessary; but give them as much as possible. Above all, don't keep your pigs too near the house, especially if they are confined in a small yard. Hogs of a good breed, well cared for, will always pay as well or better than any stock on the farm, and they can be kept with less trouble and expense. V. J. Emery.



POLLED ANGUS COW, GAILY.

Fattening Sheep for Market.—An article appeared in the issue of January 18th on the above subject, that, I think, takes a wrong view of stock-raising. If it ever pays to keep our best stock, it is when prices are low; and instead of selling off the well-formed and best stock at poor figures, I would keep them at home until they are fully ripe, while I would get clear of all poor stock just as soon as possible. When stock is low, it will only pay to keep the best, and I think the best always returns the most profit. I do not mean by this that we must buy fancy stock; for that will never pay, to any great extent, in the hands of the ordinary farmer. The farmer that keeps sheep, will, by selecting the best ewe lambs and coupling them with a good buck of good stock, soon raise a flock that he need not be ashamed of. I. J. B.

Jottings.—The cows from the Blissville stables have all been sacrificed to the public apprehensions with regard to pleuro-pneumonia. Some of the buildings have been destroyed, and all disinfected. Hogs, instead of cows, will in future be fed on the distillery swill, at least until more peaceable days. . . . Vigorous measures have at length been adopted for stamping out pleuro-pneumonia in New Jersey. Infected animals will be remorselessly slaughtered, exposed animals rigidly quarantined, and inoculation, as a preventive, prohibited. Farmers should be paid well for beasts slaughtered for the puplic good.



HEREFORD COW, EMPRESS.

Dairy Husbandry.

TURNING COWS TO GRASS.

T. H. HOSKINS, M. D.

Wintering Stock badly a cause of "accidents" in spring; other ill effects from it; running dairies the year round; treatment of cows in spring; using the card and brush; repairing of pasture fences; supplying salt.

Cows that have been well wintered are half summered. Under the old method, unhappily not yet altogether extinct, cattle lost so much in flesh and condition during the winter that half the grazing season was required to put them where they ought to have been when they left the barn. Cows so weak in April that they have to be "tailed up" are not yet unknown in New England, while our newspapers find many a local item in which we are told of the "misfortunes" of this and that farmer who have lost more or less of their horned stock in the spring of the year "most unaccountably." But the old *regime* is dying out, and with greatly accelerated speed in consequence of the low prices of dairy products. "Scrub-farming," if it ever paid, has now ceased to pay. Scrub-stock goes out with the scrub-farmer, and the dairyman who adheres to the customs of the past, finds that "Jordan's a hard road to travel."

The large majority of our farmers, however, yet follow the practice of drying off their cows early in the winter, and having them "come in" from March till May. Cows that have been fed, under these circumstances, with liberal rations of good hay and corn-fodder, without grain, ought at calving time to be in sufficiently good condition. But if after they become dry, straw is put before them as their main diet, and no grain-feed is allowed them, there will necessarily be a great loss in condition; the calf will be small, the cow in danger of serious trouble at calving, and the flow of milk will be so much less in quantity and poorer in quality than it ought to be, that profit is out of the question.

In the new dairying which is being, in a manner, forced upon us, both by the decline of prices and the changed taste of consumers, especially in butter, good winter-feeding and care are above all essential. With the necessity for these comes upon us, in a pressing manner, the inquiry whether we shall not be also forced to run our dairies through the year. If we must feed well during the cold weather, have light, warm, clean and airy stables for our cows, and devote much of our time to them all through the winter, must we not also arrange things so as to have a continuous income from them? Then comes a careful study of the feeding question, and how we shall not only make winter butter, but how we shall manage to make it resemble as nearly as possible the butter of June. When this point is reached by the larger portion of our dairymen, writers upon dairy topics will have but little to say upon the subject which forms the title of this article. Or if they still continue to write upon it, will be from a different stand-point altogether.

A cow should come out in the spring in as good condition as she went to the barn in the fall. She ought rather to gain than to lose in flesh after drying off. If she will not do it upon hay, she should have grain-feed of some sort. Though it is possible that a cow may be too fat at calving, it very rarely happens that she is so. Immediately after calving, her rations should be light but nourishing, and as soon as the danger of fever is past, her feed ought to be increased continuously until she has reached a full flow of milk, and maintains

it without losing much flesh. As soon as the grass shoots in the warmer and moister parts of the pastures so that a moderate bite can be had, it is better, it seems to me, to turn out the cows than to keep them in the stables or yards. They smell the spring, and, wearied by long confinement, they are eager and restless until they feel the sod under their feet again. But, of course, they must not be expected to fill themselves from the scanty growth. Unless a good feed is given morning and evening (a part of which ought to be of grain), there will be in the milk of fresh cows a decline that it will be very difficult to recover. Besides this, there is the danger of the cows' filling their hungry bellies with the dead grass out of which all nutriment has been soaked by the winter's rain and snow. A good many "accidents" happen from this cause.

The cows are shedding their coats at this season, and it pays well to use card and brush upon their hides. Not only does it greatly add to their comfort, but it obviates much danger of contamination to the milk. Strainers are good things, but it is not really necessary to let dirt fall into the milk so as to be sure that there will be something to strain out. In fact, all of our best dairymen are coming to the conclusion that the card and curry-comb rightly used upon cows, are a "paying institution," and will actually add both to the yield and the selling value of the butter.

But before turning out the cows, see that the pasture fence is sound and strong at all points. This is the time when cattle are very restless. Also, I feel like strongly advising every cow-keeper to procure a number of large lumps of salt, and place them conveniently about the pasture upon cheap stands, with a roof over them, so that all the cows may have free access to lick them at will. It is by far the best and handiest way of providing them with this necessary substance, and its being there adds both to their comfort and contentment.

HISTORY OF A POOR FARM.—No. 7.

Feeding for Milk.

"It has been said that feed has no apparent influence upon the quality of milk; that however high we feed with rich food, the milk will be no richer for it. Many prominent writers and lecturers upon dairy matters have indorsed this idea, but few dairymen or farmers will agree with such a statement. It is controverted every day in practice. The poor farmer who feeds straw and corn-stalks gets poor milk, and the farmer who feeds his cows with early-cut hay with all its nutriment preserved, along with corn meal, middlings, malt sprouts and oil meal, produces not only a larger quantity of milk, but more cream and butter."

"Everybody should know that," remarked my old neighbor; "I have had no experience in feeding oil meal or malt sprouts, but I have with grains, buckwheat bran and corn meal, and I know buckwheat bran makes more milk, but the milk is very poor and the butter from it is very white. William would not feed buckwheat bran if he had it for nothing."

"Let us hear what Fred has to say on this point. Fred has taken charge of my dairy and is carrying on a series of experiments with various sorts of food. Bring your dairy record for the month of January, Fred."

Fred took the record from the hook where it hangs in the office. And here let me give a hint to farmers about the usefulness of a small building conveniently situated, to be used as an office. I have such a one at a central point overlooking the barnyard and the orchard, with windows on three sides and a glazed door, so that from the table in the center one can see everything that comes and goes. Here are kept a few standard books; files of a few leading papers; a few simple medicines; and such small things as are always required about a farm; a sideboard with nests of drawers in front and furnished with scales and weights, measures and milk-testing tubes; and a few chairs to accommodate the friends and neighbors who drop in to talk over matters in the way I am recording in these pages, in which manner some pleasant and profitable evenings are spent.

Fred read from the record as follows:

Week ending Jan. 7..... 955 lbs.; av. per day, 136 lbs
" " 14.....1,097 " " " 156 "
" " 21.....1,219 " " " 174 "
" " 28.....1,265 " " " 181 "

TABLE OF FOOD AND YIELD OF MILK.

Date.	Cows.	Food.	Av. milk.
Jan. 7	10	9 quarts of ground corn in the ear and oats	136 lbs.
" 14	10	9 quarts of ground shelled corn and rye	156 "
" 21	10	6 quarts of corn and rye meal and 3 quarts of malt sprouts steeped.	174 "
" 28	10	Same as above with 1 quart of palm nut meal added to the sprouts...	181 "

"What is the next change to be?" asked Mr. Martin.

"I have got to the end of my tether, at present," I replied. "I don't know how I can add any more to the yield, or make richer milk, and I am content to stop for the present. I cannot afford to spoil matters as they now are. But let us consider what has been done, and if feed has no effect on the milk.

"Up to the end of December, 1878, the same ten cows were given, pretty regularly, 70 quarts or 154 pounds a day. They were fed nine quarts of meal of corn in the ear and rye or wheat middlings, with a peck of beets at noon. The beets were all used up in that month; and the first week afterwards on nine quarts of corn in the ear and oats ground together, the milk fell off to 136 pounds a day—a loss of 18 pounds, or nearly nine quarts a day for that week. When the feed was changed to shelled corn and rye ground together, the milk came up to 156 pounds daily; when three quarts of malt sprouts, steeped twelve hours in water to saturate them, were changed for the same quantity of meal, the milk was raised to 174 pounds daily; and with the addition of one quart, or two pounds, of palm-nut meal, the milk increased to 181 pounds daily; but a much larger proportionate increase in cream resulted. The whole gain was equal to 45 pounds or 20 quarts of milk, worth $1.40 per day. The other feed was two bushels of cut corn fodder and a little loose hay once a day."

"How do you account for it?' asked my old neighbor.

"Well, it is plain that nothing can come out of a cow that does not first go into her; that the milk is a product of the food, after the vital necessities of the animal are supplied, so that if the food happens to be richer in nutritious qualities than is needed for supply of the vital functions, the rest will, *in some animals*, be changed into milk and cream. Corncobs chiefly consist of indigestible woody fiber, and oats contain one-third of indigestible husk, so that corn in the ear and oats make poor feed. Shelled corn and rye make a much more nutritious food, malt sprouts are rich in nutriment, and palm-nut meal contains from 10 to 18 per cent. of fat. Put in tabular form these foods appear thus:

	Water.	Ash.	Flesh-formers.	Fat-formers.	Crude fiber.
Corn-cob, per cent.....	14.3	2.8	1.4	44.0	37.8
Oat chaff.....	14.3	18.0	4.0	29.7	34.0
Corn.....	14.4	2.1	10.0	68.6	5.5
Rye.....	14.3	2.0	11.0	69.2	3.5
Malt sprouts.....	8.11	6.8	23.0	44.7	17.5
Palm-nut meal.....	10.0	2.6	40.0	45.0	2.4

"It is very evident that the last two substances must be vastly richer food than the first two: besides, the so-called fat-formers in the first two consist nearly all of cellulose, which is the least nutritive of carbo-hydrates, while in malt sprouts and palm-oil meal these exist largely in the form of oil and fat which are the most valuable of these fat-forming elements."

"Dr. Voelcker," said Fred, "in a recent paper, mentions a series of experiments by Mr. Struckmann, a German, who found that two pounds of oil-cake, given daily to dairy cows, increase both the quantity and the quality of the milk. He also mentions that the cows of the Cirencester Agricultural College, when brought in from grass and fed hay, roots and meal, increased the yield of butter from 3½ per cent. of the milk to 4½, or nearly one-third."

"What is the use of bringing more evidence when the case is proved?" said Mr. Martin. "I don't think any one who has kept cows and fed them for a living, will deny what you state, or doubt the facts you give from your milk record. The better you feed, the better the cows will milk and the more and the better the butter will be. My daughter Mary, who is dairymaid at my house, can tell as soon as the feed is changed and when the cow is stinted of its meal."

"There is something in the cow," said William. "You only waste good food on a lanky, long-legged, narrow-bodied, high-bellied, hard-skinned cow, and there is where your plan won't work."

"Precisely," I replied, "just as you might throw good manure on that hard-packed road and look in vain for a crop equal to that from a well-plowed, mellow field. You would be disappointed in either case. There must be favorable conditions to work upon, else there will be no result.

"There are two profits to be made in feeding farm animals and in the management of any farm, be it poor or rich; both should be looked to. Milk carries off from the food, nitrogen and phosphoric acid chiefly. It is, therefore, a wise thing to use such food as is rich in these two elements, and these are the principal constituents of the soil which are taken up by crops. In the table given, the ash of malt sprouts is stated as 6¾ per cent or 136 pounds in a ton of 2,000 pounds. This ash contains 42 pounds of potash and 30 pounds of phosphoric acid; the nitrogen, already mentioned, amounts to 75 pounds. If all this went into the manure, it would be worth $26.25. But all that is not used in the increase of the milk, is left in the manure, so that at the least, the value is recovered one way or the other. In substituting three quarts or about 2½ pounds of sprouts, costing 17½ cents, for the 10 cows, in place of three quarts or five pounds of corn and rye meal each, costing 50 cents, a saving of 32½ cents in cost, and a gain of nearly nine quarts of milk worth 60 cents, are made each day; equal to 92½ cents, or the wages of my best paid man, so that in feeding the sprouts, there is that gain in addition to the value added to the manure, which may be figured as follows: In 100 pounds of nitrogen in the food of a cow, 63½ pounds are found in the manure, and in 100 of mineral matter 97 pounds are recovered, so that from the use of 2,000 pounds of sprouts, there would be found in the manure 47½ pounds of nitrogen, 40 pounds of potash and 35 pounds of phosphoric acid, worth in money at market prices of these materials, $11.90; $2 80 and $3.50 respectively, in all, $18.20. Sprouts can be purchased for $12 per ton, so that the profit of using them is, perhaps, more than that from any other purchased food whatever."

"I have been told there is danger in feeding small sprouts to cows," said Mr. Martin. "If they happen to be given dry, they will swell and pack in the stomach."

"There is danger in feeding anything recklessly," I replied. "If a cow is permitted to help herself at the meal bin, she will suffer for it, and so if dry sprouts are given in excess, there is certainly danger of mischief. I put a bushel of the dry sprouts in a 40-gallon barrel, and fill up the barrel with water; the sprouts will swell and soak up the water, and a peck of the steeped sprouts is given to each cow every day. When thus fed, there is no danger."

Miscellaneous.

NOTES FROM THE RURAL GROUNDS.

How to Treat the Seeds of our Seed Distribution.

HUNDREDS of our readers have asked such questions as the following: "Why do you not give the English or familiar names of your seeds?" Will not you tell us how to treat the seeds which you are sending to your subscribers?"

We have desired to comply with these many requests for several weeks past, but an unusually busy subscription season, the several seed distributions themselves and our special numbers have absolutely prevented our doing so. For all except our Southern friends, however, our reply must still prove timely, and so we proceed to give it in as few words as possible.

DEFIANCE WHEAT.—In nine cases out of ten, we presume this wheat will disappoint the planter. Our seed will be found somewhat shriveled—some of it unclean. But we have purchased the best that *could be* purchased. The yield of this wheat has, in *some* cases, proven immense—almost, if not quite, unparalleled; in many other trials, it has proven nearly worthless. We do not doubt it will prove a valuable variety in most parts where spring wheats thrive. It may do well in some sections where other spring wheats fail. Nevertheless, in the latter case, except as an experiment upon a small scale, we *should not try it*. In order to obtain the best results we should advise drilling it in as thinly as possible and making the drills a foot or more apart so as to cultivate during its early growth.

PEARL MILLET.—Plow and harrow and roll thoroughly, and plant *two* seeds every *four* feet either way. As soon as the plants are up, destroy one (where both appear) in a way not to disturb the other. A good method is with a pair of coarse shears to cut the plant off just beneath the surface. The ground should be rich and kept clean during its growth. The botanical name of Pearl Millet is Penicillaria spicata. It is known in certain parts of the South as "Cat-tail." The seed which we have sent out will, we should judge, plant half an acre, an ample area to enable our friends to experiment with it as they will.

BEAUTY OF HEBRON.—Suggestions as to planting this potato will not be required. We wish those who have received it would test it beside Early Rose or any other excellent potato and report to us its comparative value. As we have no interest in it, or any other new or old plant, beyond wishing to popularize a better for a poorer variety, we shall publish the bad just as freely as the good reports.

THE VOORHIS WATERMELON should be planted and cultivated the same as any other.

GOLDEN RURAL AND ACME.—These may now be sown in hot-beds, cold-frames, in flower-pots in sunny windows, or in box-flats. In any case, they should be transplanted two or three times before their final disposition in the garden. This transplanting induces a stronger growth of fibrous roots and heavier stems. Do not hasten to plant them in the garden. It is better to wait until the weather is warm and settled, and then to thump them out of their pots into the prepared ground, with the balls of earth intact. We suggest to all that they try *trellises* the same as if the tomato were a grape-vine, and tie them up to it in lieu of the usual stake-support which, by crowding the vines, retards the ripening process.

THE BRONZE RICINUS beans may be planted in rich soil, where they are to grow, not, however, until warm weather. This is a variety of the well-known Castor-oil plant—a cross between Gibsonii and Sanguineus—bearing leaves of a metal-bronze hue.

HIBISCUS MOSCHEUTOS (Marsh Hibiscus), Callicarpa Americana (the French Mulberry), Hibiscus militaris (the Halberd Rose Mallow), Geranium sanguineum (Blood Geranium), Yucca filamentosa (Adam's Needle-and-thread), Vitis heterophylla (the variegated different-leaved Vine) and Rural Hybrid Aquilegia (Columbine), all of which are entirely hardy, may all be planted just the same as a Balsam seed. Light, mellow soil should be selected, and the seeds covered according to their size. Several of the above-mentioned do not germinate in so short a time as Balsam Seed. We have known the Vitis, *e. g.*, to require not less than three months. The Chater's Hollyhocks may be similarly treated. Sown now they will not bloom until next year. They should receive, however, clean cultivation, and would be the stronger for a little light protection next winter, though quite hardy without.

WEIGELA, which is indeed the familiar name of this plant—Diervilla being the botanical name—has seeds which can scarcely be seen with the unaided eye. For this reason the pods were crushed and no attempt made to separate the seed. Our friends will sow this powder the same as they would sow seeds of Portulaca. The young plants may be pricked out into two-inch pots when they have formed second leaves, and changed for larger pots as needed. Or they may be at once planted in the open ground in beds or where they are to remain. A little shade and moisture will alone be required. The seedlings grow vigorously and will bloom the second year. Deutzia crenata fl. pl. (the double-flowering, crenate-leaved Deutzia) may be treated in precisely the same way.

ERYNGIUM LEAVENWORTHII (Leavenworth's Eryngo) is an annual, the seeds of which sometimes germinate slowly. They should be started in a hot-bed now, as, planted in the open a little later, they fail to develop their beautiful fall colors and singular flower heads.

The above are all of the sorts first offered to our readers. At that time it was stated that some varieties would be discontinued and others added as the distribution progressed. We have added the following in place of several as the supply of them became exhausted:

PINUS EDULIS (the Edible Pine, referring to its sweet nuts). These seeds are as large as the seeds of peanuts and might, in fact, be planted the same. It would be as well, however, to place these nuts in three-inch pots about an inch deep and plunge in the ground as soon as the rosette of needle-leaves appears. The second year they may be planted out permanently;—Amorpha fruticosa (Lead Plant, hardy), Calycanthus floridus (Sweet-Scented Shrub, hardy), Aristolochia Sipho (Dutchman's Pipe, hardy), may all be treated the same as Yucca or Hibiscus. We have also, among our reserve seeds, sent out a new Lettuce, a new Japan Cockscomb (Celosia), the remarkable ornamental Beets described in the RURAL of last year, and several others, all of which are of such very simple cultivation as to need no other reference from us.

Simple Method of Starting Seeds.

To those who have not provided either hot-beds or cold-frames and who intend to plant our seeds either in sunny windows or in the open ground, we offer the following effective and excellent plan for forwarding them: Provide pots from six to twelve inches in diameter—fill in with *ample* drainage and then with light, rich soil to within *an inch of the rim*. Plant the seeds and plunge these pots *up to the rims* in the earth of the sunniest, warmest part of the garden. Cover them with bits of glass and keep the soil *always moist*. As soon as the seeds break the earth, remove the glasses during the heat of the sun, replacing as soon as it loses its power in the evening. This method is as good as any cold-frame and for small lots of seeds is, we think, to be preferred.

The First Seed Distribution

of 1879 is now about completed. Hundreds of letters have been received without names—without addresses—with illegible addresses, &c., &c. Of course, such of our friends will not receive the seeds. According to the best of our abilities we have liberally filled every application, and we are free to express our belief that the undertaking has been one of the most extensive and costly ever attempted by any similar journal. According to our means and ability so to do, we propose in every way that presents itself to us, to continue our endeavors, to promote the interests of agriculture and horticulture—grateful to our friends that they seem grateful to us, and happy that we are at least striving to aid in a noble work.

Aristolochia Sipho.

IN the way of hardy vines cultivated for their flowers chiefly, probably the Clematis stands first. But for vines cultivated for their immense leaves, for their amplitude of foliage, as we may say, which utterly conceals whatever it is trained over, there is no other more desirable than the Dutchman's Pipe—Aristolochia Sipho. It is a strange thing that this vine of

really tropical luxuriance, is rarely seen in our Northern or Western homes. The leaves are heart-shaped, nearly round, often a foot in diameter and growing closely enough together to form, in effect, a shingled roofing over whatever they cover. The flowers are of a dull brown color, with a curved, tubular perianth and a trilobate limb which forms a flat border bearing altogether a rude resemblance to the typical Dutch pipe. With us this vine breaks bud in late April, if it can be said to have any buds, as the new growth shoots out of last year's petiole-scar, like a Crocus from the earth. It blooms in late May. It is found wild in some parts of Pennsylvania, Kentucky and the more Southern States, always in rich woods, growing from twenty-five to thirty feet in hight, while its stems sometimes attain a diameter of two feet.

We have never been successful in striking this plant from cuttings, though, in truth, we have never tried very hard. It grows very slowly during the first two years after transplanting, and then very rapidly. It is a twiner and cannot support itself, like the Ivy or Trumpet Creeper, and ought therefore to be planted at the base of trellises or arbors. We have never known it to be injured by our severest winters.

"Geranium New Life."

We are far from wishing to injure the sale of any new plant, provided it has any merits in keeping with the price asked for it. When, however, the contrary is the fact, we make it a part of our business to present the case as it seems to us, and then our readers may the more discriminatingly judge for themselves. This Pelargonium is offered in this country the present season, by most of our progressive florists, at an average price of $1.50 each. Its leaves and habit are similar to those of any other of the dwarfer sorts. The flowers are borne in very small trusses. Thus far we have nothing very novel. The novelty is in the flowers, and consists, we should say, in the peculiarity that no two are alike. Indeed upon the same umbel the flowers are often strikingly unlike. In a plant before us, of five flowers, one has two petals crimson lined with white, one petal crimson, the other two half crimson and half salmon; another flower has three petals white shaded with rosy-salmon, one petal half crimson and half rosy-white, and a fifth crimson; another flower has four petals crimson splashed and lined with white or rose, and a fifth petal salmon; while the two remaining flowers are rosy white with a salmon center. The variety does not seem possessed of much vigor, and the flowers, aside from the oddity of being so singularly marked, are neither well formed nor durable. The RURAL has often urged upon its readers that they send for many catalogues and compare prices. We find that in one catalogue this "New Life" is quoted at 50 cents; in another at $2.00. Such differences would more than justify the soundness of our advice. We do not believe that "New Life" will live long.

A Poultry Record.

There is one phase of the poultry question that, it seems to us, has never been sufficiently dwelt upon; namely, that all persons if so disposed, can keep a few hens with profit, if they have a space of 50 feet square, or even less, in which to keep them. In order to write from experience we, last year, began the experiment of confining a few birds in a small space and noting the results. In early spring four Plymouth Rocks, three Black Hamburgs, one Partridge Cochin and five cocks of the several breeds were hatched out. Without loss or sickness they were reared by two mothers all confined in an area of about 40x40 or 1600 square feet. The house is nearly square 7x7 feet with a roof slanting ten degrees, built of hemlock boards with lights in the front (south) about 6x3 feet. In this are plain board nests and ordinary perches. The inclosure is of pine pickets.

Care and Food.

Their water has been changed daily;—besides wheat, a little corn etc, their food has been everything from the table, raw meat occasionally and green stuff almost daily. We have purposely avoided such stimulants as red pepper and hot boiled food, even in the coldest of the past winter. The house has been cleared of the droppings almost daily—the task of a moment merely, a hoe being always at hand—the nests have had flour of sulphur scattered about them every two or three weeks, and kerosene has been poured into the cracks and supports of the perches every month, or thereabouts. The entire care of these fowls, though it seems much greater as we write out the details, has required the services of a man scarcely fifteen minutes per day during the winter.

Egg Record.

The Plymouth Rocks began laying first; the Black Hamburgs second, the Partridge Cochins last. For reasons that need not be explained, no account of the eggs was kept until Feb. 1st. We may say, however, that the average for six weeks previously was greater than since. From Feb. 1st until March 24th these eight hens have laid 278 eggs—an average of six and a half per day. We have neighbors to the right and left of us, who, during the past winter, have kept from 25 to 75 fowls that have for the most part been obliged to take care of themselves. We state what we know to be the truth when we say that the highest number (75) have not laid twice as many eggs as ours have during the same period, and that the smallest number (25) have not laid so many during the same period. At our own farm, the average of fowls, from one year to another, is over 100. They are of mixed breeds. There they have been *kept* the same as nine farmers out of every twelve keep theirs,—with the exception of the grain thrown out to them every morning, they have been left to themselves. The entire flock is more or less lousy, and is always so. Diseases carry off considerable numbers during every year. We are confident that these fowls, kept in this way, *do not pay*, and it would be money saved were we to *buy* the chickens and eggs needed by the family. Our experiments with small numbers and with all sorts of breeds (always thoroughbred) will continue. We are now erecting another house and inclosure 25x25, and propose to add one or two each of four additional breeds for this and next year.

Special Trees.

Among the trees of this place are several for which we have a special liking. We make brief mention of them now that those who desire to purchase may do so at this season of general planting. We have always regretted that the Lawson's Cypress is not hardy enough for this climate, as it has always seemed to us one of the most perfect of Evergreen trees. Retinospora pisifera, Japan Cypress, resembles it in many respects and this we have chosen to fill its place. Whenever a tree by nature possesses marked peculiarities which seem to be the work of human hands, that tree is certain to provoke a good deal of remark, if not of admiration. Abies excelsa conica (or stricta) is such a subject. It is a dwarf variety of the Norway Spruce and grows in such a completely conical form that one can scarcely look at it and believe it has never been shaped by the pruning knife. For small lawns or among evergreens of smaller size, it is most desirable.

Menzies's Spruce (Abies Menziesii) is of rapid growth and of that whitish-blue-green which few evergreens, otherwise desirable, possess. This is a conical, compact grower with sharply-pointed, rigid leaves.

From time to time we have written in detail of Magnolias—those noble trees that seem to be planted only in the inverse ratio of their surpassing beauty. There is no other tree so well fitted as this to form pleasing contrasts by its breadth of leaf, its wealth of flowers, its majestic form and distinctly tropical appearance. There are several new species of fine promise, to which we have no space further to allude. Magnolia acuminata (the Cucumber Magnolia) is one of the hardiest species and, if cut back for a year or so, forms a pyramidal tree with the lower branches sweeping the ground. M. macrophylla bears the largest leaves of any of this family, growing sometimes three feet in length. M. auriculata (Fraseri), tripetala (Umbrella), conspicua and glauca are all hardy each possessing peculiarities of size, leaf and flower. Among the later varieties M. Soulangeana and Lenné are the most beautiful. The Purple Beech—the Purple Birch—the Japan Maples, any one or all, and the Fern-leaved Beech (Fagus heterophylla) are the other trees which we desire to specialize.

Arboricultural.

EVERY-DAY NOTES.

SAMUEL PARSONS.

The Sweet-Scented Shrub.

EVERY one knows the Sweet-scented Shrub, (Calycanthus). As children we have doubtless rolled its chocolate-colored flowers in our handkerchiefs and inhaled their sweet odor, and that of its camphor-scented wood; but do we realize the plant's full excellence? It has become so common that, like all familiar things, it has failed perhaps with time to retain its proper hold on our regard.

There are several varieties, the best known of which are C. floridus and C. lævigatus. Then, there is C. macrophyllus of the Pacific coast, which is not quite hardy, and several others of less value. The kind, however, that is best known to us and which is at the same time the best plant, is C. floridus. It has the largest flowers and leaves, and is of unquestioned hardiness and vigor, well suited in every sense to do good service on the lawn. It may not have the high degree of excellence possessed by some other shrubs that could be named, but its foliage is rich and shining, quite noteworthy in general character. Its curious reddish-brown, or purplish flowers, moreover, form a feature possessing much interest.

The Calycanthus has been thought in the past a somewhat difficult plant to grow, but it is really not specially difficult to propagate from root cuttings. Seed would, of course, produce it, but seed is not easily obtainable and in other ways, affords a less ready method of propagation. Altogether the Sweet-Scented Shrub (C. floridus), is a fine old hardy plant that we cannot afford to neglect in making up our collections of ornamental shrubbery.

The Siberian Stone Pine.—(Pinus Cembra Mandschurica.)

In Italy we have the Stone Pine (Pinus pinea), somewhat umbrella-shaped in contour of foliage. Switzerland and Northern Europe contribute the Swiss Stone Pine (Pinus Cembra Helvetica), and Siberia, the Siberian Stone Pine (Pinus Cembra Mandschurica,) the tree which I specially wish to note.

The Italian Stone Pine, though picturesque, is not hardy in our climate, and so I pass it without further comment. Swiss Stone Pines are more or less common, and always admired on the lawn. Their excellences have received a fair degree of attention, although no more than they deserve, but I hardly think the same can be said of the Siberian Stone Pine, (Pinus Mandschurica. Yet it is altogether a more noteworthy tree. The leaves are stronger and massed together in a more effective way. Broader contours and greater hight also give it more imposing qualities. It has, indeed, according to Gordon, been known to grow a hundred feet. Pines, in their breadth and masses and drooping grace of clustered needles, are in some sense the Palms of the north, and among Pines few are more effective than the Siberian Stone Pine with its great cones of extraordinary length. These reddish-brown cones of such unusual size are very effective, contrasted in fall with the long heavy hanging pine needles.

Floricultural.

SPRING FLOWERS.

WINTRY snow-storms are still whistling around, and it seems hard to believe in Spring Flowers. Yet they are coming, surely coming; even now down under the snow banks tiny rootlets are stretching, and tiny buds preparing for that kiss

> "which opes the violets' eyes,
> And calls up troops of frail Anemones."

Before we realize it, the tender leaves and flowers will be opening to the showers and shines of April. The beautiful process of *lengthening days* is fairly in operation. Every morning the rising sun steals an atom further north, and every afternoon he lingers with us a few moments longer than he did the day before, so that instead of sitting under lamp-light at half-past four, we can sit by the window and pursue our avocations till nearly six. The "backbone of winter is broken," and we are justified in dreaming of Spring Flowers. It is none too soon for those who are intending to be "Pilgrims of Nature" next season, to be preparing to welcome intelligently the vernal blossoms. Young persons who live in the country, girls and boys who have the delightful privilege of climbing hills and exploring valleys and meadows, who are not afraid of a bit of bog or the wettish places in pasture lands,—these have materials from which to manufacture the sweetest kind of country happiness.

But the simple act of picking wild flowers, captivating as it is, may be made doubly delightful by calling in a little science, by which the searcher for flowers may understand something of the structure and habits of these woodland friends. It is so pleasant to be able to find out to what family a plant belongs, and who are its sisters and cousins; when the different members may be expected to put on their spring or summer dresses, and what localities they select. It is an unfailing delight to feel a personal acquaintance, a friendship for each "fragrant, flower-crowned head;" to greet them when they come; to call them by their *names*, not merely the common names, though many of these are expressive and sweet, but by their scientific names. Though many of these are hard and terrific, yet they are *the* names which learned men have bestowed, and cultured persons must know these names if they would have an accurate knowledge of the inhabitants of the woods and wilds.

A friend of the writer had occasion to lament the strange ignorance of a rural population in these matters. Knowing well the Northern wild flowers and being located during the war in a beautiful Southern region, he was charmed with the prospect of making a collection of Southern flowers, though not having time to study them out. He sought, therefore, to discover either scientific or common names from the natives around, but the only reply to be obtained to any question as to what the beautiful strangers were called, was, "Oh, they're *Posies*,"—a pretty name, it is true, but not very satisfying to a botanical collector. A very desirable preparation for those who hope to spend many a day next season in searching for wild flowers, would be to devote a little time now to becoming familiar with the elements of botany. A small book by Prof. Gray, called "How Plants Grow," gives all requisite information for beginners, and as the student advances, more elaborate books are ready. I wish I could persuade every young person in this land to take up the healthful and delightful study. There are no wearisome hours, no heavy-hanging time for those who love and study Nature. God has thrown around the shaded wood-path, the tangled bog, the open field, the marsh and the meadow, such a subtle and simple charm, influences so sweet and satisfying that, amidst the cool, green and fragrant surroundings, the heart forgets the fashions and follies of the world and puts far away "the crush and din" of its madness.

Horticultural.

OUR GARDEN.

'LIZA LEAFTREE.

"DON'T you think we might have a garden Joel?" I asked it timidly the first week in April in one of the early years of my married life.

"Where is the good?" said my husband, "we have our potato and carrot patch and I guess it's the RURAL has put that into your head." But Joel was really good-natured, and so Anslem, our hired man, had orders to turn in and plow and harrow the last year's carrot patch for my use.

It was a little rough, but with the aid of a reel and line I got the beds into order, and will give you a little idea of the crops we planted and sowed:

All round the edge of the onion bed, planted with Wethersfield Red, I sowed parsley seed, and between the rows of Carter's First Crop peas, we put in dwarf celery for a second crop after the last hoeing. Stout Anslem worked the ground with the horses at the time of the carrot and other green crop hoeing, and made the head-lands of potatoes. I procured strong-rooted Currants and Gooseberries, and planted them out in rows wide enough apart for the horses to cultivate, and grew every kind of vegetables the first year, except asparagus.

Since then, a bed of this has been made and is the most eagerly sought and highly prized of them all. Two rows of Strawberries, planted along the fence, supply us with mammoth Jucunda sufficient for preserves and a good table supply, while by keeping our few Raspberries cut back and trained to a trellis, we have fine large fruit, and enjoy it better than any we could buy. The Early Vermont potato is a superior variety, and we use early and late sweet corn, to prolong the season.

It is astonishing how small a piece of ground will supply a family, if it is properly enriched, and attention paid to planting wide, with a view to a second crop. Radishes among beets, are soon out of the way. So are lettuce among carrots and at the same time this practice tends to keep the garden tidy and free from unsightly rubbish. I sowed some of the low-growing annual flowers along the sides of my vegetable beds, and their bright bloom was always before me when gathering anything for dinner.

Turnips I found did well sown late between the rows of onions which were pulled up late in August and laid to dry. The turnip fly does not seem to like the smell of onions, and left ours unmolested. And for the squashes, both summer and winter, which we grew, I found diluted cow manure effectual in keeping off the bugs and strengthening the plants. Up the side of the house grows a Delaware grape vine now, and half a dozen Damson plum trees, not far off, supply us with this choice preserve.

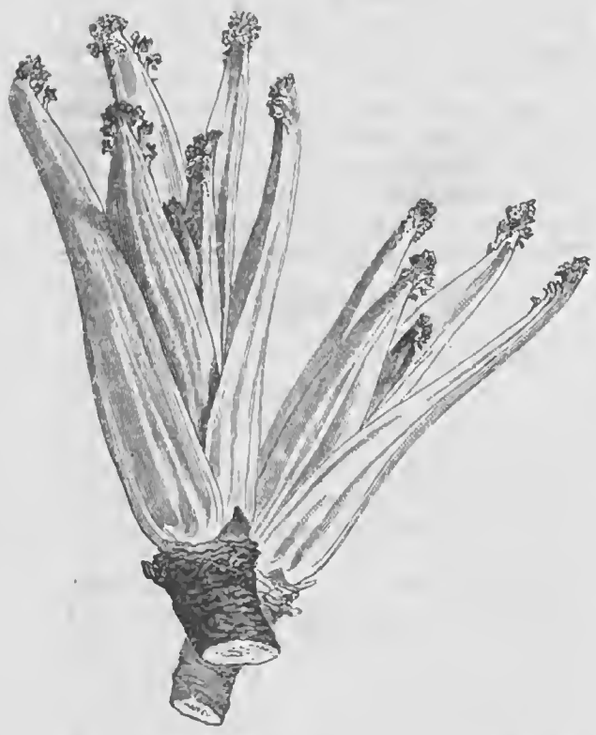
I keep the rubbish in the compost heap all winter, and make it the place for soap-suds and other good things, and when the pile is removed in spring to the garden, its removal leaves a rich spot where one may safely drop a few melon and cucumber seeds, and if covered with a pane of glass placed over a bottomless box, the melons ripen a week earlier than in the open air. Half a dozen tomato plants put into a warm, dry, not too rich corner, supply us for first use, and a few later plants, a second crop, for preserving and canning, may be put in after any of the early vegetables—spinach, beets or radishes—are pulled. Cabbage and cauliflower are grown in small quantities, the trouble with the caterpillar being so great that we have to apply air-slaked lime several times, and then if the plants chance to be neglected for a few days, we find the leaves are riddled.

Still, Joel now thinks we cannot do without our garden plot, and counting up, the other night, the profits and benefits therefrom, he concluded by saying: "Well, 'Liza, the garden and the RURAL NEW-YORKER are worth more to us than if we had "struck ile."

SEA KALE (Crambe maritima).

THIS is a vegetable that is very seldom found in the farmer's garden, though in Europe it is

a delicacy without which, in its season, no table can be considered complete. Its cultivation is similar to that of the artichoke. The old plants are divided in the spring and the roots set three feet apart in well prepared ground. During the summer, they must be kept clear of weeds, and in the fall, on the approach of hard frost, each plant must be covered with ten to twelve inches of leaves or long manure.



Sea Kale can also be raised from seed sown in the spring, thinned out to six inches when the plants are a few inches high, and in September transplanted to their permanent place in the garden, and treated like those produced from roots.

It is the young leaf-stocks that are eaten, but they must first be blanched like celery. To this end, heap the soil up around them, when they appear above ground in the spring, or invert pots or boxes over them, to exclude the light. When cooked, they have a flavor much superior to cauliflower. The engraving shows two shoots prepared for the kitchen.

Farm Topics.

WORK FOR APRIL.

This is truly a busy season. There are many things which can be done to good advantage, and some things which must be done now, or a loss will be incurred. He who has studied and been industrious all winter, will get along easily at this time; but the man who has been idle and who has no plans, will work to poor advantage and neglect many things. The approach of warm weather, green pastures and spring-buds, will stimulate any man to go to work if he have a spark of ambition left. Be careful on the start not to work too hard.

The Stock.—Cattle, sheep and horses are anxious to get to the field for a taste of grass, and will dig away all day for almost nothing. They should not be allowed to go to the pastures. It destroys their appetite and damages the young grass. Feed them regularly. They will eat less than in cold weather. Lambs and calves need milk; bran and roots are excellent to enable the mothers to furnish a supply. Feed working animals generously and use them moderately on the start, until they become hardened, shed their coats and get used to the warm weather. Horses should be blanketed for a time after work, unless the weather is quite warm. Do not be in a hurry to curry off the old hair; let it remain as long as it will, and the new coat will be all the better for it.

The Road.—We repeat the advice of last month. Just as the mud has dried partially down—before it is hard and stiff—run a scraper over the roads to fill the ruts with the little projections and ridges. This will allow the water to run off readily and prevent the road from "cutting up." A half day in scraping just in the right time, on several different occasions in spring, will save five times the amount of work along in summer.

Prepare the Fields.—Manure can be drawn and should be spread at once for corn, and the land plowed. Oats can be put in, and barley too. There will be nothing gained by cultivating heavy land when it is not in proper condition. Stones must be picked up in the meadow before the grass gets up to hide them. They can be drawn from any field which does not contain a crop. Stumps and old logs should be cleared up. The former come up easiest when the ground is soft in spring. This is a good time to repair fences, or make new ones. Strive to do all work well, that it may not soon need to be done over again. This is an excellent time to plan the ditches and places for tiling Compare drained and undrained lands and see how much earlier and better the former can be worked in spring. Keep up the comparison till after harvest, and make note on the difference of crops.

Weeds.—On the farm and in the garden, annual weeds will soon make their appearance. They are harmless, inoffensive little things to begin with. Then is just the time to fight them. Cultivate often and do not allow them to get a start. Perennial weeds should be watched for all through the growing season and not allowed to go to seed.

The Orchard.—This is the time for grafting and setting trees. The trimming is all done by this time. See that the trees are not suffering for manure or cultivation. If young trees lean over, cut in on one side, take out some dirt and straighten them up. Set trees leaning towards the prevailing wind. Look for borers. At the end of the month, remove the mounds made last autumn to keep mice away.

The Garden.—Hot-beds are in full blast and need attention on warm days as much on cold days. Young plants are started, transplanted and hardened preparatory to being moved into the open air. In the open garden, as soon as the land can be got in good order, sow lettuce, peas, onions, beets, carrots, salsify, parsnips. Potatoes for early crop can be hastened by allowing them to sprout in a warm place before planting. Plant Strawberries, Raspberries, Gooseberries and Currants. Attend to rhubarb, asparagus and horse-radish.

Farm Economy.

USES FOR WASTE FRUIT CANS.

Millions of used fruit cans go to waste every year, and every back-yard is cumbered with a collection of them. But by a little ingenuity these cans may be turned to good account. By placing them on a hot stove, top downwards, the solder is melted and the top may be removed. We have then the material for several useful purposes. By cutting a few small notches in the tin, as shown at Fig. 1, filling the can with water, covering it with a small plate or flower-pot saucer, and suddenly

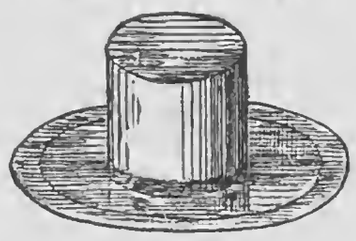


Fig. 1.

WATER FOUNTAIN FOR CHICKS.

inverting it, we have a water-fountain for young chicks, which will prevent them from fouling their drink by paddling in it, as they so frequently do. By attaching a few wires to holes punched near the edge of the can, (Fig. 2.) making a hole in the bottom and filling the can with rich soil, we can make numerous hanging pots for drooping vines, which may be hung on the shade trees, or to walls or trellises, and which will soon be covered with beautiful verdure. By cutting the tin in the shape shown at Fig. 3, and fixing a handle on to the bottom, we may have a useful scoop for flour or sugar, or other purposes. The handle may be one of the common door-stops which are usually fastened to base-boards to prevent the door-handles from striking the wall. A small nut may be procured at any stove shop, which will fit the screw, and

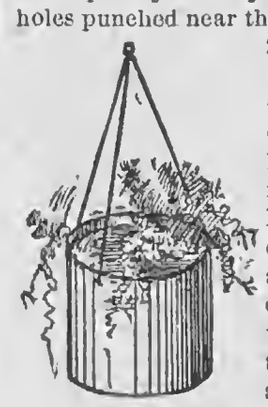

Fig. 2.

HANGING FOWER-POTS.

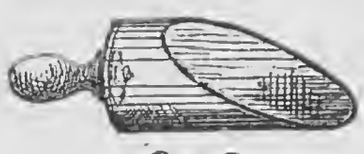

Fig. 3.

FLOUR OR SUGAR SCOOP.

by using two round pieces of tin in the shape of washers, in the manner shown in the engraving—inside the scoop and through the opening broken for that purpose—the junction of the handle and scoop is greatly strengthened. By melting the bottom off and loosening the side joint in the same way, we have open tubes as shown at Fig. 4. These may be placed around peach trees and small apple trees, and pressed into the ground an inch, when they will effectually preserve them from the dreaded borer.

Fig. 4.

OPEN TUBE.

Many other uses for these open tubes will occur. If they are cut into strips two or three inches wide, they may be used as seed-beds for tomato plants or early melons. To use them in this way, the ends of the strip should be bent down for a quarter of an inch on opposite sides, so as to form a catch which will hold the hoop together. Fig. 5. The hoops are placed on a board or on small shingles, and filled with soil in which the seeds are sown early, in the house. When ready for planting out in May or earlier, the plant in its ring, is taken to

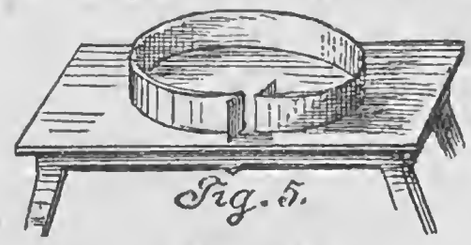

Fig. 5.

FASTENING THE RINGS.

the place prepared for it, and the ring is slipped off the board or shingle, without disturbing the plant in the least: the ring is slipped up and removed, the soil is heaped about the plant, and the business is finished. The rings may also be fastened by punching a hole through both ends with a sharp nail, and putting a wooden peg through them, or by punching one hole at one end, and cutting a small tongue on the other, which may be put into the hole to fasten the ends together. Lastly, an excellent grater for horse-radish may be made by spreading out the sheet of the loosened can, tacking it on to a soft plank, and punching holes all over it with a square-pointed tenpenny nail, or the three-cornered end of a file. The perforated sheet is then tacked on to two pieces of board cut half-round, as shown at

Fig. 6.

HORSE-RADISH GRATER.

Fig. 6, and the grater is finished. If we considered what a vast amount of varied labor is expended in procuring and making the material, and forming one of these fruit cans, we should dislike to see them utterly wasted without finding some useful employment for them before the termination of their existence.

The Apiarian.

OUR BEE HINTS.

What Bees to Keep.

We are often asked by beginners in bee-keeping "What kind of bees shall we keep?" To all such our answer will be to *keep Italians*. If it is not possible, or even convenient, to obtain Italians at the start, begin with the common black bees, and, later, procure one or more pure Italian queens with which to Italianize the stocks. It is now almost universally conceded—almost, for there are still some practical bee-keepers who prefer the black bees—that under similar circumstances the Italians are the most profitable. Professor Cook, in his Manual of the Apiary, enumerates no less than eleven points in favor of the Italians over the black bees. Some of these points may not weigh heavily in the scales, but others are of prime importance. The main ones are: First, that they have longer tongues, and can therefore gather from many flowers from which the black bees cannot. Second, they are more active, and, with the same opportunities, gather more honey. Third, the queens are more prolific. Fourth, the yellow abdomen makes her majesty more conspicuous, and she can therefore be readily found when looked for. Fifth, the bee-moth does not easily gain foothold among the Italians. Sixth, they are more amiable.

Transferring.

When bees are purchased, either in boxes or in a style of hives different from the one the bee-keeper has decided to use, it becomes necessary to transfer them. This may be done at any time, though it is best not to attempt it too early in the season, as they cannot so readily repair the comb. Choose a warm day in the latter part of April or the beginning of May, when the bees are active gathering honey. On such a day blow some smoke into the box-hive, invert it, and above it place the movable-frame hive, in which should be put some brood and a few frames of comb for the bees to adhere to; wind a blanket around the junction to prevent the bees from escaping, and drum on the box. In a few minutes the bees will have deserted the box and gone into the hive above, which should then be placed on a bottom-board and carefully removed to the colony's former stand in the apiary. Now the bees are in the new hive adhering to the few frames of comb previously placed there, and there being brood in one or more of these, the bees will not desert the hive. Next, take the box into some building to avoid being bothered by the bees, and with saw, chisel and hammer, carefully take it to pieces, with as little injury as possible to the comb.

The comb must now be put in frames and these placed in the hive with the bees. Cover a table, or a piece of board serving as such, with a thick cloth to prevent injuring the brood; on this lay the comb, lay the frame on it, and letting the knife follow the inside of the frame, cut out a piece of comb that will fit it exactly. No worker brood should be wasted, as every worker that can be reared will be needed to carry honey to the hive. Drones, on the other hand, are a tax upon the hive instead of a help, and at no time should a large number of drones be tolerated in the apiary; all drone comb and brood should therefore be cut out. Proceed thus till all are transferred. Save all the little pieces of comb that are cut off—they are handy to use for guide-comb in other frames. The inexperienced can easily distinguish drone comb from worker comb, the former having the larger cells; and if there is capped brood, the drone brood projects further out than the worker brood. The comb can be better fastened in a small frame than in a large one, hence in this respect, the Gallup frame, which measures 11¼x11¼ inches, is to be preferred. In fastening a small piece, place a piece of lath beneath the comb, and support it by a string tied over the top bar of the frame. Be careful not to drop any honey about the apiary, as the bees will soon learn that it is much easier to gather honey when found in bulk, than laboriously to collect each little particle by traveling from flower to flower, and their greediness being thus aroused, they will assail and rob the weak colonies.

Everywhere.

EUROPEAN CORRESPONDENCE.

Taganrog, Caucasus, February 17, 1879.—I have just returned from a tour along the shores of the Black Sea and the Caucasian Mountains, to this quaint town on the Sea of Azof. The climate is delightful and the vegetation most remarkable. Between Poti and Tiflis I rode for miles and miles through forests of Rhododendrons, Azaleas and Andromedas, so dense in foliage that they afford shade and shelter for man and beast at any season of the year. During the months of May and June, when they are in full bloom, the sight must be grand and magnificent. There are also many other trees and shrubs of beauty and utility. Among the latter is pre-eminent the Boxwood tree which attains here considerable size. Large numbers of these are annually cut and transported to Poti and Taganrog, thence shipped to England and there disposed of at large prices for shuttle making, it being the most desirable wood known for that purpose From here I shall return *via* Moscow to St. Petersburg. W. R. Berghoiz.

RURAL SPECIAL REPORTS.

Kentucky, Owensboro, Daviess Co., March 22.—Farmers are very much behind owing to the unfavorable winter. Some oats have been sown and some potatoes planted. Wheat is looking well on good land. Tobacco has advanced somewhat, which I think will cause strenuous efforts for a big crop. Seeds are lower this season than for many: clover, $4 10; timothy, $1 50; orchard-grass, $1 35; red-top, 45c.; oats, 30c.; corn, 30@35c. Pneumonia prevails to some extent, and is quite fatal. That terrible malady, "the-worst-cold-I-ever had-in-my-life," prevails to an alarming degree. but a few good days and ditto stews will cure most cases. J. W. S.

Nebraska, Purple Cane, Dodge Co., March 22.—Wheat is going in everywhere in this country. The ground is quite dry and rain must fall before seed can sprout *well*. Dust follows the harrow and seeder, but even that is more pleasant working than sowing on muddy land. But to half quote a great poet, and wholly quote a small one,

"Hope springs eternal in the human breast,"
"We are bound to have a good crop in the West."

You see it took two of us to concoct that, but two heads are better than one, if one *is* only fit for sour-krout. S. R. M.

Kentucky, Milton, March 19.—Some of our farmers were planting potatoes last Thursday and the next day were out in their over-coats and furs, looking decidedly blue, whether from *sympathy* with their potatoes I do not pretend to say. Potatoes that were "holed up" escaped frost and kept well; while those in cellars froze badly. They are now worth 50c. to 75c. per bushel;—Scotch Nobles in the lead. Our tobacco growers have "*raised*" immense crops this winter. There is, however, a fair prospect of an increased acreage being planted this summer. S. E. H.

Michigan, Bloomingdale, Van Buren Co., March 19, 1879.—Our principal crop—logs and wood—is very heavy and we could not have wished better weather for harvesting it. Stock of all kinds have wintered well and are in good condition. Cows are worth $18 to $25; hogs, 2c. per pound; sheep, $3 to $4 per head; corn, 30 to 35c.; wheat, 90c.; oats, 30c.; potatoes, 50c. per bushel. We had a very heavy apple crop last year, and at present the prospect is good for a fair one the coming season. M. W.

Kentucky, Fern Creek, Jeff. Co., March 24. After a severe winter the snow went off the last

of January, and the ground has been fit for plowing the larger portion of the time since. Some have finished plowing for corn and sowing oats. It looked like spring the first week of this month, but has been March sure enough, for the last week. Prices are as follows: hogs, 3½ to 4½c. per lb.; wheat, 85 to 90c.; corn, 35c,; oats, 27c.; potatoes, home grown, $2 to $2.25 per bbl.; Northern, $2.75 to $3 per bbl.

H. H. T.

WISCONSIN, Clinton, Rock Co., March 17.—Farmers are busy preparing for spring work. Farm hands are plentiful at from $12 to $16 per month, with board and washing. Wheat is selling here at 85c. per bushel; barley, 30c. to 60c; rye, 40c; corn, in the ear, 75 lbs. 26c; oats, 22c. to 24c; timothy seed, $1; clover seed, $5 to $3.60: butter, 10c. to 16c; per lb; eggs, 12cts. per doz. Hay is plenty with but little demand. Farmers are hoping and working for that good time coming in the sweet bye-and-bye. P. J.

NEW YORK, Kinderhook, March 24.—Snowbanks hereabouts are two rods wide and from four to six feet deep on each side of the fences, while the snow still lies a foot deep on a level. The prospects for an early spring are not therefore very good. Rye is selling per bushel for 50c: corn, 45c. for 60 lbs; oats, a cent a pound; hay $5 to $8 per ton; butter, 16c. per pound; eggs, 16c. per doz; wages, $13 to $16 per month; taxes high; farmers poor; potatoes $1. per bushel. A. J.

INDIANA, Newton's Retreat, Tippecanoe Co., March 21.—Land hereabouts is low. Land that sold for $50 per acre one year ago, can now be bought for $30, and everything else is down proportionately. White wheat is selling at 88c: red, at 85c; oats, 20c; rye, 40c; corn 30c; butter, 12½c. to 15c. per pound; eggs, 10c. to 15c per doz; hogs, $3.50; per 100 pounds: hay, $6 to $7 per ton; wood, $4 to $5 per cord; wages for farm hands, $12.50 to $15 per month are the highest figures paid. D. C. A.

VIRGINIA, Derry Church, March 24th.—We have had extremely cold weather this winter, with much snow; farmers are not able to plow yet on account of it being too wet and the frost not being entirely out of the ground. Prices of farm produce are as follows: wheat, $1; rye, 45c.; corn, 42c.; oats, 25c.; clover seed, $3 75; timothy seed, $1; butter, 12c.; eggs, 12c.; and potatoes, 65c.; E. E. B. S.

ILLINOIS, Risdon, St. Clair Co., March 20.—Most farmers are through sowing oats; and the others are busily preparing for doing so. Wheat looks splendid. It is abundantly thick and growing finely. Some few farmers have begun gardening; but most of them fear another cold snap before spring fairly opens. Wheat is worth 95c.; oats, 30c.; potatoes, 40c.; corn, 35c. N. J. S.

MARYLAND, Easton, Talbot Co., March 22.—Wheat now covers the ground from spring growth. Clover and grass are generally green. We feel we are in the garden spot of the world. Our waters and soil furnish all delicacies the human family need. Mild winters and pleasant summers are the rule here, the air in the heated season being tempered with ocean breezes.

T. B. B.

NORTH CAROLINA, Brookston, March 20.—Tomato seeds, &c., received, and my plants have come up finely; are now nearly two inches high. Did not count the seed, but think Prof. Beal will not find any reason to expose the RURAL as a distributor of worthless seeds.

M. B. P.

VIRGINIA, Thoroughfare, Prince William Co., March 23.—Grass and buds have started nicely. Many farmers have been plowing sod land for corn. Folks generally are busy seeding oats. Potatoes in hills were mostly a loss here. We are feeding beets to stock yet. E. K.

Various.

CATALOGUES, &c., RECEIVED.

ALFRED BRIDGEMAN, 876 Broadway, N. Y. Market Gardeners' List of seeds. Free.

G. H. & J. H. HALE, South Glastonbury, Conn. An interesting circular of small fruits.

PAMPHLET. The Beet Sugar Industry in the United States, by Ernest Th. Gennert, 38 Maiden Lane, N. Y.

PAMPHLET. The Brown Leghorn Fowl—how to rear, manage and breed—by Chas. R. Harker, Rochester, N. H. Price 30 cents.

WM. S. LITTLE, Rochester N. Y. This old establishment presents its semi-annual circular of wholesale prices for the spring of 1879.

SCHEDULE of Prizes offered by the Mass. Hort. Society for 1879. Competition open to all. Address Robert Manning, Secretary, Boston, Mass.

TUISCO GREINER, Naples, N. Y. Second Annual Catalogue of home-grown vegetable and flower seeds, plants, seed potatoes, etc. Free to all.

PAMPHLET. Additional facts and information in relation to the Catalpa Tree, Catalpa bignonioides, and its variety speciosa; by E. E. Barney, Dayton, Ohio.

JOHN SAUL, Washington City, D. C. This is a very comprehensive Catalogue of 112 pages with a handsome colored plate of the Rose "Queen of Bedders." To those who wish to keep up with the times in flowers and plants of all kinds, this Catalogue seems all but indispensable. Free to applicants.

SORGO HAND BOOK.—A treatise on the Chinese and African Sugar Canes, varieties, culture and manufacture by the Blymyer Manufacturing Co., Cincinnati, O. Free to applicants.

CATALOGUE OF FRUITS of the Michigan State Pomological Society—prepared by T. T. Lyon. The Secretary, Chas. W. Garfield, of Grand Rapids, Mich., remarks that the Society desires to place a copy of this catalogue in the hands of as many fruit growers as possible. It will, therefore, be sent to any address on the receipt of a three-cent stamp.

HOOPES, BROTHER & THOMAS, Cherry Hill Nurseries, West Chester, Pa. We always take pleasure in alluding to the catalogues of this good old firm, who for many years have made their specialty, "all plants that are handsome, whether cultivated for the beauty of the leaf or flower." We feel confident that any of our friends dealing with them will be treated in the most liberal and satisfactory manner. The present catalogue is accurate, interesting and comprehensive, and has to do chiefly with Bedding and Greenhouse plants. Free to applicants.

F. M. HEXAMER. Catalogue of small fruits, seed potatoes, etc. New Castle, Westchester Co., N. Y. Dr. Hexamer is well known to our readers as an occasional contributor, and to us (if not to them) as one of our most experienced horticulturists. In the present catalogue a select list of Strawberries comes first—a list which he has fully tested—then Raspberries, Blackberries, Currants, Grapes, vegetables, etc. Seed potatoes are specialties with him, and first in the list is the Beauty of Hebron, of which he speaks as follows: "A most valuable variety, in quality second to none and in earliness ahead of all the older leading kinds. Its shape is elongated and flattened, somewhat bluntly cut at the ends; color light pink, nearly white; size large and very uniform; flesh pure white and mealy; a good keeper and immensely productive." The catalogue will be sent free to our readers.

J. M. THORBURN & Co., 15 John St.—Catalogue of seeds for the vegetable, flower garden; for the lawn, farm and nursery. This establishment is one of the oldest and best in the country, and the catalogue is free to all. We take this place to make a remark or so respecting what we have called *Blunt's* White Prolific corn. We first learnt of its productive powers through Mr. Blunt himself, then through several of our correspondents and the Agricultural Dept. at Washington, and, finally, through our contributor, Mr. Henry Stewart, who (receiving his seed from Mr. Blunt direct,) raised last year, as we have already stated, at the rate of 150 bushels per acre. This determined us to secure the entire stock in Mr. Blunt's and Mr. Stewart's hands for free distribution among our subscribers. Both lots proved to be more than we should probably need. The surplus was handed over to Thorburn & Co. at exactly the price we paid for it, and this firm (having a very small quantity to sell,) now offer it at the high price of $10 per bushel, as long as it may last. Now we have merely this to say: Since the CORN number of the RURAL, we see that several persons are advertising "Prolific"—"White Prolific," &c., corn. We would state to our readers that the supply, in any *one* individual's hands, of the corn which we have called BLUNT'S WHITE PROLIFIC and which we have offered free to our subscribers, is necessarily small—*too* small (so far as we can judge) to enable them to advertise it for sale, and supply with the genuine seed the orders which, no doubt, would freely follow.

"NEW AND RARE FRUITS IN 1878."—A paper read before the Western N. Y. Hort. Society, by William C. Barry, of the firm of Ellwanger & Barry, Rochester, N. Y. Of some of the newer Peaches, Mr. Barry says:

"Waterloo—The first very early peach ever raised in Western New York. It was originated in Waterloo, by Mr. Henry Lisk, and fruited for the first time in 1877, when it ripened several days earlier than the Alexander or Amsden.

THE WATERTOWN WAGON.

In 1878 the first specimen ripened July 14, and all the fruit was gathered July 19th, about a week in advance of the Alexander and Amsden. The fruit is of medium to large size, good specimens measuring nine inches in circumference and weighing five ounces. The skin is whitish-green in the shade, marbled red deepening into dark purple crimson in the sun. Flesh greenish-white with an abundance of sweet vinous juice, adheres considerably to the stone, like Hale's, Amsden, etc. It is a remarkable keeper, and will undoubtedly be of great value for distant as well as home markets.

"Conkling—Among fifty varieties which we had the pleasure of seeing in fruit the past season, I think this might be justly regarded as the most attractive of them all. The fruit is large, good specimens measuring 9¼ and 9½ inches in circumference, and weighing 6½ and 6¾ ounces. Skin beautiful golden yellow; very juicy, vinous, and of very good quality. It succeeds Crawford's Early. This is another Western New York peach, having been raised in the town of Parma, N. Y., and fruited for the first time in 1873.

"Alexander's Early and Amden's June, in which a great deal of interest has been manifested, have proved so nearly identical as to make it impossible to distinguish one from the other. They are the largest and earliest of the very early sorts, not taking into consideration the introductions of 1878, of which the "Waterloo" is thought to be nearly a week earlier. The time of ripening of the newer sorts has also been satisfactorily determined. Alexander, Amsden, Honeywell and High's Early Canada bear such a striking resemblance to each other as to be considered almost identical, and all ripen at about the same time. Then follow in the order named Brigg's Red May, Early Beatrice, Early Louise, Early Rivers, Rivers's Early York, Early Silver, Magdala, Dr. Hogg, etc."

WE have before us the Scale Catalogue and Price List of Jones of Binghamton, N. Y. Mr. Jones is nothing loath to sound his own horn, and says so. He is, too, ever ready to put a beam in his neighbor's eye, if it is understood that it shall be a scale-beam, with Jones engraved upon it. The manufacturer of Jones's Scales is frank and open in his dealings. In the catalogue it is clearly explained how and why he can sell as good scales as can be made, so cheaply, and ending by avowing that he wishes no one to accept his goods on mere representation. They are always sent on trial with absolutely no conditions. If the scales do not perform well, there is no sale. Any one who has had the pleasure of meeting Mr. Jones, will see the man reflected throughout the catalogue. He is as honest as his scales are trustworthy.

Industrial Implements.

THE WATERTOWN WAGON.

WE have had occasion to mention the Watertown wagons, made by the Watertown Spring Wagon Co,, of Watertown, N. Y., and at the time stated that, owing to the thoroughness of the work and the soundness of the material used in conjunction with the moderate prices at which they are sold, a vehicle was put within the reach of farmers, that could not but yield very great satisfaction. We have had an opportunity of closely noting the performances of a wagon similar in design to the illustration given, and we think it is well adapted to general country use. It weighs but 450 pounds, and is ironed with the best American refined. Patent wheels, well-riveted and machinery-set boxes, on coach-shaped axles, with solid hammered collar and solid end nuts, make a running-gear proof against very rough usage. The springs are full ground and warranted, and, in fact, all the iron and steel used are carefully selected and the best adapted to the purpose. The pole or shafts that go with each wagon, have bent cross-bars and whiffletree, and eveners have cock-eyes and plates, and are well braced.

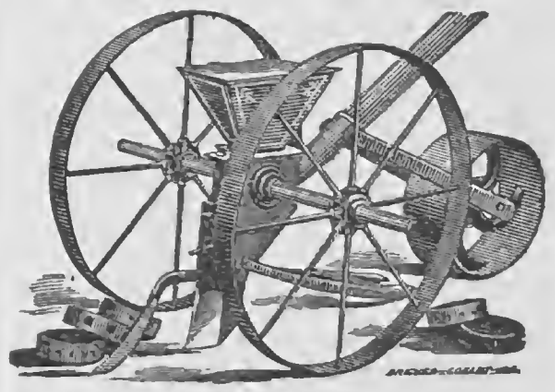
In appearance the wagon is very stylish. The box has rounded corners, is ornamented with moldings and protected on its entire upper edge with a strip of oval iron, that is broken only by the drop tail-board, that is one of the minor conveniences of the conveyance. The cushions are of corduroy, well-made, with "falls" of the same material. The paint is thoroughly well put on, the wagon continuing to look bright and neat after long use. The way in which the steps are placed makes ingress and egress easy. The wagon will carry a thousand pounds with safety, and is in every way "handy," being serviceable for work, and equally presentable when it is desired to use it as a pleasure conveyance.

THE VICTOR SEWING MACHINE.

WE call the attention of our readers to the striking and well displayed advertisement of the "Victor" Sewing Machine which appears in this paper. The extensive manufactories and principal office of the Victor Sewing Machine Company are located at Middletown, Conn., where ample facilities are to be found for producing machines of the finest quality. From the beginning of their business, this company has been governed by a determination that none of their work should be offered to the public except that of the highest class, and to this end, provided themselves at large expense, with machinery of the latest and most approved patterns, and called to their service the most skillful and intelligent mechanics. The wisdom of this course has been fully verified, as their machines have been subjected to long and severe service without becoming disabled, while giving to the purchaser the most complete satisfaction. Notwithstanding the present popularity of their machine, the Victor company have resolved to make it still more attractive and desirable, and now offer to the public a *new* "Victor" which has several important improvements. They have adopted a more simple upper tension, and added to the shaft pully a "stop motion" by which the bobbin may be wound without removing the work; but the chief and most important improvement is in the movement of the shuttle driver whereby all friction is reduced to a minimum. The "Victor" as now constructed must commend itself to the judgment of those in pursuit of a simple, durable and light-running machine, while it will challenge the admiration of those interested in the product of mechanical ingenuity and skill.

A NEW SEED DRILL.

OUR engraving of the "Monitor" seed drill displays some new features in this class of implements, that are likely to prove very serviceable. The wheels are large, and being movable on the axle, serve as markers while they turn the axle to which the seed-cup is attached. The seed-cup is an iron disc, with holes bored into the circumference, of a size proportioned to the seed that is to be sown. The delivery



is perfectly adjustable and very accurate. Leaving the seed in the ground with entire uniformity, opening the ground and clearing it of trash (by means of the coulter in front) dropping, covering and rolling the seed and marking the next row are all performed in one operation. The drill is very thoroughly made, and has but few pieces, runs smoothly and is sold at a very attractive figure, we believe. Any kind of seed may be sown. It has been used in the vicinity of Newburyport for some years, but it is only recently that its merits have attracted more general attention. The Merrimac Machine Co. of Newburyport, Mass., are the makers, and circulars may be had on application, free.

WELL-BORING with the new mechanical appliances, has become a profitable employment, and many have quitted other businesses to prosecute this one. It does not require much capital to begin with, and if successful, the operator, at the end of a fair season, is likely to have regained his original investment, with a fine set of tools representing his interest. Many who are dissatisfied with present surroundings or occupations would find the "Well-Borer's Guide," issued by Loomis & Nyman, Tiffin, Ohio, very interesting reading, containing, as it does, a complete exposition of the subject with full illustrations of machinery. It is sent free to all applicants.

The Querist.

ANSWERS TO CORRESPONDENTS.

Non-smoky Chimney; Tarred Paper; Bavarian Rennets, etc.

A Subscriber—address mislaid—asks, 1, how to build a chimney that will not smoke; 2, what is tarred paper, will it do for outside coverings, where can it be had and at what price; 3, would sprouts do as well as buds for grafting, and whether the "heart-root" would be better; 4, what are Bavarian rennets and how are they prepared, and in what do they differ from domestic rennets.

ANS.—1. Have plenty of draft, with the fireplace set in deep, and the back receding backwards to the flue or passage for the smoke. Place a flat stone over the top, resting at the corners on bricks, with open spaces at least four inches high and as wide as possible. This will prevent the wind from blowing down the chimney, which forces the smoke into the room. Make the flue not less than a foot square in the narrowest part. 2. Tarred paper is paper run through hot coal-tar and saturated with it. It will not do for any outside covering, as it will not stand wetting. Can be had at hardware stores, and costs from two to three cents a pound. 3. Sprouts are not good for grafting from any trees. The ends of healthy, bearing limbs are the best, and these should be taken, if possible, from trees in full bearing vigor and growth. Sprouts from grafted trees would be more likely to bear sooner than from seedlings. The "heart-root," by which is meant, we suppose, the tap-root, would not make any difference. 4. Bavarian rennets are calves' rennets, and are cured by being blown up like a bladder filled with air instead of being cured in salt, as most of the rennets are prepared in this country. Undoubtedly all sold here as such are not imported from Bavaria, but from all Germany and France and other European countries, although they have the name of Bavarian rennets. They are better than our domestic rennets and sell in much larger quantities. We do not know why they are better and stronger—whether it is in curing them or on the condition of the animal. Most American rennets are from veals slaughtered in the cities, which have been kept without food until their stomachs are empty and more or less inflamed. This may make the difference.

A Comprehensive Hog-House.

C. T., Millersville, Sandusky Co., Ohio, asks for information as to the construction of a hog-house for from 15 to 25 hogs, so "fixed" that the animals can be easily separated. There must also be a wagon-way across the width of the building, with doors on each side; and a place overhead large enough to hold, say 500 bushels of corn; and also room for a small workshop in some part of the building.

ANS.—A building 30 feet long and 26 feet wide, would furnish ample room for a wagon-way of 12 feet on one side with a passage, four feet wide, in front of the pens which would be 10 feet wide and 30 feet long. The space for the pens for 25 hogs can be subdivided into pens 8x10, or smaller, if any are desired for breeding purposes. A sliding door in the partitions between the pens will allow of the passage of hogs from one pen to the others. A part of the pen space can be used for a potash kettle, or for a shop, or the latter can be located in the chamber. The posts should be 13 feet high, which will admit of a high ceiling and plenty of space overhead for corn. There should be two trap-doors over the wagon-way to the chamber. The wagon-way should be closed at each end by sliding doors, and need not have any floor. There should be windows at each end and opening from the pens, and doors also. The chamber to such a building will hold 1,000 bushels of corn. One much smaller would be ample for one wagon and pigs not for breeding. The cost varies so much in different localities, and according to material used, that we will not attempt any estimate.

Stretches in Sheep, etc.

L. B., Mayville, N. Y., has a small flock of sheep that have spells of lying down and stretching themselves as far as they can, with their noses extented. The spells last from one to three days; otherwise the sheep are in good condition and always recover, and he asks the cause and a remedy. 2. He wants to know whether hemlock leaves and twigs are good for sheep. The animals like these in winter; some people have told him they were good for his flock, while others said that such feed would make them shed their wool.

ANS.—This is a case of what is known as as "stretches" which is, in fact, indigestion. This causes discomfort and pain in the bowels and the sheep stretch themselves out to find ease. A dose of one ounce of linseed oil, repeated the second day, generally relieves this complaint, and its return is prevented by feeding a pint of linseed oil-cake meal daily. 2. Hemlock is not wholesome for sheep; it affects the kidneys unfavorably, at least such has been the writer's experience, and after one season's trial of it as a sort of test af the popular opinion, its use was considered objectionable. There can be nothing better for sheep than good sound clover hay, a little oats and corn and, if possible, a few turnips. If these are provided there is no need for trash, such as hemlock or pine branches.

Care of Sheep.

E. G. R., East Varick, Seneca Co., N. Y., is 16 years old and has a flock of 18 sheep, part fine- and part coarse-wooled. They are troubled slightly with ticks which do not injure the sheep much, but attack the lambs when they come, and he asks 1, the best way of getting rid of the pests before the lambs are dropped; also, 2, what kind of food in addition to good clover hay, would be best for ewes that have lambs; 3, how many ewes can one ram serve properly; 4, at what time should the ram be turned with the ewes to have lambs ready for early market.

ANS.—1. It is not at all impossible to rid the sheep of the ticks, unless they are very badly infested with them, and then it is a poor prospect for the lambs; as the ticks will destroy them. If these ticks are not very numerous, an easy way to kill them is to take a pair of sharp-printed scissors and, opening the wool of the sheep, to clip every tick in two parts. The ticks cannot be picked off easily, but can be killed in this way with little trouble. The writer has cleared a sheep of more than a hundred in three or four minutes. It is a small matter to go over 18 sheep in this manner. 2. The best feed for the ewes in addition to the hay, would be a mixture of equal parts of oats, corn and rye; or one of bran and corn meal is very good for them. One pint a day will be sufficient for each ewe. 3. One ram will attend to 30 or 40 ewes or to 50 if fed with one quart of oats and corn daily and only turned into the flock in the yard at night. 4. The ewes should be coupled in August and September to have lambs in January and February, which will be ready for market in April and May.

Bee Querries.

H. L., Youngstown, N. Y., asks 1, how to handle bees without getting stung; 2, how to keep moths out of hives; 3, what is the best shape for hives in order to winter safely; 4, what advantage has the Italian bee over the Black bee; 5, is the bee in common culture, a native of this country; 6, how to control swarming.

ANS.—1. No one can handle bees without being stung more or less. Protect the head with a bee veil. Perform all operations on warm days while the bees are busy gathering honey. It is a good plan to drum on the hive for a moment, and blow in some smoke before opening it, the bees will fill with honey, and, like people with full stomachs, be more amiable. Avoid all quick motions; never strike at them, or run from them. Keep perfectly cool, even when electrified by a few stings, and the bees will respond with good behavior. 2. The most effective means of keeping it out is to keep the stocks strong. The moth seldom gains foothold in a hive full of busy, buzzing bees. 3. See Our Bee Hints of March 22d. 4. See article on bees in this issue. 5. No, it is probably a native of Asia, whence it spread over Europe, and from Europe has been introduced into this country. 6. Skill and watchfulness alone, on the part of the bee-keeper, can prevent bees from swarming. Destroying all queen cells as soon as they appear, if not wanted for nucleuses, and dividing the swarms artificially, are the main points in controlling swarming. To answer this question fully necessitates the explanation of many other points, and would take too much space at present. We shall later have an article on the subject.

Sheep Husbandry in the South.

W. S., Boston, Mass., asks which part of the Southern States would be the best locality in which a young man with a small capital could start in wool-growing and sheep husbandry; what kind of sheep would be the best to start with; the price of such sheep by the hundred; the price of full-blooded Merino rams; the address of H. S. Randall, author of Sheep Husbandry in the South and one of the former editors of the RURAL.

ANS.—The best location for sheep husbandry in the South is doubtless in Georgia, in what is known as the piney-woods region. This is a large tract of open woodland covered with a growth of wire-grass and other native herbage upon which sheep can subsist the year round. These lands can be purchased in large tracts at one dollar or less per acre. The common native ewes are the best to begin with, and the progeny of these crossed with pure-bred rams, are soon bred up to an equality with the full-blood. Common ewes can be purchased in Georgia for $2 per head and pure rams will cost from $30 to $50 each. Henry S. Randall is no longer living; he died about two years ago. His book on Sheep Husbandry in the South is now out of date, because things have changed greatly since it was written. The only modern book on this subject is Stewart's Shepherds' Manual, which covers the whole ground; price $1.50; to be had through this office.

Raising Sweet Potatoes and Peanuts.

G. H. F., Granville, Mass., asks how to raise, 1, sweet potatoes and, 2, peanuts.

ANS.—If both seed and plants are easily procurable it would perhaps be well for a novice to try both. In the latitude of Massachusetts it will be necessary to start the plants in a hot-bed. Place the tubers on the soil of the bed, cover them lightly with sandy soil and treat them as tomatoes or other plants grown in heat. When the sprouts are four or five inches high, pull them off carefully, leaving the potatoes undisturbed, when another growth will soon appear, which serve in the same way, and so on until late in the season. Select a plot of ground more or less sandy, run furrows three feet apart, apply well-rotted manure or ashes or both in the furrow, throw up with a small plow a ridge over this and set the plants singly about 18 inches apart. If properly handled, the sets will be ready for planting out about six weeks from the time of planting in the bed. Defer planting out until there is no danger of frosts.

2. Plant on slightly-raised hills of sandy soil two feet apart each way—two to three nuts in each. If the outside shell is removed, germination will sooner occur. As the plants spread, gradually cover slightly with loose soil, commencing at the center of the hill, leaving the extremities of the shoots free.

Butter Coming Slowly.

Mrs. S. T. B., Kansas, finding her butter coming soft, and only after much labor, asks the cause and a remedy.

ANS.—If the trouble is, as intimated, peculiar to Kansas, then the feed may be in fault. But the same difficulty is not uncommon elsewhere, and the season of the year when such trouble occurs is either winter or summer—the time when the greatest variations of temperature occur. At such times the cream rises slowly, and undergoes changes unfriendly to success in butter-making. The surest remedy is setting the milk in deep cans placed in ice-water or in a tank of cold, running water that is being constantly changed by a stream running in and one running out, so as to keep the temperature even. But one great cause of soft butter that does not gather well, is in churning the cream at too high a temperature. A thermometer is an essential instrument in any dairy, even the smallest. The best cream will give trouble, if churned at too high or too low a temperature. It should be kept as low as 62° in summer, and not higher than 68° in winter. A partial remedy, where cold-setting cannot be used, is found in scalding the milk (temperature of 135°) before setting. The evener the temperature of the milk-room, the better always.

Pearl Millet and Grasses.

J. B., Union, Broome Co., N. Y., asks, 1, whether Pearl Millet is as valuable as hay for feed, and the price of seed; whether it should be sown like oats or drilled in like corn; the kind of land suitable for it; 2, whether Kentucky blue-grass would do well on his place, and what kind of grass would give a rich, heavy pasture, and afford a heavy sod.

ANS.—Pearl Millet is not at all like hay; it grows much like sorghum or broom corn, but has a close spike in which the seed is borne. Its mode of culture is precisely the same as that of corn, and a warm, dry, rich, sandy loam is a suitable soil. The seed is sold at one dollar per pound; two pounds are required for an acre. 2. Kentucky blue-grass would not do well in your locality. It grows there already and is known as June-grass, and makes poor hay and pasture and a very thin sod. You can have nothing better than orchard-grass and red clover, as these give early pasture or hay, and a thick second growth in July and up to September.

Lawn Mowers.

S. C. A., Hempstead, L. I., asks if the Philadelphia Lawn Mower is the best. If so, where can it be purchased so as to save the exorbitant commissions of agents?

ANS.—There are now many different kinds of lawn mowers, each possessing its superior points. Most of them will do good work, though each is better adapted to some kinds of work than others. We cannot answer the question, "Which is the best?" and, considering that all of us are readily prejudiced in favor of the machine we have been using, it would not be just that we should. The Philadelphia is a simple, durable, excellent machine. R. H. Allen & Co. of this city are agents for it here, but we are not aware that they would sell a single machine for less than accredited sub-agents.

Treatment of Strawberries in Early Spring.

M. L. A., Sheboygan Falls, Wis., has a young bed of Strawberries, which he neglected to cover with long manure last fall, and consequently finds it in a poor condition now. He has been advised to cover the bed with straw for some time and then burn it off, and asks if this is the right course to pursue.

ANS.—If the plants are *fire-proof*, the plan may be commendable. We should prefer to cover the bed with horse manure, having some short straw in it, which may be laid over the plants to protect them during the freezing nights and from the sun on hot days. When the frost is out of the ground, remove the straw and with a pitchfork carefully work the manure into the ground without disturbing the roots.

Wolves in Sheep.

A misconception as to the insect to which the above name is locally applied, led us into an error in this department in the last issue.

The "wolves," J. W. L., Smith's Grove, Ky., asked about, are not the *acarus scabiei* but the larvæ of *œstrus bovis*, which burrow under the skin and appear as white grubs at this season. There is no preventive but to kill off all the grubs by squeezing them out of the tumors in the skin and destroying them. If left in, the grubs will soon work out and pupate, when they will emerge as the perfect fly, and proceed, next July or August, to lay eggs in the backs of the cattle which will produce more of the so-called "wolves."

Plymouth Rocks.

L. A. C., Brunswick, Me., asks how early Plymouth Rocks lay, and 2, whether they will lay more eggs than the Leghorns.

ANS.—They will average, perhaps, a little over six months. There are records of their having laid in less than four. The Plymouth Rock may be relied upon to lay as early as any other breed. 2. Experiments have been tried, which show that the Plymouth Rocks will lay as many eggs as the noted layers, the Leghorns; but the Leghorn egg is the larger.

Propagating a Sport From a Hemlock.

J. H. T., Burnt Hill, N. Y., asks how best to propagate a peculiarly marked sort of Hemlock (Abies Canadensis). The branches, or new growth, are very prettily tipped with a light yellow or nearly white, which gives the tree a very fine appearance.

ANS.—This Hemlock sport will have to be propagated by grafting.

The Irish Juniper.

M. F. J., Uniontown, Pa., asks for a description of the Irish Juniper.

ANS.—Irish Juniper (*Juniperus communis Hibernica*) is a variety of the common Juniper, of a very erect, pyramidal growth, with short angular branchlets. Its leaves are shorter and less pointed than those of the species, and its branches are not so compressed as those of the Swedish Juniper. It is found on the hills in Ireland.

Amorpha fruticosa.

H. B. W., Ellsworth, Kansas, asks for a description of Amorpha fruticosa and Pinus Edulis.

ANS.—Amorpha fruticosa is a handsome, ornamental, hardy shrub. It attains a hight of 10 to 12 feet, and has pretty, compound leaves of 15 to 25 oval or oblong leaflets. In early summer it bears violet or purple flowers. For Pinus Edulis see Editorial page of last week's RURAL.

Miscellaneous.

F. F. R., Beloit, Wis., asks, 1, how to apply salt to wheat lands and whether such application is lawful; 2, what kind of seed wheat would be the best for his part of Wisconsin—Lost Nation, White Russian or Fife.

ANS.—There is no law which prevents the use of salt as a fertilizer, although there is a wide-spread popular idea to that effect. Salt is frequently useful and helps to stiffen the straw and produce a clear-skinned berry. It can be used now, and about two to five bushels per acre, is the usual quantity. Coarse, cheap, refuse salt from the saltpans is generally used. Fife wheat brings the highest price in the market. Lost Nation and Russian wheats are soft and have a bad reputation among the millers. Fife is a hard wheat and rates No. 1 in the markets.

F. C. S., Gainsville, Fla, asks, 1. the names of a few good commission merchants in this city, who deal in vegetables; 2, the name of some large millinery house, likey to buy the plumes of the white heron; 3, the name of some one who will buy alligators' teeth.

ANS.—C. W. Idell, 333 Washington St; J. V. Thurston & Co; C. P. Woodworth. These are among the best known com: dealers in that line of business; but we cannot guarantee their responsibility or that they will always give satisfaction. They will doubtless send satisfactory references on application; 2. Try Worthington & Smith, 507, or Ira Beard, 457 Broadway, this city. 3. Fred J. Ballard, St. Augustine Fla.

Many Inquirers desire us to sell in quantity some of the seeds we have distributed among our subscribers.

ANS.—We have never yet *sold* a seed or a plant. Our business is to extend the influence of the RURAL NEW-YORKER and thereby to promote the interests of horticulture and agriculture. We are in the anomalous situation of having absolutely no axe to grind.

E. W. P., Syracuse, N. Y., asks where can he get the Black Mexican table corn referred to in RURAL—"Corn Number"—Brevities.

Does it yield as well as Early Crosby or Evergreen?

ANS.—Of any of our seedsmen. It does not.

T. J., Mt. Morris, Genesee Co., Mich., asks whether several seeds of Pearl Millet should be put in one hill, when the hills are six feet apart.

ANS.—Each plant ought to have as much as 16 square feet—not 16 feet feet square—to itself. Now if more than one seed be planted in a hill, all but one strong plant should be destroyed.

B. F. M., Penryn, Placer Co., Cal., asks the name and price of a good work on architecture and rural homes, one from which he would obtain some good plans for buildings.

ANS.—Bicknell's Village Builder and Country Homes, Bicknell & Co., N. Y., price $12 is an excellent work. The same publishers have other works at less price.

W. P. G., Chicago, Ill., asks how far north is the Mulberry tree hardy.

ANS.—There are several kinds of Mulberries. The Black Mulberry, is not hardy in a climate more severe than that of this city; the Red Mulberry is found from New England southward; the Paper Mulberry is hardy in New York and southward.

L. P. N., Orumb Hill, Madison Co., N. Y., asks where can he obtain the following apples for planting: Wealthy, Meader's Winter, Magog Red Streak, Scott's Winter.

ANS.—From Dr. T. H. Hoskins, Newport, Vt. He will send free Price List on application.

B. M., St. Louis, Mo., asks for the name of some book on training dogs.

ANS.—Lewis's Youatt is as good as any. It was published by Leavitt & Allen, N. Y.—but we do not know if it can now be procured except at second-hand book stores.

W. M. F., Dunkirk, N. Y., asks whether he can graft Quinces, Pears, or sour Cherries on sweet Cherries?

ANS.—No for Quinces and for Pears and yes for sour Cherries, although we would rather use sweet Cherries on sour Cherries.

J. D., Brooklyn, L. I., wishes to know where she can obtain seeds or bulblets of Hyacinthus candicans.

ANS.—We do not know the variety at all. Some of our readers may.

J. H. L., Shelby Center, N. Y., asks where can be got a double furrow plow.

ANS.—Apply to R. H. Allen & Co., 189 Water street, this city.

J. W., Warwick, Mass., asks what he can do to break his hens of the habit of eating their eggs.

ANS.—Decapitation is the only certain remedy. See Querist, last issue.

A Subscriber, asks where can the Kenerson butter packages described in a late RURAL, be obtained.

ANS.—From J. R. Kenerson, Peacham, Vt.

W. B., North Parma, N. Y., asks who has the late Mr. T. B. Miner's stock of Strawberries, Grapes, etc., for sale.

ANS.—Mrs. A. R. Miner. Linden, N. J.

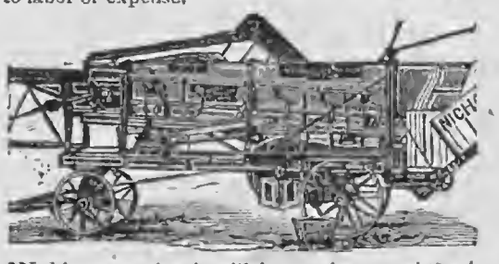
NICHOLS, SHEPARD & CO.,
Battle Creek, Mich.
ORIGINAL AND ONLY GENUINE
"VIBRATOR"
THRESHING MACHINERY.

WE are sometimes asked why the prices of our goods are apparently higher than some others of inferior make, and we avail ourselves of this opportunity to place the matter in its true light.

OUR "VIBRATOR" Threshers and Portable Engines embody the best results of our experience and study during our long business career. Whatever would add to their durability, efficiency, and solid excellence, in any particular, has been eagerly seized upon and utilized without regard to labor or expense.



IN this connection it will be pertinent and timely to warn the public against **Cheap** Threshers and **Cheap** Portable Engines. The superiority of our machinery, in all particulars, is now so generally acknowledged that our competitors have no resource but to present the attraction of low prices and long credit. Their goods being inferior, they have to sell them for what they can get. Times are hard; and purchasers, without fully considering the subject, will sometimes allow a lower price to decide them. Manufacturers of "cheap" machines are so set on carrying out competion to its utmost—competition of **Cheapness,** not of Excellence—that they meet "bargain hunters" half way, and furnish them cheerfully with inferior machines at the cheap rate they are asked for.

WE are much mistaken if this is what the public wants or expects of us. Good machinery cannot be made when neither workman nor employer has pride in his occupation; interest and pleasure in the work are both wanting, and both are essential in making good machinery.

OUR mission and business is, to build Threshing Machinery **of the Highest Excellence,** whatever the cost, and, holding firmly to this single purpose, we have added improvement after improvement, until the reputation of our Machines has become co-extensive with the grain-raising regions of the continent.

THRESHING machinery cannot be made for nothing, even with the aid of machinery. Our prices are as low as they ought to be, and, without doubt, as low as they ever will be. Do not be deceived with mere cheapness—**quality always descends faster than price.** Low price, especially in Threshers and Portable Engines, means **Low Quality, with Low Performance and High Repairs.**

Address J. T. SMITH & SON, Brentwood, N. H.

214 Bushels of CORN TO ONE ACRE.
McClure's Prolific Corn actually produced 214 bushels of corn to the acre, on ordinary land with usual cultivation; proof of which was given in October issue of FARM & FIRESIDE. It is a large white variety; gives greater yield than any other corn under same circumstances; one grain produces several stalks and from 3 to 10 large ears; makes finest meal and best fodder. We will send 1 package, containing enough to plant 1/8 square rods, by mail post-paid, to any one sending 60 cts. for 1 year's subscription to FARM & FIRESIDE, the most popular Agricultural and Home Journal in the world. One package given as a premium for sending two subscribers to FARM & FIRESIDE at 50 cts. a year.
ALL OTHERS WANTING CORN
Can obtain it by sending 25 cts. for 1 package, or $1 for 5 packages, to J. S. CROWELL, Manager FARM & FIRESIDE, Springfield, Ohio, but send all subscriptions to FARM & FIRESIDE, Springfield, Ohio, as usual.

REMINDERS.

For this climate probably the present is the best time of the entire year for transplanting. Keep the roots moist; protect them from the wind and sun from the time they are dug up until they are planted. Dig holes at least large enough to secure the roots without cramping them; fill in with good soil so as to have the roots in contact with it and rest in their natural positions. Never shake a tree up and down while it is being set. It may do much harm by bending, breaking the roots and abraiding the fibers, while it can do no good. Fix the tree or shrub firmly in its bed. If small, pressing the earth firmly about the roots will suffice; if large, staking may be necessary. Generally one stake is enough. Stick it diagonally in the ground and fasten the upper end to the main stem by bands that will prevent chafing.

That it is well to cut back the tops of trees somewhat in the proportion that their roots have been lost or mutilated there can be no doubt. But on this subject no definite rule can be laid down. There is no other way of transplanting a Tulip tree (Liriodendron tulipifera) from the woods or fields, except by cutting it back nearly to the roots. The Virgilia or Yellow-wood (Cladrastis tinctoria) will stand any amount of cutting back; while the Salisburia or Ginkgo, or a five-year-old apple tree would be injured or killed by the same treatment. Life is more distributed and irrepressible, so to speak, in some plants than in others, the same as in the animal kingdom. Many people determine to do their transplanting with great care when they order their trees or shrubs and while yet everything is wintry and there is no pressing work on hand; but when the plants arrive, all sorts of work press, and planting is too often hurried through in a slip-shod manner. We would simply remind our readers that this is poor judgment. If plants are to answer the purpose for which we purchase them, we must provide the conditions of their healthy existence.

PLANT TREES.

Spring-time has come again. This is the season when every one begins to make some improvements. There are but few farms that contain enough ornamental trees about the buildings.

What trees shall the owner plant? For deciduous trees, select from open places Young Elms, Maples, Lindens, Ashes, White-woods. For evergreens, get from the nursery stocky trees about two feet high. Unless the planter is an expert, let him begin with well-tried sorts, such as Norway Spruce, Hemlock Spruce, White Pine, Austrian Pine, Scoth Pine, Arbor-vitæ, Red Cedar, Siberian Arbor-vitæ, Savin, Irish Juniper, and the like.

Where shall he plant? Seldom in straight rows, or within thirty feet or more of a building. Rows of deciduous trees may extend along the margins of the highway. Plant them thirty or forty feet apart; protect them from cattle and mulch heavily, or keep them cultivated. In the direction of the prevailing cold winds plant evergreens for protection. Here and there about the grounds put in groups, with now and then an isolated specimen. Leave some broad, open lawn without any trees or shrubs. Take up the trees well; keep the roots from the sun and wind; keep them damp till they are well planted. Now mulch *at once*, before dry summer comes on; or, instead of this, cultivate every week or ten days till September. It is a good plan to plant thickly, if the proprietor can remember to thin in the proper time before any of the trees are injured by crowding. Keep up the mulch, or better, keep up the thorough cultivation for five or six years. Besides this, the trees will need but little care. With good cultivation, the tops will run up and the limbs spread out; the owner will be gratified and surprised to see how fast his trees grow. To keep the evergreens stocky, with thick tops, they should be trimmed. They may be sheared, or, better still, some of the limbs should be cut back to where they leave other limbs. This may be done at any time of the year. Have no fears of cutting off the leader. Cut away anywhere you desire, and watch the result. The more they are cut back, the thicker they will grow. From year to year a few new choice kinds can be added, as the farmer becomes satisfied that he wants them.

Trees increase the value of a place, whether the owner wishes to sell or to use it for a home. Trees shelter the dwelling and the barns from piercing winds; they add comfort and joy to man and beast; they economize the food of animals; they save fuel in the sitting-room; they harbor birds; they afford shade in summer. Plant trees for yourself, for your wife, for your children and grandchildren. Plant trees as a good example to your neighbor and the stranger who passes by your farm.

We know a pleasant old man who has a large family. All of them have settled near him, and have not deserted country life. He is cheerful, and makes everybody about him happy. At a public meeting, the other day, he made a remark that impressed itself on the mind of every person present. We cannot give his exact words, but he substantially said: "Several years ago I planted a lot of evergreens about my house. I took good care of them. People laughed at me and thought I was wasting time. They said I would never live to enjoy them. The trees are already the admiration of all who see them. I feel that I have set a good example for all to follow. Some neighbors have done so. I am an old man, and my body will soon be laid away in the country cemetery. A tomb-stone will be erected, on which, now and then, some one will read my name. Far better than this: the evergreens I have planted will last for many years and serve as a landmark. Neighbors, as they ride by, will say to strangers and their friends, 'old Mr. —— planted those evergreens.'"

The beautiful trees will serve to constantly remind every one of the thoughtful and generous hand that planted them. What can be more desirable than to have one's name associated with a fine lot of choice trees?

Then be encouraged to plant trees along the highway and about your buildings. Plant them for shade, for shelter, for ornament; plant them to set a good example and to increase the value of the farm; plant them to make country life attractive to your children and to strangers; plant them that when you are gone every one shall bless you for the noble work you have done.

A PURPOSE IN LIFE.
